TAPURIANS, The.—"To the west of the Hyrcanians, between Elburz and the Caspian, lay the Tapurians, whose name has survived in the modern Taberistan, and further yet, on the sea-coast, and at the mouth of the Mardus (now Safidrud), were the Mardians."—M. Duncker, *Hist. of Antiquity, bk.* 8, *ch.* 1 (*v.* 5).

TARA, The Hill, the Feis, and the Psalter of.—The Feis Teavrach, or Feis of Tara, in Irish history, was a triennial assembly on the royal hill of Tara, in Meath, which is claimed to have been instituted by a certain King Ollamh Fodhla, at so remote a period as 1,300 years before Christ. "All the chieftains or heads of septs, bards, historians, and military leaders throughout the country were regularly summoned, and were required to attend under the penalty of being treated as the king's enemies. The meeting was held in a large oblong hall, and the first three days were spent in enjoying the hospitality of the king, who entertained the entire assembly during its sittings. The bards give long and glowing accounts of the magnificence displayed on these occasions, of the formalities employed, and of the business transacted. Tables were arranged along the centre of the hall, and on the walls at either side were suspended the banners or arms of the chiefs, so that each chief on entering might take his seat under his own escutcheon. Orders were issued by sound of trumpet, and all the forms were characterized by great solemnity. What may have been the authority of this assembly, or whether it had any power to enact laws, is not clear; but it would appear that one of its principal functions was the inspection of the national records, the writers of which were obliged to the strictest accuracy under the weightiest penalties."—M. Haverty, *Hist. of Ireland, p.* 24.—The result of the examination and correction of the historical records of the kingdom were "entered in the great national register called the Psalter of Tara, which is supposed to have been destroyed at the period of the Norman invasion. . . . It is supposed that part of the contents of the Psalter of Cashel, which contains much of the fabulous history of the Irish, was copied from it."—T. Wright, *Hist. of Ireland, bk.* 1, *ch.* 2 (*v.* 1).

TARENTUM.—Tarentum (or Taras), the most important of the ancient Greek cities in Italy, "lay at the northern corner of the great gulf which still bears its name. It had an excellent harbour, almost land-locked. On its eastern horn stood the city. Its form was triangular; one side being washed by the open sea, the other by the waters of the harbour, while the base or land side was protected by a line of strong fortifications. Thus advantageously posted for commerce the city grew apace. She possessed an opulent middle class; and the poorer citizens found an easy subsistence in the abundant supply of fish which the gulf afforded. These native fishermen were always ready to man the navy of the state. But they made indifferent soldiers. Therefore when any peril of war threatened the state, it was the practice of the government to hire foreign captains, soldiers of fortune, who were often kings or princes, to bring an army for their defence. . . . The origin of Lacedæmonian Tarentum is veiled in fable. The warriors of Sparta (so runs the well-known legend) went forth to the second Messenian war under a vow not to see their homes till they had conquered the enemy. They were long absent, and their wives sought paramours among the slaves and others who had not gone out to war. When the warriors returned, they found a large body of youth grown up from this adulterous intercourse. These youths (the Parthenii as they were called), disdaining subjection, quitted their native land under the command of Phalantus, one of their own body, and founded the colony of Tarentum."—H. G. Liddell, *Hist. of Rome, bk.* 3, *ch.* 25 (*v.* 1).—See, also, Siris.

TARIFF LEGISLATION AND CONVENTIONS.

(The Netherlands): 15th Century.—Early Free Trade and Reciprocity.—In the Netherlands, at the close of a short war with the English, in 1437, "the import of raw wool was entirely relieved from the payment of even the ordinary customs. . . . And this was then their notion of protection,—to be allowed to buy what they liked where they liked, to live at peace with their neighbours, and to be let alone. Four hundred years have passed and gone since the Netherlands persuaded their rulers to take off all duty on raw wool, and to permit half-finished clothes to be brought into their country in order that they might be dyed and taken out again duty free; yet we live in the midst of tariffs whose aim it is to hinder the importation of the raw material by prohibitory duties and to prevent competition in every kind of fabric by so-called protecting ones! And in England, also, at the period in question, the suicidal spirit of commercial envy had seized hold of the government, and in every parliament some fresh evidence was afforded of the jealousy with which foreign skill and competition were viewed. But the Dutch held on

the tenour of their discerning and sagacious way without waiting for reciprocity or resenting its reverse. If the English would not admit their cloths, that was no reason why they should cheat themselves of the advantage of English and Irish wool. If not cloths, there was doubtless something else that they would buy from them. Among other articles, there was salt, which they had acquired a peculiar skill in refining; and there was an extensive carrying trade in the produce of the Northern countries, and in various costly luxuries, which the English obtained from remoter regions generally through them. In 1496, when Philip (father of the Emperor Charles V.) assumed the government of the Netherlands, as Duke of Brabant, he "presented to the senates of the leading cities the draught of a commercial treaty with England, conceived in a wise and liberal spirit, and eminently fitted to advance the real welfare of both countries. Their assent was gladly given. . . . Nor did they over-estimate the value of the new compact, which long went by the name of 'The Grand Treaty of Commerce.' Its provisions were, in all respects, reciprocal, and enabled every kind of merchandise to be freely imported from either country by the citizens of the other. The entire liberty of fishing on each other's coast was confirmed; measures were prescribed for the suppression of piracy; and property saved from wrecks, when none of the crew survived, was vested in the local authorities in trust for the proper owners, should they appear to claim it within a year and a day. . . . The industrial policy of the Dutch was founded on ideas wholly and essentially different from that of the kingdoms around them. 'The freedom of traffic had ever been greater with them than amongst any of their neighbours;' and its different results began to appear. Not only were strangers of every race and creed sure of an asylum in Holland, but of a welcome; and singular pains were taken to induce those whose skill enabled them to contribute to the wealth of the state to settle permanently in the great towns."—W. T. McCullagh, *Industrial History of Free Nations*, *v.* 2, *pp.* 110–111, 150–151, 266–267.

(France): **A. D. 1664-1667.—The System of Colbert.**—Colbert, the great minister of Louis XIV., was the first among statesmen who had an economic system, "settled, complete and consistent in all its parts; and it is to the eternal honor of his name that he made it triumph in spite of obstacles of every kind. Although this system was far from being irreproachable in all its parts, it was an immense progress at the time of its appearance; and we have had nothing since then which can be compared with it, for breadth and penetration. . . . It was . . . the need of restoring order in the finances which gave rise to the attempts at amelioration made by Colbert. This illustrious minister soon comprehended that the surest way to increase public fortune was to favor private fortune, and to open to production the broadest and freest ways. . . . One of the first acts of his ministry, the reëstablishment of the taxes on a uniform basis, is an homage rendered to true principles; and one cannot doubt that all the others would have been in conformity with this glorious precedent, if the science of wealth had been, at that time, as advanced as it is to-day. Colbert would certainly have carried out in France what Mr. Huskisson had begun in England at the time of his sudden death. . . . The edict of September, 1664, reduced the import and export duties on merchandise to suitable limits, and suppressed the most onerous. 'It is our intention,' said the king, 'to make known to all our governors and intendants in what consideration we hold at present everything that may concern commerce. . . . As the most solid and most essential means for the reëstablishment of commerce are the diminution and the regulation of the duties which are levied on all commodities, we have arranged to reduce all these duties to one single import and one export duty, and also to diminish these considerably, in order to encourage navigation, reëstablish the ancient manufactures, banish idleness.' . . . At the same time Colbert prohibited the seizure for the tailles (villein-tax) [see Taille and Gabelle] of beds, clothes, bread, horses and cattle serving for labor; or the tools by which artisans and manual laborers gained their livelihood. The register of the survey of lands was revised, so that property should be taxed only in proportion to its value and the actual extent of the land. The great highways of the kingdom and all the rivers were then guarded by armies of receivers of tolls, who stopped merchandise on its passage and burdened its transportation with a multitude of abusive charges, to say nothing of the delays and exactions of every kind. An edict was issued ordering the investigation of these degrading charges; and most of them were abolished or reduced to just limits. . . . The lease of Customs duties being about to expire, Colbert improved this occasion to revise the tariff; and although this fatal measure has since been considered as the finest monument of his administration, we think we should present it in its true aspect, which seems to us to have been invariably misapprehended. Colbert's aim in revising the customs was to make them a means of protection for national manufactures, in the place of a simple financial resource, as they formerly were. Most articles of foreign manufacture had duties imposed upon them, so as to secure to similar French merchandise the home market. At the same time, Colbert spared neither sacrifices nor encouragement to give activity to the manufacturing spirit in our country. He caused the most skilful workmen of every kind to come from abroad; and he subjected manufactures to a severe discipline, that they should not lose their vigilance, relying on the tariffs. Heavy fines were inflicted on the manufacturers of an article recognized as inferior in quality to what it should be. For the first offence, the products of the delinquents were attached to a stake, with a carcan and the name of the manufacturer; in case of a second offence, the manufacturer himself was fastened to it. These draconian rigors would have led to results entirely contrary to those Colbert expected, if his enlightened solicitude had not tempered by other measures what was cruel in them. Thus, he appointed inspectors of the manufactures, who often directed the

workmen into the best way, and brought them information of the newest processes, purchased from foreign manufacturers, or secretly obtained at great expense. Colbert was far from attaching to the customs the idea of exclusive and blind protection that has ever been attributed to them since his ministry. He knew very well that these tariffs would engender reprisals, and that, while encouraging manufactures, they would seriously hinder commerce. Moreover, all his efforts tended to weaken their evil effects. His instructions to consuls and ambassadors testify strongly to his prepossessions in this regard. . . . The more one studies the administrative acts of this great minister, the more one is convinced of his lofty sense of justice, and of the liberal tendencies of his system, which has hitherto been generally extolled as hostile to the principle of commercial liberty. In vain the Italians have hailed it by the name of 'Colbertism,' to designate the exclusive system invented by themselves and honored by the Spanish: Colbert never approved the sacrifice of the greater part of his fellow citizens to a few privileged ones, nor the creation of endless monopolies for the profit of certain branches of industry. We may reproach him with having been excessively inclined to make regulations, but not with having enfeoffed France to a few spinners of wool and cotton. He had himself summed up in a few words his system in the memorial he presented to the king: 'To reduce export duties on provisions and manufactures of the kingdom; to diminish import duties on everything which is of use in manufactures; and to repel the products of foreign manufactures, by raising the duties.' Such was the spirit of his first tariff, published in September, 1664. He had especially aimed at facilitating the supply of raw materials in France, and promoting the interests of her home trade by the abolition of provincial barriers, and by the establishment of lines of customs-houses at the extreme frontiers. . . . The only reproach that can be justly made against him is the abuse of the protective instrument he had just created, by increasing in the tariff of 1667 the exclusive measures directed against foreign manufactures in that of 1664. It was no longer then a question of manufactures, but of war, namely, with Holland; and this war broke out in 1672. . . . From the same epoch date the first wars of commercial reprisals between France and England, hostilities which were to cost both nations so much blood and so many tears. Manufactures were then seen to prosper and agriculture to languish in France under the influence of this system."—J. A. Blanqui, *Hist. of Pol. Economy in Europe, ch.* 26.

(Pennsylvania): A. D. 1785.—Beginning of "Protection" in Pennsylvania.—"Before the Revolution Pennsylvania had always been slow to impose burdens on trade. While Massachusetts, New York and South Carolina were raising considerable sums from imposts, Pennsylvania commerce was free from restrictions. In 1780, however, the need of revenue overcame the predilection of the Quakers for free trade and they decided 'that considerable sums can be raised by a small impost on goods and merchandise imported into this state without burdening commerce.' Accordingly, low duties were laid on wines, liquors, molasses, sugar, cocoa and tea, with 1 per cent. on all other imports. In 1782 the duties were doubled and the revenue was appropriated to the defence of commerce on the Delaware river and bay. This was done at the request of the merchants who wished to have their interests protected and 'signified their willingness to submit to a further impost on the importation of goods for that purpose.' When peace came, however, the merchants at once represented it as detrimental to the interests of the state to continue the duties, and they were repealed. In 1784 low duties were again imposed, and later in the same year increased. Early in 1785 more careful provisions were made for their collection. September 20, came the important act 'to encourage and protect the manufactures of this state by laying additional duties on certain manufactures which interfere with them.' . . . More than forty of the articles which Pennsylvania had begun to make were taxed at high specific rates. Coaches and carriages, paid £10 to £20; clocks, 30s.; scythes, 15s. per dozen; beer, ale and porter, 6d. per gallon; soap or candles, 1d. per pound; shoes and boots, 1s. to 6s. per pair; cordage and ropes, 8s. 4d. per hundred weight; and so on. The ten per cent. schedule included manufactures of iron and steel, hats, clothing, books and papers, whips, canes, musical instruments and jewelry. . . . The Pennsylvania act is of importance because it shows the nature of commodities which the country was then producing, as well as because it formed the basis of the tariff of 1789."—W. Hill, *First Stages of the Tariff Policy of the United States, pp.* 53–54.—The preamble of the Pennsylvania act of 1785 set forth its reasons as follows: "Whereas, divers useful and beneficial arts and manufactures have been gradually introduced into Pennsylvania, and the same have at length risen to a very considerable extent and perfection, insomuch that in the late war between the United States of America and Great Britain, when the importation of European goods was much interrupted, and often very difficult and uncertain, the artizans and mechanics of this state were able to supply in the hours of need, not only large quantities of weapons and other implements, but also ammunition and clothing, without which the war could not have been carried on, whereby their oppressed country was greatly assisted and relieved. And whereas, although the fabrics and manufactures of Europe, and other foreign parts, imported into this country in times of peace, may be afforded at cheaper rates than they can be made here, yet good policy and a regard to the wellbeing of divers useful and industrious citizens, who are employed in the making of like goods, in this state, demand of us that moderate duties be laid on certain fabrics and manufactures imported, which do most interfere with, and which (if no relief be given) will undermine and destroy the useful manufactures of the like kind in this country, for this purpose. Be it enacted" &c.—*Pennsylvania Laws,* 1785.—The duties enacted, which were additional to the then existing impost of 2½ per cent., were generally specific, but ad valorem on some commodities as on British steel, 10 per cent.; earthen ware, the same; glass and glass-ware, 2½ per cent.; linens the same. Looked

at in the light of recent American tariffs, they would hardly be recognized as "protective" in their character; but the protective purpose was plainly enough declared.

(United States): A. D. 1789-1791.— The first tariff enactment.—Hamilton's Report on Manufactures.— The "American System" proposed.—"The immediate necessity of raising some ready money led to the passage of a tariff bill at the first session of Congress. It was prepared and carried through the House chiefly by Madison; and its contents, no less than the general tone of the debate in which it was discussed, showed a decided leaning towards the protective system. But this legislation was temporary, and was at the time known to be so. The permanent system of the country was left for subsequent and more leisurely development. When at last Congress felt able to give the subject due attention, it applied as usual to Hamilton to furnish information and opinions. A topic so important and so congenial to his tastes called forth his best exertions. A series of extensive investigations conducted by every feasible kind of inquiry and research, both in foreign parts and in the United States, furnished the material for his reflections. He took abundant time to digest as well as to collect the great mass of information thus acquired, and it was not until nearly two years had elapsed since the order for the report was passed that he sent in the document to the House of Representatives. . . . The inferences and arguments constituted as able a presentation of the protectionist theory as has ever been made. . . . It is, however, an incorrect construction of that report to regard it as a vindication of the general or abstract doctrine of protection. Hamilton was very far from assuming any such position; protection always and everywhere was not his theory; protection was not his ideal principle of commercial regulation. . . . So far from entertaining any predilection for protection in the abstract, it would seem that in a perfect commercial world he would have expected to find free trade the prevalent custom. . . . If free trade were the rule of the whole commercial world, Hamilton was not prepared to say that the United States would find it for her interest to be singular. But such were not the premises from which he had to draw a conclusion. . . . The report of Hamilton determined the policy of the country. For good or for evil protection was resorted to, with the avowed purpose of encouraging domestic manufacturing as well as of raising a revenue. . . . The principles upon which Hamilton based his tariff were not quite those of pure protection, but constituted what was known as the 'American System'; a system which has been believed in by former generations with a warmth of conviction not easy to withstand."—J. T. Morse, Jr., *Life of Alex. Hamilton, ch.* 11.— Hamilton's celebrated report opens with an elaborate argument to prove the desirability of manufacturing industries in the country, and their proceeds: "A full view having now been taken of the inducements to the promotion of manufactures in the United States, accompanied with an examination of the principal objections which are commonly urged in opposition, it is proper, in the next place, to consider the means by which it may be effected, as introductory to a specification of the objects which in the present state of things appear the most fit to be encouraged, and of the particular measures which it may be advisable to adopt in respect to each. In order to a better judgment of the means proper to be resorted to by the United States, it will be of use to advert to those which have been employed with success in other countries. The principle of these are:—I. Protecting duties, or duties on those foreign articles which are the rivals of the domestic ones intended to be encouraged. Duties of this nature evidently amount to a virtual bounty on the domestic fabrics, since by enhancing the charges on foreign articles they enable the national manufacturers to undersell all their foreign competitors. The propriety of this species of encouragement need not be dwelt upon, as it is not only a clear result from the numerous topics which have been suggested, but is sanctioned by the laws of the United States in a variety of instances; it has the additional recommendation of being a resource of revenue. Indeed, all the duties imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation; and, except where they fall on raw materials, wear a beneficent aspect towards the manufacturers of the country. II. Prohibitions of rival articles, or duties equivalent to prohibitions. This is another and an efficacious mean of encouraging manufactures; but in general it is only fit to be employed when a manufacture has made such a progress, and is in so many hands, as to insure a due competition and an adequate supply on reasonable terms. Of duties equivalent to prohibitions there are examples in the laws of the United States; and there are other cases to which the principle may be advantageously extended, but they are not numerous. Considering a monopoly of the domestic market to its own manufacturers as the reigning policy of manufacturing nations, a similar policy on the part of the United States, in every proper instance, is dictated, it might almost be said, by the principles of distributive justice; certainly by the duty of endeavoring to secure to their own citizens a reciprocity of advantages. III. Prohibitions of the exportation of materials of manufactures. The desire of securing a cheap and plentiful supply for the national workmen; and, where the article is either peculiar to the country, or of peculiar quality there, the jealousy of enabling foreign workmen to rival those of the nation with its own materials, are the leading motives to this species of regulation. It ought not to be affirmed that it is in no instance proper, but it is certainly one which ought to be adopted with great circumspection and only in very plain cases. IV. Pecuniary bounties. This has been found one of the most efficacious means of encouraging manufactures, and it is, in some views, the best, though it has not yet been practiced upon the government of the United States,— unless the allowance on the exportation of dried and pickled fish and salted meat could be considered as a bounty — and though it is less favored by public opinion than some other modes. Its advantages are these:—1. It is a species of encouragement more positive and direct than any other, and for that very reason has a more immediate tendency to stimulate and uphold new enterprises, increasing the chances of profit, and diminishing the risks of loss in the first attempts. 2. It avoids the inconvenience of a temporary augmentation

of price, which is incident to some other modes, or it produces it to a less degree, either by making no addition to the charges on the rival foreign article, as in the case of protecting duties, or by making a smaller addition. The first happens when the fund for the bounty is derived from a different object (which may or may not increase the price of some other article according to the nature of that object); the second when the fund is derived from the same or a similar object of foreign manufacture. One per cent. duty on the foreign article, converted into a bounty on the domestic, will have an equal effect with a duty of 2% exclusive of such bounty; and the price of the foreign commodity is liable to be raised in the one case in the proportion of 1%, in the other in that of 2%. Indeed, the bounty when drawn from another source, is calculated to promote a reduction of price, because, without laying any new charge on the foreign article, it serves to introduce a competition with it, and to increase the total quantity of the article in the market. 3. Bounties have not, like high protecting duties, a tendency to produce scarcity. An increase of price is not always the immediate, though where the progress of a domestic manufacture does not counteract a rise, it is commonly the ultimate effect of an additional duty. In the interval between the laying of the duty and a proportional increase of price, it may discourage importation by interfering with the profits to be expected from the sale of the article. 4. Bounties are sometimes not only the best, but the only proper expedient for uniting the encouragement of a new object of agriculture with that of a new object of manufacture. It is the interest of the farmer to have the production of the raw material promoted by counteracting the interference of the foreign material of the same kind. It is the interest of the manufacturer to have the material abundant and cheap. If prior to the domestic production of the material in sufficient quantity to supply the manufacturer on good terms, a duty be laid upon the importation of it from abroad, with a view to promote the raising of it at home, the interest both of the farmer and manufacturer will be disserved. By either destroying the requisite supply, or raising the price of the article beyond what can be afforded to be given for it by the conductor of an infant manufacture, it is abandoned or fails; and there being no domestic manufactories to create a demand for the raw material which is raised by the farmer, it is in vain that the competition of the like foreign article may have been destroyed. It cannot escape notice that a duty upon the importation of an article can no otherwise aid the domestic production of it than by giving the latter greater advantages in the home market. It can have no influence upon the advantageous sale of the article produced in foreign markets, no tendency, therefore, to promote its exportation. The true way to conciliate these two interests is to lay a duty on foreign manufactures of the material, the growth of which is desired to be encouraged, and to apply the produce of that duty by way of bounty either upon the production of the material itself, or upon its manufacture at home, or upon both. In this disposition of the thing the manufacturer commences his enterprise under every advantage which is attainable as to quantity or price of the raw material. And the farmer, if the bounty be immediately to him, is enabled by it to enter into a successful competition with the foreign material. . . . There is a degree of prejudice against bounties, from an appearance of giving away the public money without an immediate consideration, and from a supposition that they serve to enrich particular classes at the expense of the community. But neither of these sources of dislike will bear a serious examination. There is no purpose to which public money can be more beneficially applied than to the acquisition of a new and useful branch of industry, no consideration more valuable than a permanent addition to the general stock of productive labor. As to the second source of objection, it equally lies against other modes of encouragement, which are admitted to be eligible. As often as a duty upon a foreign article makes an addition to its price, it causes an extra expense to the community for the benefit of the domestic manufacturer. A bounty does no more. But it is the interest of the society in each case to submit to a temporary expense, which is more than compensated by an increase of industry and wealth, by an augmentation of resources and independence, and by the circumstance of eventual cheapness, which has been noticed in another place. It would deserve attention, however, in the employment of this species of encouragement in the United States, as a reason for moderating the degree of it in the instances in which it might be deemed eligible, that the great distance of this country from Europe imposes very heavy charges on all the fabrics which are brought from thence, amounting from 15% to 30% on their value according to their bulk. . . . V. Premiums. These are of a nature allied to bounties, though distinguishable from them in some important features. Bounties are applicable to the whole quantity of an article produced or manufactured or exported, and involve a correspondent expense. Premiums serve to reward some particular excellence or superiority, some extraordinary exertion or skill, and are dispensed only in a small number of cases. But their effect is to stimulate general effort. . . . VI. The exemption of the materials of manufactures from duty. The policy of that exemption, as a general rule, particularly in reference to new establishments, is obvious. . . . VII. Drawbacks of the duties which are imposed on the materials of manufactures. It has already been observed as a general rule, that duties on those materials ought, with certain exceptions, to be forborne. Of these exceptions, three cases occur which may serve as examples. One where the material is itself an object of general or extensive consumption, and a fit and productive source of revenue. Another where a manufacture of a simpler kind, the competition of which with a like domestic article is desired to be restrained, partakes of the nature of a raw material from being capable by a further process to be converted into a manufacture of a different kind, the introduction or growth of which is desired to be encouraged. A third where the material itself is the production of the country, and in sufficient abundance to furnish a cheap and plentiful supply to the national manufacturers. . . . Where duties on the materials of manufactures are not laid for the purpose of preventing a competition with some domestic production, the same reasons which recommend, as a general rule, the exemption of those materials from

duties, would recommend, as a like general rule, the allowance of drawbacks in favor of the manufacturer. . . . VIII. The encouragement of new inventions and discoveries at home, and of the introduction into the United States of such as may have been made in other countries; particularly those which relate to machinery. This is among the most useful and unexceptionable of the aids which can be given to manufactures. The usual means of that encouragement are pecuniary rewards, and, for a time, exclusive privileges. . . . IX. Judicious regulations for the inspection of manufactured commodities. This is not among the least important of the means by which the prosperity of manufactures may be promoted. It is indeed in many cases one of the most essential. Contributing to prevent frauds upon consumers at home and exporters to foreign countries, to improve the quality and preserve the character of the national manufactures; it cannot fail to aid the expeditious and advantageous sale of them, and to serve as a guard against successful competition from other quarters. . . . X. The facilitating of pecuniary remittances from place to place — is a point of considerable moment to trade in general and to manufactures in particular, by rendering more easy the purchase of raw materials and provisions, and the payment for manufactured supplies. A general circulation of bank paper, which is to be expected from the institution lately established, will be a most valuable mean to this end. . . . XI. The facilitating of the transportation of commodities. Improvements favoring this object intimately concern all the domestic interests of a community; but they may, without impropriety, be mentioned as having an important relation to manufactures. . . . The foregoing are the principal of the means by which the growth of manufactures is ordinarily promoted. It is, however, not merely necessary that the measures of government which have a direct view to manufactures should be calculated to assist and protect them; but that those which only collaterally affect them, in the general course of the administration, should be guarded from any peculiar tendency to injure them. There are certain species of taxes which are apt to be oppressive to different parts of the community, and, among other ill effects, have a very unfriendly aspect towards manufactures. All poll or capitation taxes are of this nature. They either proceed according to a fixed rate, which operates unequally and injuriously to the industrious poor; or they vest a discretion in certain officers to make estimates and assessments, which are necessarily vague, conjectural, and liable to abuse. . . . All such taxes (including all taxes on occupations) which proceed according to the amount of capital supposed to be employed in a business, or of profits supposed to be made in it, are unavoidably hurtful to industry."—A. Hamilton, *Report on Manufactures* (*Works*, *v.* 3).

(England): **A. D. 1815-1828.—The Corn Laws and Provision Laws.—The sliding-scale.**—During the Napoleonic wars in Europe there was a prolonged period of scarcity, approaching to famine, in Great Britain. There were scant harvests at home and supplies from abroad were cut off by the "Continental system" of Napoleon. "In 1801 wheat was 115 shillings and 11 pence per quarter; from 1801 to 1818 the price averaged 84s.; whilst in the 20 years ending 1874, it averaged only 52s. per quarter. . . . The cry of starvation was everywhere heard amongst the working classes, and tradesmen of all kinds suffered severely; whilst the only well-to-do people were the Farmers and the Landlords. As soon as the war was over, and our ports were opened for the reception of foreign grain, prices came down rapidly. Then the Landlords took alarm, and appealed to Parliament to resist the importation of foreign grain, which they asserted, would be the ruin of the English Farmers. They insisted that in this country, the costs of cultivation were extremely heavy, as compared with those of foreign producers of grain, and that therefore the British Farmer must receive protection in order to prevent his ruin. Hence a Parliament, composed mostly of Landlords, proceeded, in 1815, to enact the Corn Law, which excluded foreign wheat, except at high rates of duty, until the market price should reach 80s. per quarter; and other kinds of grain, until there was a proportionate elevation in prices. The discussions in Parliament on this question made a great impression, and led to a wide-spread sympathy, and to the belief that there was need of a measure, which, according to its advocates, would preserve our Agriculture from ruin, and be at the same time a provision against famine. But by many thoughtful and patriotic people this law was viewed with intense dislike, and was characterised as an atrocious fraud. The fact was, that . . . when rents ought either to have been lowered, or the methods of cultivation improved, the Corn Law was passed by the Landlords in order to keep out foreign corn and to maintain high rents; and many of the common people saw, or thought they saw, what would be the effect; for whilst the legislature was engaged in the discussion of the question, the people of London became riotous, and the walls were chalked with invectives such as 'Bread or Blood,' 'Guy Fawkes for ever,' etc. A loaf, steeped in blood, was placed on Carlton House, (now the Tory Club House.) The houses of some of the most unpopular of the promoters of the measure were attacked by the mob. At Lord Eldon's house the iron railings were torn up, whilst every pane of glass and many articles of furniture were broken and destroyed, and it was facetiously remarked that at last his lordship kept open house. The military were called out, and two persons were killed; the Houses of Parliament were guarded by soldiers, and, indeed, the whole of London appeared to be in possession of the Army. In various parts of the country similar disturbances prevailed. . . . Large popular meetings were held at Spa Fields, in London, public meetings were also held at Birmingham, and in many other parts of the kingdom. . . . In some of the towns and populous localities, the operatives having in view a large aggregate meeting to be held on St. Peter's field in Manchester, submitted themselves to marching discipline. . . . Regardless, however, of the public demonstrations of dislike to the Corn and Provision Laws, the Legislature persisted in upholding the most stringent provisions thereof until the year 1828, when the duties on the importation of

grain were adjusted by a sliding scale, in accordance with the average prices in the English market. The following abstract may serve to denote the provisions of the amended Law:—When the average price of wheat was 36 shillings the duty was 50 shillings 8 pence per qr.; when 46s. the duty was 40s. 8d. per qr.; when 56s. it was 30s. 8d. per qr.; when 62s. it was 24s. 8d. per qr.; when 72s. it was 2s. 8d. per qr.; and when 73s. it was 1s. per qr. It was soon found that as a means of protection to the British Farmer, the operation of the sliding scale of duties was scarcely less effective, by deterring imports of grain, than the previous law, which absolutely excluded wheat until it reached 80s. per quarter. The Act certainly provided that foreign grain might at any time be imported, and be held in bond till the duty was paid; a provision under which it was expected to be stored until the price should be high, and the duty low; but the expenses attendant upon warehousing and preserving it from injury by keeping, were usually looked upon as an undesirable or even dangerous investment of a merchant's capital. . . . Agricultural protection, as exhibited by the Corn Law, would, however, have been very incomplete without the addition of the Provision Laws." By these Laws the importation of Foreign Cattle and foreign meat were strictly prohibited. Butter and Lard were indeed allowed to be imported, but they were not to be used as food, and in order to provide against any infraction of the law, the officers at the Custom Houses were employed to 'spoil' these articles on their arrival, by smearing them with a tarred stick. They could then be used only as grease for wheels, or for the smearing of sheep. With bread purposely made dear, with the import of cattle and of flesh meat prohibited, and with lard and butter wilfully reduced from articles of food to grease for wheels, there is no difficulty in accounting for the frequent murmurs of discontent, and for the starvation among the poorer classes in every part of the Kingdom. Soup kitchens were opened almost every winter, and coals and clothing gratuitously distributed in many places; but such palliatives were regarded with derision by all who understood the true causes of the evil. Such help was scorned, and a cry for justice was raised; scarcity was said to be created by Act of Parliament, in order to be mitigated by philanthropy."—H. Ashworth, *Recollections of Richard Cobden, ch.* 1.

(United States): A. D. 1816-1824.— The beginning of the protective policy (the "American System").— "The return of peace at the beginning of 1815 brought the manufacturers face to face with a serious danger. War had been their harvest time. Favored by double duties and abnormal conditions their industry had attained a marvelous though not always safe development. . . . By limitation, the double duties were to expire one year after the conclusion of peace, and unless Congress intervened promptly and effectually their individual ruin was certain. . . . As new industries sprang up, petitions were promptly laid before Congress praying for new duties, for the permanence of the war duties, and for certain prohibitions. . . . In laying before Congress the treaty of peace, February, 1815, Madison called attention to the 'unparalleled maturity' attained by manufactures, and 'anxiously recommended this source of national independence and wealth to the prompt and constant guardianship of Congress.' . . . To Dallas, Secretary of the Treasury, the manufacturers had already turned. Six days after the treaty of peace was ratified, the House, February 23, 1815, called upon Dallas to report a general tariff bill at the next session of Congress. . . . In his annual report in December, 1815, Dallas had proposed the extension of the double duties until June 30, 1816, in order to give time for the elaboration of a new tariff bill; and after some discussion Congress agreed to this plan. February 13 he transmitted his reply to the resolutions of the previous February, closing with a carefully prepared schedule of new tariff rates. This, after being worked over in the Ways and Means Committee, was embodied in a bill and introduced into the House March 12, by Lowndes of South Carolina. Debate began March 20, and continued till April 8, when the bill was finally passed by a vote of 88 to 54. April 20 it passed the Senate with some amendments, and April 27 received the approval of Madison. . . . The features of Dallas' proposed tariff were the enlarging of the ad valorem list from three groups at 12½, 15, and 20 per cent to eight groups at 7½, 15, 20, 22, 28, 30, and 33⅓ per cent; the increase of specific duties by about 42 per cent; and, most important of all, in the article of coarse cottons, the insertion of a minimum, by which, as far as the custom-house was concerned, no quality was to be regarded as costing less than 25 cents per square yard. Except in the case of coarse cottons the new rates on articles which it was desired to protect fell slightly below the double rates of the war. Three positions were brought out in debate — two extremes, seeking the formulation of economic reasons for and against the policy of protection, and a middle party, composed mainly of men indifferent to manufacturing as such, but accepting the establishment of manufactures as one of the chief results of the war. . . . The two extremes, however, were far from taking the positions assumed later by extreme protectionism and extreme laissez-faire. . . . Only a few articles occasioned any discussion, and these were items like sugar, cottons, and woolens, which had been reduced in the Ways and Means Committee from the rates proposed by Dallas. Dallas had fixed the duty on cottons at 33⅓ per cent, which was reduced to 30 per cent in Lowndes' bill. Clay moved to restore the original rate. . . . Later Webster proposed a sliding scale on cottons, the rate to be 30 per cent for two years, then 25 per cent for two more, and then 20 per cent. Clay moved to amend by making the first period three years and the second one year. . . . Lowndes assented to the motion. . . . Dallas proposed 28 per cent on woolens. The committee reduced this to 25 per cent, and following the example set in the case of cottons, Lowndes moved that after two years the rate be fixed at 20 per cent. . . . After some debate the first period was made three years, and Lowndes' amendment agreed to. The tariff of 1816 was a substantial victory for the manufacturers. . . . But . . . in its working out the tariff of 1816 proved a bitter disappointment to the manufacturing in-

terest. The causes, however, were widely varied. . . . Yet it would be easy to exaggerate the distresses of the country. The years from 1816 to 1820 especially, were years of depression and hard times, but the steady growth of the country was hardly interrupted. In the main the tariff did not fail of its legitimate object. For the most part the new manufactures were conserved. . . . More and more there was a growing impatience with the tariff of 1816, and a tendency to lay the bad times upon its shoulders. . . . March 22, 1820, Baldwin of Pennsylvania, chairman of the newly created Committee on Manufactures, introduced a tariff bill embodying the general demand of the protected interests. . . . The bill passed the House by a vote of 90 to 69; it was defeated in the Senate by one vote."— O. L. Elliott, *The Tariff Controversy*, 1789–1833 (*Leland Stanford Junior University Monographs No.* 1), *pp.* 163–211.—"The revision of the Tariff, with a view to the protection of home industry, and to the establishment of what was then called, 'The American System,' was one of the large subjects before Congress at the session of 1823–24, and was the regular commencement of the heated debates on that question which afterwards ripened into a serious difficulty between the federal government and some of the southern States. . . . Revenue the object, protection the incident, had been the rule in the earlier tariffs: now that rule was sought to be reversed, and to make protection the object of the law, and revenue the incident. . . . Mr. Clay, the leader in the proposed revision, and the champion of the American System, expressly placed the proposed augmentation of duties on this ground. . . . Mr. Webster was the leading speaker on the other side, and disputed the universality of the distress which had been described; claiming exemption from it in New England; denied the assumed cause for it where it did exist, and attributed it to over expansion and collapse of the paper system, as in Great Britain, after the long suspension of the Bank of England; denied the necessity for increased protection to manufactures, and its inadequacy, if granted, to the relief of the country where distress prevailed. . . . The bill was carried in the House, after a protracted contest of ten weeks, by the lean majority of five — 107 to 102 — only two members absent, and the voting so zealous that several members were brought in upon their sick couches. In the Senate the bill encountered a strenuous resistance. . . . The bill . . . was carried by the small majority of four votes — 25 to 21. . . . An increased protection to the products of several States, as lead in Missouri and Illinois, hemp in Kentucky, iron in Pennsylvania, wool in Ohio and New York, commanded many votes for the bill; and the impending presidential election had its influence in its favor. Two of the candidates, Messrs. Adams and Clay, were avowedly for it; General Jackson, who voted for the bill, was for it, as tending to give a home supply of the articles necessary in time of war, and as raising revenue to pay the public debt."— T. H. Benton, *Thirty Years' View*, *v.* 1, *ch.* 13.

(United States): A. D. 1828.–The "Bill of Abominations."— New England changes front. —"In 1828 came another tariff bill, so bad and so extreme in many respects that it was called the 'bill of abominations.' It originated in the agitation of the woollen manufacturers which had started the year before, and for this bill Mr. Webster spoke and voted. He changed his ground on this important question absolutely and entirely, and made no pretence of doing anything else. The speech which he made on this occasion is a celebrated one, but it is so solely on account of the startling change of position which it announced. . . . A few lines from the speech give the marrow of the whole matter. Mr. Webster said: 'New England, sir, has not been a leader in this policy. . . . The opinion of New England up to 1824 was founded in the conviction that, on the whole, it was wisest and best, both for herself and others, that manufactures should make haste slowly. . . . When, at the commencement of the late war, duties were doubled, we were told that we should find a mitigation of the weight of taxation in the new aid and succor which would be thus afforded to our own manufacturing labor. Like arguments were urged, and prevailed, but not by the aid of New England votes, when the tariff was afterwards arranged at the close of the war in 1816. Finally, after a winter's deliberation, the act of 1824 received the sanction of both Houses of Congress and settled the policy of the country. . . . What, then, was New England to do? Was she to hold out forever against the course of the government, and see herself losing on one side and yet make no effort to sustain herself on the other? No, sir. Nothing was left to New England but to conform herself to the will of others. Nothing was left to her but to consider that the government had fixed and determined its own policy, and that policy was protection.' . . . Opinion in New England changed for good and sufficient business reasons, and Mr. Webster changed with it. Free trade had commended itself to him as an abstract principle, and he had sustained and defended it as in the interest of commercial New England. But when the weight of interest in New England shifted from free trade to protection Mr. Webster followed it."— H. C. Lodge, *Daniel Webster*, *ch.* 6.— "There was force in Webster's assertion, in reply to Hayne, that New England, after protesting against the tariff as long as she could, had conformed to a policy forced upon the country by others, and had embarked her capital in manufacturing. October 23, 1826, the Boston woollen manufacturers petitioned Congress for more protection. . . . This appeal of the woollen manufacturers brought out new demands from other quarters. Especially the wool-growers came forward. . . . May 14, 1827, the Pennsylvania Society for the Promotion of Manufactures and the Mechanic Arts called a convention of wool growers and manufacturers. The convention met at Harrisburg, July 30, 1827. It was found necessary to enlarge the scope of the convention in order to make allies of interests which would otherwise become hostile. The convention went on the plan of favoring protection on everything which asked for it. The result was that iron, steel, glass, wool, woollens, hemp, and flax were recommended for protection. Louisiana was not represented, and so sugar was left

out. It was voted to discourage the importation of foreign spirits and the distillation of spirits from foreign products, by way of protection to Western whiskey. . . . When the 20th Congress met, the tariff was the absorbing question. Popular interest had become engaged in it, and parties were to form on it, but it perplexed the politicians greatly. . . . The act which resulted from the scramble of selfish special interests was an economic monstrosity. . . . May 19, 1828, the bill became a law. The duty on wool costing less than 10 cents per pound was 15 per cent., on other wool 20 per cent. and 30 per cent. That on woollens was 40 per cent. for a year, then 45 per cent., there being four minima, 50 cents, $1.00, $2.50, $4.00. All which cost over $4.00 were to be taxed 45 per cent. for a year, then 50 per cent. . . . The process of rolling iron had not yet been introduced into this country. It was argued that rolled iron was not as good as forged, and this was made the ground for raising the tax on rolled iron from $30.00 to $37.00 per ton, while the tax on forged iron was raised from $18.00 to $22.40. Rolled iron was cheaper and was available for a great number of uses. The tax, in this case, 'countervailed' an improvement in the arts, and robbed the American people of their share in the advantage of a new industrial achievement. The tax on steel was raised from $20.00 to $30.00 per ton; that on hemp from $35.00 to $45.00 per ton; that on molasses from 5 cents to 10 cents per gallon; that on flax from nothing to $35.00 per ton. The tax on sugar, salt, and glass remained unchanged, and that on tea also, save by a differential tonnage duty. Coffee was classified and the tax reduced. The tax on wine, by a separate act, was reduced one half or more. This was the 'tariff of abominations,' so called on account of the number of especially monstrous provisions which it contained."—W. G. Sumner, *Andrew Jackson as a Public Man, ch.* 9.—"The tariff of 1828 . . . was the work of politicians and manufacturers; and was commenced for the benefit of the woollen interest, and upon a bill chiefly designed to favor that branch of manufacturing industry. But, like all other bills of the kind, it required help from other interests to get itself along."—T. H. Benton, *Thirty Years' View, v.* 1, *ch.* 34.—J. Schouler, *Hist. of the U. S., ch.* 12, *sect.* 2 (*v.* 3).

(United States): A. D. 1832.—Clay's delusive act to diminish revenue.—President Jackson, in his message of December, 1831, "invited attention to the fact that the public debt would be extinguished before the expiration of his term, and that, therefore, 'a modification of the tariff, which shall produce a reduction of the revenue to the wants of the government,' was very advisable. He added that, in justice to the interests of the merchant as well as the manufacturer, the reduction should be prospective, and that the duties should be adjusted with a view 'to the counteraction of foreign policy, so far as it may be injurious to our national interests.' This meant a revenue tariff with incidental retaliation. He had thus arrived at a sensible plan to avoid the accumulation of a surplus. Clay took the matter in hand in the Senate, or rather in Congress. . . . He recognized the necessity of reducing the revenue, but he would reduce the revenue without reducing protective duties. The 'American System' should not suffer. It must, therefore, not be done in the manner proposed by Jackson. He insisted upon confining the reduction to duties on articles not coming into competition with American products. . . . Instead of abolishing protective duties he would rather reduce the revenue by making some of them prohibitory. . . . When objection was made that this would be a defiance of the South, of the President, and of the whole administration party, he replied, as Adams reports, that 'to preserve, maintain and strengthen the American System, he would defy the South, the President and the devil.' He introduced a resolution in the Senate, 'that the existing duties upon articles imported from foreign countries, and not coming into competition with similar articles made or produced within the United States, ought to be forthwith abolished, except the duties upon wines and silks, and that those ought to be reduced; and that the Committee on Finance be instructed to report a bill accordingly.'" After long debate Clay's "tariff resolution was adopted, and in June, 1832, a bill substantially in accord with it passed both houses, known as the tariff act of 1832. It reduced or abolished the duties on many of the unprotected articles, but left the protective system without material change. As a reduction of the revenue it effected very little. . . . The reduction proposed by Clay, according to his own estimate, was not over seven millions; the reduction really effected by the new tariff law scarcely exceeded three millions. Clay had saved the American System at the expense of the very object contemplated by the measure. It was extremely short-sighted statesmanship. The surplus was as threatening as ever, and the dissatisfaction in the South grew from day to day."—C. Schurz, *Life of Henry Clay, ch.* 13 (*v.* 1).

Also in H. Clay, *Life, Cor. and Speeches* (*Colton ed.*), *v.* 5, *pp.* 416–428.

(United States): A. D. 1833.—The Southern opposition to protection.—Nullification in S. Carolina.—The compromise tariff. See United States of Am.: A. D. 1828–1833.

(Germany): A. D. 1833.—The Zollverein.—"The German Customs Union (Deutsche Zollverein) is an association of states, having for its declared object to secure freedom of trade and commerce between the contracting states, and a common interest in the customs revenue. The terms of the union are expressed in the treaty between Prussia and the other states, dated 22d March, 1833, which may be regarded as the basis of the association. The states now [1844] forming the union are Prussia, Bavaria, Wurtemberg, Saxony, Hesse-Cassel, Hesse-Darmstadt, Baden, Nassau, the Thuringian states, Frankfort, Brunswick, Lippe-Schaumburg, and Luxemburg. The population of these, with the exception of the three last mentioned states, was, in 1839, 26,858,886. Including these three states, which have since joined the union, the present population cannot be less than twenty-seven millions and a half. The German powers which have not joined the union are Austria, with twelve millions of German subjects, and Hanover, Oldenburg, Holstein, the two Mecklenburgs, and the Hanse Towns, whose united population is about three millions more. The inhabitants of Germany are, therefore, divided

in the proportions of twenty-seven and a half within, to fifteen without, the sphere of the Zollverein. The treaty provides in the thirty-eighth article, for the admission of other German states, and the thirty-ninth article for the making of treaties with foreign states, but these latter are not admissible into the union. . . . The declared principle of the league — namely, the commercial and financial union of the German states — is not only one to which no foreign power has any right to object, but is excellent in itself; and is, in fact, the establishment of free trade among the associated states. . . . But it is not merely to its avowed principle that the league owes its successful accomplishment. There are other motives which have entered largely into the causes of its existence. In the first place, it has given practical effect to that vehement desire for national unity which so generally pervades the German mind. . . . Then, it so happened that this general desire for union fell in exactly with the policy of Prussia — a power which has not failed to seize so favourable an opportunity of extending her political influence, and occupying a position which, though of nominal equality, has in reality secured her predominance among the German states. To these inducements we regret to be obliged to add another — namely, the prevalent opinion in Germany that their manufacturing industry ought to be protected against foreign competition, and that the tariff of the Zollverein ought to be used as an instrument for the exclusion of foreign manufactures from the German market. . . . Although the Congress of Vienna had established a new Germanic confederation, (Deutsche Bund) and a federative diet charged with the maintenance of peace at home and abroad, yet it was soon perceived and felt that the kind of union obtained by means of this confederation was more formal than real. . . . The late King of Prussia was one of the first to perceive, that, in order to unite Germany in reality, something more cogent than the federative diet was indispensable. He found his own power rather weakened than strengthened by the addition of the Rhenish provinces, so long as they remained separated, not only by distance, but by the customs-barriers of intervening states, from his ancient territories. He accordingly effected, in 1829, a convention with those states, by which he became the farmer of their customs-revenues, and so removed the barriers between Eastern and Western Prussia. Some years, however, previous to this, the Prussian Government had deemed it expedient to comply with the demands of the manufacturers (especially those in the Rhenish provinces) for protection against foreign goods, which, since the peace, had begun to make their appearance; and on the 26th May, 1818, a new Prussian Tariff had been issued, which was designed to afford a moderate protection to the home industry, and which may be regarded as the groundwork of the present Tariff of the Zollverein. . . . But the proceedings of Prussia were considered in a hostile light by the manufacturers of the South. They formed a counteracting association in 1819 which numbered from five to six thousand members, had its headquarters in Nuremberg, and agents in all the principal towns, and published a weekly newspaper devoted to the cause. They addressed the Diet, the German courts, and the Congress at Vienna in 1820, in favor of a general customs-union. They so far succeeded that, in 1826, the small Thuringian States, occupying the central portion of Germany, with one or two others, formed themselves into a customs-union, under the name of the Mittel-Verein; and within the two succeeding years a more important union was accomplished, consisting of Bavaria and Wurtemberg, with their small enclosed states; the Tariff of which union is stated to have been as high, or very nearly so, as that of Prussia. Thus Germany contained three separate customs-associations, with separate Tariffs, and it became obviously desirable to unite these conflicting interests. Prussia made overtures to the other unions, but was for a long time unsuccessful; they objecting principally to the high scale of Prussian duties on colonial produce. At last, however, all obstacles were removed, (principally, as Dr. List states, through the exertions of Baron von Cotta, the eminent publisher, and proprietor of the Allgemeine Zeitung,) and on the 22d of March, 1833, the treaty was signed by which, for the first time, Germany was knit together in anything like a binding national confederation. Between that date and the present, the league has been enlarged by the accession of other states; but, as we have already mentioned, Hanover and some other northern states have hitherto refused to join it. Hanover formed a distinct union with three neighbouring states, viz.: Brunswick, Lippe-Schaumburg, and Oldenburg, which assumed the title of the North-western League; but the two former having subsequently seceded from it and joined the Zollverein, the North-western League has been reduced to Hanover and Oldenburg only. The Hanse towns, Mecklenburg, and Holstein, are not yet members of any customs-union. The revenues of the Zollverein are divided among the contracting states according to the population of each state respectively."— *Edinburgh Review, Jan.*, 1844 (*v.* 79, *p.* 108).

Also in G. Krause, *The Growth of German Unity*, *ch.* 10. — See, also, Germany: A. D. 1817–1840; and 1819–1847.

(England): A. D. 1836-1839.— Beginning of the Anti-Corn-Law agitation.— "Cobden was in no sense the original projector of an organized body for throwing off the burden of the corn duties. In 1836 an Anti-Corn-Law Association had been formed in London; its principal members were the parliamentary radicals, Grote, Molesworth, Joseph Hume, and Mr. Roebuck. But this group, notwithstanding their acuteness, their logical penetration, and the soundness of their ideas, were in that, as in so many other matters, stricken with impotence. Their gifts of reasoning were admirable, but they had no gifts for popular organization. . . . It was not until a body of men in Manchester were moved to take the matter in hand, that any serious attempt was made to inform and arouse the country. The price of wheat had risen to seventy-seven shillings in the August of 1838; there was every prospect of a wet harvesting; the revenue was declining; deficit was becoming a familiar word; pauperism was increasing; and the manufacturing population of Lancashire were finding it impossible to support themselves, because the landlords, and the legislation of a generation of landlords before them, insisted on keeping the first necessity of life at an artificially high rate.

. . . In October, 1838, a band of seven men met at a hotel in Manchester, and formed a new Anti-Corn Law Association. They were speedily joined by others, including Cobden, who from this moment began to take a prominent part in all counsel and action. That critical moment had arrived, which comes in the history of every successful movement, when a section arises within the party, which refuses from that day forward either to postpone or to compromise. The feeling among the older men was to stop short in their demands at some modification of the existing duty. . . . The more energetic members protested against these faltering voices. . . . The meeting was adjourned, to the great chagrin of the President, and when the members assembled a week later, Cobden drew from his pocket a draft petition which he and his allies had prepared in the interval, and which after a discussion of many hours was adopted by an almost unanimous vote. The preamble laid all the stress on the alleged facts of foreign competition, in words which never fail to be heard in times of bad trade. It recited how the existing laws prevented the British manufacturer from exchanging the produce of his labour for the corn of other countries, and so enabled his foreign rivals to purchase their food at one half of the price at which it was sold in the English market; and finally the prayer of the petition called for the repeal of all laws relating to the importation of foreign corn and other foreign articles of subsistence, and implored the House to carry out to the fullest extent, both as affects manufactures and agriculture, the true and peaceful principles of free-trade. In the following month, January, 1839, the Anti-Corn-Law Association showed that it was in earnest in the intention to agitate, by proceeding to raise a subscription of an effective sum of money. Cobden threw out one of those expressions which catch men's minds in moments when they are already ripe for action. 'Let us,' he said, 'invest part of our property, in order to save the rest from confiscation.' Within a month £6,000 had been raised, the first instalment of many scores of thousands still to come. A great banquet was given to some of the parliamentary supporters of Free Trade; more money was subscribed, convictions became clearer and purpose waxed more resolute. On the day after the banquet, at a meeting of delegates from other towns, Cobden brought forward a scheme for united action among the various associations throughout the country. This was the germ of what ultimately became the League."—J. Morley, *Life of Richard Cobden, ch.* 6 (*v.* 1).

Also in W. Robertson, *Life and Times of John Bright, ch.* 8 *and* 11-14.

(England): **A. D. 1842.—Peel's modification of the Corn Laws.—His sliding-scale.—His Tariff reductions.—The first great step towards Free-Trade.**—The Whig administration under Lord Melbourne gave way in August, in 1841, to one formed by Sir Robert Peel. On the opening of the session in February, 1842, "The Queen's Speech recommended Parliament to consider the state of the laws affecting the importation of corn and other commodities. It announced the beginning of a revolution which few persons in England thought possible, although it was to be completed in little more than ten years. On the 9th of February Peel moved that the House should resolve itself into a Committee to consider the Corn Laws. His speech, which lasted nearly three hours, was necessarily dull, and his proposal was equally offensive to the country gentlemen and to the Anti-Corn Law League. It amounted merely to an improvement of the sliding-scale which had been devised by the Duke of Wellington's Cabinet [See above: A. D. 1815–1828], and was based on the axiom that the British farmer, taking one year with another, could not make a profit by growing corn if foreign corn were admitted at a price of less than 70s. a quarter. By a calculation of prices extending over a long term of years, Peel had satisfied himself that a price of 56s. a quarter would remunerate the British farmer. He proposed to modify the sliding-scale accordingly. . . . Peel retained the minimum duty of 1s. when corn was selling at 73s. the quarter; he fixed a maximum duty of 20s. when corn was selling at from 50s. to 51s. the quarter, and he so altered the graduation in the increase of duty as to diminish the inducement to hold grain back when it became dear. . . . So general was the dissatisfaction with Peel's Corn Law that Russell ventured once more to place before the House his alternative of a fixed 8s. duty. He was defeated by a majority of upwards of 120 votes. Two days later Mr. Villiers made his annual motion for the total repeal of the Corn Laws, and was beaten by more than four votes to one. The murmurs of Peel's own supporters were easily overborne, and the Bill was carried through the House of Commons after a month spent in debates. As soon as it had passed, and the estimates for the army and navy had been voted, Peel produced what was really his Budget, nominally Mr. Goulburn's. . . . In every one of the last five years there had been a deficit. . . . Peel therefore resolved to impose an income tax." He also raised the duty on Irish spirits and on exports of coal, besides making some changes in the stamp duties. "With these and with the income tax he calculated that he would have a surplus of £1,900,000. Peel was thus able to propose a reduction of the tariff upon uniform and comprehensive principles. He proposed to limit import duties to a maximum of 5 per cent. upon the value of raw materials, of 12 per cent. upon the value of goods partly manufactured, and of 20 per cent. upon the value of goods wholly manufactured. Out of the 1,200 articles then comprised in the tariff, 750 were more or less affected by the application of these rules, yet so trivial was the revenue raised from most of them that the total loss was computed at only £270,000 a year. Peel reduced the duty on coffee; he reduced the duty on foreign and almost entirely abolished the duty on Canadian timber. Cattle and pigs, meat of all descriptions, cheese and butter, which had hitherto been subject to a prohibitory duty, he proposed to admit at a comparatively low rate. He also diminished the duty upon stage coaches. So extensive a change in our system of national finance had never before been effected at one stroke. . . . Immense was the excitement caused by the statement of the Budget. . . . Every part of Peel's scheme was debated with the utmost energy. . . . He procured the ratification of all his measures subject to some slight amendments, and at the cost of a whole session spent

in discussing them. Little or nothing else was accomplished by Parliament in this year. Peel had returned to power as the Champion of protection. His first great achievement was the extension of the freedom of trade."—F. G. Montague, *Life of Sir Robert Peel, ch.* 8.—"Notwithstanding the objections which free traders might raise, the Budget of 1842 proved the first great advance in the direction of free trade. It did not remove the shackles under which trade was struggling, but it relaxed the fastenings and lightened the load."—S. Walpole, *Hist. of Eng. from* 1815, *ch.* 18 (*v.* 4).

Also in: S. Walpole, *Life of Sir Robert Peel, v.* 3, *ch.* 5.—J. Morley, *Life of Richard Cobden, v.* 1, *ch.* 11.

(United States): A. D. 1842.—An Act to provide a necessary increase of revenue, with incidental protection.—"There had been a lull in tariff legislation for ten years. The free-trade party had been ascendant; and amendment of the law, save in the slight ways mentioned, had been impossible. During the decade, a financial tornado had swept over the country; the United-States bank had ceased to be; the experiment of keeping the government deposits with the State banks had been tried, and had failed; the government had kept them several years without authority, but finally a bill had been passed which authorized keeping them in that manner. The time had now nearly come for reducing the duties [by the gradual scaling down provided for in the Compromise tariff act of 1833] to their lowest point. Manufactures were drying up at the root. A material augmentation of the national revenue from some source had become necessary. . . . Whatever difference of opinion existed respecting the necessity of additional protection to manufacturers, some expedient, it was universally conceded, must be adopted to increase the public revenue. As no one favored direct taxation, a revision of the tariff was the only mode of enriching the treasury. . . . The committee on manufactures did not report to the House until the last of March, 1842. . . . The leading provisions of the bill reported by the committee were the following: 1. A general ad valorem duty of 30 per cent, with few exceptions, where the duty was on that principle. 2. A discrimination was made for the security of certain interests requiring it by specific duties, in some instances below, in others above, the rate of the general ad valorem duty. 3. As a general principle, the duty on the articles subject to discrimination was made at the rate at which it was in 1840, after the deduction of four-tenths of the excess on 20 per cent by the Act of 1833. . . . The subject was discussed at great length by the House, although the time was drawing near for making the last reduction under the compromise law of [1833]. Something must be done. Accordingly, Fillmore, chairman of the committee of ways and means, reported a bill to extend the existing tariff laws until the 1st day of August, 1842, which was immediately passed by the House; but the Senate amended the bill by adding a proviso that nothing therein contained should suspend the operation of the Distribution law,—a law passed at the extra session of the preceding year, distributing the proceeds of the sales of the public lands among the States. . . . In the debate on this bill the proviso became a prominent topic of discussion. The distribution Act contained a proviso, that, if at any time the duties under the compromise tariff should be raised, the distribution should cease, and be suspended until the cause of the suspension were removed. . . . Those who were in favor of high protective duties desired the removal of the proviso of the distribution Act in order that the tariff might be raised without interfering with distribution. The House having rejected an amendment proposing to strike out the proviso which prohibited the suspension of the distribution law, the bill was passed by the House, and afterward by the Senate, but vetoed by the President. Another tariff bill was introduced by Mr. Fillmore, drawn by the Secretary of the Treasury,—to which, however, the committee added a proviso that the . . . proceeds of the public lands should be distributed, notwithstanding the increase of duties,—which passed both Houses after a short debate. This contained a revision of a considerable number of duties, and was also vetoed by the President. Impelled by the necessity of providing additional revenue, a bill was rapidly pushed through Congress, similar to that previously passed, with the omission of the proviso requiring distribution, and further modified by admitting free of duty tea and coffee growing east of the Cape of Good Hope, imported in American vessels. This bill was approved by the President. A separate bill was then passed, repealing the proviso of the distribution Act, and allowing the distribution to take place, notwithstanding the increase of duties; but the bill was retained by the President and defeated. Thus ended a long and bitter controversy, in which public sentiment expanded, and hardened against the chief Executive of the nation. . . . That tariff remained without change during the next four years."—A. S. Bolles, *Financial Hist. of the U. S.*, 1789–1860, *bk.* 3, *ch.* 6.

(England): A. D. 1845-1846.—The Repeal of the Corn Laws.—Dissolution of the League.—"The Anti-Corn-Law agitation was one of those movements which, being founded on right principles, and in harmony with the interest of the masses, was sure to gather fresh strength by any event affecting the supply of food. It was popular to attempt to reverse a policy which aimed almost exclusively to benefit one class of society. . . . The economic theorists had the mass of the people with them. Their gatherings were becoming more and more enthusiastic. And even amidst Conservative landowners there were not a few enlightened and liberal minds who had already, silently at least, espoused the new ideas. No change certainly could be expected to be made so long as bread was cheap and labour abundant. But when a deficient harvest and a blight in the potato crop crippled the resources of the people and raised grain to famine prices, the voice of the League acquired greater power and influence. Hitherto they had received hundreds of pounds. Now, thousands were sent in to support the agitation. A quarter of a million was readily contributed. Nor were the contributors Lancashire mill-owners exclusively. Among them were merchants and bankers, men of heart and men of mind, the poor labourer and the peer of the realm. The fervid oratory of Bright, the demonstrative and argumentative reasoning of Cobden, the more popular appeals of Fox, Rawlins, and other platform speakers, filled the newspaper press, and were eagerly read. And when

Parliament dissolved in August 1845, even Sir Robert Peel showed some slight symptoms of a conviction that the days of the corn laws were numbered. Every day, in truth, brought home to his mind a stronger need for action, and as the ravages of the potato disease progressed, he saw that all further resistance would be absolutely dangerous. A cabinet council was held on October 31 of that year to consult as to what was to be done, and at an adjourned meeting on November 5 Sir Robert Peel intimated his intention to issue an order in council remitting the duty on grain in bond to one shilling, and opening the ports for the admission of all species of grain at a smaller rate of duty until a day to be named in the order; to call Parliament together on the 27th inst., in order to ask for an indemnity, and a sanction of the order by law; and to submit to Parliament immediately after the recess a modification of the existing law, including the admission at a nominal duty of Indian corn and of British colonial corn. A serious difference of opinion, however, was found to exist in the cabinet on the question brought before them, the only ministers supporting such measures being the Earl of Aberdeen, Sir James Graham, and Mr. Sidney Herbert. Nor was it easy to induce the other members to listen to reason. And though at a subsequent meeting, held on November 28, Sir Robert Peel so far secured a majority in his favour, it was evident that the cabinet was too divided to justify him in bringing forward his measures, and he decided upon resigning office. His resolution to that effect having been communicated to the Queen, her Majesty summoned Lord John Russell to form a cabinet, and, to smooth his path, Sir Robert Peel, with characteristic frankness, sent a memorandum to her Majesty embodying a promise to give him his support. But Lord John Russell failed in his efforts, and the Queen had no alternative but to recall Sir Robert Peel, and give him full power to carry out his measures. It was under such circumstances that Parliament was called for January 22, 1846, and on January 27 the Government plan was propounded before a crowded House. It was not an immediate repeal of the corn laws that Sir Robert Peel recommended. He proposed a temporary protection for three years, till February 1, 1849, imposing a scale during that time ranging from 4s. when the price of wheat should be 50s. per quarter and upward, and 10s. when the price should be under 48s. per quarter, providing, however, that after that period all grain should be admitted at the uniform duty of 1s. per quarter. The measure, as might have been expected, was received in a very different manner by the political parties in both Houses of Parliament. There was treason in the Conservative camp, it was said, and keen and bitter was the opposition offered to the chief of the party. For twelve nights speaker after speaker indulged in personal recriminations. They recalled to Sir Robert Peel's memory the speeches he had made in defence of the corn laws. And as to his assertion that he had changed his mind, they denied his right to do so. . . . The passing of the measure was, however, more than certain, and after a debate of twelve nights' duration on Mr. Miles's amendment, the Government obtained a majority of 97, 337 having voted for the motion and 240 against it. And from that evening the corn law may be said to have expired. Not a day too soon, certainly, when we consider the straitened resources of the country as regards the first article of food, caused not only by the bad crop of grain, but by the serious loss of the potato crop, especially in Ireland."—L. Levi, *Hist. of British Commerce, pt.* 4, *ch.* 4.—"On the 2nd of July the League was 'conditionally dissolved,' by the unanimous vote of a great meeting of the leaders at Manchester. . . . Mr. Cobden here joyfully closed his seven years' task, which he had prosecuted at the expense of health, fortune, domestic comfort, and the sacrifice of his own tastes in every way. . . . Mr. Cobden had sacrificed at least £20,000 in the cause. The country now, at the call of the other chief Leaguers, presented him with above £80,000 — not only for the purpose of acknowledging his sacrifices, but also to set him free for life for the political service of his country."—H. Martineau, *Hist. of the Thirty Years' Peace, bk.* 6, *ch.* 15 (*v.* 4).

Also in: W. C. Taylor, *Life and Times of Sir Robert Peel, v.* 3, *ch.* 8–10.—J. Morley, *Life of Richard Cobden, v.* 1, *ch.* 15–16.—M. M. Trumbull, *The Free Trade Struggle in England.*—A. Bisset, *Notes on the Anti-Corn Law Struggle.*—*Debate upon the Corn Laws in Session* 1846.

(United States): A. D. 1846-1861.—Lowered duties and the disputed effects.—"In 1846 was passed what we will call the 'Walker tariff,' from Robert J. Walker, then Secretary of the Treasury. It reduced the duties on imports down to about the standard of the 'Compromise' of 1833. It discriminated, however, as the Compromise did not, between goods that could be produced at home and those that could not. It approached, in short, more nearly than any other, in its principles and details, to the Hamilton tariff, although the general rate of duties was higher. From that time up to 1857 there was a regular and large increase in the amount of dutiable goods imported, bringing in a larger revenue to the government. The surplus in the treasury accumulated, and large sums were expended by the government in buying up its own bonds at a high premium, for the sake of emptying the treasury. Under these circumstances the 'tariff of 1857' was passed, decidedly lowering the rates of duties and largely increasing the free list. The financial crisis of that year diminished the imports, and the revenue fell off $22,000,000. It rallied, however, the next two years, but owing to the large increase of the free list, not quite up to the old point."—A. L. Perry, *Elements of Pol. Economy, p.* 464. — "The free-traders consider the tariff of 1846 to be a conclusive proof of the beneficial effect of low duties. They challenge a comparison of the years of its operation, between 1846 and 1857, with any other equal period in the history of the country. Manufacturing, they say, was not forced by a hot-house process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. Commerce, as they point out, made great advances, and our carrying trade grew so rapidly that in ten years from the day the tariff of 1846 was passed our tonnage exceeded the tonnage of England. The free-traders refer with especial emphasis to what they term the symmetrical development of all the great interests of the country under this

liberal tariff. Manufactures were not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways and to the foreign market in our own ships. Assertions as to the progress of manufactures in the period under discussion are denied by the protectionists. While admitting the general correctness of the free-trader's statements as to the prosperous condition of the country, they call attention to the fact that directly after the enactment of the tariff of 1846 the great famine occurred in Ireland, followed in the ensuing years by short crops in Europe. The prosperity which came to the American agriculturist was therefore from causes beyond the sea and not at home,— causes which were transient, indeed almost accidental. Moreover an exceptional condition of affairs existed in the United States in consequence of our large acquisition of territory from Mexico at the close of the war and the subsequent and almost immediate discovery of gold in California. A new and extended field of trade was thus opened in which we had the monopoly, and an enormous surplus of money was speedily created from the products of the rich mines on the Pacific coast. At the same time Europe was in convulsion from the revolutions of 1848, and production was materially hindered over a large part of the Continent. This disturbance had scarcely subsided when three leading nations of Europe, England, France, and Russia, engaged in the wasteful and expensive war of the Crimea. The struggle began in 1853 and ended in 1856, and during those years it increased consumption and decreased production abroad, and totally closed the grain-fields of Russia from any competition with the United States. The protectionists therefore hold that the boasted prosperity of the country under the tariff of 1846 was abnormal in origin and in character. . . . The protectionists maintain that from 1846 to 1857 the United States would have enjoyed prosperity under any form of tariff, but that the moment the exceptional conditions in Europe and in America came to an end, the country was plunged headlong into a disaster [the financial crisis of 1857] from which the conservative force of a protective tariff would in large part have saved it. . . . The free-traders, as an answer to this arraignment of their tariff policy, seek to charge responsibility for the financial disasters to the hasty and inconsiderate changes made in the tariff in 1857, for which both parties were in large degree if not indeed equally answerable." —J. G. Blaine, *Twenty Years of Congress, v.* 1, *ch.* 9.

(England): A. D. 1846-1879.—Total abandonment of Protection and Navigation Laws. —The perfected tariff of Free Trade.—"With the fall of the principle of the protection in corn may be said to have practically fallen the principle of protection in this country altogether. That principle was a little complicated in regard to the sugar duties and to the navigation laws. The sugar produced in the West Indian colonies was allowed to enter this country at rates of duty much lower than those imposed upon the sugar grown in foreign lands. The abolition of slavery in our colonies had made labour there somewhat costly and difficult to obtain continuously, and the impression was that if the duties on foreign sugar were reduced, it would tend to enable those countries which still maintained the slave trade to compete at great advantage with the sugar grown in our colonies by that free labour to establish which England had but just paid so large a pecuniary fine. Therefore, the question of Free Trade became involved with that of free labour; at least, so it seemed to the eyes of many a man who was not inclined to support the protective principle in itself. When it was put to him, whether he was willing to push the Free Trade principle so far as to allow countries growing sugar by slave labour to drive our free grown sugar out of the market, he was often inclined to give way before this mode of putting the question, and to imagine that there really was a collision between Free Trade and free labour. Therefore a certain sentimental plea came in to aid the Protectionists in regard to the sugar duties. Many of the old anti-slavery party found themselves deceived by this fallacy, and inclined to join the agitation against the reduction of the duty on foreign sugar. On the other hand, it was made tolerably clear that the labour was not so scarce or so dear in the colonies as had been represented, and that colonial sugar grown by free labour really suffered from no inconvenience except the fact that it was still manufactured on the most crude, old fashioned, and uneconomical methods. Besides, the time had gone by when the majority of the English people could be convinced that a lesson on the beauty of freedom was to be conveyed to foreign sugar-growers and slave-owners by the means of a tax upon the products of their plantations. Therefore, after a long and somewhat eager struggle, the principle of Free Trade was allowed to prevail in regard to sugar. The duties on sugar were made equal. The growth of the sugar plantations was admitted on the same terms into this country, without any reference either to the soil from which it had sprung or to the conditions under which it was grown."—J. McCarthy, *The Epoch of Reform, ch.* 12.—"The contest on the Navigation Laws [finally repealed in 1849—see NAVIGATION LAWS: A. D. 1849] was the last pitched battle fought by the Protectionist party. Their resistance grew fainter and fainter, and a few occasional skirmishes just reminded the world that such a party still existed. Three years afterwards their leaders came into power. In February, 1852, the Earl of Derby became Prime Minister, and Mr. Disraeli Chancellor of the Exchequer and leader of the House of Commons. The Free-traders, alarmed at the possibility of some attempt to reverse the policy of commercial freedom which had been adopted, took the earliest opportunity of questioning those Ministers in Parliament on the subject. The discreet reply was that the Government did not intend to propose any return to the policy of protection during the present Session, nor at any future time, unless a great majority of members favourable to that policy should be returned to Parliament. But far from this proving to be the case, the general election which immediately ensued reinstated a Liberal Government, and the work of stripping off the few rags of protection that still

hung on went rapidly forward. On the 18th of April, 1853, Mr. Gladstone, as Chancellor of the Exchequer, made his financial statement in an able and luminous speech. Such was the admirable order in which he marshalled his topics, and the transparent lucidity with which he treated them, that although his address occupied five hours in the delivery, and although it bristled with figures and statistics, he never for a moment lost the attention or fatigued the minds of his hearers. Mr. Gladstone's financial scheme included, among other reforms, the reduction or total remission of imposts on 133 articles. In this way, our tariff underwent rapid simplification. Each subsequent year was marked by a similar elimination of protective impediments to free commercial intercourse with other countries. In 1860, butter, cheese, &c., were admitted duty free; in 1869, the small nominal duty that had been left on corn was abolished; in 1874, sugar was relieved from the remnant of duty that had survived from previous reductions. It would be superfluous, as well as tedious, to enter upon a detailed reference to the various minor reforms through which we advanced towards, and finally reached, our present free-trade tariff. In fact, all the great battles had been fought and won by the close of the year 1849, and the struggle was then virtually over. . . . Is our present tariff one from which every shred and vestige of protection have been discarded? Is it truly and thoroughly a free-trade tariff? That these questions must be answered in the affirmative it is easy to prove in the most conclusive manner. We raise about £20,000,000 of our annual revenue by means of customs' duties on the foreign commodities which we import, and this fact is sometimes adduced by the advocates for protection, without any explanation, leaving their readers to infer that ours is not, as it really is, a free-trade tariff. That such an inference is totally erroneous will presently be made manifest beyond all question. We now levy import duties on only fifteen articles. Subjoined is a list of them, and to each is appended the amount of duty levied on it during the financial year ending 1st of April, 1879. Not produced in England: Tobacco, £8,589,681; Tea, 4,169,233; Wine, 1,469,710; Dried Fruit, 509,234; Coffee, 212,002; Chicory, 66,739; Chocolate and Cocoa, 44,671; Total, £15,061,270. Produced also in England: Spirits, £5,336,058; Plate (Silver and Gold), 5,853; Beer, 3,814; Vinegar, 671; Playing Cards, 522; Pickles, 17; Malt, 6; Spruce, 3; Total, £5,346,944. Total of both £20,408,214. It will be seen by the above figures that £15,000,000, or three-fourths of the total sum levied, is levied on articles which we do not and cannot produce in England. It is clear, therefore, that this portion of the import duties cannot by any possibility be said to afford the slightest 'protection to native industry.' Every shilling's worth which we consume of those articles comes from abroad, and every shilling extra that the consumer pays for them in consequence of the duty goes to the revenue. So much for that portion of the £20,400,000 import duties. As to the £5,336,000 levied on foreign spirits, it consists of import duties which are only the exact counterpart of the excise duties, levied internally on the produce of the British distillers. The foreign article is placed on precisely the same footing as the native article. Both have to pay the same duty of about 10s. per gallon on spirits of the same strength. It would of course be an absurd stultification to admit foreign spirits duty-free while the English producer was burdened with a tax of 10s. per gallon; but by making the excise duty and the customs' duty precisely the same, equality is established, and no protection or preference whatever is enjoyed by the native distiller. The excise duty levied in the aforesaid year ending April, 1879, on spirits the produce of British distilleries, was no less than £14,855,000. The trifling amounts raised on plate, beer, vinegar, &c., are explained in the same way. They also act as a mere counterpoise to the excise duties levied on the British producers of the same articles, and thus afford to the latter no protection whatever against foreign competition. It is evident, therefore, that our tariff does not retain within it one solitary shred of protection."—A. Mongredien, *Hist. of the Free Trade Movement in Eng., ch.* 13.

(France): A. D. 1853-1860.—Moderation of Protective duties.—The Cobden-Chevalier Commercial Treaty.—After the fall of Napoleon and the restoration of the Bourbons in France, the protective system was pushed to so great an extreme that it became in some instances avowedly prohibitive. "The first serious attempt to alter this very severe restrictive system was reserved for the Second Empire. The English reforms of Peel proved the possibility of removing most of the barriers to commerce that legislation had set up, and consequently Napoleon III. entered with moderation on the work of revision. Between 1853 and 1855 the duties on coal, iron, steel, and wool were lowered, as also those on cattle, corn, and various raw materials, the requirements for ship-building being allowed in free. The legislative body was, however, with difficulty brought to consent to these measures. A more extensive proposal—made in 1856—to remove all prohibitions on imports, while retaining protective duties of 30% on woollen and 35% on cotton goods, had to be withdrawn, in consequence of the strong opposition that it excited. The interest of the consumers was in the popular opinion entirely subordinate to that of the iron-masters, cotton-spinners, and agriculturists—one of the many instances which shows that the long continuance of high duties does not facilitate the introduction of free competition. It was under such discouraging circumstances that the famous Commercial Treaty of 1860 with England was negotiated. This important measure (the work of Chevalier and Cobden, but owing a good deal of its success to the efforts of the Emperor and M. Rouher), though only a finishing step in English tariff reform, inaugurated a new era in France."—C. F. Bastable, *The Commerce of Nations, ch.* 8.—"By the treaty of commerce of 1860, France engaged to abolish all prohibitions, and to admit certain articles of British produce and manufacture at duties not exceeding 30 per cent. ad valorem, to be further reduced to duties not exceeding 25 per cent. from the 1st October, 1864. Britain, on the other hand, bound herself to abolish the duties on French silks and other manufactured goods, and to reduce the duties on French wines and brandies. As regards coals, France engaged to

reduce the import duty, and both contracting parties engaged not to prohibit exportation of coal, and to levy no duty upon such exports. Whilst both contracting parties engaged to confer on the other any favour, privilege, or reduction in the tariff of duties on imports on the articles mentioned in the treaty which the said power might concede to any third power; and also not to enforce, one against another, any prohibition of importation or exportation which should not at the same time be applicable to all other nations. The sum and substance of the treaty was, that France engaged to act more liberally for the future than she had done for the past, and England made another step in the way of liberalising her tariff, and placing all her manufactures under the wholesome and invigorating influence of free competition. Nor was the treaty allowed to remain limited to France and England, for forthwith after its conclusion both France and England entered into similar treaties with other nations. And inasmuch as under existing treaties other nations were bound to give to England as good treatment as they gave to the most favoured nations, the restrictions theretofore in existence in countries not originally parties to the French treaty were everywhere greatly reduced, and thereby its benefits extended rapidly over the greater part of Europe."—L. Levi, *Statistical Results of the Recent Treaties of Commerce* (*Journal of the Statistical Soc.*, *v.* 40, 1877), *p.* 3.

(Germany): A. D. 1853-1892.—Progress towards Free Trade arrested by Prince Bismarck.—Protection measures of 1878-1887.—"Up to the revolutionary period of 1848–50, the policy of the German Zollverein or Custom's Union was a pronounced protectionism. The general liberalization, so to speak, of political life in Western Europe through the events of the years mentioned and the larger sympathy they engendered between nations produced, however, a strong movement in Germany and German-Austria in favor of greater freedom of commercial exchange between these two countries. It resulted in the conclusion, for the term of twelve years, of the treaty of 1853 between the Zollverein and Austria, as the first of the international compacts for the promotion of commercial intercourse that formed so prominent a feature of European history during the following twenty years. The treaty was a first, but long step towards free exchange, providing, as it did, for uniform duties on imports from other countries, for a considerable free list and for largely reduced duties between the contracting countries. It also contained stipulations for its renewal on the basis of entire free trade. . . . A very influential association was formed, with free trade as the avowed ulterior object. Its leaders, who were also the champions of political liberalism, represented intellects of the highest order. They included the well-known economists Prince Smith, Mittermaier, Rau, Faucher, Michaelis, Wirth, Schulze and Braun. An 'Economic Congress' was held annually, the proceedings of which attracted the greatest attention, and exercised a growing influence upon the policy of the governments composing the Zollverein. . . . The beneficial results of the treaty of 1853 were so obvious and instantaneous that the Zollverein and Austria would have no doubt sought to bring about improved commercial relations with other nations by the same means, but for the disturbance of the peace of Europe by the Crimean war, and the conflict of 1859 between France, Italy and Austria. The bitter feelings, caused by the latter war against the two first named countries wherever the German tongue was spoken, rendered the negotiation of commercial treaties with them out of the question for a time. The great achievement of Richard Cobden and Michel Chevalier, the famous treaty of 1860 between Great Britain and France, changed this reluctance at once into eagerness to secure the same advantages that those two countries had insured to each other. The enlightened and far-seeing despot occupying the throne of France, being once won over to the cause of free exchange by Cobden's ardor and persistence and clear and convincing arguments, against the views of the majority of his ministers and with probably 90 per cent. of his subjects strongly opposed to the abandonment of protectionism, determined, with the zeal of a new convert, to make the most of his new departure. He was very willing, therefore, to meet the advances of the Zollverein, so that in the spring of 1862, after a whole year's negotiation, a formal treaty was consummated between it and the French Empire. It was a very broad measure. . . . It comprised a copyright and trade-mark convention, provisions for liberal modifications of the respective navigation laws and a commercial treaty proper. The latter provided for the free admission of raw materials, for the abolition of transit and export duties and for equalizing import duties as nearly as possible, and also contained a 'most favored nation' clause. . . . In pursuance of the terms of the treaty of 1853 with Austria, negotiations had been commenced early in the sixties with reference to its renewal upon the basis of the removal of all custom-barriers between the two countries. Austria was naturally against the conclusion of a treaty between the Zollverein and France with herself left out, and opposed its consummation with all the means at her command. . . . After long negotiations, accompanied by much excitement in Germany, a compromise was reached in 1864, under which the Zollverein was renewed for twelve years, that is till 1877, and the French treaty ratified on condition that a new treaty should be made with Austria. This was done in 1865, but the new convention did not provide for the complete commercial union, contemplated under that of 1853. It was only a compact between two independent nations, but on more liberal lines than the old treaty, and certainly constituting a yet nearer approach to free trade. . . . In other directions the Zollverein lost no time in following the example of Napoleon by entering successively in 1865 and 1866 into commercial treaties with Belgium, Italy, Great Britain and Switzerland, which were simple conventions, by which the contracting parties granted to each other the position of the most favored nation, or formal tariff regulating treaties after the model of that between the Zollverein and France. These additional treaties were no more than the latter the work of Bismarck. . . . The general upheaval in Germany arising from the war between Prussia and Austria and her North and South-German Allies, while temporarily delaying the farther progress of tariff reform, subsequently accelerated its forward march. . . . A special treaty for the reform of the constitution, so to

speak, of the Zollverein was concluded in July, 1867, between the North-German Federation, the new political constellation Prussia had formed out of all Germany north of the Main, after destroying the old Diet, and Bavaria, Wuertemberg, Baden and Hesse, under the provisions of which the tariff and revenue policy of all Germany was to be managed by the 'Zollparlament,' consisting of an upper house, made up of representatives of the governments, and of a lower house of representatives of the people elected by universal suffrage on a population basis. Thus tariff reform was actually the chain that bound up, as it were, the material interests of all Germans outside of Austria for the first time, as those of one nation. Negotiations for a new commercial treaty with the dual monarchy of Austria-Hungary — into which Austria had changed in consequence of the events of 1866 — commenced immediately after the restoration of peace, and were brought to a satisfactory conclusion in March, 1868. The treaty was to run nine years, and provided for still lower duties than under the old treaty, the principal reductions being on all agricultural products, wines and iron. . . . The Franco-German war put an end to the treaty of 1862 between France and the Zollverein. As a substitute for the commercial part of it, article II of the treaty of peace of 1871 provided simply that France and Germany should be bound for an indefinite period to allow each other the most favorable tariff rates either of them had granted or might grant to Great Britain, Belgium, Holland, Switzerland, Austria-Hungary and Russia. . . . A large majority of the members of the first Reichstag [under the newly created Empire] favored further legislation in the direction of free trade, and the work of tariff reform was vigorously taken in hand, as soon as the constitution and the essential organic laws of the Empire had been framed. . . . In the session of 1873 the National Liberals brought in a motion asking the Government to present measures for the abolition of all duties on raw and manufactured iron, salt and other articles. The Government responded very readily. . . . Prince Bismarck was no less pronounced for a strict revenue tariff than any of the other government speakers. Up to the end of 1875, there was not the slightest indication of a change of views on his part upon this general subject. . . . The climax of the free trade movement in Germany can be said to have been reached about the time last stated. But a few months later, suspicious signs of a new inspiration on the part of the Prince became manifest. Rumors of dissensions between him and Minister Delbrück began to circulate, and gradually gained strength. In May, 1876, all Germany was startled by the announcement that the latter and his principal co-workers had resigned. Soon it was known that their retirement was due to a disagreement with the Prince over tariff reform matters. A crisis had evidently set in that was a great puzzle at first to everybody. Gradually it became clear that the cause of it was really a sudden abandonment of the past policy by the Prince. The new course, upon which the mighty helmsman was starting the ship of state, was signalized in various ways, but the full extent of his change of front was disclosed only in a communication addressed by him to the Federal Council, under date of December 15, 1878. It was a most extraordinary document. It condemned boldly all that had been done by the government under his own eyes and with his full consent in relation to tariff reform ever since the Franco-German treaty of 1862. . . . As the principal reason for the new departure, he assigned the necessity of reforming the public finances in order to increase the revenues of the Government. The will of the Chancellor had become the law for the federal council, and, accordingly, the tariff-committee began the work of devising a general protective tariff in hot haste. It was submitted to the Reichstag by the Prince in May, 1879. . . . Thus Germany was started on the downward plain of protectionism, on which it continued for twelve years. Beyond all question, the Chancellor was solely responsible for it. . . . The tariff bill of 1879 met with vigorous opposition under the lead of ex-Minister Delbrück, but was passed by the large majority of 217 to 117 — showing the readiness with which the 'bon plaisir' of the master had made converts to his new faith. It was a sweeping measure, establishing large duties on cereals, iron, lumber and petroleum, increasing existing duties on textile goods, coffee, wines, rice, tea, and a great number of other minor articles and also on cattle. The protectionist current came to a temporary stop from 1880-'83, inasmuch as in the new Reichstag, elected in 1881, the protection and anti-protection parties were so evenly balanced that the Government failed to carry its proposals for still higher duties. The elections of 1884, in which the Government brought every influence to bear against the opposition, resulted, however, in the return of a protectionist majority. Accordingly, there followed in 1885 a new screwing up of duties, tripling those on grain, doubling those on lumber, and raising most others. In 1887 the duties on grain were even again increased. But now the insatiateness of protection and especially the duties put on the necessaries of life produced a strong reaction, as evidenced by the largely increased membership of the opposition parties in the present Reichstag. . . . The Imperial Government, shortly after the retirement of Prince Bismarck had untied its hands, entered upon negotiations with Austria-Hungary, Italy, Switzerland and Belgium, which resulted in . . . reciprocity treaties."— H. Villard, *German Tariff Policy* (*Yale Rev., May*, 1892).

(United States and Canada): A. D. 1854-1866.— The Reciprocity Treaty.— The Treaty commonly known in America as the Canadian Reciprocity Treaty of 1854, between the governments of Great Britain and the United States, was concluded on the 5th of June, 1854, and ratifications were exchanged on the 9th of September following. The negotiators were the Earl of Elgin and Kincardine, on the part of the British Government, and William L. Marcy, Secretary of State of the United States, acting for the latter. By the first article of the treaty it was agreed that, "in addition to the liberty secured to the United States fishermen by the . . . convention of October 20, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic

Majesty, the liberty to take fish of every kind, except shell-fish, on the sea-coasts and shores, and in the bays, harbors, and creeks of Canada, New Brunswick, Nova Scotia, Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the coasts and shores of those colonies and the islands thereof, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish; provided that, in so doing, they do not interfere with the rights of private property, or with British fishermen, in the peaceable use of any part of the said coast in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen." The same article provided for the appointment of commissioners and an arbitrator or umpire to settle any disputes that might arise "as to the places to which the reservation of exclusive right to British fishermen contained in this article, and that of fishermen of the United States contained in the next succeeding article, apply." By the second article of the treaty British subjects received privileges on the eastern sea-coasts and shores of the United States north of the 36th parallel of north latitude, identical with those given by the first article to citizens of the United States on the coasts and shores mentioned above. Article 3 was as follows: "It is agreed that the articles enumerated in the schedule hereunto annexed, being the growth and produce of the aforesaid British colonies or of the United States, shall be admitted into each country respectively free of duty: Schedule: Grain, flour, and breadstuffs, of all kinds. Animals of all kinds. Fresh, smoked, and salted meats. Cotton-wool, seeds, and vegetables. Undried fruits, dried fruits. Fish of all kinds. Products of fish, and of all other creatures living in the water. Poultry, eggs. Hides, furs, skins, or tails, undressed. Stone or marble, in its crude or unwrought state. Slate. Butter, cheese, tallow. Lard, horns, manures. Ores of metals, of all kinds. Coal. Pitch, tar, turpentine, ashes. Timber and lumber of all kinds, round, hewed, and sawed, unmanufactured in whole or in part. Firewood. Plants, shrubs, and trees. Pelts, wool. Fish-oil. Rice, broom-corn, and bark. Gypsum, ground or unground. Hewn, or wrought, or unwrought burr or grindstones. Dye-stuffs. Flax, hemp, and tow, unmanufactured. Unmanufactured tobacco. Rags." Article 4 secured to the citizens and inhabitants of the United States the right to navigate the River St. Lawrence and the canals in Canada between the ocean and the great lakes, subject to the same tolls and charges that might be exacted from Her Majesty's subjects, but the British Government retained the right to suspend this privilege, on due notice given, in which case the Government of the United States might suspend the operations of Article 3. Reciprocally, British subjects were given the right to navigate Lake Michigan, and the Government of the United States engaged itself to urge the State governments to open the several State canals to British subjects on terms of equality. It was further agreed that no export or other duty should be levied on lumber or timber floated down the river St. John to the sea, "when the same is shipped to the United States from the province of New Brunswick." Article 5 provided that the treaty should take effect whenever the necessary laws were passed by the Imperial Parliament, the Provincial Parliaments, and the Congress of the United States, and that it should "remain in force for ten years from the date at which it may come into operation, and further until the expiration of twelve months after either of the high contracting parties shall give notice to the other of its wish to terminate the same." Article 6 extended the provisions of the treaty to the island of Newfoundland, so far as applicable, provided the Imperial Parliament, the Parliament of Newfoundland and the Congress of the United States should embrace the island in their laws for carrying the treaty into effect; but not otherwise. — *Treaties and Conventions between the United States and other Powers, ed. of* 1889, *pp.* 448–452. —The Treaty was abrogated in 1866, the United States having given the required notice in 1865. —F. E. Haynes, *The Reciprocity Treaty with Canada of* 1854 (*Am. Economic Assn. Pubs., v.* 7, *no.* 6).

(United States): A. D. 1861-1864. — The Morrill Tariff and the War Tariffs.—"In 1861 the Morrill tariff act began a change toward a higher range of duties and a stronger application of protection. The Morrill act is often spoken of as if it were the basis of the present protective system. But this is by no means the case. The tariff act of 1861 was passed by the House of Representatives in the session of 1859–60, the session preceding the election of President Lincoln. It was passed, undoubtedly, with the intention of attracting to the Republican party, at the approaching Presidential election, votes in Pennsylvania and other States that had protectionist leanings. In the Senate the tariff bill was not taken up in the same session in which it was passed in the House. Its consideration was postponed, and it was not until the next session — that of 1860–61 — that it received the assent of the Senate and became law. It is clear that the Morrill tariff was carried in the House before any serious expectation of war was entertained; and it was accepted by the Senate in the session of 1861 without material change. It therefore forms no part of the financial legislation of the war, which gave rise in time to a series of measures that entirely superseded the Morrill tariff. Indeed, Mr. Morrill and the other supporters of the act of 1861 declared that their intention was simply to restore the rates of 1846. The important change which they proposed to make from the provisions of the tariff of 1846 was to substitute specific for ad-valorem duties. . . . The specific duties . . . established were in many cases considerably above the ad-valorem duties of 1846. The most important direct changes made by the act of 1861 were in the increased duties on iron and on wool, by which it was hoped to attach to the Republican party Pennsylvania and some of the Western States. Most of the manufacturing States at this time still stood aloof from the movement toward higher rates. . . . Mr. Rice, of Massachusetts, said in 1860: 'The manufacturer asks no additional protection. He has learned, among other things, that the greatest evil, next to a ruinous competition from foreign sources, is an excessive protec-

tion, which stimulates a like ruinous and irresponsible competition at home' (Congress. Globe, 1859–60, p. 1867). Mr. Sherman said: . . . 'The manufacturers have asked over and over again to be let alone. The tariff of 1857 is the manufacturers' bill; but the present bill is more beneficial to the agricultural interest than the tariff of 1857.' (Ibid., p. 2053. C. F. Hunter's speech, Ibid., p. 3010.) In later years Mr. Morrill himself said that the tariff of 1861 'was not asked for, and but coldly welcomed, by manufacturers, who always and justly fear instability.' (Congr. Globe, 1869–70, p. 3295.) . . . Hardly had the Morrill tariff been passed when Fort Sumter was fired on. The Civil War began. The need of additional revenue for carrying on the great struggle was immediately felt; and as early as the extra session of the summer of 1861, additional customs duties were imposed. In the next regular session, in December, 1861, a still further increase of duties was made. From that time till 1865 no session, indeed hardly a month of any session, passed in which some increase of duties on imports was not made. . . . The great acts of 1862 and 1864 are typical of the whole course of the war measures; and the latter is of particular importance, because it became the foundation of the existing tariff system. . . . The three revenue acts of June 30, 1864, practically form one measure, and that probably the greatest measure of taxation which the world has seen. The first of the acts provided for an enormous extension of the internal-tax system; the second for a corresponding increase of the duties on imports; the third authorized a loan of $400,000,000. . . . Like the tariff act of 1862, that of 1864 was introduced, explained, amended, and passed under the management of Mr. Morrill, who was chairman of the Committee on Ways and Means. That gentleman again stated, as he had done in 1862, that the passage of the tariff act was rendered necessary in order to put domestic producers in the same situation, so far as foreign competition was concerned, as if the internal taxes had not been raised. This was one great object of the new tariff. . . . But it explains only in part the measure which in fact was proposed and passed. The tariff of 1864 was a characteristic result of that veritable furor of taxation which had become fixed in the minds of the men who were then managing the national finances. Mr. Morrill, and those who with him made our revenue laws, seem to have had but one principle: to tax every possible article indiscriminately, and to tax it at the highest rates that any one had the courage to suggest. They carried this method out to its fullest extent in the tariff act of 1864, as well as in the tax act of that year. At the same time these statesmen were protectionists. . . . Every domestic producer who came before Congress got what he wanted in the way of duties. Protection ran riot; and this, moreover, not merely for the time being. The whole tone of the public mind toward the question of import duties became distorted. . . . The average rate on dutiable commodities, which had been 37.2 per cent. under the act of 1862, became 47.06 per cent. under that of 1864. . . . In regard to the duties as they stood before 1883, it is literally true, in regard to almost all protected articles, that the tariff act of 1864 remained in force for twenty years without reductions."—F. W. Taussig, *Tariff History of the U. S., pp.* 158–169, *with foot-note.*—Under the Morrill Tariff, which went into effect April 1, 1861, the imposts which had averaged about 19 per cent. on dutiable articles were raised to 36 per cent.—J. G. Blaine, *Twenty Years of Congress, v.* 1, *p.* 400.

(Australia): A. D. 1862-1892.—Contrasted policy of Victoria and New South Wales.—Both New South Wales and Victoria "are young countries, and are inhabited by men of the same race, speech, and training: capital and labour oscillate freely between them: both use substantially the same methods and forms of government: while against the larger territory of New South Wales may be set the superior climate and easier development of its southern neighbour. Whatever may be the balance of the natural advantages, whether of climate or population, is on the side of Victoria, whose compact, fertile, and well watered territory gained for it, on its first discovery, the well-deserved title of Australia Felix. The striking and ultimate point of difference between the two countries is their fiscal policy. Since 1866 Victoria has lived under a system of gradually increasing Protection, while the policy of New South Wales has been, in the main, one of Free Trade. According to all Protectionist theory Victoria should be prosperous and New South Wales distressed; there should be variety and growth in the one country, stagnation in the other. At least the progress of Victoria ought to have been more rapid than that of New South Wales, because she has added to the natural advantages which she already enjoyed, the artificial benefits which are claimed for a Protective tariff. If, in fact, neither of these conclusions is correct, and, while both countries have been phenomenally prosperous, New South Wales has prospered the most, one of two conclusions is inevitable — namely, either that certain special influences have caused the more rapid progress of New South Wales which were not felt in Victoria, or that Protection has retarded instead of assisted the development of Victoria's natural superiority. Writers of all schools admit that activity in certain departments of national life is a fair indication of prosperity and progress. It is, for instance, generally allowed that an increase in population, a development of agricultural and manufacturing industry, a growth of foreign commerce, an increase in shipping, or an improvement in the public revenue, are all signs of health and well-being; and that a concurrence of such symptoms over a lengthened period indicates an increase in material wealth. Accepting these tests of progress, our comparison proceeds thus: first, we examine the position of the two Colonies as regards population, foreign commerce, shipping, agriculture, manufactures, and revenue, at the time when both of them adhered to Free Trade; from which we find that, according to all these indications of prosperity, Victoria was then very much the better off: In 1866 she outnumbered New South Wales in population by 200,000 souls: her foreign commerce was larger by £8,300,000: she had a greater area of land under cultivation: her manufactures were well established, while those of New South Wales were few and insignificant: she was ahead in shipping, and her revenue was greater by one-third. Passing next to the years which follow 1866, we observe that New South Wales gradually bettered her position in every province of national activity, and

that, as the fetters of Protection became tighter, Victoria receded in the race. She gave way first in the department of foreign commerce, next in population, shipping, and revenue, until, in 1887, she maintained her old superiority in agriculture alone. From this accumulation of facts—and not from any one of them we infer that the rate of progress in New South Wales under Free Trade has been greater than that of Victoria under Protection."—B. R. Wise, *Industrial Freedom, app.* 3.

(Europe): **A. D. 1871-1892.—Protectionist reaction on the Continent.—High Tariff in France.**—"The Franco-German War (1870-1) and the overthrow of Napoleon III. at once arrested the free-trade policy, which had little support in the national mind, and was hardly understood outside the small circle of French economists. The need of fresh revenue was imperative, and M. Thiers, the most prominent of French statesmen, was notoriously protectionist in his leanings. Pure revenue duties on colonial and Eastern commodities were first tried; the sugar duty was increased 30%; that on coffee was trebled; tea, cocoa, wines and spirits, were all subjected to greatly increased charges. As the yield thus obtained did not suffice, proposals for the taxation of raw materials were brought forward but rejected by the legislature in 1871, when M. Thiers tendered his resignation. To avoid this result the measure was passed, not however to come into operation until compensating productive duties had been placed on imported manufactures. The existing commercial treaties were a further obstacle to changes in policy, and accordingly negotiations were opened with England and Belgium, in order that the new duties might be applied to their products. As was justifiable under the circumstances, the former country required that if imported raw products were to be taxed, the like articles produced in France should pay an equivalent tax, and therefore, as the shortest way of escape, the French Government gave notice for the termination of the treaties (in the technical language of international law 'denounced' them), and new conventions were agreed on; but as this arrangement was just as unsatisfactory in the opinion of the French Chambers, the old treaties were in 1873 restored to force until 1877, and thus the larger part of the raw materials escaped the new taxation. The protectionist tendency was, too, manifested in the departure from the open system introduced in 1866 in respect to shipping. A law of 1872 imposed differential duties on goods imported in foreign vessels. . . . The advance of the sentiment in favour of a return to the restrictive system was even more decidedly indicated in 1881. Bounties were then granted for the encouragement of French shipping, and extra taxes imposed on indirect imports of non-European and some European goods. In 1889 the carrying trade between France and Algiers was reserved for native ships. The revision of the general tariff was a more serious task, undertaken with a view to influencing the new treaties that the termination of the old engagements made necessary. The tariff of 1881 (to come into force in 1882) made several increases and substituted many specific for ad valorem duties. Raw materials escaped taxation; half-manufactured articles were placed under moderate duties. The nominal corn duties were diminished by a fraction, but the duties on live stock and fresh meat were considerably increased. . . . A new 'conventional tariff' speedily followed in a series of fresh treaties with European countries. . . . The duties on whole or partially-manufactured goods remained substantially unchanged by the new treaties, which do not, in fact, vary so much from the general tariff as was previously the case. The number of articles included in the conventions had been reduced, and all countries outside Europe came under the general code. The reaction against the liberal policy of 1860 was thus as yet very slight, and did not seriously affect manufactures. The agricultural depression was the primary cause of the legislation of 1885, which placed a duty of 3 francs per quintal on wheat, 7 francs on flour, 2 francs on rye and barley, and one franc on oats, with additional duties on indirect importation. Cattle, sheep, and pigs came under increases of from 50% to 100%. . . . Not satisfied with their partial success, the advocates of high duties have made further efforts. Maize, hitherto free, as being chiefly used by farmers for feeding purposes, is now liable to duty, and the tariff proposed in the present year (1891) raises the rates on most articles from an average of 10% to 15% to one of 30% and 40%. . . . Germany did not quite as speedily come under the influence of the economic reaction as France. . . . Italian commercial policy also altered for the worse. From the formation of the kingdom till 1875, as the various commercial treaties and the general tariff of 1861 show, it was liberal and tending towards freedom. About the latter date the forces that we have indicated above as operating generally throughout Europe, commenced to affect Italy. The public expenditure had largely increased, and additional revenue was urgently required. Agriculture was so depressed that, though the country is pre-eminently agricultural, alarm was excited by the supposed danger of foreign competition. The result was that on the general revision of duties in 1877 much higher rates were imposed on the principal imports. . . . Depression both in agriculture and elaborative industries continued and strengthened the protectionist party, who succeeded in securing the abandonment of all the commercial treaties, and the enactment of a new tariff in 1887. . . . The first effect of the new system of high taxation with no conventional privileges was to lead to a war of tariffs between France and Italy. . . . Austria may be added to the list of countries in which the protectionist reaction has been effectively shown. . . . In Russia the revival (or perhaps it would be more correct to say continued existence), of protection is decisively marked. . . . Spain and Portugal had long been strongholds of protectionist ideas. . . . Holland and Belgium have as yet [1891] adhered to the system of moderate duties."—C. F. Bastable, *The Commerce of Nations, ch.* 9.—A new tariff system was elaborated by the French Chambers, with infinite labor and discussion, during the year 1891, and adopted early in the following year, being known as the "Loi du 11 Janvier, 1892." This tariff makes a great advance in duties on most imports, with a concession of lower rates to nations according reciprocal favors to French productions. Raw materials in general are admitted free of duties. The commercial treaties of France are undergoing modification.

(United States): A. D. 1883.—Revision of the Tariff.—In 1882, "Congress appointed a Tariff Commission 'to take into consideration, and to thoroughly investigate, all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff upon a scale of justice to all interests.' Several things it was expected would be accomplished by revising the tariff, and the measure received the assent of nearly all the members of Congress. The free-traders expected to get lower duties, the protectionists expected to concede them in some cases, and in others to get such modifications as would remove existing ambiguities and strengthen themselves against foreign competition. The protective force of the existing tariff had been weakened in several important manufactures by rulings of the treasury department. . . . The composition of the commission was as satisfactory to the manufacturing class as displeasing to free-traders. . . . Early in their deliberations, the commission became convinced that a substantial reduction of the tariff duties was demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which had in former times been most strenuous for the preservation of the national industrial defences. Such a reduction of the existing tariff the commission regarded not only as a due recognition of public sentiment, and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it might be temporarily inconvenient, would be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties, except for establishing new industries, which more than equalized the conditions of labor and capital with those of foreign competitors, could be justified. Excessive duties, or those above such standard of equalization, were positively injurious to the interest which they were supposed to benefit. They encouraged the investment of capital in manufacturing enterprise by rash and unskilled speculators, to be followed by disaster to the adventurers and their employees, and a plethora of commodities which deranged the operations of skilled and prudent enterprise. . . . 'It would seem that the rates of duties under the existing tariff—fixed, for the most part, during the war under the evident necessity at that time of stimulating to its utmost extent all domestic production—might be adapted, through reduction, to the present condition of peace requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which had become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties.' Entertaining these views, the commission sought to present a scheme of tariff duties in which substantial reduction was the distinguishing feature. . . . The attempt to modify the tariff brought into bold relief the numerous conflicting interests, and the difficulty and delicacy of the undertaking. As our industries become more heterogeneous, the tariff also grows more complex, and the difficulty of doing justice to all is increased. For example, the wool manufacturers to succeed best must have free wool and dye-stuffs; on the other hand, both these interests desired protection. The manufacturers of the higher forms of iron must have free materials to succeed best; on the other hand, the ore producers, the pig-iron manufacturers, and every succeeding class desired a tariff on their products. It was not easy for these interests to agree, and some of them did not. The iron-ore producers desired a tariff of 85 cents a ton on ore; the steel-rail makers were opposed to the granting of more than 50; the manufacturers of fence wire were opposed to an increase of duty on wire rods used for making wire, and favored a reduction; the manufacturers of rods in this country were desirous of getting an increase; the manufacturers of floor oil-cloths desired a reduction or abolition of the duty on the articles used by them; the soap manufacturers desired the putting of caustic soda on the free list, which the American manufacturers of it opposed; some of the woolen manufacturers were desirous that protection should be granted to the manufacturers of dye-stuffs, and some were not; the manufacturers of tanned foreign goat and sheep skins desired the removal of the tariff on such skins; those who tanned them, and who were much less numerous, were equally tenacious in maintaining the tariff on the raw skins, and the same conflict arose between other interests. The method of determining how much protection their several interests needed, and of adjusting differences between them, has always been of the crudest kind. . . . Although not all of the recommendations of the commission were adopted, most of them were. Those which pertained to the simplification of the law were adopted with only slight changes. The bill reported by the commission contained, not including the free list, 631 articles and classifications. . . . Less than 25 articles, mainly in the cotton, woolen goods, and the iron and steel schedules, were matters of contention. The rates on 409 of the 631 articles mentioned in the tariff recommended by the commission were adopted, and between 50 and 60 more articles have substantially the same rates, though levied under different clauses. Of the 170 changes, 98 were fixed at lower rates than those proposed by the commission, 46 at higher, and 26 have been classed as doubtful."—A. S. Bolles, *Financial History of the United States*, 1861–1885, *bk.* 2, *ch.* 7.

(United States): A. D. 1884-1888.—Attempts at Tariff Reform.—The Morrison Bills and the Hewett Bill.—President Cleveland's Message.—The Mills Bill and its defeat.—The slight concessions made in the protectionist tariff-revision of 1883 did not at all satisfy the opinion in the country demanding greater industrial freedom, and the question of tariff-reform became more important than before in American politics. The Democratic Party, identified by all its early traditions, with the opposition to a policy of "protection," won the election of 1884, placing Mr. Cleveland in the Presidency and gaining control of the House of Representatives in the 49th Congress. But it had drifted from its old anchorage on the tariff question, and was slow in pulling back. A large minority in the party had accepted and become supporters of

the doctrine which was hateful to their fathers as an economic heresy. The majority of the Democrats in the House, however, made strenuous efforts to accomplish something in the way of reducing duties most complained of. Their first undertaking was led by Mr. Morrison of Illinois, who introduced a bill which "proposed an average reduction of 20 per cent., but with so many exceptions that it was estimated the average reduction on dutiable articles would be about 17 per cent. The rates under the Morrill Act of 1861 were to form the minimum limit. An extensive addition to the free list was proposed, including the following articles: ores of iron, copper, lead, and nickel, coal, lumber, wood, hay, bristles, lime, sponges, indigo, coal tar and dyewoods." In the Committee of Ways and Means the bill underwent considerable changes, the articles in the free list being reduced to salt, coal, lumber and wood. It was reported to the House March 11, and remained under debate until May 6, when it was killed by a motion to strike out the enacting clause, on which 118 Republicans and 41 Democrats voted aye, against 4 Republicans and 151 Democrats voting nay. The 4 Republicans supporting the bill were all from Minnesota; of the 41 Democrats opposing it 12 were from Pennsylvania, 10 from Ohio, 6 from New York, 4 from California and 3 from New Jersey. "The Morrison 'horizontal bill' having been thus killed, Mr. Hewett, a New York Democrat, and a member of the Ways and Means Committee, on May 12 introduced a new tariff bill, providing for a reduction of 10 to 20 per cent. on a considerable number of articles and placing several others on the free list." The bill was reported favorably to the House, but action upon it was not reached before the adjournment. During the same session, a bill to restore the duties of 1867 on raw wool was defeated in the House; an amendment to the shipping bill, permitting a free importation of iron and steel steamships for employment in the foreign trade, passed the House and was defeated in the Senate; and a bill reducing the duty on works of art from 20 to 10 per cent. was defeated in the House. In the next Congress, the Forty-ninth, Mr. Morrison led a new undertaking to diminish the protective duties which were producing an enormous surplus of revenue. The bill which he introduced (February 15, 1886) received radical changes in the Ways and Means Committee, "inasmuch as it was clearly seen that the opposition from the metal and coal interests was sufficiently strong to destroy all chance of consideration in the House. Accordingly, it was found preferable to make the duties on wool and woolens the special point for assault." But the bill modified on this new line,—lowering duties on woolens to 35 per cent. ad valorem, and placing wool in the free list, with lumber, wood, fish, salt, flax, hemp and jute,—was refused consideration by a vote of 157 to 140 in the House, on the 17th of June. Again there were 35 members of his own party arrayed against Mr. Morrison. At the second session of the same Congress, December 18, 1886, Mr. Morrison repeated his attempt with no better success.—O. H. Perry, *Proposed Tariff Legislation since* 1883 (*Quarterly Journal of Economics, October*, 1887).—The assembling of the 50th Congress, on the 6th of December, 1887, was signalized by a message from President Cleveland which produced an extraordinary effect, decisively lifting the tariff question into precedence over all other issues in national politics, and compelling the Democratic Party to array its lines distinctly and unequivocally against the upholders of "protection" as an economic policy. He emphasized the "paramount importance of the subject" impressively by passing by every other matter of public concern, and devoting his message exclusively to a consideration of the "'state of the Union' as shown in the present condition of our Treasury and our general fiscal situation." The condition of the Treasury to which the President called attention was one of unexampled plethora. "On the 30th day of June, 1885, the excess of revenues over public expenditures, after complying with the annual requirement of the Sinking-Fund Act, was $17,859,735.84; during the year ended June 30, 1886, such excess amounted to $49,405,545.20; and during the year ended June 30, 1887, it reached the sum of $55,567,849.54." "Our scheme of taxation," said the President, "by means of which this needless surplus is taken from the people and put into the public treasury, consists of a tariff or duty levied upon importations from abroad, and internal-revenue taxes levied upon the consumption of tobacco and spirituous and malt liquors. It must be conceded that none of the things subjected to internal-revenue taxation are, strictly speaking, necessaries; there appears to be no just complaint of this taxation by the consumers of these articles, and there seems to be nothing so well able to bear the burden without hardship to any portion of the people. But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that while comparatively a few use the imported articles, millions of our people, who never use and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public treasury, but the majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to the home manufacturer. . . . The difficulty attending a wise and fair revision of our tariff-laws is not underestimated. It will require on the part of Congress great labor and care, and especially a broad and national contemplation of the subject, and a patriotic disregard of such local and selfish claims as are unreasonable and reckless of the welfare of the entire country. Under our present laws more than 4,000 articles are subject to duty. Many of these do not in

any way compete with our own manufactures, and many are hardly worth attention as subjects of revenue. A considerable reduction can be made in the aggregate by adding them to the free list. The taxation of luxuries presents no features of hardship; but the necessaries of life used and consumed by all the people, the duty upon which adds to the cost of living in every home, should be greatly cheapened. The radical reduction of the duties imposed upon raw material used in manufactures, or its free importation, is of course an important factor in any effort to reduce the price of these necessaries. . . . It is not apparent how such a change can have any injurious effect upon our manufacturers. On the contrary, it would appear to give them a better chance in foreign markets with the manufacturers of other countries, who cheapen their wares by free material. Thus our people might have an opportunity of extending their sales beyond the limits of home consumption—saving them from the depression, interruption in business, and loss caused by a glutted domestic market, and affording their employés more certain and steady labor, with its resulting quiet and contentment. The question thus imperatively presented for solution should be approached in a spirit higher than partisanship. . . . But the obligation to declared party policy and principle is not wanting to urge prompt and effective action. Both of the great political parties now represented in the Government have, by repeated and authoritative declarations, condemned the condition of our laws which permits the collection from the people of unnecessary revenue, and have, in the most solemn manner, promised its correction. . . . Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free trade. This savors too much of bandying epithets. It is a condition which confronts us—not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant."—The President's emphatic utterance rallied his party and inspired a more united effort in the House to modify and simplify the tariff. Under the chairmanship of Mr. Mills, of Texas, a bill was framed by the Committee of Ways and Means and reported to the House on the 2d of April, 1888. "We have gone as far as we could," said the Committee in reporting the bill, "and done what we could, in the present condition of things, to place our manufactures upon a firm and unshaken foundation, where they would have advantages over all the manufacturers of the world. Our manufacturers, having the advantage of all others in the intelligence, skill, and productive capacity of their labor, need only to be placed on the same footing with their rivals in having their materials at the same cost in the open markets of the world. In starting on this policy, we have transferred many articles from the dutiable to the free list. The revenues now received on these articles amount to $22,189,595.48. Three-fourths of this amount is collected on articles that enter into manufactures, of which wool and tin-plates are the most important. . . . The repeal of all duties on wool enables us to reduce the duties on the manufactures of wool $12,332,211.65. The largest reduction we have made is in the woolen schedule, and this reduction was only made possible by placing wool on the free list. There is no greater reason for a duty on wool than there is for a duty on any other raw material. A duty on wool makes it necessary to impose a higher duty on the goods made from wool, and the consumer has to pay a double tax. If we leave wool untaxed the consumer has to pay a tax only on the manufactured goods. . . . In the woolen schedule we have substituted ad valorem for specific duties. The specific duty is the favorite of those who are to be benefited by high rates, who are protected against competition, and protected in combinations against the consumer of their products. There is a persistent pressure by manufacturers for the specific duty, because it conceals from the people the amount of taxes they are compelled to pay to the manufacturer. The specific duty always discriminates in favor of the costly article and against the cheaper one. . . . This discrimination is peculiarly oppressive in woolen and cotton goods, which are necessaries of life to all classes of people." The ad valorem duty on woolen goods proposed by the committee in accordance with these views, ranged from 30 to 45 per cent., existing rates being reckoned as equivalent to about from 40 to 90 per cent. ad valorem. Duties on cottons were fixed at 35 to 40 per cent. On steel rails the bill proposed a reduction from $17 per ton to $11. It lowered the duty on pig-iron to $6 per ton. It diminished the tariff on common earthenware from 60 to 35 per cent.; on china and decorated earthenware from 60 to 45 per cent.; on window-glass from 93 and 106 to 62 and 68 per cent. It put tin plates on the free list, along with hemp, flax, lumber, timber, salt, and other materials of manufacture and articles in common use. These were the more important modifications contemplated in what became known as "the Mills Bill." After vigorous debate, it was passed by the Democrats of the House with a nearness to unanimity which showed a remarkable change in the sentiment of their party on the subject. Only four Democratic representatives were found voting in opposition to the measure. In the Senate, where the Republicans were in the majority, the measure was wrecked, as a matter of course. The protectionists of that body substituted a bill which revised the tariff in the contrary direction, generally raising duties instead of lowering them. Thus the issue was made in the elections of 1888.

(United States): A. D. 1890.—The McKinley Act.—"In the campaign of 1888 the tariff question was the issue squarely presented. . . . The victory of the Republicans . . . and the election of President Harrison were the results. . . . The election was won by a narrow margin, and was affected by certain factors which stood apart from the main issue. The independent voters had been disappointed with some phases of President Cleveland's administration of the civil service, and many who had voted for him in 1884 did not do so in 1888. . . . On the whole, however, the Republicans held their own, and even made gains, throughout the country, on the tariff issue; and they might fairly consider the result a popular verdict in favor of the system of protection. But their opposition to the policy of lower duties, emphasized by President Cleveland, had led them not only to champion the existing system, but to advocate its

further extension, by an increase of duties in various directions. . . . Accordingly when the Congress then elected met for the session of 1889–90, the Republican majority in the House proceeded to pass a measure which finally became the tariff act of 1890. This measure may fairly be said to be the direct result of Mr. Cleveland's tariff message of 1887. The Republicans, in resisting the doctrine of that message, were led by logical necessity to the opposite doctrine of higher duties. . . . Notwithstanding grave misgivings on the part of some of their leaders, especially those from the northwest, the act known popularly as the McKinley bill was pushed through."—F. W. Taussig, *Tariff History of the U. S., ch.* 5.— The bill was reported to the House of Representatives by the Chairman of its Committee on Ways and Means, Mr. McKinley, on the 16th of April, 1890. "We have not been so much concerned," said the majority of the Committee in their report, "about the prices of the articles we consume as we have been to encourage a system of home production which shall give fair remuneration to domestic producers and fair wages to American workmen, and by increased production and home competition insure fair prices to consumers. . . . The aim has been to impose duties upon such foreign products as compete with our own, whether of the soil or the shop, and to enlarge the free list wherever this can be done without injury to any American industry, or wherever an existing home industry can be helped without detriment to another industry which is equally worthy of the protecting care of the Government. . . . We have recommended no duty above the point of difference between the normal cost of production here, including labor, and the cost of like production in the countries which seek our markets, nor have we hesitated to give this quantum of duty even though it involved an increase over present rates and showed an advance of percentages and ad valorem equivalents." On the changes proposed to be made in the rates of duty on wool and on the manufactures of wool — the subject of most debate in the whole measure — the majority reported as follows: "By the census of 1880, in every county in the United States except 34, sheep were raised. In 1883 the number of sheep in the United States was over 50,000,000, and the number of persons owning flocks was in excess of a million. This large number of flock-masters was, to a considerable extent, withdrawn from the business of raising grain and other farm products, to which they must return if wool-growing cannot be profitably pursued. The enormous growth of this industry was stimulated by the wool tariff of 1867, and was in a prosperous condition prior to the act of 1883. Since then the industry has diminished in alarming proportions, and the business has neither been satisfactory nor profitable. . . . By the proposed bill the duties on first and second class wools are made at 11 and 12 cents a pound, as against 10 and 12 under existing law. On third-class wool, costing 12 cents or less, the duty is raised from 2½ cents a pound to 3½ cents, and upon wool of the third class, costing above 12 cents, the duty recommended is an advance from 5 to 8 cents per pound. . . . There seems to be no doubt that with the protection afforded by the increased duties recommended in the bill the farmers of the United States will be able at an early day to supply substantially all of the home demand, and the great benefit such production will be to the agricultural interests of the country cannot be estimated. The production of 600,000,000 pounds of wool would require about 100,000,000 sheep, or an addition of more than 100 per cent to the present number. . . . The increase in the duty on clothing wool and substitutes for wool to protect the wool growers of this country, and the well-understood fact that the tariff of 1883, and the construction given to the worsted clause, reduced the duties on many grades of woollen goods to a point that invited increasing importations, to the serious injury of our woollen manufacturers and wool growers, necessitate raising the duties on woollen yarn, cloth and dress goods to a point which will insure the holding of our home market for these manufactures to a much greater extent than is now possible. The necessity of this increase is apparent in view of the fact already stated that during the last fiscal year there were imports of manufactures of wool of the foreign value of $52,681,482, as shown by the undervalued invoices, and the real value in our market of nearly $90,000,000 — fully one-fourth of our entire home consumption — equivalent to an import of at least 160,000,000 pounds of wool in the form of manufactured goods. In revising the woollen-goods schedule so as to afford adequate protection to our woollen manufacturers and wool growers we have continued the system of compound duties which have proved to be so essential in any tariff which protects wool, providing first for a specific compensatory pound or square yard duty, equivalent to the duty which would be paid on the wool if imported, for the benefit of the wool grower, and an ad valorem duty of from 30 to 50 per cent, according to the proportion of labor required in the manufacture of the several classes of goods, as a protection to the manufacturer against foreign competition, and 10 per cent additional upon ready made clothing for the protection of the clothing manufacturers. . . . In computing the equivalent ad valorem duty on manufactures of woollens, the combinations of both the specific duty, which is simply compensatory for the duty on the wool used, of which the wool grower receives the benefit, and the duty which protects the manufacturers, makes the average resultant rate of the woollen-goods schedule proposed 91.78 per cent."—*Report of the Committee on Ways and Means.*— "Substantially as reported from the Committee on Ways and Means, it [the McKinley Bill] passed the House, after two weeks' debate, May 21 [1890]. The vote was a strictly party one, except that two Republicans voted in the negative. June 19 the bill was reported from the Senate Committee on Finance with a very large number of amendments, mainly in the way of a lessening of rates. After debating the project during nearly the whole of August and a week in September, the Senate passed it by a strict party vote, September 10. The differences between the houses then went to a conference committee. The bill as reported by this committee, September 26, was adopted by the House and Senate on the 27th and 30th respectively and approved by the President October 1. On the final vote three Republicans in each house declined to follow their party. The law went into effect October 6. Prominent features of the new

schedules are as follows: steel rails reduced one-tenth of a cent per lb.; tin plates increased from one cent to two and two-tenths cents per lb., with the proviso that they shall be put on the free list at the end of six years if by that time the domestic product shall not have reached an aggregate equal to one-third of the importations; unmanufactured copper substantially reduced; bar, block and pig tin, hitherto on the free list, receives a duty of four cents per lb. to take effect July 1, 1893, provided that it be restored to the free list if by July 1, 1895, the mines of the United States shall not have produced in one year 5,000 tons; a bounty of one and three-fourths and two cents per lb. upon beet, sorghum, cane or maple sugar produced in the United States between 1891 and 1905; all imports of sugar free up to number 16, Dutch standard, in color and all above that one-half cent per lb. (formerly from three to three and a half cents), with one-tenth cent additional if imported from a country that pays an export bounty; a heavy increase on cigar wrappers and cigars; a general and heavy increase on agricultural products, e. g. on beans, eggs, hay, hops, vegetables and straw; a heavy increase on woolen goods, with a new classification of raw wool designed to give more protection; paintings and statuary reduced from 30 to 15 per cent. The following (among other) additions are made to the free list: beeswax, books and pamphlets printed exclusively in languages other than English, blue clay, coal tar, currants and dates, jute butts and various textile and fibrous grasses, needles, nickel ore, flower and grass seeds and crude sulphur. . . . Among the 464 points of difference between the two houses which the conference committee had to adjust, some of the more important were as follows: paintings and statuary, made free by the House and kept at the old rate by the Senate, were fixed at half the old rate; binding twine, made free by the Senate in favor of Western grain-raisers but taxed by the House to protect Eastern manufacturers, fixed at half the House rate; the limit of free sugar fixed at number 16, as voted by the House, instead of number 13, as passed by the Senate, thus including in the free list the lower grades of refined as well as all raw sugar. The question of reciprocity with American nations was injected into the tariff discussion by Secretary Blaine in June. In transmitting to Congress the recommendation of the International American Conference for improved commercial relations, the secretary dilated upon the importance of securing the markets of central and South America for our products, and suggested as a more speedy way than treaties of reciprocity an amendment to the pending tariff bill authorizing the President to open our ports to the free entry of the products of any American nation which should in turn admit free of taxation our leading agricultural and manufactured products. In July Mr. Blaine took up the idea again in a public correspondence with Senator Frye, criticizing severely the removal of the tariff on sugar, as that on coffee had been removed before, without exacting trade concessions in return. He complained that there was not a section or a line in the bill as it came from the House that would open the market for another bushel of wheat or another barrel of pork. The Senate Finance Committee acted upon the suggestion of the secretary by introducing an amendment to the bill authorizing and directing the President to suspend by proclamation the free introduction of sugar, molasses, coffee, tea and hides from any country which should impose on products of the United States exactions which in view of the free introduction of sugar etc. he should deem reciprocally unequal and unreasonable. The rates at which the President is to demand duties upon the commodities named are duly fixed. This reciprocity provision passed the Senate and the conference committee and became part of the law."—*Political Science Quarterly: Record of Events, Dec.*, 1890.

(United States): A. D. 1894.—The Wilson Act.—Protected interests and the Senate.—Two years after the embodiment of the extremest doctrines of protection in the McKinley Act, the tariff question was submitted again to the people, as the dominant issue between the Republican and Democratic parties, in the presidential and congressional elections of 1892. The verdict of 1888 was then reversed, and tariff reform carried the day. Mr. Cleveland was again elected President, with a Democratic majority in both houses of Congress apparently placed there to sustain his policy. A serious financial situation was manifesting itself in the country at the time he resumed the presidential office, produced by the operation of the silver-purchase law of 1890 (see MONEY AND BANKING: A. D. 1848–1893), and by the extravagance of congressional appropriations, depleting the treasury. It became necessary, therefore, to give attention, first, to the repeal of the mischievous silver law, which was accomplished, November 1, 1893, at a special session of Congress called by the President. That cleared the way for the more serious work of tariff-revision, which was taken up under discouraging circumstances of general depression and extensive collapse in business, throughout the country. "The Democratic members of the House committee on ways and means began during the special session the preparation of a tariff bill. The outcome of their labors was the Wilson Bill, which was laid before the whole committee and made public November 27. On the previous day the sugar schedule was given out, in order to terminate the manipulation of the stock market through false reports as to the committee's conclusions. The characteristic features of the bill, as described in the statement of Chairman Wilson which accompanied it, were as follows: First, the adoption, wherever practicable, of ad valorem instead of specific duties; second, 'the freeing from taxes of those great materials of industry that lie at the basis of production.' Specific duties were held to be objectionable, first, as concealing the true weight of taxation, and second, as bearing unjustly on consumers of commoner articles. Free raw materials were held necessary to the stimulation of industry and the extension of foreign trade. The schedules, as reported, showed in addition to a very extensive increase in the free list, reductions in rates, as compared with the McKinley Bill, on all but a small number of items. The important additions to the free list included iron ore, lumber, coal and wool. Raw sugar was left free, as in the existing law, but the rate on refined sugar was reduced from one-half to one-fourth of a cent per pound, and the bounty was repealed one-eighth per annum until extin-

guished. Some amendments were made in the administrative provisions of the tariff law, designed to soften, as the committee said, features of the McKinley Bill 'that would treat the business of importing as an outlawry, not entitled to the protection of the government.' It was estimated that the reduction of revenue effected would be about $50,000,000, and the committee set to work on an internal revenue bill to make good this deficiency. On January 8 Mr. Wilson brought up the bill in the House, and debate began under a rule calling for a vote on the 29th. During the consideration in committee a number of changes were made in the schedules, the most important being in respect to sugar, where the duty was taken off refined sugars, and the repeal of the bounty was made immediate instead of gradual. A clause was inserted, also, specifically repealing the reciprocity provision of the McKinley Act. The greatest general interest was excited, however, by the progress of the internal revenue bill, the chief feature of which was a proposition for an income tax. The bill, after formulation by the Democratic members of the ways and means committee, was brought before the full committee January 22. Besides the income tax, the measure provided for a stamp duty on playing cards, and raised the excise on distilled spirits to one dollar per gallon. As to incomes, the committee's bill . . . imposed a tax of two per cent on all incomes so far as they were in excess of $4,000, after allowing deductions for taxes, losses not covered by insurance and bad debts. Declarations of income were required from all persons having over $3,500, under heavy penalties for neglect, refusal or fraud in the matter. As to corporations, the same rate was levied on all interest on bonds and on all dividends and all surplus income above dividends, excepting premiums returned to policy holders by mutual life insurance companies, interest to depositors in savings banks, and dividends of building loan associations. . . . The income-tax measure was immediately and very vigorously antagonized by a considerable number of Eastern Democrats, headed by the New York Congressmen. It was adopted by the ways and means committee mainly through Southern and Western votes. On the 24th of January it was reported to the House. A Democratic caucus on the following day resolved by a small majority, against the wish of Mr. Wilson, to attach the measure to the Tariff Bill. Accordingly, the rule regulating the debate was modified to allow discussion of the amendment. The final votes were then taken on February 1. The internal revenue bill was added to the Wilson Bill by 182 to 50, 44 Democrats voting in the minority and most of the Republicans not voting. The measure as amended was then adopted by 204 to 140, 16 Democrats and one Populist going with the Republicans in the negative. In the hands of the Senate finance committee the bill underwent a thorough revision, differences of opinion in the Democratic majority leading to a careful discussion of the measure in a party caucus. The measure as amended was laid before the full committee March 8, and was introduced in the Senate on the 20th. Changes in details were very numerous. The most important consisted in taking sugar, iron ore and coal off the free list and subjecting each to a small duty. Debate on the bill was opened April 2. It was soon discovered, however, that many Democratic senators were seriously dissatisfied with the schedules affecting the industries of their respective states, and at the end of April there was a lull in the debate while the factions of the majority adjusted their differences. A scheme of changes was finally agreed to in caucus on May 3, and laid before the Senate by the finance committee on the 8th. The most important features were a new sugar schedule which had given great trouble, and very numerous changes from ad valorem to specific duties, with a net increase in rates."— *Political Science Quarterly : Record of Political Events, June,* 1894.

—Very soon after the tariff bill appeared in the Senate, it became apparent that the more powerful protected "interests," and conspicuously the "sugar trust" had acquired control, by some means, of several Democratic senators, who were acting obviously in agreement to prevent an honest fulfillment of the pledges of their party, and especially as concerned the free opening of the country to raw materials. Public opinion of the conduct of the senators in question may be judged from the expressions of so dignified an organ of the business world as the "Banker's Magazine," which said in its issue of July, 1894: "Indifference has largely supplanted the hopes of the friends of tariff reform, as well as the fears of the honest advocates of high protection; and disgust, on the part of the people, has taken the place of trust in our Government, at the exposures of the corruption of the Senate by the most unconscionable and greedy Trusts in existence. Hence the indifference of everybody but the Trusts, and their Senatorial attorneys and dummies with 'retainers' or Trust stocks in their pockets; as it is taken for granted that no interests, but those rich and characterless enough to buy 'protection' will be looked after. . . . Nothing will be regarded as finally settled . . . if the Tariff Bill, as emasculated by the Senate, becomes a law; and it may as well be killed by the House, if the Senate refuse to recede; or, vetoed by the President, if it goes to him in its present shape; and let the existing status continue, until the country can get rid of its purchasable Senators and fill their disgraced seats with honest men who cannot be bought up like cattle at so much per head. This is the growing sentiment of business men generally."— H. A. Pierce, *A Review of Finance and Business* (*Banker's Magazine, July,* 1894).—First in committee, and still more in the Senate after the committee had reported, the bill was radically changed in character from that which the House sent up. The profits of the sugar trust were still protected, and coal and iron ore were dropped back from the free list into the schedules of dutiable commodities. According to estimates made, the average rate of duty in the Wilson Bill as it passed the House was 35.52 per cent., and in the bill which passed the Senate it was 37 per cent., as against 49.58 per cent. in the McKinley law. Hence, the general effect of the revision in the Senate, even as manipulated by the senators suspected of corrupt motives, was an extensive lowering of duties. Some very important additions to the free list made by the Wilson Bill were left untouched by the senators — such as wool, lumber and salt. In view of the extent

of the gains acquired, the supporters of tariff-reform in the House, after prolonged attempts in conference committee to break the strength of the combination against free sugar, free coal and free iron ore, were reluctantly prevailed upon to accept the Senate bill. It had passed the Senate on the 3d of July. The struggle in conference committee lasted until the 13th of August, when the House passed the Senate bill unchanged. The President declined to give his signature to the act, but allowed it to become a law. Immediately after the passage of the bill, the House adopted special enactments admitting raw sugar, coal, iron ore, and barbed wire, free of duty; but these bills were not acted on in the Senate.

TARTAR DYNASTY OF CHINA, The. See CHINA: A. D. 1294–1882.

TARTARS, OR TATARS.—"The Chinese used the name in a general sense, to include the greater part of their northern neighbours, and it was in imitation of them, probably, that the Europeans applied the name to the various nomade hordes who controlled Central Asia after the Mongol invasion. But the name properly belonged, and is applied by Raschid and other Mongol historians, to certain tribes living in the north-eastern corner of Mongolia, who, as I believe, were partially, at least, of the Tungusic race, and whose descendants are probably to be found among the Solons of Northern Manchuria."—H. H. Howorth, *Hist. of the Mongols, pt.* 1, *p.* 25.—"The name of Tartars, or Tatars, has been variously applied. It was long customary among geographical writers to give this title to the Kalmucs and Mongoles, and even to use it as a distinguishing name for those races of men who resemble the Kalmucs in features, and who have been supposed, whether correctly or not, to be allied to them in descent. Later authors, more accurate in the application of terms, have declared this to be an improper use of the name of Tartar, and by them the appellation has been given exclusively to the tribes of the Great Turkish race, and chiefly to the northern division of it, viz. to the hordes spread through the Russian empire and independent Tartary. . . . Whatever may be the true origin of the name of Tartar, custom has appropriated it to the race of men extensively spread through northern Asia, of whom the Ottoman Turks are a branch. It would, perhaps, be more strictly correct to call all these nations Turks, but the customary appellation may be retained when its meaning is determined."—J. C. Prichard, *Researches into the Physical History of the Races of Mankind, ch.* 5, *sect.* 1 (*v.* 2).—"The populations in question [the remnants, in southern Russia and Siberia, of the great Mongol empire of the Kiptchak], belong to one of three great groups, stocks, or families—the Turk, the Mongol, or the Tungus. When we speak of a Tartar, he belongs to the first, whenever we speak of a Kalmuk, he belongs to the second, of these divisions. It is necessary to insist upon this; because, whatever may be the laxity with which the term Tartar is used, it is, in Russian ethnology at least, a misnomer when applied to a Mongol. It is still worse to call a Turk a Kalmuk."—R. G. Latham, *The Nationalities of Europe, v.* 1, *ch.* 23.—"Tartars (more correctly Tatars, but Tartars is the form generally current), a name given to nearly three million inhabitants of the Russian empire, chiefly Moslem and of Turkish origin. The majority—in European Russia—are remnants of the Mongol invasion of the 13th century, while those who inhabit Siberia are survivals of the once much more numerous Turkish population of the Ural-Altaic region, mixed to some extent with Finnish and Samoyedic stems, as also with Mongols. . . . The ethnographical features of the present Tartar inhabitants of European Russia, as well as their language, show that they contain no admixture (or very little) of Mongolian blood, but belong to the Turkish branch of the Ural-Altaic stock, necessitating the conclusion that only Batu, his warriors, and a limited number of his followers were Mongolians, while the great bulk of the 13th-century invaders were Turks."—P. A. Kropotkine, *Art. "Tartars" Encyclopædia Brit.*

TASMANIA, formerly Van Diemen's Land.—"The first occupation of Van Diemen's Land as a British settlement dates from the 13th of June, 1802, when Lieutenant John Bowen, of H. M. S. Glatton, was instructed by the Governor of New South Wales to proceed thither from Sydney in order 'to establish His Majesty's right' to the Island. . . . A mere handful of convicts, guarded by a few soldiers, constituted the vanguard of the great army of criminals

which was to follow. . . . Lieutenant-Colonel Arthur was appointed Lieutenant-Governor of the colony in 1824. . . . About 18 months after his arrival in Van Diemen's Land it was proclaimed an independent colony [see New South Wales: A. D. 1821–1831], and the Imperial Government instituted Executive and Legislative Councils, with advisory and legislative functions. . . . For the better administration of justice, Governor Arthur divided the Island into police districts, with a stipendiary magistrate for each; but he caused the laws to be executed with a Draconic severity, which transformed wretched convicts — many of whom had been transported for trivial offences — into sullen madmen, or ferocious and revengeful devils. Men fled from the horrors of the penal settlement into the solitude of the bush, preferring to face a lingering death by starvation rather than undergo the tortures of the oft-repeated lash at the convict station. . . . In the year 1825, as many as 100 escaped convicts with arms in their hands had re-established a reign of terror in the country districts. . . . At length it became a question whether law or lawlessness should triumph. Governor Arthur placed himself at the head of a strong body of soldiers and civilians, and hunted the daring outlaws down. As many as 103 persons underwent capital punishment in the years 1825 and 1826, and once more the plague of brigandage was stamped out. . . . The Government of the Island remained in the hands of Colonel Arthur for twelve years; and the Crown acknowledged the value of his services by creating him a baronet on his return to England, and by conferring on him the Governorship of Canada. Captain Sir John Franklin . . . was the next Governor of Van Diemen's Land, where he arrived in January, 1837. . . . To numbers of even well-informed persons in the Old World the very name of this remote island was unfamiliar until it became associated with that of the illustrious navigator; and men of high scientific attainments began from that time to exhibit a lively interest in a part of the world of which so little was actually known. . . . Sir John Franklin was replaced in the Government of the colony by Sir John Eardley Wilmot, on the 21st of August, 1843. . . . Shortly after his appointment to the Governorship of Van Diemen's Land, the penal settlement in Norfolk Island had been constituted a dependency of the former; and the most depraved, desperate and irreclaimable of the convicts had been herded together on that beautiful spot. It would be difficult to exaggerate the horrors perpetrated by such a 'pestilent congregation' of criminals of the deepest dye. . . . There were 2,000 prisoners concentrated in Norfolk Island in the year 1845, under the nominal rule of a superintendent who is alleged to have been stern, merciless and cruel in the exercise of the authority entrusted to him. . . . He used the lash and various forms of torture with a frequency and severity which failed to break the spirit of the criminals he endeavoured to tame, while it aggravated the ferocity of their natures. . . . The result was the prevalence of a state of things upon the Island, which, in its unexampled misery and horror, it would be impossible to find adequate words to describe. The Imperial Government happening to learn what a pandemonium Norfolk Island had become, determined upon putting an end to it, and Governor Wilmot received instructions for the immediate transfer of the establishment to Port Arthur. . . . A turning point had now arrived in the history of Van Diemen's Land; and its free population found itself confronted by two alternatives. Either it must consent to succumb to, and to be overwhelmed by, the criminal and servile element, . . . or it must resolve, as it soon afterwards did, that transportation should cease. . . . In . . 1846 Sir Eardley Wilmot was recalled. . . . The darker chapters of Tasmanian story were by this time rapidly turning their last pages. . . . The vice-regal term of Governor Denison, who followed, marks the dawn of the new day which was to see the picturesque Island assume a new name and turn a brighter chapter in its hitherto gloomy story. . . . In the year 1850 the Imperial Parliament passed an Act for the better Government of the Australian Colonies, and among its provisions was one for the establishment of a Legislative Council in Van Diemen's Land, to consist of eight Members nominated by the Governor for the time being, and sixteen to be elected by as many districts. . . . The new Legislative Council did not meet for the dispatch of business until the 1st of January, 1852, and one of its earliest proceedings was to pass a resolution condemnatory of the continuance of the system of transportation. . . . Sir William Denison pertinaciously advised the Secretary of State for the Colonies to uphold transportation to Van Diemen's Land, and stigmatized its opponents as 'a few itinerant agitators.' Happily, wiser counsels prevailed in Downing Street, and when the Earl of Aberdeen came into office, the Duke of Newcastle was enabled to convey to the people of Van Diemen's land the gratifying assurance that . . . transportation to that Island had been put an end to for ever. The welcome dispatch . . . was published in . . . May, 1853. . . . To break the more effectually with such of the associations of the past as were painful in the present, there was a general understanding that the old name of Van Diemen's Land should be allowed to fall into disuse, and that that of the Dutch navigator who had discovered the Island [in 1642] should be bestowed upon it. . . . Henceforth it was to be known as Tasmania, and the judicious change was formally sanctioned by Legislative Enactment a short time afterwards. . . . By an Act of the Imperial Parliament which received the Royal Assent upon the 1st of May, 1855, a Constitution was bestowed upon Tasmania. Two Houses, both of them elective, the Council consisting of 15, and the Assembly of 30 Members, were created and invested with all the Legislative and Administrative powers and functions enjoyed by the august body which had called them into existence."—*Historical Review of Tasmania*, by James Smith, in *Australasia Illustrated, v.* 2, *pp.* 925–941.—Since its constitutional organization, the history of Tasmania has been one of moderate, progress. By census in 1891, its population was 146,667. The aborigines are extinct.

TAUNTON: A. D. 1685.—The Welcome to Monmouth.—The Maids of Taunton and their flag.—"When Monmouth marched into Taunton [A. D. 1685] it was an eminently prosperous place. . . . The townsmen had long

leaned towards Presbyterian divinity and Whig politics. In the great civil war, Taunton had, through all vicissitudes, adhered to the Parliament, had been twice closely besieged by Goring, and had been twice defended with heroic valour by Robert Blake, afterwards the renowned Admiral of the Commonwealth. Whole streets had been burned down by the mortars and grenades of the Cavaliers. . . . The children of the men who, forty years before, had manned the ramparts of Taunton against the Royalists, now welcomed Monmouth with transports of joy and affection. Every door and window was adorned with wreaths of flowers. No man appeared in the streets without wearing in his hat a green bough, the badge of the popular cause. Damsels of the best families in the town wove colours for the insurgents. One flag in particular was embroidered gorgeously with emblems of royal dignity, and was offered to Monmouth by a train of young girls." After the suppression of Monmouth's rebellion, and while the "bloody Assizes" of Jeffreys were in progress, these little girls were hunted out and imprisoned, and the queen's maids of honor were permitted to extort money from their parents for the buying of their pardon and release.—Lord Macaulay, *Hist. of Eng., ch.* 5.—See, also, ENGLAND: A. D. 1685 (MAY—JULY).

TAURICA, TAURIC CHERSONESE.—The ancient Greek name of the Crimea, derived from the Tauri, a savage people who once inhabited it; "perhaps," says Grote, "a remnant of the expelled Cimmerians." See BOSPHORUS, THE CITY, &C.; and CIMMERIANS.

TAURIS, Naval battle near.—In the Roman civil war between Cæsar and his antagonists an important naval battle was fought, B. C. 47, near the little island of Tauris, on the Illyrian coast. Vatinius, who commanded on the Cæsarian side, defeated Octavius, and drove him out of the Adriatic.—G. Long, *Decline of the Roman Republic, v.* 5, *ch.* 21.

TCHINOVNIKS.—To keep the vast and complex bureaucratic machine of Russia in motion "it is necessary to have a large and well-drilled army of officials. These are drawn chiefly from the ranks of the noblesse and the clergy, and form a peculiar social class called Tchinovniks, or men with 'Tchins.' As the Tchin plays an important part in Russia, not only in the official world, but also to some extent in social life, it may be well to explain its significance. All officers, civil and military, are, according to a scheme invented by Peter the Great, arranged in fourteen classes or ranks, and to each class or rank a particular name is attached. . . . As a general rule a man must begin at or near the bottom of the official ladder, and he must remain on each step a certain specified time. The step on which he is for the moment standing, or, in other words, the official rank or Tchin which he possesses, determines what offices he is competent to hold. Thus rank or Tchin is a necessary condition for receiving an appointment, but it does not designate any actual office, and the names of the different ranks are extremely apt to mislead a foreigner."—D. M. Wallace, *Russia, ch.* 13.

TEA: Introduction into Europe.—"The Dutch East India Company were the first to introduce it into Europe, and a small quantity came to England from Holland in 1666. The East India Company thereafter ordered their agent at Bantam to send home small quantities, which they wished to introduce as presents, but its price was 60s. per lb., and it was little thought of. Twenty years elapsed before the Company first decided on importing tea, but by degrees it came into general use. In 1712 the imports of tea were only 156,000 lbs.; in 1750 they reached 2,300,000 lbs.; in 1800, 24,000,000 lbs.; in 1830, 30,500,000 lbs., and in 1870, 141,000,000 lbs."—L. TEMPERANCE MOVEMENTS. — Organized movements of temperance reform appear to have had their origin in America. The first known Temperance Society is said to have been formed among the farmers of Litchfield county, Connecticut, in 1789; the next appeared in Saratoga county, New York, in 1808 and 1809. In 1813 a Massachusetts Society for the Suppression of Intemperance was formed. In 1829 the movement was nationalized by the organization of the American Temperance Society. In that year, too, it was taken up in Ireland and Scotland, by societies formed at New Ross, in the former, and at Glasgow, in the latter. The first English society of like kind is reported to have taken form at Bradford, in 1830; but a British and Foreign Temperance Society was organized for general agitation of the subject as early as 1831. In America, the first national temperance convention was held at Philadelphia in 1833. A movement for the absolute suppression of the traffic in ardent spirits was begun in Maine, with Neal Dow among its leaders, as early as 1837. It succeeded after fourteen years in accomplishing its purpose, by the passage of the famous Maine Law, in June, 1851. Stringent legislation to restrain the traffic had already been secured in several other states; but really effective prohibition may be said to have been brought to trial first by the Maine Law. Meantime, many widespread temperance organizations had arisen—the Order of Rechabites in England, in 1835; the Societies of the Washingtonians, for the reclamation of drunkards, at Baltimore, in 1840; the Band of Hope among children, instituted at Leeds, England, in 1847; the Order of Sons of Temperance, formed in New York, in 1842; the Good Templars, in 1851. In 1838, Father Mathew entered on his great temperance mission in Ireland. In 1842, John B. Gough began his career as a temperance lecturer. In 1853, the United Kingdom Alliance, for the suppression of the liquor traffic, was formed in Great Britain. In December, 1873, the Women's Temperance Crusade, by meetings for prayer in saloons, was started in Ohio, and spread through many states. In the same year, the Blue Ribbon temperance mission of Francis Murphy was begun. In 1874, the Woman's National Christian Temperance Union was organized, at a convention held in Cleveland, Ohio.—*Centennial Temperance Volume.*

TEMPLARS: A. D. 1118.—The Founding of the Order.—In 1118, nine knights, of whom Hugh de Payens was the principal, took a vow, in the presence of Baldwin I., King of Jerusalem, to be both monks and soldiers, devoting themselves to the protection of the pilgrims who visited the Holy Land. They were given part of the king's palace for residence, and the open space between the palace and the Temple—whence they took the name of Templars. In 1128 Hugh de Payens and others visited Europe and awakened great interest in the Order. "The Templars appeared before the council of Troyes, and gave an account of their order and its objects, which were highly approved of by the fathers. The celebrated Bernard, abbot of Clairvaux, took a lively interest in its welfare, and made some improvements in its rule. A white mantle was assigned as their habit, to which Pope Eugenius some years afterwards added a plain red cross on the left breast; their banner was formed of the black and white striped cloth named Bauséant, which word became their battle-cry, and it bore the humble inscription, 'Not unto us, O Lord, but unto thy name be glory!' Hugh de Payens returned to Syria at the head of three hundred knights of the noblest houses of the West, who had become members of the order."—T. Keightley, *The Crusaders, ch. 2.*

ALSO IN: J. A. Froude, *The Spanish Story of the Armada and other Essays, ch. 4.*

A. D. 1185-1313.—The Order in England and elsewhere.—"The Knights Templars first established the chief house of their order in England, without Holborn Bars [London] on the south side of the street, where Southampton House formerly stood; . . . but when the order had greatly increased in numbers, power, and wealth, and had somewhat departed from its original purity and simplicity, we find that the superior and the knights resident in London began to look abroad for a more extensive and commodious place of habitation. They purchased a large space of ground, extending from the White Friars westward to Essex House without Temple Bar, and commenced the erection of a convent on a scale of grandeur commensurate with the dignity and importance of the chief house of the great religio-military society of the Temple in Britain. It was called the New Temple, to distinguish it from the original establishment at Holborn, which came thenceforth to be known by the name of the Old Temple. . . [In 1185] Geoffrey, the superior of the order in England, caused an inquisition to be made of the lands of the Templars, . . . and the amount of all kinds of property possessed by the Templars in England at that period is astonishing. . . . The annual income of the order in Europe has been roughly estimated at six millions sterling! According to Matthew Paris, the Templars possessed nine thousand manors or lordships in Christendom, besides a large revenue and immense riches arising from the constant charitable bequests and donations of sums of money from pious persons. . . . The Templars, in addition to their amazing wealth, enjoyed vast privileges and immunities."—C. G. Addison, *The Knights Templars, ch. 3.*—When the order of the Templars was suppressed and its property confiscated, the convent and church of the Temple in London were granted by the king, first, in 1313, to Aymer de Valence, Earl of Pembroke; afterwards, successively, to the Duke of Lancaster and to Hugh le Despenser. "The Temple then came for a short time into the hands of the Knights Hospitallers, and during the reign of

Edward III. it seems to have been occupied by the lawyers, as tenants under the Hospitallers. When that order was dissolved by Henry VIII., the property passed into the hands of the Crown, the lawyers still holding possession as tenants. This continued till the reign of James I., when a petition was drawn up and presented to the king asking him to assign the property to the legal body in permanence. This was accordingly done by letters patent, in A. D. 1609, and the Benchers of the Inner and Middle Temple received possession of the buildings, on consideration of a small annual payment to the Crown."—F. C. Woodhouse, *Military Religious Orders, pt. 2, ch. 7.*— "Many of the old retainers of the Temple became servants of the new lawyers, who had ousted their masters. . . . The dining in pairs, the expulsion from hall for misconduct, and the locking out of chambers were old customs also kept up. The judges of Common Pleas retained the title of knight, and the Fratres Servientes of the Templars arose again in the character of learned serjeants-at-law, the coif of the modern serjeant being the linen coif of the old Freres Serjens of the Temple."—W. Thornbury, *Old and New London, v. 1, ch. 14.*

A. D. 1299.—Their last campaign in Palestine. See Crusades: A. D. 1299.

A. D. 1307-1314.—The prosecution and destruction of the order.—"When the Holy Land fell completely into Mahomedan hands on the loss of Acre in 1291 [see Jerusalem: A. D. 1291] they [the Templars] abandoned the hopeless task and settled in Cyprus. By the end of the thirteenth century they had almost all returned to Europe. They were peculiarly strong and wealthy in France — the strength and wealth were alike dangerous to them. In Paris they built their fortress, the Temple, over against the King's palace of the Louvre; and in that stronghold the King himself had once to take refuge from the angry Parisian mob, exasperated by his heavy extortions. During the life and death struggle with the Papacy, the order had not taken the side of the Church against the sovereign; for their wealth had held them down. Philip [Philip IV], however, knew no gratitude, and they were doomed. A powerful and secret society endangered the safety of the state: their wealth was a sore temptation: there was no lack of rumours. Dark tales came out respecting the habits of the order; tales exaggerated and blackened by the diseased imagination of the age. Popular proverbs, those ominous straws of public opinion, were heard in different lands, hinting at dark vices and crimes. Doubtless the vows of the order, imposed on unruly natures, led to grievous sins against the first laws of moral life. And there was more than this: there were strange rumours of horrible infidelity and blasphemy; and men were prepared to believe everything. So no one seemed to be amazed when, in October, 1307, the King made a sudden coup d'état, arrested all the Templars in France on the same day, and seized their goods. The Temple at Paris with the Grand Master fell into his hands. Their property was presently placed in the custody of the Pope's nuncios in France; the knights were kept in dark and dismal prisons. Their trial was long and tedious. Two hundred and thirty-one knights were examined, with all the brutality that examination then meant; the Pope also took the depositions of more than seventy. From these examinations what can we learn? All means were used: some were tortured, others threatened, others tempted with promises of immunity. They made confession accordingly; and the ghastly catalogue of their professed ill-doings may be read in the history of the trial. Who shall say what truth there was in it all? Probably little or none. Many confessed and then recanted their confession. The golden image with eyes of glowing carbuncle which they worshipped; the trampling and spitting on the crucifix; the names of Galla and Baphomet; the hideous practices of the initiation;— all these things pass before us, in the dim uncertainty, like some horrible procession of the vices in hell. What the truth was will never be known. . . . The knights made a dignified defence in these last moments of their history; they did not flinch either at the terrible prospect before them, or through memory of the tortures which they had undergone. Public opinion, in and out of France, began to stir against the barbarous treatment they had received; they were no longer proud and wealthy princes, but suffering martyrs, showing bravery and a firm front against the cruelties of the King and his lawyers. Marigni, Philip's minister and friend, and the King himself, were embarrassed by the number and firmness of their victims, by the sight of Europe looking aghast, by the murmurs of the people. Marigni suggested that men who had confessed and recanted might be treated as relapsed heretics, such being the law of the Inquisition, (what irony was here!) and accordingly in 1310 an enclosure was made at Paris, within which fifty-nine Templars perished miserably by fire. Others were burnt later at Senlis. . . . The King and Pope worked on the feeble Council, until in March 1312 the abolition of the order was formally decreed; and its chief property, its lands and buildings, were given over to the Knights of St. John, to be used for the recovery of the Holy Land; 'which thing,' says the Supplementor to William of Nangis, 'came not to pass, but rather the endowment did but make them worse than before.' The chief part of the spoil, as might be well believed, never left the King's hands. One more tragedy, and then all was over. The four heads of the order were still at Paris, prisoners — Jacques de Molai, Grand Master; Guy of Auvergne, the Master of Normandy, and two more. The Pope had reserved their fate in his own hands, and sent a commission to Paris, who were enjoined once more to hear the confession of these dignitaries, and then to condemn them to perpetual captivity. But at the last moment the Grand Master and Guy publicly retracted their forced confessions, and declared themselves and the order guiltless of all the abominable charges laid against them. Philip was filled with devouring rage. Without further trial or judgment he ordered them to be led that night to the island in the Seine; there they were fastened to the stake and burnt."— G. W. Kitchin, *Hist. of France, v. 1, bk. 3, ch. 10, sect. 3.* — In England, a similar prosecution of the Templars, instigated by the pope, was commenced in January, 1308, when the chiefs of the order were seized and imprisoned and subjected to examination with torture. The result was the dissolution of the order and the confiscation of its property

but none of the knights were executed, though some died in prison from the effects of their barbarous treatment. "The property of the Templars in England was placed under the charge of a commission at the time that proceedings were commenced against them, and the king very soon treated it as if it were his own, giving away manors and convents at his pleasure. A great part of the possessions of the Order was subsequently made over to the Hospitallers. . . . Some of the surviving Templars retired to monasteries, others returned to the world, and assumed secular habits, for which they incurred the censures of the Pope. . . . In Spain, Portugal, and Germany, proceedings were taken against the Order; their property was confiscated, and in some cases torture was used; but it is remarkable that it was only in France, and those places where Philip's influence was powerful, that any Templar was actually put to death."—F. C. Woodhouse, *Military Religious Orders, pt. 2, ch. 6–7 and 5.*

TEMPLE, The (London). See Templars: A. D. 1185–1313.

TEMPLE OF CONCORD AT ROME, The.—After the long contest in Rome over the Licinian Laws, which were adopted B. C. 367, M. Furius Camillus—the great Camillus—being made Dictator for the fifth time, in his eightieth year, brought about peace between the patricians and plebeians, in commemoration of which he vowed a temple to Concord. "Before he could dedicate it, the old hero died. The temple, however, was built according to his design; its site, now one of the best known among those of ancient Rome, can still be traced with great certainty at the north-western angle of the Forum, immediately under the Capitoline. The building was restored with great magnificence by the Emperor Tiberius; and it deserved to be so, for it commemorated one of the greatest events of Roman history."—H. G. Liddell, *Hist. of Rome, bk. 2, ch. 15 (v. 1).*

TEMPLE OF DIANA. See Ephesus.

TEMPLE OF JANUS, The.—"The Temple of Janus was one of the earliest buildings of Rome, founded, according to Livy (i. 19.) by Numa. It stood near the Curia, on the north-east side of the Forum, at the verge of a district called the Argiletum. . . . [It was] a small 'ædicula' or shrine, which towards the end of the Republic, or perhaps earlier, was of bronze. It is shown with much minuteness on a First Brass of Nero as a small cella, without columns, but with richly ornamented frieze and cornice. Its doors were closed on those rare occasions when Rome was at peace with all the world. From the time of its traditional founder, Numa, to that of Livy, it was only twice shut—once after the first Punic War, and secondly after the victory of Augustus at Actium. . . . It contained a very ancient statue, probably by an Etruscan artist, of the doublefaced Janus Bifrons, or Geminus. . . . The Temple of Janus gave its name to this part of the edge of the Forum, and from the numerous shops of the argentarii or bankers and money-lenders which were there, the word Janus came to mean the usurers' quarter."—J. H. Middleton, *Ancient Rome in 1885, ch. 5.*—The Temple of Janus was closed, once more, by Vespasian, after the destruction of Jerusalem and the ending of the war in Judea, A. D. 71. "It had stood open since the German wars of the first princeps [Augustus]; or, according to the computation of the christian Orosius, from the birth of Christ to the overthrow of the Jewish people: for the senate had refused to sanction Nero's caprice in closing it on his precarious accommodation with Parthia. Never before had this solemn act addressed the feelings of the citizens so directly. . . . The Peace of Vespasian was celebrated by a new bevy of poets and historians not less loudly than the Peace of Augustus. A new era of happiness and prosperity was not less passionately predicted."—C. Merivale, *Hist. of the Romans, ch. 60.*

TEMPLE OF SOLOMON, The.—"As soon as David had given to his people the boon of a unique capital, nothing could be more natural than the wish to add sacredness to the glory of the capital by making it the centre of the national worship. According to the Chronicles, David . . . had made unheard-of preparations to build a house for God. But it had been decreed unfit that the sanctuary should be built by a man whose hands were red with the blood of many wars, and he had received the promise that the great work should be accomplished by his son. Into that work Solomon threw himself with hearty zeal in the month Zif of the fourth year of his reign, when his kingdom was consolidated. . . . He inherited the friendship which David had enjoyed, with Hiram, King of Tyre. . . . The friendliest overtures passed between the two kings in letters, to which Josephus appeals as still extant. A commercial treaty was made by which Solomon engaged to furnish the Tyrian king with annual revenues of wheat, barley, and oil, and Hiram put at Solomon's disposal the skilled labour of an army of Sidonian wood-cutters and artisans. . . . Some writers have tried to minimise Solomon's work as a builder, and have spoken of the Temple as an exceedingly insignificant structure which would not stand a moment's comparison with the smallest and humblest of our own cathedrals. Insignificant in size it certainly was, but we must not forget its costly splendour, the remote age in which the work was achieved, and the truly stupendous constructions which the design required. Mount Moriah was selected as a site hallowed by the tradition of Abraham's sacrifice, and more recently by David's vision of the Angel of the Pestilence with his drawn sword on the threshing-floor of the Jebusite Prince Araunah. But to utilise this doubly consecrated area involved almost superhuman difficulties, which would have been avoided if the loftier but less suitable height of the Mount of Olives could have been chosen. The rugged summit had to be enlarged to a space of 500 yards square, and this level was supported by Cyclopean walls, which have long been the wonder of the world. . . . The caverns, quarries, water storages, and subterranean conduits hewn out of the solid rock, over which Jerusalem is built, could only have been constructed at the cost of immeasurable toil. . . . It was perhaps from his Egyptian father-in-law that Solomon, to his own cost, learnt the secret of forced labour which alone rendered such undertakings possible. . . . Four classes were

subject to it. 1. The lightest labour was required from the native freeborn Israelites (ezrach). They were not regarded as bondsmen, . . . yet 30,000 of these were required in relays of 10,000 to work, one month in every three, in the forest of Lebanon. 2. There were the strangers, or resident aliens (Gerim), such as the Phœnicians and Giblites, who were Hiram's subjects and worked for pay. 3. There were three classes of slaves — those taken in war, or sold for debt, or home-born. 4. Lowest and most wretched of all, there were the vassal Canaanites (Toshabim), from whom were drawn those 70,000 burden-bearers, and 80,000 quarry-men, the Helots of Palestine, who were placed under the charge of 3,600 Israelite officers. The blotches of smoke are still visible on the walls and roofs of the subterranean quarries where these poor serfs, in the dim torchlight and suffocating air, 'laboured without reward, perished without pity, and suffered without redress.' The sad narrative reveals to us, and modern research confirms, that the purple of Solomon had a very seamy side, and that an abyss of misery heaved and moaned under the glittering surface of his splendour. . . . Apart from the lavish costliness of its materials the actual Temple was architecturally a poor and commonplace structure. It was quite small — only 90 feet long, 35 feet broad, and 45 feet high. It was meant for the symbolic habitation of God, not for the worship of great congregations. . . . Of the external aspect of the building in Solomon's day we know nothing. We cannot even tell whether it had one level roof, or whether the Holy of Holies was like a lower chancel at the end of it; nor whether the roof was flat or, as the Rabbis say, ridged; nor whether the outer surface of the three-storied chambers which surrounded it was of stone, or planked with cedar, or overlaid with plinths of gold and silver; nor whether, in any case, it was ornamented with carvings or left blank; nor whether the cornices only were decorated with open flowers like the Assyrian rosettes. Nor do we know with certainty whether it was supported within by pillars or not. . . . It required the toil of 300,000 men for twenty years to build one of the pyramids. It took two hundred years to build and four hundred to embellish the great Temple of Artemis of the Ephesians. It took more than five centuries to give to Westminster Abbey its present form. Solomon's Temple only took seven and a half years to build; but . . . its objects were wholly different from those of the great shrines which we have mentioned. . . . Needing but little repair, it stood for more than four centuries. Succeeded as it was by the Temples of Zerubbabel and of Herod, it carried down till seventy years after the Christian era the memory of the Tabernacle in the wilderness, of which it preserved the general outline, though it exactly doubled all the proportions and admitted many innovations."— F. W. Farrar, *The First Book of Kings, ch.* 14 (*Expositor's Bible*).

A. D. 1769-1772.—The first settlers in the eastern valley.—The Watauga commonwealth and its constitution.—"Soon after the successful ending of the last colonial struggle with France, and the conquest of Canada, the British king issued a proclamation forbidding the English colonists from trespassing on Indian grounds, or moving west of the mountains [see Northwest Territory of the U. S.: A. D. 1763]. But in 1768, at the treaty of Fort Stanwix, the Six Nations agreed to surrender to the English all the lands lying between the Ohio and the Tennessee [see United States of Am.: A. D. 1765–1768]; and this treaty was at once seized upon by the backwoodsmen as offering an excuse for settling beyond the mountains. However, the Iroquois had ceded lands to which they had no more right than a score or more other Indian tribes. . . . The great hunting-grounds between the Ohio and the Tennessee formed a debatable land, claimed by every tribe that could hold its own against its rivals. The eastern part of what is now Tennessee consists of a great hill-strewn, forest-clad valley, running from northeast to southwest, bounded on one side by the Cumberland, and on the other by the Great Smoky and Unaka Mountains; the latter separating it from North Carolina. In this valley arise and end the Clinch, the Holston, the Watauga, the Nolichucky, the French Broad, and the other streams, whose combined volume makes the Tennessee River. The upper end of the valley lies in southwestern Virginia, the headwaters of some of the rivers being well within that State; and though the province was really part of North Carolina, it was separated therefrom by high mountain chains, while from Virginia it was easy to follow the watercourses down the valley. Thus, as elsewhere among the mountains forming the western frontier, the first

movements of population went parallel with, rather than across, the ranges. As in western Virginia the first settlers came, for the most part, from Pennsylvania, so, in turn, in what was then western North Carolina, and is now eastern Tennessee, the first settlers came mainly from Virginia, and, indeed, in great part, from this same Pennsylvanian stock. Of course, in each case there was also a very considerable movement directly westward. They were a sturdy race, enterprising and intelligent, fond of the strong excitement inherent in the adventurous frontier life. Their untamed and turbulent passions, and the lawless freedom of their lives, made them a population very productive of wild, headstrong characters; yet, as a whole, they were a God-fearing race, as was but natural in those who sprang from the loins of the Irish Calvinists. Their preachers, all Presbyterians, followed close behind the first settlers and shared their toil and dangers. . . . In 1769, the year that Boon first went to Kentucky, the first permanent settlers came to the banks of the Watauga, the settlement being merely an enlargement of the Virginia settlement, which had for a short time existed on the head-waters of the Holston, especially near Wolf Hills. At first the settlers thought they were still in the domain of Virginia, for at that time the line marking her southern boundary had not been run so far west. . . . But in 1771, one of the new-comers, who was a practical surveyor, ran out the Virginia boundary line some distance to the westward, and discovered that the Watauga settlement came within the limits of North Carolina. Hitherto the settlers had supposed that they themselves were governed by the Virginian law, and that their rights as against the Indians were guaranteed by the Virginian government; but this discovery threw them back upon their own resources. They suddenly found themselves obliged to organize a civil government. . . . About the time that the Watauga commonwealth was founded, the troubles in North Carolina came to a head. Open war ensued between the adherents of the royal governor, Tryon, on the one hand, and the Regulators, as the insurgents styled themselves, on the other, the struggle ending with the overthrow of the Regulators at the battle of Alamance [see NORTH CAROLINA: A. D. 1766–1771]. As a consequence of these troubles, many people from the back counties of North Carolina crossed the mountains, and took up their abode among the pioneers on the Watauga and upper Holston; the beautiful valley of the Nolichucky soon receiving its share of this stream of immigration. Among the first comers were many members of the class of desperate adventurers always to be found hanging round the outskirts of frontier civilization. . . . But the bulk of the settlers were men of sterling worth; fit to be the pioneer fathers of a mighty and beautiful state. . . . Such were the settlers of the Watauga, the founders of the commonwealth that grew into the State of Tennessee, who early in 1772 decided that they must form some kind of government that would put down wrong-doing and work equity between man and man. Two of their number already towered head and shoulders above the rest in importance and merit especial mention; for they were destined for the next thirty years to play the chief parts in the history of that portion of the Southwest which largely through their own efforts became the State of Tennessee. These two men, neither of them yet thirty years of age, were John Sevier and James Robertson. . . . With their characteristic capacity for combination, so striking as existing together with the equally characteristic capacity for individual self-help, the settlers determined to organize a government of their own. They promptly put their resolution into effect early in the spring of 1772, Robertson being apparently the leader in the movement. They decided to adopt written articles of agreement, by which their conduct should be governed; and these were known as the Articles of the Watauga Association. They formed a written constitution, the first ever adopted west of the mountains, or by a community composed of American-born freemen. It is this fact of the early independence and self-government of the settlers along the head-waters of the Tennessee that gives to their history its peculiar importance. They were the first men of American birth to establish a free and independent community on the continent. . . . The first step taken by the Watauga settlers, when they had determined to organize, was to meet in general convention, holding a kind of folk-thing, akin to the New England town-meeting. They then elected a representative assembly, a small parliament or 'witanagemot,' which met at Robertson's station. Apparently the freemen of each little fort or palisaded village, each block-house that was the centre of a group of detached cabins and clearings, sent a member to this first frontier legislature. It consisted of thirteen representatives, who proceeded to elect from their number five—among them Sevier and Robertson—to form a committee or court, which should carry on the actual business of government, and should exercise both judicial and executive functions. This court had a clerk and a sheriff, or executive officer, who respectively recorded and enforced their decrees. . . . In fact, the dwellers, in this little outlying frontier commonwealth, exercised the rights of full statehood for a number of years; establishing in true American style a purely democratic government with representative institutions."— T. Roosevelt, *The Winning of the West, v.* 1, *ch.* 7.

A. D. 1776-1784.—Annexation to North Carolina.—Cession by that state to the Congress of the Confederation.—Consequent revolt.—Repeal of the act of cession.—"The Watauga people had hopes, when the articles of association were adopted, of being able eventually to form an independent government, governed as the older colonies were governed, by royal governors. When the disagreements between the colonies and the mother country arose, they modified their views to the new order of things, and regarded themselves as a distinct though as yet inchoate state. But their weakness . . . rendered the protection of some more powerful state necessary for their welfare. . . . They petitioned North Carolina for annexation in 1776. Their petition was granted. . . . The provincial congress of North Carolina met at Halifax in November, 1776, and [Robertson, Sevier and two others] were delegates from Washington District, Watauga settlement. . . . After

the annexation of the Washington District the old form of government was allowed to stand until the spring of 1777. . . . In November of this year, 1777, the District of Washington became Washington County. . . . From 1777 until the disturbances of eight years later, the history of Tennessee was a part of the history of North Carolina. . . . The part played by the inhabitants of Tennessee in the war for independence was active, and in one instance [at King's Mountain] decisive. Their operations were chiefly of a desultory, guerrilla kind, under the leadership of Sevier . . . and Shelby." Sevier was also the leader in wars with the Indians, which were carried on with unsparing fierceness on both sides. "In the April session of 1784, the General Assembly of North Carolina, in accordance with the recommendation of Congress itself, as well as with the dictates of a far-seeing and enlightened statesmanship, imitated the example of Virginia and New York [see UNITED STATES OF AM.: A. D. 1781–1786], and ceded to the United States all the territory which is now the State of Tennessee. This of course included all the settlements. The condition of the cession was its acceptance by Congress within two years. Until Congress should have accepted the ceded territory, the jurisdiction of North Carolina over it was to remain in every respect the same as heretofore. . . . When the question of cession was first broached, it was accepted by the four representatives of the western counties at Hillsboro, as well as by those who proposed it, as the natural and legitimate solution of a complex problem. No one apparently dreamed of opposition on the part of the settlers themselves. . . . There is no reason to think that the Watauga people had any objection to the cession. . . . The objection was against the manner of the cession and its conditions. . . . The main cause of complaint was that North Carolina had left them without any form of government for two years. . . . A storm of indignation swept through the entire settlement. . . . The people regarded themselves without government, and, true to the traditions of their race, they sought the solution of the difficulty in their own resources. . . . It is one of the noteworthy facts in the history of institutions that the possessors of English tradition always begin with the first primal germ of local self-government at hand, be it court leet, court of quarter sessions, township, county, school district, or military company, and build upward. The Watauga people had nothing so convenient as the militia companies, and they began with them as representing a more minutely varied constituency than the county court. Each company elected two representatives, and the representatives so elected in each county formed themselves into a committee, and the three committees of Washington, Sullivan, and Greene counties met as a kind of impromptu or temporary legislature, and decided to call a general convention to be elected by the people of the different counties. This convention met on the 23d of August, 1784, at Jonesboro. John Sevier was elected president, and Landon Carter secretary. . . . It is supposed that the convention which met at Jonesboro adopted the resolution to form a 'separate and distinct State, independent of the State of North Carolina.' . . . Provision was made for the calling of a future convention in which representation was to be according to companies. . . . The meeting adjourned, having fairly inaugurated the contest with North Carolina, which still claimed jurisdiction." Soon afterward the legislature of North Carolina repealed the act of cession, and "for a time it was supposed that this would terminate the agitation in favor of a new State." —J. Phelan, *Hist. of Tennessee, ch.* 5–10.

A. D. 1780.—The Battle of King's Mountain. See UNITED STATES OF AM.: A. D. 1780–1781.

A. D. 1785.—The organization of the State of Franklin.—"Toward the close of May [1785] the western lands being again under discussion [in Congress], a resolution was carried urging North Carolina to reconsider her act of the previous November, and once more cede to Congress her possessions beyond the mountains. Had the request been granted, there can be no doubt the measure would have speedily brought peace and quiet to that distracted region. But North Carolina was too intent on bringing her rebellious subjects to terms to think for a moment of bestowing them with their lands and goods on Congress. Indeed, when the news of the request was carried into the district some months later, the malcontents expressed much surprise. They could not, they said, understand why Congress should apply to North Carolina; North Carolina had nothing to do with them. The parent State had, by her act of 1784, given them away. Congress did not take them under its protection. They belonged, therefore, to nobody, and while in this condition had called a convention, had framed a constitution, had formed a new State, had chosen for it a name, and elected a Legislature which was actually in session at the time the act of the 23d of May was passed. . . . Much of what they stated was strictly true. The delegates to the second convention had assembled early in 1785. These had given the State the name of Franklin, and had drawn up a constitution which they submitted to the people. It was expected that the men of the district would consider it carefully, and select delegates to a third convention, which should have full power to ratify or reject. The place fixed upon for the meeting of the convention was Greenville. But as there was then no printing-press nearer than Charleston or Richmond, and as much time must elapse before the constitution could become known to all, the delegates were not to convene till the 14th of November. Meanwhile the Legislature was to organize. Elections were held without delay; members were chosen after the manner in which the settlers had long been accustomed to elect representatives to the Assembly of the parent State, and these, meeting at Jonesboro, conducted their business with so much dispatch that on the last day of March they adjourned. Many acts were passed by them. But one alone excited general comment, and was the cause of unbounded merriment across the mountains. A list of articles at that time scarce to be met with in the State of Franklin would be a long one. But there would be no article in the list less plentiful than money. . . . When, therefore, the Legislature came to determine what should be the legal currency of the State, it most wisely contented itself with fixing the value of

such articles as had, from time immemorial, been used as money. One pound of sugar, the law said, should pass for a shilling-piece; the skin of a raccoon or a fox for a shilling and threepence. A gallon of rye whiskey, it was thought, was worth twice that sum, while a gallon of peach-brandy or a yard of good nine hundred flax linen was each to pass for a three-shilling piece. Some difficulty was met with in selecting articles that could be easily carried from place to place and expressive of large values. It was, however, finally determined that a clean beaver-skin, an otter- or a deer-skin, should each of them be the representative of six shillings. In this kind of money, the law further prescribed, the salary of every officer of the State, from the Governor down to the hangman, was to be paid. When this act became known in the East the wits were greatly amused. . . . In the belief that the new money could not be counterfeited they were much mistaken. Many bundles of what seemed to be otter-skins were soon passing about, which, on being opened, were found to be skins of raccoons with tails of otters sewed to them. . . . The name of the State has often been asserted to be Frankland, the land of the Franks, or Freemen. . . . But letters are extant from high officials of the State to Benjamin Franklin declaring that it was named after him."—J. B. McMaster, *Hist. of the People of the U. S., v.* 1, *ch.* 3, *with foot-note.*

Also in: J. G. M. Ramsey, *Annals of Tennessee, ch.* 4.

A. D. 1785-1796.—The troubled history and the fall of the state of Franklin.—The rise of the state of Tennessee.— On receiving news of the organization of the independent state of Franklin, Governor Martin, of North Carolina, issued a proclamation which was skilfully addressed to the cooler judgment of the mountaineers and which "was not without its effect." But, although the adherents of North Carolina "gradually gained ground in the new commonwealth, a majority still clung to Sevier, and refused to recognize any government but the one they themselves had organized. In this opposition of parties, disorders sprang up which presently degenerated into lawlessness. Both governments claimed jurisdiction, and both sought to exercise it. The consequence was that both became inefficient. Party quarrels ensued; old friends became enemies; Tipton and his followers openly supported the claims of North Carolina; Sevier sought to maintain his authority as the executive officer of Franklin. This antagonistic spirit led to the commission of various outrages. . . . But in the midst of these inglorious quarrels, Governor Sevier did not neglect to defend from Indian aggressions the state over which he had been called to preside. . . . He was far less successful, however, in giving peace to the distracted state of Franklin. The continuance of intestine dissensions, and the nice balance of parties which took place in 1787, induced the people to refuse to pay taxes either to North Carolina or to the local government, until the supremacy of one or the other should be more generally acknowledged. In this state of affairs, with his government tottering to its downfall, Sevier earnestly appealed to North Carolina for a ratification of the independence of the state of Franklin, and to Franklin himself, and the governors of Georgia and Virginia, for counsel and assistance. Disappointed on all sides, he finally rested for support upon his immediate friends, conscious of the rectitude of his own intentions. . . . But the people were already weary of a feud which threatened, at every fresh outbreak, to end in bloodshed. In 1787 the last legislature of the state of Franklin held its session at Greenville. . . . The conciliatory measures of North Carolina presently disarmed the malecontents of all further arguments for opposing the reunion; and in February, 1788, the state of Franklin ceased to exist." Fierce conflicts between Sevier and Tipton and their hotter partisans still continued for some time; until, in October, Sevier was arrested for high treason and imprisoned at Morgantown. He escaped soon after, through the aid of his sons, was elected to the North Carolina senate, and was permitted to qualify for the seat on renewing his oath of allegiance. "His services were remembered and his faults forgotten." Meantime, settlements on the Cumberland, founded in 1779 by James Robertson, had prospered and grown strong, and Nashville, the chief among them, assumed its name in 1784, "in commemoration of the patriotic services of Colonel Francis Nash," of North Carolina, who fell in the battle of Germantown. In 1790, after ratifying the Federal Constitution, North Carolina, re-enacted the cession of her western territory, coinciding with the present state of Tennessee, to the United States, stipulating "that no regulation made or to be made by Congress shall tend to the emancipation of slaves." The "Territory southwest of the Ohio" was then organized, with William Blount for governor. Six years later (January, 1796), the population of the Territory having been ascertained by a census to be 67,000 free white inhabitants and 10,000 slaves, a constitution was adopted, the State of Tennessee was formed, with John Sevier for Governor, and, after some opposition in Congress, it was formally admitted to its place and rank as one of the United States of America. Its first Representative in the House was Andrew Jackson.— W. H. Carpenter, *Hist. of Tennessee, ch.* 13–17.

A. D. 1861 (January—May).— The mode in which the state was dragged into Rebellion.— "The Legislature of Tennessee met on the 6th of January. On the 12th, a bill for the calling of a state convention [with the object of following the lead, in secession, which South Carolina had taken on the 20th of December — See United States of Am.: A. D. 1860 (October — December)] was passed. It was passed subject to the approval of the voters. The election took place on the 8th day of February. The people voted against holding a convention by 67,360, to 54,156. In disregard of this vote of the people, however, the legislature, on May 1st, passed a joint resolution authorizing the governor to enter into a military league with the Confederate States. The league was formed. The Governor,

Isham G. Harris, sent a message to the legislature, announcing the fact. He stated its terms. . . . It stipulated that until the state should become a member of the Confederacy, 'the whole military force and military operations, offensive and defensive, of said state, in the impending conflict with the United States, shall be under the chief control and direction of the President of the Confederate States.' It was also agreed that the state would, as soon as it should join the Confederacy, turn over all public property it might acquire from the United States. The legislature ratified the league by decided majorities of both branches. These final proceedings took place on the 7th day of May. On the preceding day, the legislature put forth a declaration of independence. It was submitted to the votes of the people for ratification. This document waives the right of secession, as follows: 'We, the people of the State of Tennessee, waiving an expression of opinion as to the abstract doctrine of secession, but asserting the right, as a free and independent people,' declare that all the laws and ordinances by which Tennessee became a member of the Federal Union, 'are hereby abrogated.' The vote for separation was declared by the governor to be 104,019 for, and 47,238 against that measure. It thus appears that the Legislature of Tennessee, in declaring the separation of the state from the Federal Union, placed its action upon the ground of a revolutionary right, which all admit to be inalienable, if the cause be just."—S. S. Cox, *Three Decades of Federal Legislation, ch.* 6.

A. D. 1861 (June).—The loyalty of East Tennessee and its resistance to Secession.—"For separation and representation at Richmond, East Tennessee gave [at the election, June 8, when the question of secession was nominally submitted to the people, the state having been already delivered by its governor and legislature to the Confederacy] 14,700 votes; and half of that number were Rebel troops, having no authority under the Constitution to vote at any election. For 'no separation' and 'no representation,'—the straight-out Union vote,—East Tennessee gave 33,000, or 18,300 of a majority, with at least 5,000 quiet citizens deterred from coming out by threats of violence, and by the presence of drunken troops at the polls to insult them. . . . By . . . fraud and villainy, . . . the great State of Tennessee was carried out of the Union. The loyal people of East Tennessee, to their great honor, had no lot or part in the work."—W. G. Brownlow, *Sketches of the Rise, Progress and Decline of Secession, pp.* 222–223.—"Finding themselves powerless before the tyranny inaugurated, the Unionists of East Tennessee resolved, as a last resort, to hold a Convention at Greenville, to consult as to the best course to pursue. This Convention met June 17th. The attendance was very large—thirty-one counties having delegates present on the first day. Judge Nelson presided. After a four days' session it adopted a Declaration of Grievances and Resolutions," declaring that "we prefer to remain attached to the Government of our fathers. The Constitution of the United States has done us no wrong. The Congress of the United States has passed no law to oppress us. . . . The secession cause has thus far been sustained by deception and falsehood." The Convention protested on behalf of East Tennessee against being dragged into rebellion, and appointed commissioners to pursue measures looking to the formation of a separate state. "Vain protest! It was not long before those Unionists and protestants against wrong were flying for their lives, and were hunted down like wild beasts."—O. J. Victor, *Hist. of the Southern Rebellion, div.* 5, *ch.* 5 (*v.* 2).

A. D. 1865-1866.— Reconstruction.— Abolition of Slavery.—Restoration of the State to its "former, proper, practical relation to the Union."— In the early part of 1865, Andrew Johnson, though Vice-President-elect, was "still discharging the functions of military governor of Tennessee. A popular convention originating from his recommendation and assembling under his auspices, was organized at Nashville on the 9th day of January, 1865. Membership of the body was limited to those who 'give an active support to the Union cause, who have never voluntarily borne arms against the Government, who have never voluntarily given aid and comfort to the enemy.'. . . Tennessee, as Johnson bluntly maintained, could only be organized and controlled as a State in the Union by that portion of her citizens who acknowledged their allegiance to the Government of the Union. Under this theory of procedure the popular convention proposed an amendment to the State constitution, 'forever abolishing and prohibiting slavery in the State,' and further declaring that 'the Legislature shall make no law recognizing the right of property in man.' The convention took several other important steps, annulling in whole and in detail all the legislation which under Confederate rule had made the State a guilty participant in the rebellion. Thus was swept away the ordinance of Secession, and the State debt created in aid of the war against the Union. All these proceedings were submitted to popular vote on the 22d of February, and were ratified by an affirmative vote of 25,293 against a negative vote of 48. The total vote of the State at the Presidential election of 1860 was 145,333. Mr. Lincoln's requirement of one-tenth of that number was abundantly complied with by the vote on the questions submitted to the popular decision. . . . Under this new order of things, William G. Brownlow, better known to the world by his soubriquet of 'Parson' Brownlow, was chosen governor without opposition on the 4th day of March, 1865, the day of Mr. Lincoln's second inauguration. The new Legislature met at Nashville a month later, on the 3d of April, and on the 5th ratified the Thirteenth Amendment; thus adding the abolition of slavery by National authority to that already decreed by the State. The Legislature completed its work by electing two consistent Union men, David T. Patterson and Joseph S. Fowler, to the United States Senate. The framework of the new Government was thus completed and in operation before the death of Mr. Lincoln."— J. G. Blaine, *Twenty Years of Congress, v.* 2, *ch.* 3.— After the organization of a loyal government in Tennessee, more than a year passed before the restoration of the State to its constitutional relations with the United States, by the admission of its Senators and Representatives to Congress. Tennessee was the first, however, among the seceded States to obtain that recognition, by being the first to ratify the Fourteenth Constitutional Amendment. "Immediately on the reception of the circular of the Secretary of State containing the proposed amendment, Governor Brownlow issued a proclamation summoning the Legislature of Tennessee to assemble at Nashville on the 4th of July [1866]. . . . Every effort was made to prevent the assembling of the required number [to constitute a quorum]. The powerful influence of the President himself was thrown in opposition to ratification." By arresting recalcitrant members, and by "the expedient of considering the members who were under arrest and confined in a committee room as present in their places," the quorum was assumed to have been made up and the amendment was ratified. "Immediately after the news was received in Washington, Mr. Bingham, in the House of Representatives, moved to reconsider a motion by which a joint resolution relating to the restoration of Tennessee had been referred to the Committee on Reconstruction," and, this motion being adopted, he introduced a substitute which declared, "That the State of Tennessee is hereby restored to her former, proper, practical relation to the Union, and again entitled to be represented by Senators and Representatives in Congress, duly elected and qualified, upon their taking the oaths of office required by existing laws." On the following day this joint resolution passed the House, and a day later (July 21st), it was adopted by the Senate.— W. H. Barnes, *Hist. of the 39th Cong., ch.* 20.

TERROR, The Reign of.—As commonly used, this phrase describes the fearful state of things that prevailed in France during a period of the French Revolution which ended with

the fall of Robespierre, July 27 (Ninth Thermidor), 1794. The beginning of the period so called is usually placed at the date of the coup d'état, May 31—June 2, 1793, which overthrew the Girondists and gave unrestrained power into the hands of the Terrorists of the Mountain. The Reign of Terror was not however fully organized as a deliberately merciless system, and made, according to the demand of the Paris Commune, "the order of the day," until the following September. In another view, the Reign of Terror may be said to have begun with the creation of the terrible Revolutionary Tribunal, March, 1793. See FRANCE: A. D. 1793 (FEBRUARY—APRIL), to 1794 (JULY).

TEUKRIANS, The.—"The elegiac poet Kallinus, in the middle of the seventh century B. C., was the first who mentioned the Teukrians; he treated them as immigrants from Krête, though other authors represented them as indigenous, or as having come from Attica. However the fact may stand as to their origin, we may gather that, in the time of Kallinus, they were still the great occupants of the Troad [northwestern Asia Minor]. Gradually the south and west coasts, as well as the interior of this region, became penetrated by successive colonies of Æolic Greeks. . . . The name Teukrians gradually vanished out of present use and came to belong only to the legends of the past."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 14.

TEUTECAS, The. See AMERICAN ABORIGINES: ZAPOTECS, ETC.

TEUTONES.—TEUTONIC.—"In the way of evidence of there being Teutones amongst the Germans, over and above the associate mention of their names with that of the Cimbri [see CIMBRI], there is but little. They are not so mentioned either by Tacitus or Strabo. . . . Arguments have been taken from . . . the supposed connection of the present word 'Deut-sch' = 'German,' with the classical word 'Teut-ones.' . . . The reasoning . . . runs thus: The syllable in question is common to the word 'Teut-ones,' 'Teut-onicus,' 'Theod-iscas,' 'teud-uiscus,' 'teut-iscus,' 'tût-iske,' 'dût-iske,' 'tiut-sche,' 'deut-sch'; whilst the word Deut-sch means German. As the 'Teut-ones' were Germans, so were the Cimbri also. Now this line of argument is set aside by the circumstance that the syllable 'Teut-' in Teut-ones and Teut-onicus as the names of the confederates of the Cimbri, is wholly unconnected with the 'Teut-' in 'theod-iscus' and Deut-sch. This is fully shown by Grimm in his dissertation on the words German and Dutch. In its oldest form the latter word meant 'popular,' 'national,' 'vernacular'; it was an adjective applied to the 'vulgar tongue,' or the vernacular German, in opposition to the Latin. In the tenth century the secondary form 'Teut-onicus' came in vogue even with German writers. Whether this arose out of imitation of the Latin form 'Romanice,' or out of the idea of an historical connection with the Teutones of the classics, is immaterial. It is clear that the present word 'Deut-sch' proves nothing respecting the Teutones. Perhaps, however, as early as the time of Martial the word 'Teutonicus' was used in a general sense, denoting the Germans in general. Certain it is that, before his time, it meant the particular people conquered by Marius, irrespective of origin or locality."—R. G. Latham, *The Germany of Tacitus, app.* 3.

TEUTONIC KNIGHTS OF THE HOSPITAL: The founding of the order.—"It is not possible to find the exact date of the foundation of the Teutonic Order, but it was probably about A. D. 1190 that it received its full organization as one of the recognized Religious Military Orders. Its actual commencement, like that of the other Orders, was obscure and humble. About 1128 or 1129, a wealthy German, who had taken part in the siege and capture of Jerusalem, settled there with his wife, intending to spend the remainder of his life in the practice of religion and in visiting the holy places. His attention and interest were soon excited by the misfortunes of his poorer countrymen, who came in great numbers as pilgrims to Jerusalem. Many fell sick, and endured great miseries and hardships. Moved with compassion, he received some of the more distressing cases into his own house. But he soon found that the work grew beyond this, and he built a hospital, with a chapel dedicated to the Blessed Virgin. In this institution he passed the whole of his time, nursing the sick pilgrims; and to their maintenance he devoted the whole of his means." One by one, others of his countrymen joined the pious German in his benevolent work, and "banded themselves together after the pattern of the Order of St. John of Jerusalem, and united the care of the sick and poor with the profession of arms in their defence, under the title of Hospitallers of the Blessed Virgin. This little band put themselves under the direction of the Grand Prior of the Hospitallers of St. John of Jerusalem, although they did not actually join this Order, whose operations they so closely imitated. . . . It was, however, during the siege of Acre [A. D. 1189–1191] that the Teutonic Order received its final and complete organization as one of the great Military Religious Orders of Europe." At Acre, the Hospitallers of the Blessed Virgin, then driven from Jerusalem by Saladin's conquest, joined certain citizens of Bremen and Lubeck in providing a field-hospital for the wounded and sick, and in their new sphere of labor they acquired the designation of the Teutonic Knights of the Hospital of the Blessed Virgin at Jerusa-

lem. "It is said that the Order owed its constitution to Frederick, Duke of Suabia; but there is much obscurity, and little authentic record to determine this or to furnish particulars of the transaction. The Order seems, however, to have been confirmed by Pope Celestine III."—F. C. Woodhouse, *Military Religious Orders, pt. 3, ch. 1.*

A. D. 1819-1835.—Relinquishment of American claims to Spain.—Condition as a Mexican province.—Encouragement of immigration from the United States and Europe.—"By the treaty of 1819 with Spain for the cession of the Floridas, the United States relinquished all claim to the western portion of Louisiana lying south of Red River and west of the Sabine [see FLORIDA: A. D. 1819-1821; and LOUISIANA: A. D. 1798-1803]. After the final ratification of that treaty by both governments, and the cession and delivery of the Floridas to the United States, the Spaniards took formal possession of the country west of the Sabine, and erected it into the 'Province of Texas,' under the authority and jurisdiction of the Viceroy of Mexico. From that time the Sabine River was the western boundary of the United States, near the Gulf of Mexico. The province of Texas at this time was occupied by the native tribes of savages, interrupted only by a few Spanish settlements. . . . The whole population, including some settlements in the vicinity of the sea-coast, scarcely exceeded 5,000 souls, of whom the greater portion were the remains of old colonies formed during the Spanish dominion over the province of Louisiana. Each principal settlement, from San Antonio de Bexar to Nacogdoches, was placed under the government of a military commandant, who exercised civil and military authority within the limits of his presidio. . . . Such was the province of Texas under the Spanish monarchy until the year 1821, when Mexico became an independent nation. . . . On the 24th of October, 1824, the Mexican States adopted a Republican form of government, embracing 'a confederation of independent states,' known and designated as the 'United States of Mexico.' In this confederation the departments of Texas and Coahuila were admitted as one state, and were jointly represented in the Congress of Mexico. Soon after the establishment of independence in the United States of Mexico, the colonization and settlement of Texas became a favorite subject of national policy with the new government. To attract population for the settlement of the country, colonization laws were enacted, to encourage enterprising individuals from foreign countries to establish large colonies of emigrants within the limits of Texas. Under the provisions of these laws enterprise was awakened in the United States and in some portions of Europe. Founders of colonies, or 'Empresarios,' were induced to enter into engagements for the occupancy and settlement of large tracts of country, designated in their respective 'grants'; the extent of the grant being proportionate to the number of colonists to be introduced. The first grant was made to Moses Austin, a native of Durham, Connecticut, in 1821, and under its provisions he was required by the Mexican authorities to introduce 300 families from the United States. This enterprising man, having departed from Bexar for the introduction of his colony, died on his journey through the wilderness, leaving his plans of colonization to be prosecuted by his son, Colonel Stephen F. Austin, who possessed the talents, energy, and judgment requisite for the arduous undertaking. Having succeeded to his father's enterprise, he subsequently acquired more influence with the Mexican government than any other 'empresario' in the province. . . . But a few years had elapsed when nearly the whole area of the department of Texas had been parceled out into extensive grants for settlement by the different 'empresarios' with their colonies. . . . Emigration from the United States, as well as from Great Britain and Ireland, continued to augment the population in all the departments until the year 1834, when political troubles began to convulse the Mexican Republic." In 1835 "the whole Anglo-American population of Texas was about 20,000; of this number General Austin's colony comprised no less than 13,000, or more than half the entire population. These were chiefly emigrants from the United States. . . . The Mexicans within the limits of Texas at this period scarcely exceeded 3,000, most of whom resided in the vicinity of Bexar."—J. W. Monette, *Discovery and Settlement of the Mississippi Valley, v. 2, pp. 569-572.*

A. D. 1824-1836.—The introduction of Slavery.—Schemes of the Slave Power in the United States. — Revolutionary movement under Houston.—Independence of Mexico declared, and practically won at San Jacinto.— The American settlers in Texas "brought their slaves with them, and continued to do so notwithstanding a decree of the Mexican Congress, issued in July, 1824, which forbade the importation into Mexican territory of slaves from foreign countries, and notwithstanding the Constitution adopted the same year, which declared free all children thereafter born of slaves. About that time the slave-holders in the United States began to see in Texas an object of peculiar interest to them. The Missouri Compromise, admitting Missouri as a Slave State and opening to slavery all that part of the Louisiana purchase south of 36° 30′, seemed at first to give a great advantage to the slave power. But gradually it became apparent that the territory thus opened to slavery was, after all, too limited for the formation of many new Slave States, while the area for the building up of Free States was much larger. More territory for slavery was therefore needed to maintain the balance of power between the two sections. At the same time the Mexican government, growing alarmed at the unruly spirit of the American colony in Texas, attached Texas to Coahuila, the two to form one state. The constitution of Coahuila forbade the importation of slaves; and in 1829 the Republic of Mexico, by the decree of September 15, emancipated all the slaves within its boundaries. Then the American Slave States found themselves flanked in the southwest by a power not only not in sympathy with slavery, but threatening to become dangerous to its safety. The maintenance of slavery in Texas, and eventually the acquisition of that country, were thenceforth looked upon by the slaveholding interest in this Republic as matters of very great importance, and the annexation project was pushed forward systematically. First the American settlers in Texas refused to obey the Mexican decree of emancipation, and, in order to avoid an insurrection, the Mexican authorities permitted it to be understood that the decree did not embrace Texas. Thus one point was gained. Then the Southern press vigorously agitated the necessity of enlarging the area of slavery, while an interest in the North was created by organizing three land companies in New York, which used pretended Mexican land grants in Texas as the basis of issues of stock, promising to make people rich over-night, and thus drawing Texas within the circle of American business speculation. In 1830 President Jackson made another attempt to purchase Texas [Henry Clay, in 1827, when Secretary of State under John Quincy Adams, had already made a proposal to the Mexican government for the purchase], offering five millions, but without success. The Mexican government, scenting the coming danger, prohibited the immigration of Americans into Texas. This, however, had no effect. The American colony now received a capable and daring leader in Sam Houston of Tennessee, who had served with General Jackson in the Indian wars. He went to Texas for the distinct object of wresting that country from Mexico. There is reason for believing that President Jackson was not ignorant of his intentions. Revolutionary convulsions in Mexico gave the American colonists welcome opportunities for complaints, which led to collisions with the Mexican authorities. General Santa Anna, who by a successful revolutionary stroke had put himself at the head of the Mexican government, attempted to reduce the unruly Americans to obedience. In 1835 armed conflicts took place, in which the Americans frequently had the advantage. The Texans declared their independence from Mexico on March 2, 1836. The declaration was signed by about 60 men, among whom there were only two of Mexican nationality. The constitution of the new republic confirmed the existence of slavery under its jurisdiction, and surrounded it with all possible guaranties. Meanwhile Santa Anna advanced at the head of a Mexican army to subdue the revolutionists. Atrocious butcheries marked the progress of his soldiery. On March 6 the American garrison [250 men] of the Alamo [a mission church at San Antonio de Bexar] was massacred, and on the 27th a large number [500] of American prisoners at Goliad met a like fate. These atrocities created a great excitement in the United States. But on April 21 the Texans under Houston, about 800 strong, inflicted a crushing defeat upon Santa Anna's army of 1,500 men, at San Jacinto, taking Santa Anna himself prisoner. The captive Mexican President concluded an armistice with the victorious Texans, promising the evacuation of the country, and to procure the recognition of its independence; but this the Mexican Congress refused to ratify. The government of the United States maintained, in appearance, a neutral position. President Jackson had indeed instructed General Gaines to march his troops into Texas, if he should see reason to apprehend Indian incursions. Gaines actually crossed the boundary line, and was recalled only after the Mexican Minister at Washington had taken his passports. The organization of reinforcements for Houston, however, had been suffered to proceed on American soil without interference."—C. Schurz, *Life of Henry Clay, ch.* 17 (*v.* 2).

Also in: H. von Holst, *Const. and Pol. Hist. of the U. S., v.* 2, *ch.* 7.— H. H. Bancroft, *Hist. of the Pacific States, v.* 8 (*Mexico, v.* 5), *ch.* 7.— A. M. Williams, *Sam Houston and the War of Independence in Texas.*

A. D. 1836-1845.—Eight years of independence.— Annexation to the United States.— The question in Congress and the country.— "Santa Anna, . . . constrained in his extremity to acknowledge the independence of Texas, . . . was liberated, and the new republic established in October, 1836, with a Constitution modeled on that of the United States, and with General Houston inaugurated as its first President. The United States forthwith acknowledged its independence. In less than a year application was made to the United States government to receive the new republic into the Union, and, though this was at the time declined, it was obvious that the question was destined to play a most important part in American civil policy. The North saw in the whole movement a predetermined attempt at the extension of slavery, and in the invasive emigration, the revolt, the proclamation of independence, the temporary organization of a republic, and the application to be admitted into the Union as a state, successive steps of a conspiracy which would, through the creation of

half a dozen or more new states, give a preponderance to the slave power in the republic. Mr. Van Buren, who had declined the overtures for the annexation of Texas, was succeeded in the Presidency by General Harrison, who, dying almost immediately after his inauguration, was followed by the Vice President, Mr. Tyler, a Virginian, and a supporter of extreme Southern principles. The annexation project was now steadily pressed forward, but, owing to the difficult circumstances under which Mr. Tyler was placed, and dissensions arising in the party that had elected him, nothing decisive could be done until 1844, when Mr. Upshur, the Secretary of State, being accidentally killed by the bursting of a cannon, Mr. Calhoun succeeded him. A treaty of annexation was at once arranged, but, on being submitted to the Senate, was rejected. Undiscouraged by this result, the South at once determined to make annexation the touchstone in the coming Presidential election. . . . Mr. Van Buren and Mr. Clay, the prominent candidates of the two opposing parties for the Presidency, were compelled to make known their views previously to the meeting of the nominating Conventions," and both discountenanced annexation. Van Buren was accordingly defeated in the Democratic Convention and James K. Polk received the nomination. Clay was nominated by the Whigs, and made an attempt, in the succeeding canvass, to change his ground on the Texas question; but "his attempt only served to make the matter worse, and cost him the support of the anti-slavery party, whose votes would have elected him." Polk was chosen President; but the annexation of Texas did not wait for his inauguration. "On December 19th a joint resolution was introduced into the House of Representatives providing for annexation. Attempts were made to secure half the country for free labor, the other half being resigned to slavery. . . . This proposition was, however, defeated. . . . As the measure eventually stood, it made suitable provision for the mode in which the 'State of Texas' should be admitted into the Union, the disposal of its munitions of war, public property, unappropriated lands, debts. On the main point it was arranged that new states, not exceeding four in number, in addition to Texas proper, should subsequently be made out of its territory, those lying south of latitude 36° 30′ to be admitted with or without slavery, as their people might desire; in those north of that line, slavery to be prohibited. Mr. Tyler, on the last day of his term of office, unwilling to leave to his successor, Mr. Polk, the honor of completing this great Southern measure, dispatched a swift messenger to Texas; her assent was duly secured, and the Mexican province became a state of the Union. But the circumstances and conditions under which this had been done left a profound dissatisfaction in the North. The portion of territory ceded to freedom did not belong to Texas; her boundary did not approach within 200 miles of the Missouri Compromise line. The South had therefore secured the whole of the new acquisition; she had seized the substance, and had deluded the North with a shadow."—J. W. Draper, *Hist. of the Am. Civil War, v.* 1, *ch.* 22.

THANKSGIVING DAY, The American.—In 1621 the Pilgrims, at Plymouth, "determined to have a period of recreation, combined with thanksgiving for their many mercies. The Governor thereupon sent out four huntsmen, who in one day secured enough game to supply the Colony for nearly a week. Hospitality was extended to Massasoit, who accepted and brought ninety people with him. The guests remained three days, during which they captured five deer to add to the larder of their hosts. . . . Without doubt, religious services opened each day; for the Pilgrims were cheerful Christians, who carried religion into all their affairs. Thus heartily and royally was inaugurated the great New England festival of Thanksgiving. . . . I do not doubt that such a religious festival was held after every harvest."—J. A. Goodwin, *The Pilgrim Republic, pp.* 179–180, *and foot-note.*—The first Thanksgiving Day observed in all the States of the American Union was recommended by a proclamation from the Continental Congress, after Burgoyne's surrender, in 1777, and fixed for Thursday, December 18. Each year thereafter, until 1784, the Continental Congress continued to recommend a day for thanksgiving services which the several States accepted and appointed. Then came an interval during which the observance was left

wholly to the States. The first Congress under the federal constitution, in 1789, adopted a resolution which requested President Washington to recommend a day for national thanksgiving and prayer, and the President's proclamation named Thursday, November 26, of that year. This proceeding, however, was much opposed by the anti-federalists, and it was not repeated until 1795, when President Washington, without action of Congress, recommended a day of thanksgiving, on February 19th. Until 1815 there was no other national appointment. In that year, by resolution of Congress and proclamation of the President, the 13th of April was set apart as a day of national thanksgiving for the restoration of peace. Then, for almost half a century, the national observance ceased. It was revived by President Lincoln in 1863, when he appointed a special day of thanksgiving for the victory at Gettysburg, on the 6th of August, and nationalized, by his proclamation, the autumnal Thanksgiving Day of November, which had become a fixed festival in most of the States. From that time the day has been appointed for the whole nation each year by presidential proclamation. — W. De L. Love, Jr., *Fast and Thanksgiving Days of New England, ch.* 27 —See, also, HOLIDAYS.

THEATINES, The.—The founders of the Order of the Theatines (1524) were "Gaetano of Thiene, a native of Vicenza, and Gian Pietro Caraffa [afterwards Pope Paul IV.]. The former had quitted a lucrative post at the Roman court in order to transplant the ideas of the Oratory of the Divine Love to his native city, Venice, and Verona, and had gradually come to concentrate his pious thoughts upon the reformation of the secular clergy of the Church. On his return to Rome, Bonifacio da Colle, a Lombard lawyer, became interested in his design, and then it was enthusiastically taken up by Caraffa, whose bishopric of Chieti, or, according to the older form, Theate, gave its name to the new order of the Theatines."—A. W. Ward, *The Counter-Reformation, p.* 28.—"To the vow of poverty they made the special addition that not only would they possess nothing, but would even abstain from begging, and await the alms that might be brought to their dwellings. . . . They did not call themselves monks, but regular clergy—they were priests with the vows of monks. . . . The order of the Theatines did not indeed become a seminary for priests precisely, its numbers were never sufficient for that; but it grew to be a seminary for bishops, coming at length to be considered the order of priests peculiar to the nobility."—L. Ranke, *Hist. of the Popes, bk.* 2, *sect.* 3 (*v.* 1).

THEBAIS, The.—The southern district of Upper Egypt, taking its name from Thebes.

THEBES, Egypt.—"No city of the old world can still show so much of her former splendour as Egyptian Thebes. . . . Not one of the many temples of Thebes has wholly disappeared; some are almost complete; many of the royal and private tombs were, until the tourist came, fresh with colours as of yesterday. . . . The origin of the great city is obscure. Unlike Memphis, Thebes, her southern rival, rose to the headship by slow degrees. It was towards the close of the dark age marked by the rule of Hanes, that a new line of kings arose in the upper country, with Thebes for their capital. At first they were merely nobles; then one became a local king, and his successors won the whole dominion of Egypt. These were the sovereigns of the Eleventh Dynasty. Their date must be before Abraham, probably some centuries earlier. . . . Thebes, like the other cities of Egypt, had a civil and a religious name. The civil name was Apiu, 'the city of thrones,' which, with the article 't' or 'ta,' became Ta-Apiu, and was identified by the Greeks with the name of their own famous city, by us corruptly called Thebes. The sacred name was Nu-Amen, 'the city of Amen,' the god of Thebes; or simply Nu, 'the city,' and Nu-ā, 'the great city.' In these names we recognize the No-Amon and No of Scripture." — R. S. Poole, *Cities of Egypt, ch.* 4.— See, also, EGYPT: THE OLD EMPIRE AND THE MIDDLE EMPIRE.

THEBES, Greece: The founding of the city.—"In the fruitful plain, only traversed by low hills, which stretches from the northern declivity of Mount Cithæron to the Bœotian lakes opposite the narrowest part of the sound which separates Eubœa from the mainland, in the 'well-watered, pasture-bearing region of the Aones,' as Euripides says, lay the citadel and town of Thebes. According to Greek tradition, it was built by Cadmus the Phœnician. The Aones, who inhabited the country, are said to have amalgamated with the Phœnicians whom Cadmus brought with him, into one people. The citadel lay on a hill of moderate height between the streams Ismenus and Dirce; it bore even in historical times the name Cadmea; the ridge to the north of the town was called Phœnicium, i. e. mountain of the Phœnicians. In the story of Cadmus and Europa, Greek legend relates the Phœnician mythus of Melkarth and Astarte. In order to seek the lost goddess of the moon, Astarte, Cadmus-Melkarth, the wandering sun-god, sets forth. He finds her in the far west, in Bœotia, and here in Thebes, on the Cadmea, celebrates the holy marriage. . . . There are a few relics of the wall of the citadel of Cadmea, principally on the north side; they are great blocks, not quite regularly hewn. Of the city wall and the famous seven gates in it nothing remains; even this number seven points to the Phœnicians as well as the designations which were retained by these gates even in historical times. The Electric gate belonged to the sun-god Baal, called by the Greeks Elector; the Neitic gate, it would seem, to the god of war. . . . The gate Hypsistia was that of

Zeus Hypsistos, whose shrine stood on the Cadmea; . . . the Prœtidic gate belonged to Astarte, whose domain was the moon; the Oncæic gate in the north-west belonged to Athena Onca, who is expressly called a Phœnician goddess. . . . It is probable that the two remaining gates, the Homoloic and the Crenaic, were also dedicated to gods of this circle—to the spirits of planets. According to Greek legend, Cadmus invented the building of walls, mining, armour, and letters. Herodotus contents himself with saying that the Phœnicians who came with Cadmus taught much to the Greeks, even writing: from the Phœnicians the Ionians, in whose midst they lived, had learned letters. If even this early borrowing of writing on the part of the Greeks is incorrect, all the other particulars,—the legend of Cadmus, which extends to the Homeric poems, where the inhabitants of Thebes are called Cadmeans; the rites of the Thebans; the walls and gates,—taken together, give evidence that the Phœnicians went over from Eubœa to the continent, and here fixed one of their most important and lasting colonies upon and around the hill of Cadmea."—M. Duncker, *Hist. of Greece, bk.* 1, *ch.* 4.—See, also, Bœotia.

B. C. 378.—The Sacred Band.—"This was an institution connecting itself with earlier usages of the land. For already in the battle of Delium a band of the Three Hundred is mentioned, who fought, like the heroes of the Homeric age, associated in pairs, from their chariots in front of the main body of the soldiery. This doubtless very ancient institution was now [B. C. 378] revived and carried out in a new spirit under the guidance of Epaminondas and Gorgidas. They had quietly assembled around them a circle of youths, with whom they had presented themselves before the community on the day of the Liberation, so that they were regarded as the founders of the Sacred Band of Thebes. It was now no longer a privilege of the nobility to belong to the Three Hundred; but those among the youth of the land who were in feeling the noblest and most high-minded, and who already under the oppression of the Tyrants had been preparing themselves for the struggle for freedom, were henceforth the elect and the champions. It was their duty to stimulate the rest eagerly to follow their example of bravery and discipline; they were associated with one another by the bonds of friendship and by identity of feelings. . . . A soldier-like spirit was happily blended with ethical and political points of view, and ancient national usage with the ideas of the present and with Pythagorean principles; and it constitutes an honorable monument of the wisdom of Epaminondas."—E. Curtius, *Hist. of Greece, bk.* 6, *ch.* 1.

THEOPHILUS, Emperor in the East, (Byzantine, or Greek), A. D. 829–842.

THEORI.—The name of Theori, among the ancient Greeks, "in addition to its familiar signification of spectators at the theatre and public ambassadors to foreign sanctuaries and festivals, was specially applied to certain public magistrates, whose function it was to superintend and take charge of religious affairs in general, though they often possessed along with this some more extensive political power."—G. Schömann, *Antiq. of Greece: The State, pt.* 2, *ch.* 5.

THEORICON, The.—"By means of the Theoricon . . . , the most pernicious issue of the age of Pericles, there arose in a small free state [Athens] a lavish expenditure, which was relatively not less than in the most voluptuous courts, and which consumed large sums, while the wars were unsuccessful for the want of money. By it is understood the money which was distributed among the people for the celebration of the festivals and games, partly to restore to the citizens the sum required for their admission into the theatre, partly to enable them to procure a better meal. In part it was expended for sacrifices, with which a public feast was connected. . . . The superintendents of the theoricon were not called treasurers; but they evidently had a treasury. Their office was one of the administrative offices of the government, and indeed of the most eminent. They were elected by the assembly of the people through cheirotonia. Their office seems to have been annual. Their number is nowhere given. Probably there were ten of them, one from each tribe. . . . The Athenian people was a tyrant, and the treasury of the theorica its private treasury."—A. Boeckh, *Public Economy of Athens* (*tr. by Lamb*), *bk.* 2, *ch.* 7; *also ch.* 13.

THEOW.—"In the earliest English laws . . slaves are found; the 'theow' [from the same root as 'dienen,' to serve] or slave simple, whether 'wealh'—that is, of British extraction, captured or purchased—or of the common German stock descended from the slaves of the first colonists; the 'esne' or slave who works for hire; the 'wite-theow' who is reduced to slavery because he cannot pay his debts."—W. Stubbs, *Const. Hist. of Eng., ch.* 5, *sect.* 37.

THERA.—The ancient name of the Greek island of Santorin, one of the Sporades, whose inhabitants were enterprising navigators, and weavers and dyers of purple stuffs. They are said to have founded Cyrene, on the north African coast.—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 3.—See CYRENAICA.

THERMÆ.—"The Roman thermæ were a combination on a huge scale of the common balneæ with the Greek gymnasia. Their usual form was that of a large quadrangular space, the sides of which were formed by various porticos, exedræ, and even theatres for gymnastic and literary exercises, and in the centre of which stood a block of buildings containing the bath rooms and spacious halls for undergoing the complicated process of the Roman warm bath. The area covered by the whole group of buildings was, in many cases, very large. The court of the Baths of Caracalla enclosed a space of 1,150 feet on each side, with curvilinear projections on two sides. The central mass of building was a rectangle, 730 feet by 380. . . . The other great Imperial thermæ of Rome, those of Nero, Titus, Domitian, Diocletian, and Constantine, were probably upon the same plan as the Thermæ Caracallæ. All were built of brick, and the interior was decorated with stucco, mosaics, or slabs of marble, and other ornamental stones. . . . The public balneæ, as distinct from thermæ, . . . were used simply as baths, and had none of the luxurious accessories attached to them which were found in the courts of the great thermæ."—R. Burn, *Rome and the Campagna, introd.*

THESPROTIANS. See EPIRUS; and HELLAS.

THESSALONICA.—Therma, an unimportant ancient city of Macedonia, received the name of Thessalonica, about 315 B. C., in honor of the sister of Alexander the Great, who married Cassander. Cassander gave an impetus to the city which proved lasting. It rose to a high commercial rank, acquired wealth, and became, under the Romans, the capital of the Illyrian provinces.

A. D. 390.—Massacre ordered by Theodosius.—A riotous outbreak at Thessalonica, A. D. 390, caused by the imprisonment of one of the popular favorites of the circus, was punished by the Emperor Theodosius in a manner so fiendish that it seems wellnigh incredible. He caused the greatest possible number of the inhabitants to be invited, in his name, to witness certain games in the circus. "As soon as the assembly was complete, the soldiers, who had secretly been posted round the circus, received the signal, not of the races, but of a general massacre. The promiscuous carnage continued three hours,

without discrimination of strangers or natives, of age or sex, of innocence or guilt; the most moderate accounts state the number of the slain at 7,000; and it is affirmed by some writers that more than 15,000 victims were sacrificed. . . . The guilt of the emperor is aggravated by his long and frequent residence at Thessalonica."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 27.

A. D. 904.—Capture and pillage by the Saracens.—The capture of Thessalonica by a piratical expedition from Tarsus, A. D. 904, was one of the most terrible experiences of its kind in that age of blood and rapine, and one of which the fullest account, by an eye-witness and sufferer, has come down to posterity. The wretched inhabitants who escaped the sword were mostly sold into slavery, and the splendid city — then the second in the Byzantine Empire — was stripped of all its wealth. The defense of the place had been neglected, with implicit dependence on the goodwill and the power of St. Demetrius.—G. Finlay, *Hist. of the Byzantine Empire, from* 716 *to* 1057, *bk.* 2, *ch.* 1, *sect.* 2.

A. D. 1204-1222.—Capital of the kingdom of Saloniki. See Saloniki.

A. D. 1222-1234.—The Greek empire. See Epirus: A. D. 1204–1350.

A. D. 1430.—Capture by the Turks.—Thessalonica, feebly defended by Venetians and Greeks, was taken by the Turks, under Amurath II., in February, 1430. "'The pillage and the carnage,' relates the Greek Anagnosta, an eye-witness of this disastrous night, 'transcended the hopes of the Turks and the terror of the Greeks. No family escaped the swords, the chains, the flames, the outrages of the Asiatics fierce for their prey. At the close of the day, each soldier drove like a herd before him, through the streets of Salonica, troops of women, of young girls, of children, of caloyers and anchorites, of monks of all the monasteries. Priests were chained with virgins, children with old men, mothers with their sons, in derision of age, of profession, of sex, which added a barbarous irony to nudity and death itself.'"—A. Lamartine, *Hist. of Turkey, bk.* 10, *sect.* 27.

THESSALY. — "The northern part of Greece is traversed in its whole length by a range of mountains, the Greek Apennines, which issue from the same mighty root, the Thracian Scomius, in which Hæmus, and Rhodopé and the Illyrian Alps likewise meet. This ridge first takes the name of Pindus, where it intersects the northern boundary of Greece, at a point where an ancient route still affords the least difficult passage from Epirus into Thessaly. From Pindus two huge arms stretch towards the eastern sea and enclose the vale of Thessaly, the largest and richest plain in Greece: on the north the Cambunian Hills, after making a bend towards the south, terminate in the loftier heights of Olympus, which are scarcely ever entirely free from snow; the opposite and lower chain of Othrys parting, with its eastern extremity, the Malian from the Pagasæan Gulf, sinks gently towards the coast. A fourth rampart, which runs parallel to Pindus, is formed by the range which includes the celebrated heights of Pelion and Ossa; the first a broad and nearly even ridge, the other towering into a steep and conical peak, the neighbour and rival of Olympus, with which, in the songs of the country, it is said to dispute the pre-eminence in the depth and duration of its snows. The mountain barrier with which Thessaly is thus encompassed is broken only at the northeast corner by a deep and narrow cleft, which parts Ossa from Olympus; the defile so renowned in poetry as the vale, in history as the pass, of Tempe. The imagination of the ancient poets and declaimers delighted to dwell on the natural beauties of this romantic glen and on the sanctity of the site, from which Apollo had transplanted his laurel to Delphi. . . . South of this gulf [the Gulf of Pagasæ], the coast is again deeply indented by that of Malia, into which the Spercheius, rising from Mount Tymphrestus, a continuation of Pindus, winds through a long, narrow vale, which, though considered as a part of Thessaly, forms a separate region, widely distinguished from the rest by its physical features. It is intercepted between Othrys and Œta, a huge, rugged pile, which stretching from Pindus to the sea at Thermopylæ, forms the inner barrier of Greece, as the Cambunian range is the outer, to which it corresponds in direction and is nearly equal in height. From Mount Callidromus, a southern limb of Œta, the same range is continued without interruption, though under various names and different degrees of elevation, along the coast of the Eubœan Sea. . . . Another branch, issuing from the same part of Pindus, connects it with the loftier summits of Parnassus, and afterward skirting the Corinthian Gulf under the names of Cirphis and Helicon, proceeds to form the northern boundary of Attica under those of Cithæron and Parnes."—C. Thirlwall, *Hist. of Greece, ch.* 1 (*v.* 1).— In the mythical legends of Greece, Thessaly was the kingdom of Hellen, transmitted to his son Æolus and occupied originally by the Æolic branch of the Hellenic family. The Æolians, however, appear to have receded from the rich Thessalian plain, into Bœotia and elsewhere, before various invading tribes. The people who fixed their name, at last, upon the country, the Thessalians, came into it from Epirus, crossing the Pindus mountain-range.— See, also, Greece: The Migrations; and Dorians and Ionians.

THING.— THINGVALLA.—ALTHING.—"The judicial and legislative assembly of the Northmen represented by the word 'thing' (from 'tinga'=to speak, and allied to our English word 'think') can be traced in many local names throughout England, and more especially in the extreme North, where the Scandinavian race prevailed, and where the 'thing' was primitively held upon the site of, or as an appanage to, a 'hof' or temple. It is plainly seen in the Tynwald Court or general legislative assembly for the Isle of Man, where the distinctive feature of the primitive open-air assembly still survives in the custom of the whole assembly going once a year in solemn procession, attended by the governor of the island and a military escort, to a hill known as the Tynwald Hill, whence all the laws that have been passed in the course of the past year are proclaimed in English and Manx. . . . In Norway there is an 'Al-thing' or general assembly, and four district 'things' for the several provinces, as well as a Norwegian Parliament familiar to us as 'Stor-thing' or great council."—R. R. Sharpe, *Introd. to Calendar of Wills, Court of Husting, London, v.* 1.—"By the end of the period of the first occupation of Iceland, a number of little kingdoms had been formed all round the coast, ruled by the priests, who, at stated times, convened their adherents and retainers to meetings for the settlement of matters which concerned any or all of them. These were called 'Things'—meetings, i. e. Mot-things. Each was independent of the other, and quarrels between the members of two separate Things could only be settled as the quarrels of nations are settled, by treaty or war. But the time soon arrived when the progress of political thought began to work upon this disjointed constitution; and then amalgamation of local Things into an Althing, of local jurisdiction into a commonwealth jurisdiction, was the historical result. . . . The Thingvalla, or Thing-field itself, was a vast sunken plain of lava, about four miles broad and rather more than four miles deep, lying with a dip or slope from north-east to south-west, between two great lips or furrows. A stream called Öxará, (Axewater) cuts off a rocky portion of the plain, so as almost to form an island. This is the famous Hill of Laws, or Lögberg, which was the heart of the Icelandic body politic. . . . This example of the Icelandic Thing is the most perfect that is known to history."—G. L. Gomme, *Primitive Folk-Moots, ch.* 2.

THRACIANS, The.—"That vast space comprised between the rivers Strymon and Danube, and bounded to the west by the easternmost Illyrian tribes, northward of the Strymon, was occupied by the innumerable subdivisions of the race called Thracians, or Threïcians. They were the

most numerous and most terrible race known to Herodotus: could they by possibility act in unison or under one dominion (he says) they would be irresistible. . . . Numerous as the tribes of Thracians were, their customs and character (according to Herodotus) were marked by great uniformity: of the Getæ, the Trausi, and others, he tells us a few particularities. . . . The general character of the race presents an aggregate of repulsive features unredeemed by the presence of even the commonest domestic affections. . . . It appears that the Thynians and Bithynians, on the Asiatic side of the Bosphorus, perhaps also the Mysians, were members of this great Thracian race, which was more remotely connected, also, with the Phrygians. And the whole race may be said to present a character more Asiatic than European; especially in those ecstatic and maddening religious rites, which prevailed not less among the Edonian Thracians than in the mountains of Ida and Dindymon of Asia, though with some important differences. The Thracians served to furnish the Greeks with mercenary troops and slaves."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 26.—"Under Seuthes [B. C. 424—] Thrace stood at the height of its prosperity. It formed a connected empire from Abdera to the Danube, from Byzantium to the Strymon. . . . The land abounded in resources, in corn and flocks and herds, in gold and silver. . . . No such state had as yet existed in the whole circuit of the Ægean. . . . But their kingdom failed to endure. After Seuthes it broke up into several principalities."—E. Curtius, *Hist. of Greece, bk.* 7, *ch.* 1.—"Herodotus is not wrong in calling the Thracians the greatest of the peoples known to him after the Indians. Like the Illyrian, the Thracian stock attained to no full development, and appears more as hard-pressed and dispossessed than as having any historically memorable course of its own. . . . The Thracian [language] disappeared amidst the fluctuations of peoples in the region of the Danube and the overpowerful influence of Constantinople, and we cannot even determine the place which belongs to it in the pedigree of nations. . . . Their wild but grand mode of worshipping the gods may perhaps be conceived as a trait peculiar to this stock—the mighty outburst of the joy of spring and youth, the nocturnal mountain-festivals of torch-swinging maidens, the intoxicating sense-confusing music, the flowing of wine and the flowing of blood, the giddy festal whirl, frantic with the simultaneous excitement of all sensuous passions. Dionysos, the glorious and the terrible, was a Thracian god." Under the supremacy of the Romans, the Thracians were governed by a native line of vassal kings, reigning at Bizye (Wiza), between Adrianople and the coast of the Black Sea, until the Emperor Claudius, A. D. 46, suppressed the nominal kingdom and made Thrace a Roman province.—T. Mommsen, *Hist. of Rome, bk.* 8, *ch.* 6.—In the 8th and 9th centuries, "the great Thracian race, which had once been inferior in number only to the Indian, and which, in the first century of our era, had excited the attention of Vespasian by the extent of the territory it occupied, had . . . almost disappeared. The country it had formerly inhabited was peopled by Vallachian and Sclavonian tribes."—G. Finlay, *Hist. of the Byzantine Empire, bk.* 1, *ch.* 1, *sect.* 1.

THREE CHAPTERS, The dispute of the. —A famous church dispute raised in the sixth century by the Emperor Justinian, who discovered an heretical taint in certain passages, called the Three Chapters, culled out of the works of Theodore of Mopsuestia and two other doctors of the church who had been teachers and friends of Nestorius. A solemn Church Council called (A. D. 553) at Constantinople—the fifth general Council—condemned the Three Chapters and anathematized their adherents. But this touched by implication the decrees of the Council of Chalcedon, which were especially cherished in the Latin Church, and Rome became rebellious. In the end, the Roman opposition prevailed, and, "in the period of a century, the schism of the three chapters expired in an obscure angle of the Venetian province."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 47.

THULE.—Pytheas, a Greek traveller and writer of the time (as supposed) of Alexander the Great, was the first to introduce the name of Thule into ancient geography. He described it vaguely as an island, lying six days' voyage to the north of Britain, in a region where the sea became like neither land nor water, but was of a thick and sluggish substance, resembling that of the jelly fish. "It appears to me impossible to identify the Thule of Pytheas with any approach to certainty; but he had probably heard vaguely of the existence of some considerable island, or group of islands, to the north of Britain, whether the Orkneys or the Shetlands it is impossible to say."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 15, *sect.* 2, *foot-note.*—Some modern writers identify Thule with Iceland; some with the coast of Norway, mistakenly regarded as an island. But, whichever land it may have been, Thule to the Greeks and Romans, was Ultima Thule,—the end of the known world,—the most northerly point of Europe to which their knowledge reached.—R. F. Burton, *Ultima Thule, introd., sect.* 1 (*v.* 1).

THUNDERING LEGION, The.—During the summer of the year 174, in a campaign which the Emperor Marcus Aurelius Antoninus conducted against the Quadi, on the Danube, the Roman army was once placed in a perilous position. It was hemmed in by the enemy, cut off from all access to water, and was reduced to despair. At the last extremity, it is said, the army was saved by a miraculous storm, which

poured rain on the thirsty Romans, while lightning and hail fell destructively in the ranks of the barbarians. According to the Pagan historians, Aurelius owed this "miraculous victory," as it was called, to the arts of one Arnuphis, an Egyptian magician. But later Christian writers told a different story. They relate that the distressed army contained one legion composed entirely of Christians, from Melitene, and that these soldiers, being called upon by the emperor to invoke their God, united in a prayer which received the answer described. Hence, the legion was known thereafter, by imperial command, as the Thundering Legion.—P. B. Watson, *Marcus Aurelius Antoninus, ch.* 5.

THURII.—THURIUM. See SIRIS.

THURINGIA.—THURINGIANS, The.—"To the eastward of the Saxons and of the Franks, the Thuringians had just formed a new monarchy. That people had united to the Varni and the Heruli, they had spread from the borders of the Elbe and of the Undstrut to those of the Necker. They had invaded Hesse or the country of the Catti, one of the Frankish people, and Franconia, where they had distinguished their conquests by frightful cruelties. . . . It is not known at what period these atrocities were committed, but Thierri [or Theoderic, one of the four Frank kings, sons of Clovis] towards the year 528, reminds his soldiers of them to excite their revenge; it is probable that they were the motives which induced the Franks of Germany and those of Gaul to unite, in order to provide more powerfully for their defence." Thierry, the Frank king at Metz, and Clotaire, his brother, who reigned at Soissons, united in 528 against the Thuringians and completely crushed them. "This great province was then united to the monarchy of the Franks, and its dukes, during two centuries, marched under the standards of the Merovingians."—J. C. L. S. de Sismondi, *The French under the Merovingians, ch.* 6.

TIBET.—"The name of Tibet is applied not only to the south-west portion of the Chinese Empire, but also to more than half of Kashmîr occupied by peoples of Tibetan origin. These regions of 'Little Tibet' and of 'Apricot Tibet'—so called from the orchards surrounding its villages—consist of deep valleys opening like troughs between the snowy Himalayan and Karakorum ranges. Draining towards India, these uplands have gradually been brought under Hindu influences, whereas Tibet proper has pursued a totally different career. It is variously known as 'Great,' the 'Third,' or 'East Tibet'; but such is the confusion of nomenclature that the expression 'Great Tibet' is also applied to Ladak, which forms part of Kashmîr. At the same time, the term Tibet itself, employed by Europeans to designate two countries widely differing in their physical and political conditions, is unknown to the people themselves. Hermann Schlagintweit regards it as an old Tibetan word meaning 'strength,' or 'empire' in a pre-eminent sense and this is the interpretation supplied by the missionaries of the seventeenth century, who give the country the Italian name of Potente, or 'Powerful.' But however this be, the present inhabitants use the term Bod-yul alone; that is, 'land of the Bod,' itself probably identical with Bhutan, a Hindu name restricted by Europeans to a single state on the southern slope of the Himalayas. The Chinese call Tibet either Si-Tsang—that is, West Tsang, from its principal province—or Wei-Tsang, a word applied to the two provinces of Wei and Tsang, which jointly constitute Tibet proper. To the inhabitants they give the name of Tu-Fan, or 'Aboriginal Fans,' in opposition to the Si-Fan, or 'Western Fans,' of Sechuen and Kansu. . . . Suspended like a vast terrace some 14,000 or 16,000 feet above the surrounding plains, the Tibetan plateau is more than half filled with closed basins dotted with a few lakes or marshes, the probable remains of inland seas whose overflow discharged through the breaks in the frontier ranges. . . . During the present century the Tibetan Government has succeeded better than any other Asiatic state in preserving the political isolation of the people, thanks chiefly to the relief and physical conditions of the land. Tibet rises like a citadel in the heart of Asia; hence its defenders have guarded its approaches more easily than those of India, China, and Japan. The greater part of Tibet remains still unexplored. . . . The great bulk of the inhabitants, apart from the Mongolo-Tartar Horsoks of Khachi and the various independent tribes of the province of Kham, belong to a distinct branch of the Mongolian family. They are of low size, with broad shoulders and chests, and present a striking contrast to the Hindus in the size of their arms and calves, while resembling them in their small and delicate hands and feet. . . . The Tibetans are one of the most highly endowed people in the world. Nearly all travellers are unanimous in praise of their gentleness, frank and kindly bearing, unaffected dignity. Strong, courageous, naturally cheerful, fond of music, the dance and song, they would be a model race but for their lack of enterprise. They are as easily governed as a flock of sheep, and for them the word of a lama has force of law. Even the mandates of the Chinese authorities are scrupulously obeyed, and thus it happens that against their own friendly feelings they jealously guard the frontiers against all strangers. The more or less mixed races of East Tibet on the Chinese

frontier, on the route of the troops that plunder them and of the mandarins who oppress them, seem to be less favourably constituted, and are described as thievish and treacherous. . . . The Tibetans have long been a civilised people. . . . In some respects they are even more civilised than those of many European countries, for reading and writing are general accomplishments in many places, and books are here so cheap that they are found in the humblest dwellings, though several of these works are kept simply on account of their magical properties. In the free evolution of their speech, which has been studied chiefly by Foucaux, Csoma de Körös, Schiefner, and Jäschke, the Tibetans have outlived the period in which the Chinese are still found. The monosyllabic character of the language, which differs from all other Asiatic tongues, has nearly been effaced. . . . The Tibetan Government is in theory a pure theocracy. The Dalia-lama, called also the Gyalba-remboché, 'Jewel of Majesty,' or 'Sovereign Treasure,' is at once god and king, master of the life and fortunes of his subjects, with no limit to his power except his own pleasure. [On Lamaism in Tibet, see LAMAS.] Nevertheless he consents to be guided in ordinary matters by the old usages, while his very greatness prevents him from directly oppressing his people. His sphere of action being restricted to spiritual matters, he is represented in the administration by a viceroy chosen by the Emperor in a supreme council of three high priests. . . . Everything connected with general politics and war must be referred to Peking, while local matters are left to the Tibetan authorities. . . . Pope, viceroy, ministers, all receive a yearly subvention from Peking and all the Tibetan mandarins wear on their hats the button, or distinctive sign of the dignities conferred by the empire. Every third or fifth year a solemn embassy is sent to Peking with rich presents, receiving others in exchange from the 'Son of Heaven.'. . . The whole land belongs to the Dalai-lama, the people being merely temporary occupants, tolerated by the real owner. The very houses and furniture and all movable property are held in trust for the supreme master, whose subjects must be grateful if he takes a portion only for the requirements of the administration. One of the most ordinary sentences, in fact, is wholesale confiscation, when the condemned must leave house and lands, betaking themselves to a camp life, and living by begging in the districts assigned to them. So numerous are these chong long, or official mendicants, that they form a distinct class in the State. . . . Since the cession of Ladak to Kashmir, and the annexation of Batang, Litang, Aten-tze, and other districts to Sechuen and Yunnan, Si-tsang, or Tibet proper, comprises only the four provinces of Nari, Tsang, Wei, or U, and Kham. Certain principalities enclosed in these provinces are completely independent of Lassa, and either enjoy self-government or are directly administered from Peking. . . . Even in the four provinces the Chinese authorities interfere in many ways, and their power is especially felt in that of Nari, where, owing to its dangerous proximity to Kashmir and India, the old spirit of independence might be awakened. Nor is any money allowed to be coined in Tibet, which in the eyes of the Imperial Government is merely a dependency of Sechuen, whence all orders are received in Lassa."—É. Reclus, *The Earth and its Inhabitants: Asia, v. 2, ch. 2.*

ALSO IN: H. Bower, *Diary of a Journey across Tibet, ch. 16.*

TIBISCUS, The.—The ancient name of the river Theiss.

TIBUR.—An important Latin city, more ancient than Rome, from which it was only 20 miles distant, on the Anio. Tibur, after many wars, was reduced by the Romans to subjection in the 4th century, B. C., and the delightful country in its neighborhood became a favorite place of residence for wealthy Romans in later times. The ruins of the villa of Hadrian have been identified in the vicinity, and many others have been named, but without historical authority. Hadrian's villa is said to have been like a town in its vast extent. The modern town of Tivoli occupies the site of Tibur.—R. Burn, *Rome and the Campagna, ch. 14.*

TIERRA FIRME.—"The world was at a loss at first [after Columbus' discovery] what to call the newly found region to the westward. It was easy enough to name the islands, one after another, as they were discovered, but when the Spaniards reached the continent they were backward about giving it a general name. . . . As the coast line of the continent extended itself and became known as such, it was very naturally called by navigators 'tierra firme,' firm land, in contradistinction to the islands which were supposed to be less firm. . . . The name Tierra Firme, thus general at first, in time became particular. As a designation for an unknown shore it at first implied only the Continent. As discovery unfolded, and the magnitude of this Firm Land became better known, new parts of it were designated by new names, and Tierra Firme became a local appellation in place of a general term. Paria being first discovered, it fastened itself there; also along the shore to Darien, Veragua, and on to Costa Rica, where at no well defined point it stopped, so far as the northern seaboard was concerned, and in due time struck across to the South Sea, where the name marked off an equivalent coast line. . . . As a political division Tierra Firme had existence for a long time. It comprised the provinces of Darien, Veragua, and Panamá, which last bore

also the name of Tierra Firme as a province. The extent of the kingdom was 65 leagues in length by 18 at its greatest breadth, and 9 leagues at its smallest width. It was bounded on the east by Cartagena, and the gulf of Urabá and its river; on the west by Costa Rica, including a portion of what is now Costa Rica; and on the north and south by the two seas. . . . Neither Guatemala, Mexico, nor any of the lands to the north were ever included in Tierra Firme. English authors often apply the Latin form, Terra Firma, to this division, which is misleading."—H. H. Bancroft, *Hist. of the Pacific States, v.* 1, *p.* 290, *foot-note.*—See, also, SPANISH MAIN.

TIGORINI, OR TIGURINI, in Gaul, The.—After the Cimbri had defeated two Roman armies, in 113 and 109 B. C., "the Helvetii, who had suffered much in the constant conflicts with their north-eastern neighbours, felt themselves stimulated by the example of the Cimbri to seek in their turn for more quiet and fertile settlements in western Gaul, and had, perhaps, even when the Cimbrian hosts marched through their land, formed an alliance with them for that purpose. Now, under the leadership of Divico, the forces of the Tougeni (position unknown) and of the Tigorini (on the lake of Murten) crossed the Jura and reached the territory of the Nitiobroges (about Agen on the Garonne). The Roman army under the consul Lucius Cassius Longinus, which they here encountered, allowed itself to be decoyed by the Helvetii into an ambush, in which the general himself and his legate, the consular Gaius Piso, along with the greater portion of the soldiers, met their death."—T. Mommsen, *Hist. of Rome, bk.* 4, *ch.* 5.—Subsequently the Tigorini and the Tougeni joined the Cimbri, but were not present at the decisive battle on the Raudine Plain and escaped the destroying swords of the legions of Marius, by flying back to their native Helvetia.

TIMAR.—TIMARLI.—SAIM.—SPAHI.—"It was Alaeddin who first instituted a division of all conquered lands among the 'Sipahis,' or Spahis (horsemen), on conditions which, like the feudal tenures of Christian Europe, obliged the holders to service in the field. Here, however, ends the likeness between the Turkish 'Timar' and the European fief. The 'Timarli' were not, like the Christian knighthood, a proud and hereditary aristocracy almost independent of the sovereign and having a voice in his councils, but the mere creatures of the Sultan's breath. The Ottoman constitution recognised no order of nobility. . . . The institution of military tenures was modified by Amurath I., who divided them into the larger and smaller ('Siamet' and 'Timar'), the holders of which were called 'Saim' and 'Timarli.'. . . The symbols of . . . investment were a sword and colours ('Kilidsch' and 'Sandjak')."—T. H. Dyer, *The History of Modern Europe, v.* 1, *introd.*—See, also, SPAHIS.

TIMOR.—A large island which sometimes gives its name to the group, east of Java, to which it belongs. The group is also called the Lesser Sunda Islands. See MALAY ARCHIPELAGO.

TIMOUR, The Conquests of.—"Timour the Tartar, as he is usually termed in history, was called by his countrymen Timourlenk, that is, Timour the Lame, from the effects of an early wound; a name which some European writers have converted into Tamerlane, or Tamberlaine. He was of Mongol origin [see below], and a direct descendant, by the mother's side, of Zenghis Khan. He was born at Sebzar, a town near Samarcand, in Transoxiana, in 1336. . . . Timour's early youth was passed in struggles for ascendency with the petty chiefs of rival tribes, but at the age of thirty-five he had fought his way to undisputed pre-eminence, and was proclaimed Khan of Zagatai by the 'couroultai,' or general assembly of the warriors of his race. He chose Samarcand as the capital of his dominion, and openly announced that he would make that dominion comprise the whole habitable earth. . . . In the thirty-six years of his reign he raged over the world from the great wall of China to the centre of Russia on the north; and the Mediterranean and the Nile were the western limits of his career, which was pressed eastward as far as the sources of the Ganges. He united in his own person the sovereignties of twenty-seven countries, and he stood in the place of nine several dynasties of kings. . . . The career of Timour as a conqueror is unparalleled in history; for neither Cyrus, nor Alexander, nor Cæsar, nor Attila, nor Zenghis Khan, nor Charlemagne, nor Napoleon, ever won by the sword so large a portion of the globe, or ruled over so many myriads of subjugated fellow-creatures."—E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 3.—"Born of the same family as Jenghiz, though not one of his direct descendants, he bore throughout life the humble title of Emir, and led about with him a nominal Grand Khan [a descendant of Chagatai, one of the sons of Jenghiz Khan], of whom he professed himself a dutiful subject. His pedigree may in strictness entitle him to be called a Mogul; but, for all practical purposes, himself and his hordes must be regarded as Turks. Like all the eastern Turks, such civilization as they had was of Persian origin; and it was of the Persian form of Islam that Timour was so zealous an assertor."—E. A. Freeman, *Hist. and Conquests of the Saracens, lect.* 6.—In 1378 Timour overran Khuarezm. Between 1380 and 1386 he subjugated Khorassan, Afghanistan, Baluchistan and Sistan. He then passed into southern Persia and forced the submission of the Mozafferides who reigned over Fars, punishing the city of Isfahan for a rebellious rising by the massacre of 70,000 of its inhabitants. This done, he returned to Samarkand for a period of rest and prolonged carousal. Taking the field again in

1389, he turned his arms northward and shattered the famous "Golden Horde," of the Khanate of Kiptchak, which dominated a large part of Russia. In 1392–93 the Tartar conqueror completed the subjugation of Persia and Mesopotamia, extinguishing the decayed Mongol Empire of the Ilkhans, and piling up a pyramid of 90,000 human heads on the ruins of Bagdad, the old capital of Islam. Thence he pursued his career of slaughter through Armenia and Georgia, and finished his campaign of five years by a last destroying blow struck at the Kiptchak Khan whom he is said to have pursued as far as Moscow. Once more, at Samarkand, the red-handed, invincible savage then gave himself up to orgies of pleasure-making; but it was not for many months. His eyes were now on India, and the years 1398–1399 were spent by him in carrying death and desolation through the Punjab, and to the city of Delhi, which was made a scene of awful massacre and pillage. No permanent conquest was achieved; the plunder and the pleasure of slaughter were the ends of the expedition. A more serious purpose directed the next movement of Timour's arms, which were turned against the rival Turk of Asia Minor, or Roum — the Ottoman, Bajazet, or Bayezid, who boasted of the conquest of the Roman Empire of the East. In 1402, Bajazet was summoned from the siege of Constantinople to defend his realm. On the 20th of July in that year, on the plain of Angora, he met the enormous hosts of Timour-lenk and was overwhelmed by them — his kingdom lost, himself a captive. The merciless Tartar hordes swept hapless Anatolia with a besom of destruction and death. Nicæa, Prusa and other cities were sacked. Smyrna provoked the Tartar savage by an obstinate defense and was doomed to the sword, without mercy for age or sex. Even then, the customary pyramid of heads which he built on the site was not large enough to satisfy his eye and he increased its height by alternate layers of mud. Aleppo, Damascus, and other cities of Syria had been dealt with in like manner the year before. When satiated with blood, he returned to Samarkand in 1404, rested there until January 1405, and then set out upon an expedition to China; but he died on the way. His empire was soon broken in pieces.—A. Vambery, *Hist. of Bokhara, ch.* 10, 11, 12.

TOGA, The Roman.—"The toga, the specifically national dress of the Romans, was originally put on the naked body, fitting much more tightly than the rich folds of the togas of later times. About the shape of this toga, which is described as a semicircular cloak . . . , many different opinions prevail. Some scholars consider it to have been an oblong piece of woven cloth . . . ; others construct it of one or even two pieces cut into segments of a circle. Here again we shall adopt in the main the results arrived at through practical trials by Weiss ('Costümkunde,' p. 956 et seq.). The Roman toga therefore was not . . . a quadrangular oblong, but 'had the shape of an oblong edged off into the form of an oval, the middle length being equal to about three times the height of a grown-up man (exclusive of the head), and its middle breadth equal to twice the same length. In putting it on, the toga was at first folded lengthwise, and the double dress thus originated was laid in folds on the straight edge and thrown over the left shoulder in the simple manner of the Greek or Tuscan cloak; the toga, however, covered the whole left side and even dragged on the ground to a considerable extent. The cloak was then pulled across the back and through the

right arm, the ends being again thrown over the left shoulder backwards. The part of the drapery covering the back was once more pulled towards the right shoulder, so as to add to the richness of the folds.' . . . The simpler, that is narrower, toga of earlier times naturally clung more tightly to the body."—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 95.—"No tacks or fastenings of any sort indeed are visible in the toga, but their existence may be inferred from the great formality and little variation displayed in its divisions and folds. In general, the toga seems not only to have formed, as it were, a short sleeve to the right arm, which was left unconfined, but to have covered the left arm down to the wrist. . . . The material of the toga was wool; the colour, in early ages, its own natural yellowish hue. In later periods this seems, however, only to have been retained in the togas of the higher orders; inferior persons wearing theirs dyed, and candidates for public offices bleached by an artificial process. In times of mourning the toga was worn black, or was left off altogether. Priests and magistrates wore the 'toga pretexta,' or toga edged with a purple border, called pretexta. This . . . was . . . worn by all youths of noble birth to the age of fifteen. . . . The knights wore the 'trabea,' or toga striped with purple throughout."—T. Hope, *Costume of the Ancients, v.* 1.

TONGA, or Friendly Islands, The.—"According to Mariner, the Tongans did not deserve the name Cook gave them, that of the Friendly Islanders. He says that the chiefs intended to treacherously massacre Cook and his company, but the scheme came to nothing on account of differences among themselves as to how their amiable designs should be carried out. . . . The Tongan Archipelago is composed of at least a hundred islands and islets, comprised between 18° and 20° S. lat., and 174° and 179° W. long. The three principal islands of Tongatabu, Vavau and Eoa, are alone of any extent, which is in their cases from 15 to 20 miles in length. Six others, namely, Late, Tofua, Kao, Namuka, Lefuga, and Haano are from five to seven miles in extent. The rest are much smaller. Many of them are in fact only banks of sand and coral, covered with some tufts of trees. . . . Late Island has a peak about 1800 feet high in the centre of the island, which at one time was a volcano. . . . The Tongans, like the Fijians and Samoans, have had, from time immemorial, a civilisation of their own. They have more moral stamina, energy, and self-reliance than any other existing race in the Pacific. Had they been acquainted formerly with the use of metals, there can be no doubt that they would have subdued all Polynesia. When Captain Cook was in the islands, the

habits of war were little known to the natives; the only quarrels in which they had at that time engaged had been among the inhabitants of the Fijis. They visited that group for the purpose of getting sandalwood, and to join the fighting Fijians for their own ends. From the latter they gained a knowledge of improved spears, and bows, and arrows."—H. Stonehewer Cooper, *Coral Lands, v.* 2, *ch.* 12.—"In 1835 some Methodist missionaries arrived in New Zealand, whence they sailed to the Friendly or Tonga Islands. There they effected the conversion of the supreme chief of that archipelago. King George of Tonga, following the principle of 'cujus regio, ejus religio,' had his subjects baptised. The British Government recognised his title of king, concluded a treaty of friendship with him in 1879, and established a consulate in his capital. At the instance and under the direction of the missionaries, George I. granted his people a free constitution and parliament, and he was fortunate enough to find a man capable of governing his kingdom, in the Rev. Mr. Baker, one of the missionaries. King George, now [1884] 92 years of age, is still reigning, while Mr. Baker, the missionary and prime minister, is still governing at Tonga; and the archipelago has attained a degree of comparative prosperity and civilisation such as is not found in any other independent group of Oceania." — Baron von Hübner, *Through the British Empire, v.* 2, *pt.* 5, *ch.* 2. — In 1880 the condition of Tonga was described by the English visitor already quoted as being "a very satisfactory one; the soil, it is almost needless to add, is inexhaustibly fertile, and it is also industriously cultivated, and intersected by good roads. Tonga is a succession of gardens, and want, beggary, or squalor are unknown. All the people are clothed, all read and write, all are professed Christians. They still retain a good deal of their old Tongan pride, but are courteous to strangers. . . . On each of the great islands there resides a governor. These are men of intelligence who speak English, dress well, and live in imported houses of the European fashion. The Governor of Vavau in 1874 was named David — all the Tongans take great delight in scriptural, or English names. He was a man of huge stature and majestic presence, and looked very well in a handsome uniform he had made for him in Sydney, at a cost of about £200. A friend of mine told me the following curious account of this personage with whom he stayed. David's house would be regarded in the Australian colonies as a fitting residence for any high official below the rank of a Viceroy. It is constructed of imported materials, all the interior panelled and polished; the furniture of every room being elegant and costly, and imported from New South Wales. In the centre of the building is a large dining hall with stained glass doors at either end, which is only used on state occasions. Here the table is laid with every requisite, fine linen, plate, and cut glass. The cook is a Chinaman, the butler a negro. A better, or more elegantly served dinner one would scarcely expect in Sydney: everything was in profusion, even to champagne and soda-water. This David, like all his colleagues, apes the manners of a British officer. . . . The established religion is Protestant; but toleration of all other creeds is the rule in Tonga, and no oppression of minorities is permitted. . . . The Tongan laws are generally just, and are very strictly enforced. The statutes are printed, and distinctly understood by all the people. There is a strong flavour of Sabbatarianism about some of the edicts, which of course indicates their origin; but it seems to me that it is far better for the Tongans to hold curiously strict notions as to how to conduct themselves on the first day of the week — or, as they would call it, in Jewish parlance, the Sabbath — than to strangle children in sacrifice to heathen deities. The laws of Tonga forbid the sale of land to foreigners, but it is permitted to be leased on such liberal conditions and for so long a term as to be tantamount to an actual sale. All traders, planters, or permanent foreign residents not in the service of the Government, are obliged to take out a license. Spirits and some other articles pay a heavy duty. All the people contribute to the support of the state, the tax being on an adult male about six dollars per annum. All the great islands are traversed by broad roads laid out by a European engineer. They are formed and kept in repair by the labour of convicted criminals."—H. S. Cooper, *Coral Lands, v.* 2. See, also, POLYNESIA.

TONIKAN FAMILY, The. See AMERICAN ABORIGINES: TONIKAN FAMILY.

TONKAWAN FAMILY, The. See AMERICAN ABORIGINES: TONKAWAN FAMILY.

TONKIN. — COCHIN-CHINA. — ANNAM. — CAMBOJA. — "The whole region which recent events have practically converted into French territory comprises four distinct political divisions: Tonkin in the north; Cochin-China in the centre; Lower Cochin-China and Camboja in the south. The first two, formerly separate States, have since 1802 constituted a single kingdom, commonly spoken of as the empire of Annam. This term Annam (properly An-nan) appears to be a modified form of Ngan-nan, that is, 'Southern Peace,' first applied to the frontier river between China and Tonkin, and afterwards extended not only to Tonkin, but to the whole region south of that river after its conquest and pacification by China in the third century of the new era. Hence its convenient application to the same region since the union of Tonkin and Cochin-China under one dynasty and since the transfer of the administration to France in 1883 is but a survival of the Chinese usage, and fully justified on historic grounds. Tonkin (Tongking, Tungking), that is, 'Eastern Capital,' a term originally applied to Ha-noi when that city was the royal residence, has in quite recent times been extended to the whole of the northern kingdom, whose true historic name is Yüeh-nan. Under the native rulers Tonkin was divided into provinces and subdivisions bearing Chinese names, and corresponding to the administrative divisions of the Chinese empire. . . . Since its conquest by Cochin-China the country has been administered in much the same way as the southern kingdom. From this State Tonkin is separated partly by a spur of the coast range projecting seawards, partly by a wall built in the sixteenth century and running in the same direction. After the erection of this artificial barrier, which lies about 18° N. lat., between Hatinh and Dong-koi, the northern and southern kingdoms came to be respectively distinguished by the titles of Dang-ngoai and Dang-trong, that is, 'Outer' and 'Inner Route.' The term Cochin-

China, by which the Inner Route is best known, has no more to do with China than it has with the Indian city of Cochin. It appears to be a modified form of Kwe-Chen-Ching, that is, the 'Kingdom of Chen-Ching,' the name by which this region was first known in the 9th century of the new era, from its capital Chen-Ching. Another although less probable derivation is from the Chinese Co-Chen-Ching, meaning 'Old Champa,' a reminiscence of the time when the Cham (Tsiam) nation was the most powerful in the peninsula. . . . Before the arrival of the French, Cochin-China comprised the whole of the coast lands from Tonkin nearly to the foot of the Pursat hills in South Camboja. . . . From the remotest times China claimed, and intermittently exercised, suzerain authority over Annam, whose energies have for ages been wasted partly in vain efforts to resist this claim, partly in still more disastrous warfare between the two rival States. Almost the first distinctly historic event was the reduction of Lu-liang, as Tonkin was then called, by the Chinese in 218 B. C., when the country was divided into prefectures, and a civil and military organisation established on the Chinese model. . . . Early in the ninth century of the new era the term Kwe-Chen-Ching (Cochin-China) began to be applied to the southern, which had already asserted its independence of the northern, kingdom. In 1428 the two States freed themselves temporarily from the Chinese protectorate, and 200 years later the Annamese reduced all that remained of the Champa territory, driving the natives to the uplands, and settling in the plains. This conquest was followed about 1750 by that of the southern or maritime provinces of Camboja since known as Lower (now French) Cochin-China. In 1775 the King of Cochin-China, who had usurped the throne in 1774, reduced Tonkin, and was acknowledged sovereign of Annam by the Chinese emperor. But in 1798 Gia-long, son of the deposed monarch, recovers the throne with the aid of some French auxiliaries, and in 1802 reconstitutes the Annamese empire under the Cochin-Chinese sceptre. From this time the relations with France become more frequent. . . . After his death in 1820 the anti-European national party acquires the ascendant, the French officers are dismissed, and the Roman Catholic religion, which had made rapid progress during the reign of Gia-long, is subjected to cruel and systematic persecution. Notwithstanding the protests and occasional intervention of France, this policy is persevered in, until the execution of Bishop Diaz in 1857 by order of Tu-Duc, third in succession from Gia-long, calls for more active interference. Admiral Rigault de Genouilly captures Tourane in 1858, followed next year by the rout of the Annamese army at the same place, and the occupation of the forts at the entrance of the Donnai and of Gia-dińh (Saigon), capital of Lower Cochin-China. This virtually established French supremacy, which was sealed by the treaty of 1862, ceding the three best, and that of 1867 the three remaining, provinces of Lower Cochin-China. It was further strengthened and extended by the treaty of 1863, securing the protectorate of Camboja and the important strategical position of 'Quatre-Bras' on the Mekhong. Then came the scientific expedition of Mekhong (1866–68), which dissipated the hopes entertained of that river giving access to the trade of Southern China. Attention was accordingly now attracted to the Song-koi basin, and the establishment of French interests in Tonkin secured by the treaties of peace and commerce concluded with the Annamese Government in 1874. This prepared the way for the recent diplomatic complications with Annam and China, followed by the military operations in Cochin-China and Tonkin [see FRANCE: A. D. 1875–1889], which led up to the treaties of 1883 and 1884, extending the French protectorate to the whole of Annam, and forbidding the Annamese Government all diplomatic relations with foreign powers, China included, except through the intermediary of France. Lastly, the appointment in 1886 of a French Resident General, with full administrative powers, effaced the last vestige of national autonomy, and virtually reduced the ancient kingdoms of Tonkin and Cochin-China to the position of an outlying French possession."—A. H. Keane, *Eastern Geography*, *pp.* 98–104.—"In the south-eastern extremity of Cochin-China, and in Camboja, still survive the scattered fragments of the historical Tsiam (Cham, Khiam) race, who appear to have been at one time the most powerful nation in Farther India. According to Gagelin, they ruled over the whole region between the Menam and the Gulf of Tongking. . . . Like the Tsiams, the Cambojans, or Khmers, are a race sprung from illustrious ancestry, but at present reduced to about 1,500,000, partly in the south-eastern provinces of Siam, partly forming a petty state under French protection, which is limited east and west by the Mekong and Gulf of Siam, north and south by the Great Lake and French Cochin-China. During the period of its prosperity the Cambojan empire overshadowed a great part of Indo-China, and maintained regular intercourse with Cisgangetic India on the one hand, and on the other with the Island of Java. The centre of its power lay on the northern shores of the Great Lake, where the names of its great cities, the architecture and sculptures of its ruined temples, attest the successive influences of Brahmanism and Buddhism on the local culture. A native legend, based possibly on historic data, relates how a Hindu prince migrated with ten millions of his subjects, some twenty-three centuries ago, from Indraspathi (Delhi) to Camboja, while the present dynasty claims descent from a Benares family. But still more active relations seem to have been maintained with Lanka (Ceylon), which island has acquired almost a sacred character in the eyes of the Cambojans. The term Camboja itself (Kampushea, Kamp'osha) has by some writers been wrongly identified with the Camboja of Sanskrit geography. It simply means the 'land of the Kammen,' or 'Khmer.' Although some years under the French protectorate, the political institutions of the Cambojan state have undergone little change. The king, who still enjoys absolute power over the life and property of his subjects, chooses his own mandarins, and these magistrates dispense justice in favour of the highest bidders. Trade is a royal monopoly, sold mostly to energetic Chinese contractors; and slavery has not yet been abolished, although the severity of the system has been somewhat mitigated since 1877. Ordinary slaves now receive a daily pittance, which may help to purchase their freedom. . . . On the eastern slopes, and in the lower Mekong basin,

the dominant race are the Giao-shi (Giao-kii) or Annamese, who are of doubtful origin, but resemble the Chinese more than any other people of Farther India. Affiliated by some to the Malays, by others to the Chinese, Otto Kunze regards them as akin to the Japanese. According to the local traditions and records they have gradually spread along the coast from Tongking southwards to the extremity of the Peninsula. After driving the Tsiams into the interior, they penetrated about 1650 to the Lower Mekong, which region formerly belonged to Camboja, but is now properly called French Cochin-China. Here the Annamese, having driven out or exterminated most of the Cambojans, have long formed the great majority of the population."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 3, *ch.* 22.

TORIES, English: Origin of the Party and the Name. See RAPPAREES; ENGLAND: A. D. 1680; and CONSERVATIVE PARTY.

Of the American Revolution, and their exile.—"Before the Revolution the parties in the colonies were practically identical with the Whigs and Tories of the mother country, the Whigs or anti-prerogative men supporting ever the cause of the people against arbitrary or illegal acts of the governor or the council. In the early days of the Revolution the ultra Tories were gradually driven into the ranks of the enemy, until for a time it might be said that all revolutionary America had become Whig; the name Tory, however, was still applied to those who, though opposed to the usurpations of George III., were averse to a final separation from England."—G. Pellew, *John Jay, p.* 269.—"The terms Tories, Loyalists, Refugees, are burdened with a piteous record of wrongs and sufferings. It has not been found easy or satisfactory for even the most candid historian to leave the facts and arguments of the conflict impartially adjusted. Insult, confiscation of property, and exile were the penalties of those who bore these titles. . . . Remembering that the most bitter words of Washington that have come to us are those which express his scorn of Tories, we must at least look to find some plausible, if not justifying, ground for the patriot party. Among those most frank and fearless in the avowal of loyalty, and who suffered the severest penalties, were men of the noblest character and of the highest position. So, also, bearing the same odious title, were men of the most despicable nature, self-seeking and unprincipled, ready for any act of evil. And between these were men of every grade of respectability and of every shade of moral meanness. . . . As a general rule, the Tories were content with an unarmed resistance, where they were not reinforced by the resources or forces of the enemy. But in successive places in possession of the British armies, in Boston, Long Island, New York, the Jerseys, Philadelphia, and in the Southern provinces, there rallied around them Tories both seeking protection, and ready to perform all kinds of military duty as allies. By all the estimates, probably below the mark, there were during the war at least 25,000 organized loyalist forces. . . . When the day of reckoning came at the close of the war, it needed no spirit of prophecy to tell how these Tories, armed or unarmed, would fare, and we have not to go outside the familiar field of human nature for an explanation. That it was not till six months after the ratification of the treaty by Congress that Sir Guy Carleton removed the British army from New York — the delay being caused by his embarrassment from the crowds of loyalists seeking his protection — is a reminder to us of their forlorn condition. . . . From all over the seaboard of the continent refugees made their way to New York in crowds. . . . They threw themselves in despair upon the protection of the British commander. . . . He pleaded his encumbrances of this character in answer to the censures upon him for delaying his departure, and he vainly hoped that Congress would devise some measures of leniency to relieve him. It is difficult to estimate with any approach to exactness the number of these hounded victims. Many hundreds of them had been seeking refuge in Nova Scotia and New Brunswick since the autumn of 1782, and additional parties, in increasing number, followed to the same provinces. An historian [Murdoch, "Hist. of Nova Scotia"] sets the whole number at the close of 1783 at 25,000. Large numbers of the loyalists of the Southern provinces were shipped to the Bahamas and to the West India Islands. At one time Carleton had upon his hands over 12,000 Tories clamorous for transportation. . . . A celebration of the centennial of the settlement of Upper Canada by these exiles took place in 1884. At a meeting of the royal governor, Lord Dorchester, and the council, in Quebec, in November, 1789, in connection with the disposal of still unappropriated crown lands in the province, order was taken for the making and preserving of a registry of the names of all persons, with those of their sons and daughters, 'who had adhered to the unity of the empire, and joined the royal standard in America before the treaty of separation in the year 1783.' The official list contains the names of several thousands. It was by their descendants and representatives that the centennial occasion referred to was observed. . . . Some bands passed to Canada by Whitehall, Lake Champlain, Ticonderoga, and Plattsburg, then south-

ward to Cornwall, ascending the St. Lawrence, and settling on the north bank. Others went from New Brunswick and Nova Scotia up the St. Lawrence to Sorel, where they wintered, going afterwards to Kingston. Most of the exiles ascended the Hudson to Albany, then by the Mohawk and Wood Creek to Oneida and Ontario lakes. . . . As these exiles had stood for the unity of the empire, they took the name of the 'United Empire Loyalists'" (a name which is often abbreviated in common use to U. E. Loyalists).—G. E. Ellis, *The Loyalists and their Fortunes (Narrative and Critical Hist. of Am., v. 7, pp.* 185–214).—"Some 10,000 refugees had, in 1784, and the few years following, found homes in Western Canada, just as it is estimated . . . that 20,000 had settled in the provinces by the sea. Assuming full responsibility for the care and present support of her devoted adherents, Great Britain opened her hand cheerfully to assist them. . . . The sum paid by the British Government to the suffering refugees was about $15,000,000."—G. Bryce, *Short Hist. of the Canadian People, ch.* 7, *sect.* 2.

TORONTO: A. D. 1749.—The hospitable origin of the city.—"The Northern Indians were flocking with their beaver-skins to the English of Oswego; and in April, 1749, an officer named Portneuf had been sent with soldiers and workmen to build a stockaded trading-house at Toronto, in order to intercept them,—not by force, which would have been ruinous to French interests, but by a tempting supply of goods and brandy. Thus the fort was kept well stocked, and with excellent effect."—F. Parkman, *Montcalm and Wolfe, ch.* 3 (*v.* 1).

TOTEMS.—"A peculiar social institution exists among the [North American] Indians, very curious in its character; and though I am not prepared to say that it may be traced through all the tribes east of the Mississippi, yet its prevalence is so general, and its influence on political relations so important, as to claim especial attention. Indian communities, independent of their local distribution into tribes, bands, and villages, are composed of several distinct clans. Each clan has its emblem, consisting of the figure of some bird, beast, or reptile; and each is distinguished by the name of the animal which it thus bears as its device; as, for example, the clan of the Wolf, the Deer, the Otter, or the Hawk. In the language of the Algonquins, these emblems are known by the name of 'Totems.' The members of the same clan, being connected, or supposed to be so, by ties of kindred more or less remote, are prohibited from intermarriage. Thus Wolf cannot marry Wolf; but he may, if he chooses, take a wife from the clan of Hawks, or any other clan but his own. It follows that when this prohibition is rigidly observed, no single clan can live apart from the rest; but the whole must be mingled together, and in every family the husband and wife must be of different clans. To different totems attach different degrees of rank and dignity; and those of the Bear, the Tortoise, and the Wolf are among the first in honor. Each man is proud of his badge, jealously asserting its claims to respect; and the members of the same clan, though they may, perhaps, speak different dialects, and dwell far asunder, are yet bound together by the closest ties of fraternity. If a man is killed, every member of the clan feels called upon to avenge him; and the wayfarer, the hunter, or the warrior is sure of a cordial welcome in the distant lodge of the clansman whose face perhaps he has never seen. It may be added that certain privileges, highly prized as hereditary rights, sometimes reside in particular clans; such as that of furnishing a sachem to the tribe, or of performing certain religious ceremonies or magic rites."—F. Parkman, *Conspiracy of Pontiac; ch.* 1.—"A totem is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. The name is derived from an Ojibway (Chippeway) word 'totem,' the correct spelling of which is somewhat uncertain. It was first introduced into literature, so far as appears, by J. Long, an Indian interpreter of last century, who spelt it 'totam.'. . . The connexion between a man and his totem is mutually beneficent; the totem protects the man, and the man shows his respect for the totem in various ways, by not killing it if it be an animal, and not cutting or gathering it if it be a plant. As distinguished from a fetich, a totem is never an isolated individual, but always a class of objects, generally a species of animals or of plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects. Considered in relation to men, totems are of at least three kinds:—(1) the clan totem, common to a whole clan, and passing by inheritance from generation to generation; (2) the sex totem, common either to all the males or to all

the females of a tribe, to the exclusion in either case of the other sex; (3) the individual totem, belonging to a single individual and not passing to his descendants."—J. G. Frazer, *Totemism, pp.* 1–2.

TOULOUSE: B. C. 106.—Acquisition by the Romans.—Tolosa, modern Toulouse, was the chief town of the Volcæ Tectosages (see VOLCÆ, THE), a Gallic tribe which occupied the upper basin of the Garonne, between the western prolongation of the Cévennes and the eastern Pyrenees. Some time before 106 B. C. the Romans had formed an alliance with the Tectosages which enabled them to place a garrison in Tolosa; but the people had tired of the arrangement, had risen against the garrison and had put the soldiers in chains. On that provocation, Q. Servilius Cæpio, one of the consuls of the year 106, advanced upon the town, found traitors to admit him within its gates, and sacked it as a Roman general knew how to do. He found a great treasure of gold in Tolosa, the origin of which has been the subject of much dispute. The treasure was sent off under escort to Massilia, but disappeared on the way, its escort being attacked and slain. Consul Cæpio was accused of the robbery; there was a great scandal and prosecution at Rome, and "Aurum Tolosanum"—"the gold of Toulouse"—became a proverbial expression, applied to ill-gotten wealth.—G. Long, *Decline of the Roman Republic, v.* 2, *ch.* 1.

10-11th Centuries.—The rise of the Counts.—The counts of Toulouse "represented an earlier line of dukes of Aquitaine, successors of the dukes of Gothia or Septimania, under whom the capital of southern Gaul had been not Poitiers but Toulouse, Poitou itself counting as a mere underfief. In the latter half of the tenth century these dukes of Gothia or Aquitania Prima, as the Latin chroniclers sometimes called them from the Old Roman name of their country, had seen their ducal title transferred to the Poitevin lords of Aquitania Secunda—the dukes of Aquitaine with whom we have had to deal. But the Poitevin overlordship was never fully acknowledged by the house of Toulouse; and this latter in the course of the following century again rose to great importance and distinction, which reached its height in the person of Count Raymond IV., better known as Raymond of St. Gilles, from the name of the little county which had been his earliest possession. From that small centre his rule gradually spread over the whole territory of the ancient dukes of Septimania. In the year of the Norman conquest of England [1066] Rouergue, which was held by a younger branch of the house of Toulouse, lapsed to the elder line; in [1088] the year after the Conqueror's death Raymond came into possession of Toulouse itself; in 1094 he became, in right of his wife, owner of half the Burgundian county of Provence. His territorial influence was doubled by that of his personal fame; he was one of the chief heroes of the first Crusade; and when he died in 1105 he left to his son Bertrand, over and above his Aquitanian heritage, the Syrian county of Tripoli. On Bertrand's death in 1112 these possessions were divided, his son Pontius succeeding him as count of Tripoli, and surrendering his claims upon Toulouse to his uncle Alfonso Jordan, a younger son of Raymond of St. Gilles. Those claims, however, were disputed. Raymond's elder brother, Count William IV., had left an only daughter who, after a childless marriage with King Sancho Ramirez of Aragon, became the wife of Count William VIII. of Poitou. From that time forth it became a moot point whether the lord of St. Gilles or the lord of Poitiers was the rightful count of Toulouse. . . . With all these shiftings and changes of ownership the kings of France had never tried to interfere. Southern Gaul—'Aquitaine' in the wider sense—was a land whose internal concerns they found it wise to leave as far as possible untouched."—K. TOURNEY.—TOURNAMENT.—JOUST. —"The word tourney, sometimes tournament, and in Latin 'torneamentum,' clearly indicates both the French origin of these games and the principal end of that exercise, the art of manœuvring, of turning ('tournoyer') his horse skilfully, to strike his adversary and shield himself at the same time from his blows. The combats, especially those of the nobility, were always fought on horseback, with the lance and sharp sword; the knight presented himself, clothed in armour which covered his whole body, and which, while it preserved him from wounds, bent to every movement and retarded those of his war horse. It was important, therefore, that constant exercise should accustom the knight's limbs to the enormous weight which he must carry, and the horse to the agility which was expected of him. In a 'passage' or 'pass of arms' ('passage' or 'pas d'armes') the generic name of all those games, this exercise was composed of two parts: the joust, which was a single combat of knight against knight, both clothed in all their arms, and the tourney, which was the image of a general battle, or the encounter and evolutions of two troops of cavalry equal in number."—J. TOWER AND SWORD, The Order of the. — This was an order of knighthood founded in Portugal by Alfonso V., who reigned from 1438 to 1481. "The institution of the order related to a sword reputed to be carefully guarded in a tower of the city of Fez: respecting it there was a prophecy that it must one day come into the possession of a Christian king; in other words, that the Mohammedan empire of northwestern Africa would be subverted by the Christians. Alfonso seemed to believe that he was the destined conqueror."—S. A. Dunham, *Hist. of Spain and Portugal, v.* 3, *p.* 225 (*Am. ed.*).

TOWER OF LONDON, The. — "Built originally by the Conqueror to curb London, afterwards the fortress-palace of his descendants, and in the end the State prison, from which a long procession of the ill-starred great went forth to lay their heads on the block on Tower Hill; while State murders, like those of Henry VI. and the two young sons of Edward IV., were done in the dark chambers of the Tower itself."—Goldwin Smith, *A Trip to England, p.* 56.—"Even as to length of days, the Tower has no rival among palaces and prisons. . . . Old writers date it from the days of Caesar; a legend taken up by Shakspeare and the poets in favour of which the name of Caesar's Tower remains in popular use to this very day. A Roman wall can even yet be traced near some parts of the ditch. The Tower is mentioned in the Saxon Chronicle, in a way not incompatible with the fact of a Saxon stronghold having stood upon the spot. The buildings as we have them now in block and plan were commenced by William the Conqueror; and the series of apartments in Caesar's Tower [the great Norman keep now called the White Tower] — hall, gallery, council chamber, chapel — were built in the early Norman reigns and used as a royal residence by all our Norman kings."—W. H. Dixon, *Her Majesty's Tower, ch.* 1.—"We are informed by the 'Textus Roffensis' that the present Great or White Tower was constructed by Gundulph, Bishop of Rochester, under the direction of King William I., who was suspicious of the fidelity of the citizens. The date assigned by Stow is 1078."—J. Britton and E. W. Brayley, *Memoirs of the Tower of London, ch.* 1.

ALSO IN: Lord de Ros, *Memorials of the Tower.*

TOWN.—"Burh, burgh, borough, in its various spellings and various shades of meaning, is our native word for urbes of every kind from Rome downward. It is curious that this word should in ordinary speech have been so largely displaced by the vaguer word tun, town, which means an enclosure of any kind, and in some English dialects is still applied to a single house and its surroundings."—E. A. Freeman, *City and Borough* (*Macmillan's Mag., May,* 1889).—See, also, TOWNSHIP; BOROUGH; GUILDS; and COMMUNE.

TOWNSHEND MEASURES, The. See UNITED STATES OF AMERICA: A. D. 1766–1767.

TOWNSHIP.—"In recent historical writing dealing with Anglo-Saxon conditions, a great place has been occupied by the 'township.' The example was set sixty years ago by Palgrave; but it does not seem to have been generally followed until in 1874 Dr. Stubbs gave the word a prominent place in his 'Constitutional History.' With Dr. Stubbs the 'township' was 'the unit of the constitutional machinery or local administration'; and since then most writers on constitutional and legal history have followed in the same direction. . . . The language commonly used in this connection need not, perhaps, necessarily be understood as meaning that the phenomenon which the writers have in mind was actually known to the Saxons themselves as a 'township' ('tunscipe'). It may be said that 'township' is merely a modern name which it is convenient to apply to it. Yet, certainly, that language usually suggests that it was under that name that the Saxons knew it. . . . It is therefore of some interest, at least for historical terminology,—and possibly for other and more important reasons,—to point out that there is no good foundation in Anglo-Saxon sources for such a use of the term; that 'tunscipe' in the few places where it does appear does not mean an area of land, an extent of territory, or even the material houses and crofts of a village; that it is probably nothing more than a loose general term

for 'the villagers.' . . . Only three passages in Anglo-Saxon literature have as yet been found in which the word 'tunscipe' appears,—the Saxon translation of Bede's 'Ecclesiastical History,' v. 10, the laws of Edgar, iv. 8, and the 'Saxon Chronicle,' s. a 1137. . . . The later history of the word 'township' would probably repay investigation. It is certainly not a common word in literature until comparatively recent times; and, where it does appear, its old meaning seems often to cling to it. . . . There is a good deal to make one believe that 'town' [see, above, TOWN] continued to be the common popular term for what we may describe in general language as a rural centre of population even into the 18th century. . . . The far more general use of the word 'town' than of 'township' in early New England is most naturally explained by supposing that it was the word ordinarily employed in England at the time of the migration,—at any rate, in East Anglia. . . . It might very naturally be said that the effect of the foregoing argument is no more than to replace 'township' by town, and that such a change is immaterial,—that it is a difference between tweedle-dum and tweedle-dee. I cannot help thinking, however, that the adoption of a more correct terminology will be of scientific advantage; and for this reason. So long as we speak of the Anglo-Saxon 'township' we can hardly help attaching to the word somewhat of the meaning which it has borne since the sixteenth century. We think of it as an area inhabited by freemen with an administrative machinery in the hands of an assembly of those inhabitants and of officers chosen by them. We start, therefore, with a sort of unconscious presumption that the 'township' was what we call 'free.' . . . Now, it is this question as to the position of the body of the population in the earliest Anglo-Saxon times that is just now at issue; and no student would say that at present the question is settled."—W. J. Ashley, *The Anglo-Saxon "Township"* (*Quarterly Journal of Economics, April,* 1894).

TOWNSHIP AND TOWN-MEETING, The New England.—"When people from England first came to dwell in the wilderness of Massachusetts Bay, they settled in groups upon small irregular-shaped patches of land, which soon came to be known as townships. . . . This migration . . . was a movement, not of individuals or of separate families, but of church-congregations, and it continued to be so as the settlers made their way inland and westward. . . . A township would consist of about as many farms as could be disposed within convenient distance from the meeting-house, where all the inhabitants, young and old, gathered every Sunday, coming on horseback or afoot. The meeting-house was thus centrally situated, and near it was the town pasture or 'common,' with the school-house and the block-house, or rude fortress for defence against the Indians. . . . Around the meeting-house and common the dwellings gradually clustered into a village, and after a while the tavern, store, and town-house made their appearance. . . . Under these circumstances they developed a kind of government which we may describe in the present tense, for its methods are pretty much the same to-day that they were two centuries ago. In a New England township the people directly govern themselves; the government is the people, or, to speak with entire precision, it is all the male inhabitants of one-and-twenty years of age and upwards. The people tax themselves. Once each year, usually in March but sometimes as early as February or as late as April, a 'town-meeting' is held, at which all the grown men of the township are expected to be present and to vote, while any one may introduce motions or take part in the discussion. . . . The town-meeting is held in the town-house, but at first it used to be held in the church, which was thus a 'meeting-house' for civil as well as ecclesiastical purposes. At the town-meeting measures relating to the administration of town affairs are discussed and adopted or rejected; appropriations are made for the public expenses of the town, or in other words the amount of the town taxes for the year is determined; and town officers are elected for the year. . . . The principal executive magistrates of the town are the selectmen. They are three, five, seven, or nine in number. . . . It [the town] was simply the English parish government brought into a new country and adapted to the new situation. Part of this new situation consisted in the fact that the lords of the manor were left behind. There was no longer any occasion to distinguish between the township as a manor and the township as a parish; and so, as the three names had all lived on together, side by side, in England, it was now the oldest and most generally descriptive name, 'township,' that survived, and has come into use throughout a great part of the United States. . . . New York had from the very beginning the rudiments of an excellent system of local self-government. The Dutch villages had their assemblies, which under the English rule were developed into town-meetings, though with less ample powers than those of New England. . . . The New York system is of especial interest, because it has powerfully influenced the development of local institutions throughout the Northwest."—J. Fiske, *Civil Government in the U. S., ch. 2 and* 4.—"The name town first occurs in the record of the second colonial meeting of the Court of Assistants [Massachusetts Bay, Sept. 7, 1630], in connection with the naming of Boston, Charlestown and Watertown. . . . A rude pattern of a frame of town government was shaped by Dorchester, when, in place of the earlier practice of transacting business at meetings of the whole body of its freemen (the grants of land being certified by a committee consisting of the clergymen and deacons), it designated certain inhabitants, twelve in number, to meet weekly, and consult and determine upon public affairs,—without any authority, however, beyond other inhabitants who should choose to come and take part in their consultations and votes. About the same time, at Watertown, it was 'agreed by the consent of the freemen, that there should be three persons chosen for the ordering of the civil affairs.' In the fourth year from the settlement of Boston, at which time the earliest extant records were made, three persons were chosen 'to make up the ten to manage the affairs of the town.' The system of delegated town action was there perhaps the same which was defined in an 'Order made by the inhabitants of Charlestown, at a full meeting [Feb. 10, 1635], for the government of the town by Selectmen,'—the name presently extended throughout New England to the municipal governors. . . . The towns have

been, on the one hand, separate governments, and, on the other, the separate constituents of a common government. In Massachusetts, for two centuries and a quarter, the Deputies in the General Court — or Representatives, as they have been named under the State Constitution — continued to represent the municipal corporations. In New Hampshire, Vermont, Connecticut and Rhode Island, that basis of representation still subsists."—J. G. Palfrey, *Hist. of New Eng., v.* 1, *ch.* 9.—"Boston . . . is the largest community that ever maintained the town organization, probably the most generally able and intelligent. No other town ever played so conspicuous a part in connection with important events. It led Massachusetts, New England, the thirteen colonies, in the struggle for independence. Probably in the whole history of the Anglo-Saxon race, there has been no other so interesting manifestation of the activity of the Folk-mote. Of this town of towns, Samuel Adams was the son of sons. . . . One may almost call him the creature of the town-meeting." — J. K. Hosmer, *Samuel Adams, the Man of the Town-Meeting* (*Johns Hopkins University Studies, series* 2, *no.* 4).

Also in: E. Channing, *Town and County Gov't in the Eng. Colonies* (*Johns Hopkins Univ. Studies, series* 2, *no.* 10).—See, also, New England: A. D. 1640–1644; and Selectmen.

TOWTON, Battle of (A. D. 1461). — On Palm Sunday, March 29, 1461, two armies of Englishmen met on a "goodly plain," ten miles from the city of York, between the villages of Towton and Saxton, to fight out the contention of the parties of the "two roses," — of Lancaster and York. The battle they fought is called the bloodiest that ever dyed English soil. It raged through an afternoon and a night until the following day, and the slain of the two sides has been variously reckoned by different historians at 20,000 to 38,000. No quarter was given by the victorious partisans of Edward IV. and the Lancastrians were utterly crushed. Henry VI. fled to Scotland and Queen Margaret repaired to France.— See England: A. D. 1455–1471.— C. Ransome, *Battle of Towton* (*English Historical Rev., July*, 1889).

TOXANDRIA. — After Julian's successful campaigns against the Franks, A. D. 358, the latter were permitted to remain, as subjects of the Roman Empire, in "an extensive district of Brabant, which was then known by the appellation of Toxandria, and may deserve to be considered as the original seat of their Gallic monarchy. . . . This name seems to be derived from the 'Toxandri' of Pliny, and very frequently occurs in the histories of the middle age. Toxandria was a country of woods and morasses, which extended from the neighbourhood of Tongres to the conflux of the Vahal and the Rhine."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 19, *with foot-note.*—See, also, Gaul: A. D. 355–361.

TOXARCHI, The.—The commanders of the Athenian archers and of the city-watch (known as Scythians) were so called.—A. Boeckh, *Public Economy of Athens, bk.* 2, *ch.* 11.

TRADE.

Ancient.

The Earliest Records of Trade.—Probably the oldest commercial record that exists was found sculptured on the rocks in the valley of Hammamat, east from Koptos on the Nile. It relates to an expedition sent out by the Pharaoh Sankh-ka-ra, to trade in the "land of Punt." Dr. Brugsch fixes the reign of Sankh-ka-ra at about 2500 B. C. The "land of Punt" he considers to have been the Somali coast of Africa, south of the extremity of the Red Sea, on the Gulf of Aden. Other writers maintain that it was southern Arabia. It was the "Holy Land" of the Egyptians, from which their gods were supposed to have anciently come. The trading expedition of Sankh-ka-ra was commanded by one Hannu (a name which has a Phœnician sound). Some seven or eight centuries after Hannu's voyage to Punt was made, we obtain in the Bible a most interesting glimpse of the trade then going on between Egypt and surrounding countries. It is found in the story of Joseph. When Joseph's brethren threw him into a pit, intending that he should be left there to die, their plans were changed by seeing a "Company of Ishmaelites from Gilead with their camels bearing spicery and balm and myrrh, going to carry it down to Egypt." Then Judah said, "let us sell him to the Ishmaelites." Now this story is found to agree well with other facts which go to show that some, at least, among the ancient tribes in northern Arabia — the Ishmaelites of the Bible — were great traders between the richer countries that surrounded them. By the poverty of their country, by their wandering disposition, by their possession of the camel, and by their geographical situation, these Arabs of the olden time must have naturally been made a trading people. With their caravans of camels they traveled back and forth, very busily, no doubt, through the desert, which needed no building of bridges or making of roads. In one direction they carried the barley, wheat, millet, flax and woven goods of Egypt; in another, the honey, wine, wax, wool, skins, gums, resins and asphalt of Canaan and Syria; in still another the more costly freight of gold ornaments, precious stones, pearls, ivory, ebony, spices and fragrant gums from the south. In all directions, it is probable, they dragged poor unfortunates like Joseph, whom they bought or kidnapped to sell as slaves.

Babylonia.—"The industry of the Babylonians quickly attained great skill and wide development. They were famous for their weaving in wool and linen. . . . Their pottery was excellent and the manufacture active; the preparation of glass was not unknown; the ointments prepared in Babylon were famous and much sought after, and the stones cut there were highly valued. The products of Babylonian skill and industry were first brought to their kinsmen in Syria, who could offer oil and wine in exchange. In the Hebrew scriptures we find Babylonian cloaks in use in Syria before the immigration of the Hebrews into Canaan. . . . The rough material required by Babylonian industry was supplied in the first

place by the Arabs, who exchanged their animals, skins, and wool for corn and weapons. Wine, and more especially wood, of which there was none in Babylonia, were brought by the Armenians from their valleys in the north down the Euphrates to Babylon. Before 1500 B. C. the commerce of the Arabs brought the products of South Arabia, the spices of Yemen, and even the products and manufactures of India, especially their silks, which reached the coasts of Southern Arabia, to Babylon. The Babylonians required the perfumes of Arabia and India to prepare their ointments. . . . When the cities of Phenicia became great centres of trade which carried the wares of Babylonia by sea to the West in order to obtain copper in exchange, the trade between Babylonia and Syria must have become more lively still. It was the ships of the Phenicians which brought the cubic measure, and the weights, and the cubit of Babylonia to the shores of Greece, and caused them to be adopted there."—M. Duncker, *Hist. of Antiquity, bk.* 2, *ch.* 3 (*v.* 1).—See, also, MONEY AND BANKING.

Egypt. — "In ancient Egypt agriculture counted for more than manufactures, and manufactures were of more importance than commerce. The trade which existed was brisk enough as far as it went, but it aimed at little more than the satisfaction of local wants by the more or less direct exchange of commodities between producers. The limited development of internal traffic was due to two principal causes: the natural products of different parts of the country were too much alike for much intercourse to be necessary for purposes of exchange, and the conformation of the country, in itself scarcely larger than Belgium, was such as to give the longest possible distance from north to south. . . . The Nile was the only known highway, so much so that the language scarcely possessed a general word for travelling; going southward was called 'going up stream,' and a journey to the north, even by land into the desert, was described by a term meaning to sail with the current. . . . While internal traffic was thus brought to a minimum by natural causes, foreign commerce can scarcely be said to have existed, before the establishment of peaceable intercourse with Syria under the new empire. The importation of merchandize from foreign countries was a political rather than a commercial affair. Such foreign wares as entered the country came as tribute, as the spoil of war, or as memorials of peaceful embassies. . . . The list of the spoil taken by Thothmes III. gives a tolerably exhaustive account of the treasures of the time. It includes, of course, bulls, cows, kids, white goats, mares, foals, oxen, geese, and corn; then follow strange birds, negroes, men and maid-servants, noble prisoners and the children of defeated kings, chariots of copper, plated with gold and silver, iron armour, bows, swords and other accoutrements, leather collars ornamented with brass, gold and silver rings, cups, dishes and other utensils, vessels of iron and copper, statues with heads of gold, ell-measures with heads of ivory, ebony, and cedar inlaid with gold, chairs, tables and footstools of cedar wood and ivory, a plough inlaid with gold, blocks of bluestone, greenstone and lead, 'a golden storm-cap inlaid with bluestone,' jars of balsam, oil, wine and honey, various kinds of precious woods, incense, alabaster, precious stones and colours, iron columns for a tent with precious stones in them, bricks of pure brass, elephants' tusks, natron, and, finally, by way of curiosity, from the land of the kings of Ruthen, three battle-axes of flint."—E. J. Simcox, *Primitive Civilizations, bk.* 1, *ch.* 3, *sect.* 1 (*v.* 1).—See, also, MONEY AND BANKING.

India.—"It is said in the Rig-Veda that 'merchants desirous of gain crowd the great waters with their ships.' And the activity in trade, thus early noted, has continued ever since to be characteristic of the country. Professor Lassen considers it remarkable that Hindus themselves discovered the rich, luxurious character of India's products. Many of the same beasts, birds, and fragrant oils are produced in other countries, but remain unnoticed until sought for by foreigners; whereas the most ancient of the Hindus had a keen enjoyment in articles of taste or luxury. Rajas and other rich people delighted in sagacious elephants, swift horses, splendid peacocks, golden decorations, exquisite perfumes, pungent peppers, ivory, pearls, gems, &c.; and, consequently, caravans were in constant requisition to carry these, and innumerable other matters, between the north and the south, and the east and the west, of their vast and varied country. These caravans, it is conjectured, were met at border stations, and at outports, by western caravans or ships bound to or from Tyre and Egypt, or to or from the Persian Gulf and the Red Sea. To the appearance of India goods in Greece, Professor Lassen attributes the Greek invasion of India. . . . The indirect evidence afforded by the presence of India's products in other ancient countries, coincides with the direct testimony of Sanskrit literature, to establish the fact that ancient Hindus were a commercial people. The code of Manu requires the king to determine the prices of commodities, and also the trustworthiness of the weights and measures used. And that the transactions contemplated were not restricted to local products is evident from reference to the charges for freight for articles in river boats, and the undetermined and larger charges to which sea-borne goods were liable. The account of King Yudhishthira's coronation in the Mahâbhârata affords an instance of precious articles from distant lands brought into India. So also in the Râmâyana, we read that when Râma and his brothers were married, the brides were clad in silk from China. . . . Merchants are constantly being introduced into Sanskrit fiction, and equally often into Buddhist legend. They seem to have been always at hand to give variety and movement to the monotony of daily life."—Mrs. Manning, *Ancient and Mediæval India, ch.* 40 (*v.* 2).

Phœnicians and Carthagians.—"The Phœnicians for some centuries confined their navigation within the limits of the Mediterranean, the Propontis, and the Euxine, land-locked seas, which are tideless and far less rough than the open ocean. But before the time of Solomon they had passed the pillars of Hercules, and affronted the dangers of the Atlantic. Their frail and small vessels, scarcely bigger than modern fishing-smacks, proceeded southwards along the West African coast, as far as the tract watered by the Gambia and Senegal, while northwards they coasted along Spain, braved the heavy seas of the Bay of Biscay, and passing Cape Finis-

terre, ventured across the mouth of the English Channel to the Cassiterides. Similarly, from the West African shore, they boldly steered for the Fortunate Islands (the Canaries), visible from certain elevated points of the coast, though at 170 miles distance. Whether they proceeded further, in the south to the Azores, Madeira, and the Cape de Verde Islands, in the north to the coast of Holland, and across the German Ocean to the Baltic, we regard as uncertain. It is possible that from time to time some of the more adventurous of their traders may have reached thus far; but their regular, settled and established navigation did not, we believe, extend beyond the Scilly Islands and coast of Cornwall to the north-west, and to the south-west Cape Non and the Canaries. The commerce of the Phœnicians was carried on, to a large extent, by land, though principally by sea. It appears from the famous chapter [xxvii] of Ezekiel which describes the riches and greatness of Tyre in the 6th century B. C., that almost the whole of Western Asia was penetrated by the Phœnician caravans, and laid under contribution to increase the wealth of the Phœnician traders. . . . Translating this glorious burst of poetry into prose, we find the following countries mentioned as carrying on an active trade with the Phœnician metropolis:—Northern Syria, Syria of Damascus, Judah and the land of Israel, Egypt, Arabia, Babylonia, Assyria, Upper Mesopotamia, Armenia, Central Asia Minor, Ionia, Cyprus, Hellas or Greece, and Spain."—G. Rawlinson, *Hist. of Phœnicia, ch.* 9.—"Though the invincible industry and enterprise of the Phenicians maintained them as a people of importance down to the period of the Roman empire, yet the period of their widest range and greatest efficiency is to be sought much earlier — anterior to 700 B. C. In these remote times they and their colonists [the Carthaginians especially] were the exclusive navigators of the Mediterranean: the rise of the Greek maritime settlements banished their commerce to a great degree from the Ægean Sea, and embarrassed it even in the more westerly waters. Their colonial establishments were formed in Africa, Sicily, Sardinia, the Balearic Isles, and Spain. The greatness as well as the antiquity of Carthage, Utica, and Gades, attest the long-sighted plans of Phenician traders, even in days anterior to the first Olympiad. We trace the wealth and industry of Tyre, and the distant navigation of her vessels through the Red Sea and along the coast of Arabia, back to the days of David and Solomon. And as neither Egyptians, Assyrians, Persians, or Indians, addressed themselves to a sea-faring life, so it seems that both the importation and the distribution of the products of India and Arabia into Western Asia and Europe were performed by the Idumæan Arabs between Petra and the Red Sea — by the Arabs of Gerrha on the Persian Gulf, joined as they were in later times by a body of Chaldæan exiles from Babylonia — and by the more enterprising Phenicians of Tyre and Sidon in these two seas as well as in the Mediterranean."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 18.—"The Commerce of Carthage may be conveniently considered under its two great branches — the trade with Africa, and the trade with Europe. The trade with Africa . . . was carried on with the barbarous tribes of the inland country that could be reached by caravans, and of the sea-coast. Of both we hear something from Herodotus, the writer who furnishes us with most of our knowledge about these parts of the ancient world. . . . The goods with which the Carthaginian merchants traded with the African tribes were doubtless such as those which civilized nations have always used in their dealings with savages. Cheap finery, gaudily coloured cloths, and arms of inferior quality, would probably be their staple. Salt, too, would be an important article. . . . The articles which they would receive in exchange for their goods are easily enumerated. In the first place comes . . . gold. Carthage seems to have had always at hand an abundant supply of the precious metal for use, whether as money or as plate. Next to gold would come slaves. . . . Ivory must have been another article of Carthaginian trade, though we hear little about it. The Greeks used it extensively in art. . . . Precious stones seem to have been another article which the savages gave in exchange for the goods they coveted. . . . Perhaps we may add dates to the list of articles obtained from the interior. The European trade dealt, of course, partly with the things already mentioned, and partly with other articles for which the Carthaginian merchants acted as carriers, so to speak, from one part of the Mediterranean to another. Lipara, and the other volcanic islands near the southern extremity of Italy, produced resin; Agrigentum, and possibly other cities of Sicily, traded in sulphur brought down from the region of Etna; wine was produced in many of the Mediterranean countries. Wax and honey were the staple goods of Corsica. Corsican slaves, too, were highly valued. The iron of Elba, the fruit and the cattle of the Balearic islands, and, to go further, the tin and copper of Britain, and even amber from the Baltic, were articles of Carthaginian commerce. Trade was carried on not only with the dwellers on the coast, but with inland tribes. Thus goods were transported across Spain to the interior of Gaul, the jealousy of Massilia (Marseilles) not permitting the Carthaginians to have any trading stations on the southern coast of that country."— A. J. Church and A. Gilman, *The Story of Carthage, pt.* 3, *ch.* 3. — A high authority on questions of intercourse in ancient times throws doubt on the supposed African caravan trade of the Carthaginians — as follows: "There seems no doubt that the existing system of caravan trade dates only from the introduction of Islamism into Africa. It was the Arabs who first introduced the camel into Northern Africa, and without camels any extensive intercourse with the interior was impossible. The Negro races have never shown any disposition to avail themselves of this mode of transport, and at the present day the commerce of the interior is carried on almost entirely by Moorish, that is, by Mohammedan, traders. The spread of Islamism has doubtless led to increased communication from another cause, the necessity for the Mohammedan inhabitants of the outlying and detached regions of the continent to make the pilgrimage to Mecca. Even in the most flourishing times of the Carthaginians they do not appear to have made any use of camels; and as late as the days of Strabo the communications with the tribes of Western Africa who dwelt beyond the Sahara were scanty and irregular. In the time of Herodotus there is certainly no indication that either the Carthaginians or the Greeks

of the Cyrenaïca had any commercial intercourse with the regions beyond the Great Desert."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 8, *note I* (*v.* 1).—See, also, PHŒNICIANS; and CARTHAGE.

Jews.—Beginning early in his reign, Solomon made great and enlightened efforts to promote the commerce and industries of the people of Israel. "To increase the land traffic, he had small cities built in advantageous localities, in which goods of all sorts in large quantities were kept in suitable storehouses; a practice similar to that which had from ancient times prevailed in Egypt. . . . They were established chiefly in the most northern districts of Israel, towards the Phœnician boundaries, as well as in the territories of the kingdom of Hamath, which was first conquered by Solomon himself.—The main road for the land traffic between Egypt and the interior of Asia must have been the great highway leading past Gaza and further west of Jerusalem to the Northern Jordan and Damascus. Here it was joined by the road from the Phœnician cities, and continued as far as Thapsacus, on the Euphrates. This was entirely in the dominions of the king; and here, under the peaceful banner of a great and powerful monarchy, commerce could flourish as it had never flourished before. It was clearly for the improvement of this route, which had to traverse the Syrian desert on the north, that Solomon built, in a happily chosen oasis of this wilderness, the city of Thammor, or Tadmor, of which the Greek version is Palmyra. There is not a single indication that this city was of importance before Solomon's time, but from that era it flourished for more than a thousand years. . . . For any distant navigation, however, Solomon was obliged to rely on the aid of the Phœnicians, inasmuch as they were in that age the only nation which possessed the necessary ability and inclination for it. It is true that the idea of competing with the Phœnicians upon the Mediterranean could hardly have occurred to him, since they had long before that time attracted all the commerce upon it to themselves, and would scarcely have desired or even tolerated such a rival. . . . But the Red Sea, which had been thrown open to the kings of Israel by the conquest of the Idumeans, offered the finest opportunity for the most distant and lucrative undertakings, the profit of which might perfectly satisfy a nation in the position of Israel in the dawn of maritime activity; and on their part, the Phœnicians could not fail to be most willing helpers in the promotion of undertakings which it lay in the hands of the powerful king of Israel entirely to cut off from them, or at any rate to encumber with great difficulties. In this way the mutual desires and needs of two nations coincided without any injury to the one or the other. . . . Phœnician sailors were at first, it is true, the teachers of the Israelite. It was they who aided them in constructing and manning the tall ships, which, destined to distant voyages upon uncertain seas, needed to be strongly built; but yet how many new ideas and what varied knowledge the nation would in this way acquire! The ships were built in Ezion-geber, the harbour of the town of Elath (or Eloth), probably on the very spot where Akaba now stands. The cargo brought back each time from the three years' voyage consisted of 420 talents of gold, besides silver, ivory, red sandal-wood, apes, and peacocks, probably also nard and aloe."—**H. Ewald**, *Hist. of Israel, v.* 3, *pp.* 261–264.

Greeks.—"When the Greeks had established themselves, not only on the peninsula, but also on the islands and on the east coast of the Ægean Sea, their navigation was greatly extended. That this, even in the first half of the 8th century, was profitable in its results, we see from the instance of Dius of Cyme, the father of Hesiod, who maintained himself in this manner. The works of art in which Lydia and Caria excelled, together with the products and manufactures of the east, which reached the western coasts of Asia, the products of these coasts, and wine and oil from Lesbos and Samos—all these could be shipped from the Greek maritime cities of Asia Minor, and carried to the peninsula. It was through this commerce . . . that Chalcis and Eretria laid the foundation of their greatness. To what proportions it had attained, even in the course of the 8th century, we find from the mint marks of Phocæa and Cyme, the standards of Chalcis and Eretria, the coins and weights and measures of Phidon of Argos. . . . From the middle of the 8th century, the Greeks no longer merely practised navigation; they became, in an eminent sense, a maritime nation. At the time when Sinope and Trapezus were founded in the east, Naxos, Catana, and Syracuse in Sicily, and Cyme in Campania, a nautical discovery had already been made, by means of which the Greeks surpassed the Phœnicians, the ancient voyagers of Syria; this was the building of triremes. To what an extent and proficiency must seamanship have attained, what importance naval battles must have assumed, to give rise to the attempt to replace the ancient war vessels by others of a far more powerful kind! When the first triremes were built at Corinth and Samos, about the year 700 B. C., Greek cities already existed on the southern shore of the Black Sea, on the coasts of Thrace, in Corcyra and Sicily; the southern coast of Italy had also been colonised. The products of Greek industry, pottery, implements, and weapons, were advantageously bartered on the coasts of the Thracians, Scythians, Illyrians, Sicilians, and Oscans, for the fruits of the soil, and for the cattle of those regions. The need of the means of exchange must have given great encouragement and impetus to manufactures in the Greek cities of the peninsula, on the coasts of Asia, and in the newly-founded Asiatic settlements themselves. . . . Navigation and commerce must have become permanent occupations. And the great increase of manufactures must also have given employment to numbers of the country people. Thus there grew up under the very rule of the aristocracy a powerful rival to itself; a nautical, artisan, commercial class, side by side with the land population. If the protecting walls of the chief place of the canton had previously been sought only in time of need, in case of surprises or hostile landings, the new industrial classes were now settled together in the harbours and centres of trade. Handicrafts, navigation, and commerce, could not exist without one another. In the maritime cantons on the east of the peninsula, and in the cantons on the coasts of the Peloponnesus, there sprang up simultaneously with the burgher class a town population."—M. Duncker, *Hist. of Greece, bk.* 4, *ch.* 2 (*v.* 2).—"Between 700 B. C. and 530 B. C.,

we observe . . . an immense extension of Grecian maritime activity and commerce—but we at the same time notice the decline of Tyre and Sidon, both in power and traffic. The arms of Nebuchadnezzar reduced the Phenician cities to the same state of dependence as that which the Ionian cities underwent half a century later from Crœsus and Cyrus; while the ships of Miletus, Phokæa and Samos gradually spread over all those waters of the Levant which had once been exclusively Phenician. In the year 704 B. C., the Samians did not yet possess a single trireme: down to the year 630 B. C. not a single Greek vessel had yet visited Libya. But when we reach 550 B. C. we find the Ionic ships predominant in the Ægean, and those of Corinth and Korkyra in force to the west of Peloponnesus—we see the flourishing cities of Kyrene and Barka already rooted in Libya, and the port of Naukratis a busy emporium of Grecian commerce with Egypt. The trade by land—which is all that Egypt had enjoyed prior to Psammetichus, and which was exclusively conducted by Phenicians—is exchanged for a trade by sea, of which the Phenicians have only a share, and seemingly a smaller share than the Greeks. Moreover the conquest by Amasis of the island of Cyprus, half-filled with Phenician settlements and once the tributary dependency of Tyre—affords an additional mark of the comparative decline of that great city. In her commerce with the Red Sea and the Persian Gulf she still remained without a competitor, the schemes of the Egyptian king Nekos having proved abortive. Even in the time of Herodotus, the spices and frankincense of Arabia were still brought and distributed only by the Phenician merchant. But on the whole, both political and industrial development of Tyre are now cramped by impediments, and kept down by rivals, not before in operation. . . . The 6th century B. C., though a period of decline for Tyre and Sidon, was a period of growth for their African colony Carthage, which appears during this century in considerable traffic with the Tyrrhenian towns on the southern coast of Italy, and as thrusting out the Phokæan settlers from Alalia in Corsica."—G. Grote, *Hist. of Greece, pt. 2, ch. 21.*—"It is a remarkable fact in the history of Greek colonies that the exploration of the extreme west of the Mediterranean was not undertaken either by the adventurers who settled at Cyme, or by the powerful cities of Sicily. A century or more elapsed from the foundation of Syracuse before any Greek vessel was seen on the coast of Spain or Liguria, and when the new beginning was made, it was not made by any of the colonies, Chalcidian, Dorian, or Rhodian, which had taken part in the discovery of the West. It was the Phocaeans of Ionia, Herodotus tells us, who first made the Greeks acquainted with the Hadriatic, with Tyrrhenia, Iberia (Spain), and Tartessus (the region round Cadiz). The first impulse to these distant voyages arose from a mere accident. At the time of the foundation of Cyrene, about the year 630 B. C., a Greek of Samos, by name Colaeus, when on his way to Egypt, was carried by contrary winds beyond the pillars of Heracles to Tartessus. There he found a virgin market, from which he returned to realise a profit of 60 talents (£12,000), an amount only surpassed by the gains of Sostratus of Aegina, who was the premier of Greek merchants. But this was the beginning and the end of Samian trade to the West; why they left it to the Phocaeans to enter into the riches which they had discovered, we cannot say, but within thirty years of this date, the enterprising Ionian town sent out a colony to Massilia near the mouth of the Rhone, in the district known as Liguria. . . . The mouth of the Rhone was the point where all the routes met which traversed France from the English Channel to the Gulf of Genoa. Of these Strabo specifies three. Merchandise was carried by boats up the Rhone and Saône, from which it was transferred to the Seine, and so passed down the river; or it was taken by land from Marseilles (or Narbo) to the Loire; or again carried up the Aude and transported thence to the Garonne. By one or other of these routes, the wares collected by the Gaulish merchants—more especially the tin, which they imported from Britain—was brought into the Greek market, if indeed it was not carried on pack-horses straight across the narrowest part of the country. The importance of these lines of transit at a time when the western Mediterranean was held by the Carthaginians, and the northern Hadriatic by the Tyrrhenians, can hardly be over-estimated. The colonists extended their borders by degrees, though not without severe contests with the Ligurians and Tyrrhenians by sea and land. New cities were founded to serve as outposts against the enemy: Agatha in the direction of the barbarians of the Rhone; Olbia, Antipolis, and Nicaea in the direction of the Salyans and Ligurians of the Alps. They also spread themselves down the coast of Spain."—E. Abbott, *Hist. of Greece, pt. 2, ch. 13.*

Rome.—"Rome, placed like a mightier Mexico in the centre of her mighty lake, was furnished with every luxury and with many of her chief necessaries from beyond the waters; and cities on every coast, nearly similar in latitude and climate, vied in intense rivalry with each other in ministering to her appetite. First in the ranks of commerce was the traffic in corn, which was conducted by large fleets of galleys, sailing from certain havens once a year at stated periods, and pouring their stores into her granaries in their appointed order. Gaul and Spain, Sardinia and Sicily, Africa and Egypt were all wheat-growing countries, and all contributed of their produce, partly as a tax, partly also as an article of commerce, to the sustentation of Rome and Italy. The convoy from Alexandria was looked for with the greatest anxiety, both as the heaviest laden, and as from the length of the voyage the most liable to disaster or detention. The vessels which bore the corn of Egypt were required to hoist their topsails on sighting the promontory of Surrentum, both to distinguish them from others, and to expedite their arrival. These vessels moreover, according to the institution of Augustus, were of more than ordinary size, and they were attended by an escort of war galleys. The importance attached to this convoy was marked by the phrases, 'auspicious' and 'sacred,' applied to it. . . . A deputation of senators from Rome was directed to await its arrival at the port where it was about to cast anchor, which, from the bad condition of the haven at Ostia, was generally at this period Puteoli in Campania. As soon as the well-known topsails were seen above the horizon a general

holiday was proclaimed, and the population of the country, far and near, streamed with joyous acclamations to the pier, and gazed upon the rich flotilla expanding gaily before them. The vessels engaged in this trade, however numerous, were after all of small burden. The corn-fleets did not indeed form the chief maritime venture of the Alexandrians. The products of India, which had formerly reached Egypt from Arabia, and were supposed indeed in Europe to have come only from the shores of the Erythræan Sea, were now conveyed direct to Cleopatris or Berenice from the mouths of the Indus and the coast of Malabar, and employed an increasing number of vessels, which took advantage of the periodical trade winds both in going and returning. The articles of which they went in quest were for the most part objects of luxury; such as ivory and tortoiseshell, fabrics of cotton and silk, both then rare and costly, pearls and diamonds, and more especially gums and spices. The consumption of these latter substances in dress, in cookery, in the service of the temples, and above all at funerals, advanced with the progress of wealth and refinement. The consignments which reached Alexandria from the East were directed to every port on the Mediterranean; but there was no corresponding demand for the produce of the West in India, and these precious freights were for the most part exchanged for gold and silver, of which the drain from Europe to Asia was uninterrupted. The amount of the precious metals thus abstracted from the currency or bullion of the empire, was estimated at 100,000,000 sesterces, or about £800,000 yearly. The reed called papyrus, the growth of which seems to have been almost confined to the banks of the Nile, was in general use as the cheapest and most convenient writing material, and the consumption of it throughout the world, though it never entirely superseded the use of parchment and waxen tablets, must have been immense. It was converted into paper in Egypt, and thence exported in its manufactured state; but this practice was not universal, for we read of a house at Rome which improved on the native process, and produced what Pliny calls an imperial or noble out of a mere plebeian texture. With respect to other articles of general use, it may be remarked that the most important, such as corn, wine, oil, and wool, were the common produce of all the coasts of the Mediterranean, and there was accordingly much less interchange of these staple commodities among the nations of antiquity than with ourselves, whose relations extend through so many zones of temperature. Hence, probably, we hear of none of their great cities becoming the workshops or emporiums of the world for any special article of commerce. The woollens indeed of Miletus and Laodicea, together with other places of Asia Minor, were renowned for their excellence, and may have been transported as articles of luxury to distant parts; but Africa and Spain, Italy and parts of Greece, were also breeders of sheep, and none of these countries depended for this prime necessary on the industry or cupidity of foreigners. The finest qualities of Greek and Asiatic wines were bespoken at Rome, and at every other great seat of luxury. The Chian and Lesbian vintages were among the most celebrated. . . . Again, while the clothing of the mass of the population was made perhaps mainly from the skins of animals, leather of course could be obtained abundantly in almost every locality. When we remember that the ancients had neither tea, coffee, tobacco, sugar, nor for the most part spirits; that they made little use of glass, and at this period had hardly acquired a taste for fabrics of silk, cotton, or even flax, we shall perceive at a glance how large a portion of the chief articles of our commerce was entirely wanting to theirs. Against this deficiency, however, many objects of great importance are to be set. Though the ruder classes were content with wooden cups and platters fashioned at their own doors, the transport of earthenware of the finer and more precious kinds, and from certain localities, was very considerable. Though the Greeks and Romans generally were without some of our commonest implements of gold and silver, such for instance as watches and forks, it is probable that they indulged even more than we do in personal decoration with rings, seals, and trinkets of a thousand descriptions. . . . The conveyance of wild animals, chiefly from Africa, for the sports of the amphitheatres of some hundreds of cities throughout the empire, must alone have given occupation to a large fleet of ships and many thousand mariners. Nor were the convoys smaller which were employed to transport marble from the choicest quarries of Greece and Asia to many flourishing cities besides the metropolis. . . . After due deduction for the more contracted sphere of ancient commerce, and the lesser number of articles, for the extent also to which the necessaries and conveniences of life were manufactured at home in the establishments of wealthy slaveowners, we shall still readily believe that the inter-communication of the cities of the Mediterranean, such as Corinth, Rhodes, Ephesus, Cyzicus, Antioch, Tyrus, Alexandria, Cyrene, Athens, Carthage, Tarraco, Narbo and Massilia, Neapolis and Tarentum, Syracuse and Agrigentum, and of all with Rome, must have been a potent instrument in fusing into one family the manifold nations of the empire. . . . In the eyes of the Orientals and the Greeks, the mistress of lands and continents, the leader of armies, and the builder of roads was regarded as the greatest of all maritime emporiums, and represented in their figurative style as a woman sitting enthroned upon the waves of the Mediterranean. The maritime aspect thus assumed by Rome in the eyes of her subjects beyond the sea, is the more remarkable when we consider how directly her ancient policy and habits were opposed to commercial development. . . . The landowners of Rome, in the highday of her insolent adolescence, had denounced both commerce and the arts as the business of slaves or freedmen. So late as the year 535 a law had been passed which forbade a senator to possess a vessel of burden, and the traffic which was prohibited to the higher class was degraded in the eyes of the lower. . . . It was . . . by following the natural train of circumstances, and by no settled policy of her own, that Rome secured her march across the sea, and joined coast to coast with the indissoluble chain of her dominion. On land, on the contrary, she constructed her military causeways with a fixed and definite purpose. . . . The population of Gaul crept, we know, slowly up the channel of the rivers, and the native tracks which conveyed

their traffic from station to station were guided by these main arteries of their vital system. But the conquerors struck out at once a complete system of communication for their own purposes, by means of roads cut or built as occasion required, with a settled policy rigidly pursued. These high roads, as we may well call them, for they were raised above the level of the plains and the banks of the rivers, and climbed the loftiest hills, were driven in direct lines from point to point, and were stopped by neither forest nor marsh nor mountain."—C. Merivale, *Hist. of the Romans, ch.* 39.

Gaul under the Romans and after the fall of the Empire.—"In the second century of our era, in the time of Trajan and the Antonines, Gaul with its fertile fields, its beautiful meadows, its magnificent forests, was one of the best cultivated countries of the Roman world. It exported into Italy grain from Aquitaine, Celtique and from the country of the Allobroges (Dauphiné), flax from Cadurques (Quercy) and Bituriges (Berry), hemp from Auvergne and the valley of the Rhône, spikenard from Provence (valeriana celtica according to M. Littré) renowned in the Roman pharmacopœia, oak and pine from the immense forests which still covered the Pyrenees, the Cévennes, the Alps, the Jura, the Vosges and nearly all the north of Gaul (forest of Ardennes), horses from Belgium, wool from the Narbonnaise, cheese from the Alps and from Nîmes, hams and salt provisions from Séquanaise (Franche-Comté), and the Pyrenees. The wines of the Narbonnaise and the valley of the Rhône, often adulterated and little relished by the Italians, were notwithstanding one of the principal objects of commerce in the interior of Gaul, in Great Britain and Germany. The oysters of the Mediterranean and even those of the Atlantic and the Channel which the ancients had perhaps found means of keeping in fresh water, figured upon the tables of the gourmets of Rome. We know that long before the conquest, the Gauls took gold from the sands of their rivers and that in certain regions (Upper Pyrenees), territory of the Tarbelles, and Val d'Aoste, territory of the Salasses, they extracted gold from the auriferous rocks by processes quite analogous to those which are now employed by the great Californian companies. These mines which were yet in existence under Augustus were not long in being exhausted, but the iron of Berry, Sénonais, Périgord, Rouergue, the valley of the Rhône and of the Saône, the copper of the Pyrenees (Saint-Etienne-de-Baïgorry), of the Alps (country of the Centrons, now Upper Savoy), of the Cévennes (Cabrieres in Hérault and Chessy in Rhône), the tin of Limousin, the argentiferous lead of the territory of the Rutènes (Rouergue), of the Gabales (Gévaudan), of the Centrons, etc., were mined and wrought with a skill which placed the metallurgy of Gaul in the first rank of the industries of the empire. These mining operations, superintended by the State, although they belonged to the proprietors of the soil, were often directed by companies which combined the working of the metal with its extraction from the ore. One which had its seat at Lyons is known to us by many inscriptions. Textile industries were not less flourishing than metallurgy, the manufacture of sail-cloth was carried on all over Gaul; the bleached linens of Cahors, the carpets of the Narbonnaise, the sagums of mingled bright colors were renowned even in Italy. The progress of commerce had followed that of agriculture and manufacture. The network of Roman roads planned by Agrippa was completed and four roads accessible to carriages or beasts of burden, crossed the Alps by the passes of the Little (Graius Mons) and of the Great Saint-Bernard (Summus Penninus), of Mount Genèvre (Mons Matrona) and of the Argentière: the Corniche road stretched along the Mediterranean from Genoa to Marseilles: those of the pass of Pertus (Summo Pyrenoeco), of the valley of Aran, of the Somport, of Roncevaux, and from Lapurdum (Bayonne) to Pampeluna connected Gaul to Spain. . . . Notwithstanding the competition of new roads, river navigation had retained all its activity. . . . We know from inscriptions of a certain number of associations for water transportation which appear to have played a greal rôle in the interior commerce of Gaul from the first century of our era. The boatmen of the Rhône, the Saône, the Durance, the Seine, the Loire, the Aar, an affluent of the Rhine, formed corporations recognized by the State, organized on the model of cities, having their regulations, property, elective chiefs, and patronized by great personages who charged themselves with defending their interests against the Roman authorities. The most celebrated, if not the most important of these associations, is that of the Nautæ Parisiaci, the memory of which has been preserved to us by the remains of an altar raised, under Tiberius, at the point of the Isle of the City (the ancient Lutetia) and found in 1711 under the choir of Notre-Dame. . . . The two great commercial ports of the Mediterranean were Narbonne and Arles, after Marseilles had lost her maritime preponderance and was only a city of science, luxury and pleasure. . . . Immense labor upon embankments and canalization which had thrown within Narbonne the mass of the river and deepened the maritime channel made of the metropolis of the Narbonnaise one of the safest ports upon the coast of Gaul. It communicated with the Rhône by the navigation of the lakes (étangs) which at that time extended without interruption to the western mouth of the river, with the ocean by the course of the Garonne, navigable from Toulouse (Tolosa). The port of the Garonne was then as now Bordeaux (Burdigala) which already had intercourse with Great Britain and Spain. Arles, connected with the sea by the canal of Marius and perhaps also by the small arm of the Rhône and the navigation of the lakes (étangs), was a maritime port and at the same time the outlet for the navigation of the Rhône which was prolonged by the Saône as far as Chalon (Cabillonum). Upon the banks of the river rose the wealthy cities of Tarascon, Avignon (Avenio), Orange (Arausio), Vienne. Lyons is the commercial and also the political metropolis of Gaul, the seat of the most powerful manufacturing and commercial companies; the boatmen of the Saône and the Rhône, the wine merchants, the mining and smelting company of the valley of the Rhône. Above Chalon, four great commercial routes start from the valley of the Saône. The first ascends the Doubs as far as Besançon (Vesuntio) and terminates at the Rhine near Augst (Augusta Rauracorum), where the river is already navigable. The second follows the valley of the Saône and

descends by the Moselle, navigable above Trèves (Augusta Trevirorum), and by the Meuse, toward the middle and lower valley of the Rhine. . . . The third route, that from the Saône to the Loire, set out from Chalon, crossed Autun (Augustodunum), and reached the Loire above Orléans (Genabum, later Aurelianum). Goods embarked upon the river arrived, after a voyage of 370 kilometers (2,000 stades), at Nantes (Portus Namnetum) which appears to have been substituted, about the beginning of the first century, for the ancient port of Corbilo and which was also in intercourse with Great Britain. The fourth route, that from the Saône to the Seine, crossed Autun, was there divided into two branches which went by way of Avallon and Alise to meet at Sens (Agedincum) on the Yonne, and descended the Seine to its mouth by Melun (Melodunum), Paris (Lutetia) and Rouen (Rotomagus). This was the shortest route between the new province of Britani and the Mediterranean; but the ancients, notwithstanding the progress in navigation, always distrusted long passages by sea; so the principal emporium of commerce with Britani was not Caracotinum (Harfleur), the port of the Seine, but Gesoriacum, later Bononia (Boulogne), which is distant only 50 kilometers from the English coast. It was there that Caligula erected that gigantic pharos known to the middle-ages under the name of the tower of Odre and which existed until 1645. . . . When one thinks of Gaul in the second half of the 5th century, after those great streams of invasion which swept it for fifty years, one easily fancies that the flood has carried everything away, that the Roman institutions have disappeared, that private fortunes are swallowed up in a frightful catastrophe, that the barbarians have enslaved the Gallo-Romans, that social life is suspended, manufactures ruined, commerce interrupted. This picture which responds to the idea we form of a barbarian conquest, is necessarily exaggerated, because the Germanic invasion was not a conquest. The Germans who established themselves upon the Roman territory, those even who had employed force to make a place for themselves within it, did not consider themselves conquerors, but subjects and soldiers of the Empire: they dreamed so little of destroying it that they aspired to serve it whether it would or no. . . . Notwithstanding the decadence of manufactures and the inevitable disorders which weakness of the central power brings in its train, commerce appears to have preserved a certain amount of activity. In the 6th century, post stages still existed. Upon the Roman roads, maintained and repaired by the Mérovingians, heavy wagons which served for the transportation of goods and travelers circulated with their teams of oxen or horses. Royal decrees commanded the preservation of towing-paths along navigable rivers; the rivers had remained the high-ways of interior commerce, and the boatmen's companies of Roman Gaul had perhaps survived the fall of the imperial domination. The ports of the Atlantic, Bordeaux and Nantes, those of the Channel, Alet (between Saint-Malo and Saint-Servan), Rouen, Quantovic (Etaples or Saint-Josse-sur-Mer?) on the bay of the Canche, Boulogne, were in relations with the Visigoths and the Suevi of Spain, the Irish, the Frisians, and received in exchange for the wines, honey, madder, grains and linens of Gaul, oils and lead from Spain, metals and slaves from Great Britain, coarse cloths from Ireland and finer fabrics which they were beginning to make in Frisia. Marseilles, Arles, Narbonne, the great ports of the Mediterranean, were always the depots for the trade of the Orient, where their vessels went for spices, silks, papyrus from Alexandria, cloths and carpets from Antioch and Laodicea, which their merchants exchanged in part for money, in part for metals, honey, saffron, almonds and linens from southern Gaul, coral brought from Italy, and amber brought overland from the borders of the Baltic. The conquests of the Franks, masters of central and southern Germany, had opened to commerce two new roads: one, by the Danube, stretched away to the frontiers of the Eastern Empire and to Constantinople through the countries occupied by the fierce tribes of the Avars and the Bulgarians; the other arrived by Thuringia in the regions where the Slav tribes, Sorbs (Mecklenburg, Brandenburg, Pomerania) and Wends (Bohemia, Moravia, Austria, Carinthia) dominated. In these uncultivated countries, covered with forests and marshes, in the midst of these warlike peoples, the merchants could risk themselves only in large caravans, sword at the side and lance in hand. These distant and perilous expeditions were attractive to the adventurous spirit of the Frank race. . . . Faith, as well as ambition, found its account in these journeys to the countries of the pagan. On the way, they distributed religious images to the heathen, they tried to convert them while profiting by them. . . . This mingling of commerce and religion is one of the characteristic traits of the middle ages, as it is of antiquity. The most ancient fairs of Gaul, that of Troyes which was in existence as early as the 5th century, that of Saint-Germain-des-Prés, that of Saint-Denis, which goes back to the time of Dagobert (629), were at the same time pilgrimages. This latter the most celebrated of all, under the Mérovingians, was held outside the walls of Paris, between the churches of Saint-Martin and Saint-Laurent, upon the lands watered by the brook Ménilmontant; it was opened on the festival of Saint-Denis and continued four weeks, in order to permit, says its charter, merchants from Spain, Provence and Lombardy and even those from beyond the sea, to take part in it. . . . The fair of Saint-Denis was the rendezvous of merchants from all parts of Gaul and Europe. Beside the wines and oils of the South might be seen the honey and wax of Armorica, the linens and madder of Neustria, the metals of Spain and England, the furs of the North, the products of the royal manufactories; but the choicest goods were the spices, pepper, tissues of silk and of cotton, jewels, enamels, goldsmiths' work, which came from the Orient by the Mediterranean ports, more rarely by way of the Danube, and whose guardians were the Syrians or Jews destined to hold so great a place in the commerce of the middle ages. The Syrians,—and under this name the Franks comprehended, without doubt, all merchants native to Egypt or Roman Asia,—formed powerful communities at Marseilles, Narbonne, Bordeaux; at Paris they had sufficient influence to enable one of them, Eusebius, to succeed in purchasing the episcopate, in 591. . . . As to the Jews, a great number were already established in Gaul before

the fall of the Roman Empire, but their prosperity dates only from the epoch of disorganization which followed the barbarian invasion."— H. Pigeonneau, *Histoire du Commerce de la France* (*trans. from the French*), *tome* 1, *livre* 1.

Mediæval.

Early trade with China. — "During the Tang Dynasty the intercourse between China and other considerable powers was not only closer but conducted on more nearly equal terms than at any other time. . . . The neighbouring kingdom of Tibet is first mentioned in the annals for 634 A. D. as sending ambassadors with tribute and being able to raise a large and formidable army. . . . Appeals from Persia and India for help against the Saracens were addressed to China more than once in the 7th and 8th centuries; and the heir apparent to the Persian throne resided for a time as hostage at the court of China. . . . But for the physical structure of the continent, which isolates India and China, while freezing Tibet and nomadizing Tartary, the spread of Arab conquest round or across the desert would have reached a point near enough to bring about a collision with China. As it was, a general impetus was given to foreign travel and foreign commerce; and . . . colonies of traders established themselves in the southern ports, as well as along the continental trade routes. . . . About the year 700 A. D. a market for strangers was opened at Canton, and an imperial commission appointed to levy duties. In 714 A. D. we hear of a petition of foreign merchants, arriving by way of the southern sea, which is forwarded from the coast in quite modern fashion for the emperor's consideration. It set forth all the precious things which the merchants could bring from the countries of the West, and represented them as only desirous of collecting medicinal drugs and simples. Unfortunately for the traders, they arrived at the beginning of a new reign, when a vigorous attempt had been made to put down the luxury of the court. . . . It was concluded to take no further notice of the petition. Foreign trade continued to exist on sufferance, but so far as the Chinese were concerned, it was limited by the attitude of the Government to a moderate exportation of staple commodities, paid for in foreign coin or precious metals. What China had to sell was much more important to the Western nations than anything she or her rulers could be prevailed upon to buy; and so long as the trade dealt with surplus manufactures, like silk, or natural products, like musk or rhubarb, and did not endanger the local food supply, it was not interfered with. In 794 A. D. complaints were made that trade was leaving Canton for Cochin China, but the traders' schemes for recovering or pursuing it were discouraged by the Government, which opined that there must have been intolerable extortions used to drive it away, or a want of natural inducements to bring it, and quoted the Shoo: 'Do not prize strange commodities too much, and persons will come from remote parts.' Arab geographers and travellers of the 9th century show what a development had been reached by foreign commerce under this modified freedom. The Jewish merchants described by Ibn Khordadbeh as speaking Persian, Latin, Greek, Arab, Spanish, Slavonic, and Lingua franca, and trading by sea and land to the remotest regions, had their representatives at Canton; and the four trade routes, enumerated by Sir Henry Yule, enabled all the great commercial communities to try their hand at the China trade. The first of these routes led from the Mediterranean over the Isthmus of Suez, and onwards by sea; another reached the Indian sea viâ Antioch, Bagdad and Bussora and the Persian Gulf; a third followed the coast of Africa by land from Tangiers to Egypt and thence by Damascus to Bagdad, while the fourth led south of the Caspian Sea and north of the central Asian desert to the gates of the Great Wall. The Chinese traders either met the Western merchants at Ceylon, or themselves came as far as the mouth of the Euphrates."— E. J. Simcox, *Primitive Civilizations*, *bk.* 4, *ch.* 12, *sect.* 2 (*v.* 2).

The Arabs.—The earliest date to which any positive statement of intercourse between the Arabs and the Chinese "appears to refer is the first half of the 5th century of our era. At this time, according to Hamza of Ispahan and Masudi, the Euphrates was navigable as high as Hira, a city lying south-west of ancient Babylon, near Kufa, (now at a long distance from the actual channel of the river), and the ships of India and China were constantly to be seen moored before the houses of the town. Hira was then abounding in wealth, and the country round, now a howling wilderness, was full of that life and prosperity which water bestows in such a climate. A gradual recession took place in the position of the headquarters of Indian and Chinese trade. From Hira it descended to Obolla, the ancient Apologos, from Obolla it was transferred to the neighbouring city of Basra, built by the Khalif Omar on the first conquest of Irak (636), from Basra to Siraf on the northern shore of the gulf, and from Siraf successively to Kish and Hormuz. Chinese Annals of the Thang dynasty of the 7th and 8th centuries, describe the course followed by their junks in voyaging to the Euphrates from Kwangcheu (Canton). . . . The ships of China, according to some authorities, used to visit Aden as well as the mouths of Indus and Euphrates. I do not think that either Polo or any traveller of his age speaks of them as going further than Malabar, the ports of which appear to have become the entrepôts for commercial exchange between China and the west, nor does it appear what led to this change. Some time in the 15th century again they seem to have ceased to come to Malabar. . . . The Arabs at an early date of Islam, if not before, had established a factory at Canton, and their numbers at that port were so great by the middle of the 8th century that in 758 they were strong enough to attack and pillage the city, to which they set fire and then fled to their ships. Nor were they confined to this port. . . . In the 8th century also the Arabs began to know the Chinese not only as Sinæ, but as Seres, i. e. by the northern land route. . . . Besides . . . communication by land and sea with Arabia, and with the various states of India, . . . there existed from an old date other and obscurer streams of intercourse between China and Western Asia, of which we have but fragmentary notices, but which seem to indicate a somewhat fuller mutual knowledge and freer communication than most persons probably have been prepared to recognise. Thus, China

appears to have been well known from an early period to the Armenians."—H. Yule, *Cathay and the Way thither, prelim. essay* (*v.* 1), *pp. lxxvii–lxxxii.*
—After the Arabs began their career as a conquering people, under Mahomet and his successors, and took possession of the great ancient fields of Asiatic and African commerce, with its highways and its capital seats, from Ispahan to Palmyra, Damascus, Baalbec, Tyre, Alexandria, and the old Carthaginian ports, they quickly caught the large ideas of trade that were then opened up to them. They improved the early caravan routes and established new ones in many directions. They dug wells, made cisterns and built caravansaries, or public places of shelter for travelers and traders, along the important desert roads. The pilgrimages which their religion encouraged had a lively traffic connected with them, and by spreading one language and one set of customs and laws over the wide region which they ruled, they helped commerce as the Romans had done. From Bagdad, the new capital city which they built on the Tigris, nearly opposite the deserted ruins of Babylon, on the other side of the Chaldean plain, they carried on direct trade with India, through Afghanistan; with China by three routes through Bokhara, or Tartary; with Siberia and with Russia, to the very center of it, through the agency of the Turkish and Tartar races. This city of Bagdad became a marvel of magnificence under the early Arabian caliphs. Other cities of Asia that acquired importance in manufactures or trade, or both, during the period of Arabian power, were Ispahan, in Persia, the woolens and linens from which were equally noted for their fineness; Damascus, in Syria, which produced cutlery of steel, and especially sword blades, that have never been surpassed, and which gave the name of "damasks" to certain raised patterns in linen that are well known by that term to this day; Herat, in Afghanistan, which was famous for its carpet looms and for its cultivation of saffron and assafœtida; Balkh and Khotan, in Bokhara, the former of which, on the banks of the Oxus, was a populous seat of trade between China, India and the West. From its great antiquity, Balkh was called "the mother of cities." In their native country, the Arabs, during this brilliant period of their history, increased the ancient trade which they had carried on by sea, with India, on one hand, and with the eastern coasts of Africa, on the other. They extended the latter far south of the limits of ancient Ethiopia, and even to the island of Madagascar. There are few settlements now existing on the east African coast, below the straits of Babel-Mandeb, which were not of Arabian origin. The pilgrimages to Mecca, their holy city, where the remains of Mahomet were interred, made that a great market and both industry and commerce were enlivened throughout the Arabian peninsula. As masters of Egypt, the Arabians reorganized with fresh vigor the ancient caravan traffic with central Africa and with the countries on the Upper Nile. Alexandria, it is true, lost much of its former importance. This was owing, in part, to the bitter hostility that existed between the Mahometans and the European Christians, which broke up, for a long period, nearly all open commerce between the two. But Alexandria was also hurt by the rise of new Arabian cities, in Egypt and on the Barbary coast, which drew away some of the trade that had centered almost wholly at Alexandria before. Cairo, the modern capital of Egypt, stood first among these and became a wealthy seat of many manufactures and of much commercial exchange. The interior caravan traffic of Egypt centered principally at Syene, while Temnis and Damietta were busy productive towns. Within the old Carthaginian dominions, west of Egypt, on the Mediterranean, the Arab conquerors revived a traffic quite as extensive, perhaps, as the greatest that ancient Carthage had controlled. Not far from the site of that ancient emporium, and twelve miles from the modern city of Tunis, they built the now forgotten city of Kirwan, which was one of the largest and most magnificent of its time. It was a point from which numerous caravan routes led southward into the heart of the African continent, even beyond the great desert, as well as eastward to Egypt and westward to the Atlantic coasts and Spain. Many flourishing towns surrounded this African metropolis and were the centers of many different activities, such as the cultivation of grain, the making of salt, the rearing of silk-worms and the production of silk. In Mauritania, which embraced the modern empire of Morocco and part of Algiers, the Arabs introduced the same spirit of enterprise. In their hands, the barren country — which has since become almost a desert again — was made fertile, through wide regions, by extensive irrigation, and produced wheat, olives, grapes, dates and other fruits in great abundance, besides feeding flocks and herds of sheep, goats, horses, asses and camels in rich pastures. The people became skilful in several manufactures, including weaving and dyeing, the making of silk and gold thread, the mining and smelting of copper and iron, the preparation of soap and the tanning of leather. From the Atlantic coast of their Mauritanian dominion, the Arabs pushed their traffic far down the western shores of the continent, while they opened caravan routes to the interior quite as widely, perhaps, as they did from Kirwan and from Egypt. The chief city that they founded in Mauritania was Fez, which still bears witness to its former glory in a lingering university, or collection of Mahometan schools; in the remains of many mosques, and in a vast number of caravansaries. The native inhabitants whom the Arabs found in Mauritania derived from their country the name of Moors. They embraced the Mahometan religion and joined their Saracen conquerors in invading Spain, A. D. 712. This led, in Europe, to the applying of the name "Moors" to the whole of the mixed races which took possession of southern Spain, and finally gave that name to all the Mahometans on the western Mediterranean coasts. But the Moors and the Arabs were distinct races of people. The conquest of southern Spain gave the Arabs the finest field in which their energy and genius were shown. They made the most of its mineral treasures, its delightful climate and its fertile soil. On the remains of Roman civilization, which Vandals and Visigoths had not wholly destroyed, they built up, with wonderful quickness, a new culture — of industry, of manners and of taste, of art, of literature, of government and of social life — that was splendidly in contrast with the rude state of Europe at large. The trade of the Spanish Moors was considerably extended among

the Christians of Europe, notwithstanding the religious enmities that opposed it. The products of their skilful workmanship were so eagerly desired, and they controlled so many of the coveted luxuries found in Africa and the East that their Christian neighbors could not be restrained, by war nor by the commands of the church nor by the hatred which both stirred up, from dealings with them. With other parts of the Mahometan dominion, and with the countries in commercial connection with it, the trade of Moorish Spain was active and large. In exchange for the varied products which they received, they gave the fine fabrics of their looms; exquisite work of their goldsmiths and silversmiths; famous leather; iron, quicksilver and silver from the old Spanish mines, which they worked with new knowledge and skill; sugar, the production of which they had learned and introduced from India; olive oil, raw silk, dye-stuffs, sulphur and many commodities of less worth. The career of the Arabs, in the large region of the world which they conquered, was brilliant but not lasting. The energy which carried them for a time far ahead of their slower neighbors in Europe showed signs of decay before two centuries of their career had been run.

Byzantine Trade. — "The commerce of Europe centred at Constantinople in the 8th and 9th centuries more completely than it has ever since done in any one city. The principles of the government, which reprobated monopoly, and the moderation of its duties, which repudiated privileges, were favourable to the extension of trade. While Charlemagne ruined the internal trade of his dominions by fixing a maximum of prices, and destroyed foreign commerce under the persuasion that, by discouraging luxury, he could enable his subjects to accumulate treasures which he might afterwards extort or filch into his own treasury, Theophilus prohibited the persons about his court from engaging in mercantile speculations, lest by so doing they should injure the regular channels of commercial intercourse, by diminishing the profits of the individual dealer. . . . During this period the western nations of Europe drew their supplies of Indian commodities from Constantinople, and the Byzantine empire supplied them with all the gold coin in circulation for several centuries. The Greek navy, both mercantile and warlike, was the most numerous then in existence. Against the merchant-ships of the Greeks, the piratical enterprises of the Egyptian, African, and Spanish Arabs were principally directed. Unfortunately we possess no authentic details of the commercial state of the Byzantine empire, nor of the Greek population during the Iconoclast period, yet we may safely transfer to this time the records that exist proving the extent of Greek commerce under the Basilian dynasty. Indeed, we must remember that, as the ignorance and poverty of western Europe was much greater in the 11th and 12th centuries than in the 8th and 9th, we may conclude that Byzantine commerce was also greater during the earlier period. The influence of the trade of the Arabians with the East Indies on the supply of the markets of western Europe has been overrated, and that of the Greeks generally lost sight of. . . . The Byzantine markets drew their supplies of Indian and Chinese productions from Central Asia, the trade passing north of the caliph's dominions through the territory of the Khazars to the Black Sea. This route was long frequented by the Christians, to avoid the countries in the possession of the Mohammedans, and was the highway of European commerce for several centuries. Though it appears at present a far more difficult and expensive route than that by the Red Sea and the Indian Ocean, it was really safer, more rapid, and more economical, in the 8th, 9th, and 10th centuries. This requires no proof to those who are acquainted with caravan life in the East, and who reflect on the imperfections of ancient navigation, and the dangers and delays to which sailing vessels of any burden are exposed in the Red Sea. When the Venetians and Genoese began to surpass the Greeks in commercial enterprise, they endeavoured to occupy this route; and we have some account of the line it followed, and the manner in which it was carried on, after the East had been thrown into confusion by the conquests of the Crusaders and Tartars, in the travels of Marco Polo. For several centuries the numerous cities of the Byzantine empire supplied the majority of the European consumers with Indian wares, and it was in them alone that the necessary security of property existed to preserve large stores of merchandise. Constantinople was as much superior to every city in the civilised world, in wealth and commerce, as London now is to the other European capitals. And it must also be borne in mind, that the countries of central Asia were not then in the rude and barbarous condition into which they have now sunk, since nomade nations have subdued them. On many parts of the road traversed by the caravans, the merchants found a numerous and wealthy population ready to traffic in many articles sought after both in the East and West; and the single commodity of furs supplied the traders with the means of adding greatly to their profits. Several circumstances contributed to turn the great highway of trade from the dominions of the caliphs to Constantinople. The Mohammedan law, which prohibited all loans at interest, and the arbitrary nature of the administration of justice, rendered all property, and particularly commercial property, insecure. Again, the commercial route of the Eastern trade, by the way of Egypt and the Red Sea, was suddenly rendered both difficult and expensive, about the year 767, by the Caliph Al Mansur, who closed the canal connecting the Nile with the Red Sea. The harvests of Egypt, which had previously filled the coast of Arabia with plenty, could no longer be transported in quantity to the ports of the Red Sea; living became expensive; the population of Arabia declined; and the carrying trade was ruined by the additional expenditure required. The caliph certainly by this measure impoverished and depopulated the rebellious cities of Medina and Mecca to such a degree as to render their military and political power less dangerous to the central authority at Bagdat, but at the same time he ruined the commerce of Egypt with India and the eastern coast of Southern Africa. Since that period, this most important line of communication has never been restored, and the coarser articles of food, of which Egypt can produce inexhaustible stores, are deprived of their natural market in the arid regions of Arabia. The hostile relations be-

tween the caliphs of Bagdat and Spain likewise induced a considerable portion of the Mohammedan population on the shores of the Mediterranean to maintain close commercial relations with Constantinople. A remarkable proof of the great wealth of society at this period is to be found in the immense amount of specie in circulation. . . . The poverty of Europe at a later period, when the isolation caused by the feudal system had annihilated commerce and prevented the circulation of the precious metals, cannot be used as an argument against the probability of this wealth having existed at the earlier period of which we are treating."—G. Finlay, *Hist. of the Byzantine Empire*, 716–1057, *bk.* 1, *ch.* 4, *sect.* 1.

Venice and Genoa.—In the slow revival of commerce which took place in Christian Europe, during the later half of the middle ages, no one city or people can be said to have taken a lead from the beginning. At various points, north and south, on the Mediterranean and the Adriatic, on the Baltic, on the Rhine and other rivers which flow into the North Sea, and on the Danube, the Dnieper and the Don, centers of trade were growing up in a gradual way, out of which it would be hard to name one that ranked much above the rest for many generations. But the 11th century brought a great commercial leader to the front. This was Venice. The circumstances of the founding of Venice, in the 5th century, and the history of the rise of the singular republic, are given elsewhere—see VENICE: A. D. 452. The condition of the unfortunate refugees, who sought shelter from invading savages on a few small mud banks, barely separated from the shore of their Adriatic coast, did not seem to be a promising one. Nor was it so. While the neighboring parts of Italy were being overrun by Huns, Goths and Lombards in succession, and while the settlement of the barbarous new races was going on over all Southern Europe, in the midst of great disorder and constant war, these islanders and their descendants, for generations, were protected as much by their poverty as by the shallow waters that surrounded them. They had nothing to tempt either plunder or conquest. They lived by salt-making, fishing and fish-salting. They began trade in a small way by exchanging their salt and salted fish for other articles. It grew in their hands from year to year, for they were enterprising, industrious and courageous. Procuring timber on the opposite Dalmatian coast of the Adriatic, they became expert ship builders and sailors. The safety of their situation caused increasing numbers of their Italian fellow countrymen to join them. The islands of the Venetian lagune were, in time, all occupied, and bridges between several of them were built. From the selling of salt and fish to their neighbors, the Venetians went on to more extensive commercial business. By slow degrees, they took the occupation of general merchants, buying goods here and there to sell again. They became friendly with the Greeks on the eastern side of the Adriatic, in Dalmatia and Albania, and this led them into important relations, both commercial and political, with the Byzantine Empire and its capital city, Constantinople. By the time they had gained wealth and consequence enough to attract the notice of their rough neighbors and invite attack, they had also gained strength enough to defend themselves. They took part then in the wars of the Byzantines, rendering valuable services in Italy and elsewhere, and they joined the Greeks in destroying the pirates who infested the Adriatic Sea. The early important trade of the Venetians was with Constantinople, where they enjoyed, for a long period, the peculiar favor of the Byzantine rulers. After the Saracens had mastered Syria and Persia, and taken possession of Alexandria (A. D. 640), Constantinople became the emporium of Eastern trade, adding it to a great traffic which the Byzantine capital had always carried on with the Tartar and Russian territories in Asia and Europe. When the Venetians gained a footing there, as political friends and favored merchants, their fortunes were made. While the Greeks were busy in desperate wars with their Mahometan neighbors, these enterprising Italians took into their own hands more and more of the profitable trade which the Greeks had opened to them. They soon had the handling of Byzantine commerce in western Europe almost wholly. From partners they became rivals, and especially in the Russian traffic, which they drew away from Constantinople, to a large extent, by opening direct dealings with the Russian traders, at a market place established on the Dnieper. From the beginning of the Crusades, in the 11th century, the rise of Venetian commerce and Venetian power was very rapid. The Venetians were prepared, as no other people were, at the time, to furnish fleets, both for transportation and for naval war. They enlisted in the crusading enterprises with a zeal which was not, perhaps, purely pious. Their carrying ships were busy conveying men and supplies; their war galleys were in the front of some sea fighting with the Moslems, and more with Christian rivals; their shrewd politicians were alert, at all points and among all parties, looking after the interests of the republic; their merchants were everywhere ready to improve the new opportunities of trade which these times of excitement opened up. In all directions, and throughout the whole of Europe, new activities were awakened, and especially such as led to a busier trade. The crusaders who lived to return, into France, Flanders, Italy, Germany, and England, brought home with them many ideas which they had picked up in the East, and much new knowledge of oriental products and arts, all of which became widely diffused and produced great effects. The result was to stimulate and improve the industries and to increase the commerce which the Europeans carried on among themselves, as well as to greatly enlarge their demand for the products of the Asiatic world. A new era in European commerce was opened, therefore, by the Crusades, and the Venetians, by their enterprise, their energy and their early experience, took the lead in its activities. They organized the traffic between the East and the West, the North and the South, upon a great scale, and centered the larger part of it in their island city. By sea and by land they managed it with equal vigor. Their merchant fleets were under the protection of the state and made voyages, at regular and appointed times, under the convoy of vessels of war. On the landward side, they arranged an extensive trade with the interior of Germany, Hungary and Bohemia, through the Tyrol and Carinthia. As the first bitterness of

hatred between Christians and Mahometans wore away, they grew willing to trade with one another, though the Popes still forbade it. The Venetians were among the first in such willingness. Having many quarrels with the Byzantine Greeks, they were eager to reopen the old eastern market at Alexandria, and did so at the earliest opportunity. From that beginning they spread their trade with Arabs, Moors and Turks, along the whole Mahometan line, in Asia and Africa. But, though Venice took the lead in the reviving commerce of the middle ages and held it substantially to the end of that period of history, she had powerful rivals to contend with, and the strongest were among her near neighbors in Italy. The same commercial spirit was alive in several other Italian cities, which had grown up in the midst of those disorderly times and had contrived to acquire more or less of independence and more or less of power to defend themselves. Amalfi, Genoa and Pisa were the earliest of these in growing to importance, and Florence at a somewhat later day rose to high rank. Florence, which did not become a free city until near the end of the 12th century, gained its subsequent wealth more by manufactures and by banking than by trade. Its chief products were woolens, silk and jewelry, and its money-lenders were everywhere in Europe. See FLORENCE: 12TH CENTURY, and after. The commercial career of Amalfi was cut short in the 12th century by events connected with the Norman conquest of Southern Italy. Pisa, an ancient city, whose history goes back to Etruscan times, was a considerable seat of trade while Venice was little known; but she fell behind both Venice and Genoa, soon after those vigorous republics were fairly entered in the race. The Pisans prospered highly for some time, by going into partnership or alliance with the Venetians, first, and afterwards with the Genoese; but they quarreled with the latter and were ruined in the wars that ensued. After the thirteenth century Pisa had no commercial importance. See PISA. The most formidable rival of Venice was Genoa, a city which claims to be, like Pisa, of more than Roman antiquity. In the trade of the Levant — that is, the eastern ports of the Mediterranean Sea — the Genoese pushed themselves into competition with the Venetians at an early day, and they seemed for some time to hold an equal chance of controlling the prize. During the later part of the 12th century, such unfriendly feelings had grown up between the Venetians and the Byzantine court that the latter transferred its commercial favors to the merchants of Genoa, Pisa and Amalfi, and gave them many privileges at Constantinople. The Venetians were thus placed at a disadvantage in the Bosphorus and the Black Sea; but they did not long submit. In 1204 they persuaded one of the crusading expeditions to join them in attacking Constantinople, which was taken, and the dominions of the ancient Empire of the East were divided among the captors, Venice receiving a goodly share. See BYZANTINE EMPIRE. This was a golden era for Venice and she improved it to the utmost. For almost sixty years she triumphed over her rivals completely. But in 1261 her merchants were again expelled from Constantinople and the Black Sea. The Greeks had continued to hold a large part of the ancient domain of the Byzantine Empire in Asia Minor, and now, with the help of the Genoese, they succeeded in retaking their old capital city. The Frank Empire, or Latin Empire as it was differently called, which the Crusaders and the Venetians had set up, was extinguished and the Genoese again took the place of the Venetians as masters of the Byzantine trade, including that of the Black Sea and the Asiatic traffic which was carried on from its ports. But by this time the better disposition to deal commercially with one another had grown up between the Christians and the Mahometans. So the Venetians, when they lost their footing at Constantinople, very promptly went over to Alexandria and made excellent arrangements with the Saracens there, for supplying Europe once more with the commodities of the East, by those easier and shorter ancient routes which Christian commerce had not used for several hundred years. This opening of trade with the Mahometan races, at Alexandria, and elsewhere soon afterwards, may easily have repaid the Venetians for what they lost in the Byzantine direction; but they did not give up the latter. A long series of desperate wars between the competitors ensued, with such shiftings of victory that Venice seemed sometimes to be almost in a hopeless strait; but, in the end, she broke the power of her rival completely. The final peace, which was concluded in 1381, left her quite undisputedly, for a time, the mistress of the Mediterranean and its trade. See GENOA: A. D. 1261–1299; VENICE: A. D. 1378–1379, and 1379–1381; and CONSTANTINOPLE. Both the northward and the southward lines of traffic between Asia and Europe, through Alexandria and through Constantinople, were now chiefly in the hands of the Venetians. Between those great courses were important minor currents of commerce, along caravan routes through Asia Minor and Syria, which they mainly controlled. The trade of the rich islands of the Levant and of Moorish Africa was under their management for the most part, and they found on the northern shores of the Black Sea a commerce with the Russian region which the Genoese had increased while they ruled in those waters. For three quarters of a century the Venetians enjoyed this large extent of commerce with the East. Then the Turks came, besieged and captured Constantinople (A. D. 1453) and spread over the country which they now occupy. For the next two centuries the Venetians were at war with the Turks — defending Christendom in the Mediterranean with little help. At the same time they had to encounter an almost fatal attack from Christian princes who had become jealous of their formidable wealth and power and who united against the republic in the shameful League of Cambrai — see VENICE: A. D. 1508–1509. They might have recovered from this attack, for they still held the Mediterranean trade; but a great event had occurred, just ten years before the League of Cambrai, which was more fatal than war, not to Venice alone, but to most of her rivals in trade as well. This was the discovery, by Vasco da Gama, of the ocean passage to the Eastern world around the Cape of Good Hope. The toiling traffic of desert caravans, to Alexandria, to Constantinople, to Tyre, Antioch, Ephesus and Erzeroum, was soon reduced to insignificance. The rich trade of the Indies and of all the farther East — the trade of the silk countries and the

cotton countries, of the spice islands, of the pearl fisheries, of the lands of ivory, of ebony, of gold, of precious stones, of fragrant gums, of curious things and curious arts — was quickly swept into a different course — into broader seas than the Mediterranean and into new hands.

Northern Europe.—The Baltic Cities.—The Hansa.— The earliest commercial seaports of northwestern Europe had their rise, not on the North Sea, but on the Baltic and the straits which enter it. The Northmen of that region were not alone in the traffic which grew up there, for the Wends (a Slavonic people), who occupied most of the southern shores of the Baltic, east of the Elbe, appear to have stoutly rivalled them from the first. Biorko, on an island in Lake Maelar, Sweden (the inlet upon which Stockholm is situated), was one of the first of the seats of commerce at the North. It is supposed to have been destroyed about 1008. But the most famous was the city of Winet, or Vineta, on the island of Usedom, at the mouth of the river Oder. It may not have been quite as rich and magnificent a town as some would infer from accounts given in early chronicles; but no doubt it was remarkable for the age, in that part of the world, and carried on a large trade. The Swedes and Danes were the destroyers of Vineta, before the middle of the 9th century, and the former people are said to have carried away from it great quantities of marble, brass and iron work, with which they gave splendor to their own newer city of Wisby, then just rising on the island of Gothland. The career of Wisby lasted several centuries and it was prominent in commerce throughout the Middle Ages. All that can be said of that most ancient commerce in northern Europe is gathered from sources which are uncertain and obscure. It is not until the 12th century that much of the real history of trade in the Baltic region opens. In 1140 the modern city of Lubeck was founded, on the site of a more ancient town, known as Old Lubeck, which is supposed to have been a thriving port of trade in its day but which had been utterly destroyed by its rivals or enemies. The new Lubeck established close relations with the Genoese and soon took the lead in the commerce of the north, among a large number of enterprising towns which, about that time, came into prominence on the northern coast and on the rivers which run to it. The city of Hamburg, on the Elbe, lying inland and not very distant from Lubeck, was one of the earliest of these. Like Lubeck, it had suffered destruction, in the constant warfare of the earlier time, and had made a new beginning of existence about 1013. Hamburg had access to the North Sea by the Elbe and Lubeck to the Baltic by the Trave. Trading in different directions, therefore, by sea, they carried on an active traffic with one another, across the narrow stretch of land which divides them,—as they still do to this day. But this inland commerce was greatly disturbed by robbers who infested the country, until the two cities, Lubeck and Hamburg, in 1241, agreed to establish and support in common a body of soldiers for the protection of their merchants. That agreement is believed to have been the beginning of a wide-spread union which afterwards took shape among the commercial cities of northern Europe, and which became powerful and famous in the later history of the Middle Ages, under the name of the Hanseatic League.—For an account of that remarkable commercial league of German free cities, see HANSA TOWNS.

Frisians and Flemings.—The early Netherlands.— The two peoples who inhabit the region called the Netherlands — a purely Germanic stock in the north (modern Holland) and a mixed but largely Celtic population in the south (modern Belgium) — have had a history so much in common that it cannot well be divided, though they have differed in experiences as widely as in character. The struggle with nature for a foothold in the lowland itself was harder in the north than in the south, and no doubt that is why the Teutonic Frisians led the way in industrial training. It was among them that the arts of weaving and dyeing were cultivated first to a notable excellence. As early as the age of Charlemagne (8–9th centuries), Frisian robes, of white and purple woolen stuffs, are mentioned among the choice gifts which the Emperor sometimes sent to foreign princes, and even to the great caliph, Haroun al Raschid. In the 9th century, Frisian weavers are said to have been persuaded by an enterprising count of Flanders to settle in his dominions, at Ghent, and introduce there a better knowledge of their art. But if the Flemish people borrowed from the Frisians in this matter, they soon outran their teachers and made the loom their own peculiar property. The shuttle, ere long, was in the hands of a very large part of the whole south Netherland or Belgian population, and they became almost a nation of weavers. The same Count Baldwin of Flanders who brought the Frisian weavers into Ghent established annual markets, or fairs, in various towns, which drew merchants from abroad, promoted trade and stimulated manufacturing industries throughout the country. Woolen, linen, and finally silk looms multiplied to a prodigious extent, and the weavers in all these branches acquired remarkable skill. The working of metals was also learned with great aptness, and Flemish cutlery, weapons and armor became very nearly as renowned as those of Milan and Damascus. Tanning was another valuable art which the Flemings and their Netherland neighbors cultivated, and the tilling of the soil was so industriously pursued that flax, hemp, grain and other farm products were raised quite abundantly for sale abroad. In the north Netherlands — the Hollow-land of the sturdy "Free Frisians" and Batavians, who were afterwards called the Dutch — the hard working energy of the people had been pushed in some different directions. The old trade of weaving was still vigorously carried on, in nearly every important town, and Dutch woolens, damask linens, carpets, velvets, etc., were largely produced and widely sought after; but this industry was never so prominent as it became in the Belgian provinces. The fortunes of the Hollanders were founded to a large extent upon their fisheries, and especially the herring fishery, which assumed great importance in their hands after the middle of the 12th century. Before that time, they appear to have been obliged to seek the herring in other waters than their own — along the shores of England, Scotland and Norway. But some change in the movements of those curiously swarming fish, about the time above mentioned, brought great shoals

of them to the Dutch coast, and the herring harvest thereafter was a rich source of gain to the Hollanders. They discovered some secrets of salting or curing the fish which were very much valued, and the Dutch herring were eagerly bought for all parts of Europe. The making of pottery was another industry to which the Dutch applied themselves with success, and particularly at the town of Delft, which gave its name for many centuries to the common earthenware used in western Europe. In dairy farming and skilful horticulture, or gardening, the Hollanders were superior to all other people at an early time. Wherever seafisheries are extensive, sailors and ship builders are trained and ocean navigation and commerce are sure, in time, to be prosperously pursued. It was so with the Dutch. Their Frisian ancestors had suffered so much on their coasts from the harassing raids of the Norse pirates, or Vikings, that they did not figure very early in seafaring enterprise. But they fought the freebooters in their stubborn and stout-hearted way and were able at last to make the harbors of their coast tolerably safe. From that time the seaport towns of Holland grew rapidly, and Dutch merchants and merchant ships, trading with the cities of the Baltic, with England and with Flanders and France increased in number. The Hollanders had an advantage in this matter over their Flemish neighbors of the South Netherlands. They were provided with better harbors and they held the outlets of the great rivers in their hands. This latter was the cause of incessant quarrels between the two peoples. The 15th century found the whole Netherlands, both north and south, in a thriving state, so far as industry and trade were concerned, notwithstanding bad government and disorderly times. The people were counted among the richest in Europe. Many great and wealthy cities had grown up, containing large populations and very busy ones. In the north, there were Dordrecht or Dort, Hoorn, Zierikzee, Haarlem, Delft, Leyden, Deventer, Enkhuizen, Middelburg, Nimeguen, Utrecht, Rotterdam, and Amsterdam, which last named city eclipsed them all in the end, though it was one of the latest to rise. In the south there was Ghent, with forty thousand weavers inside its strong walls, who were always as ready to string the bow as to throw the shuttle, and whose hot-tempered revolts against tyranny and wrong are among the most exciting incidents of history. There was Bruges, which became for a time the great emporium of the commerce of northern and southern Europe, but which lost its importance before the 15th century closed. There was Antwerp, which succeeded to the trade of Bruges and rose to unrivalled rank; and there were Lille, Mechlin (or Malines), Courtrai, Ypres, Louvain, and other towns, all centers of flourishing manufactures, chiefly those of the loom.

Trade Routes, west and north from the Mediterranean.—"The connection between the two great divisions of European commerce, the northern including the Hansa and the Flemish towns, and the southern the Italian republics and Mediterranean ports, was effected by two chief routes. One was by sea from the Mediterranean through the Straits of Gibraltar, up the coasts of Spain and France to Flanders. This route was used more by the southern, and especially by Venetian, merchants than by the northern traders, for . . . Venice sent every year a large fleet to Flanders and the English Channel, which fleet would meet at Bruges, the great Hansa depot, the most important merchants of North Europe and the Hansa traders. Bruges was indeed for a long time the central mart in the north for the commercial world, till 1482, when the canal connecting it with the port of Sluys was blocked up. But at Bruges also the maritime trade just mentioned met the overland trade through central Europe, a trade that was very important, and which enriched many a city upon the Rhine and farther south, from Augsburg to Cologne. We must consider this overland route more carefully. The great centre from which it started, or to which it tended, was Venice, where as we know were collected most of the products of the East, coming both via Egypt and via the lands round the Black Sea. . . . Starting . . . from Venice, the merchants used to cross the Alps by the Brenner or Julier Passes, and then would make for the Upper Danube or one of its tributaries, and thence get on to the stream of the Rhine. Their object was generally to utilise a natural waterway wherever possible, rather in contrast to the old Roman traders, who preferred the roads. But the roads of the Middle Ages were far inferior to the old Roman highways. One of the first great cities which the mediæval trader passed on this route, coming from Venice, was Augsburg. . . . Thence he might go down the stream to Regensburg (Ratisbon) and Vienna; or he might go up to Ulm and then make a short land journey till he reached the Rhine, and so right away down that convenient stream. This was perhaps the main route from north to south. But many others converged from central Europe to Italy, and many important cities owed their wealth to the stream of trade. In Karl the Great's time the cities on the great waterway to the East along the Danube became very flourishing; Regensburg, Passau, and Vienna being the most important. From Regensburg there ran north and west two great commercial highways into the interior of Germany, one by way of Nürnberg and Erfurt and the other past Nürnberg to the Rhine. Another route from Regensburg, by river, to Trentschin on the river Waag took its merchants through Galicia into Russia, whither they went as far as Kief, the centre of Russian trade. Along this great waterway of the Danube and its tributaries came the products of the East from Constantinople and the Black Sea. . . . Another important route was that from the cities of the Rhine, such as Coblenz and Basle, up that river and on to Chur and then by the Julier Pass and the Engadine and the Etschthal to Venice; or again, after passing Chur, through the Septimer Pass and the Bergeller Thal to Genoa. These Rhine cities were very flourishing, from Basle to Cologne. . . . Like most trading towns in the Middle Ages, the Rhine cities were compelled to form themselves into a confederacy to resist the robbery and extortions of feudal nobles, whose only idea of trade seems to have been that it providentially existed as a source of plunder to themselves. But besides this Confederacy of the Rhine there was another great Confederacy of the Swabian cities, arising from the same causes. . . . That of the Rhine included ninety cities, and existed

in a fully organised form in 1255. The Swabian Confederacy was formed a little later, about 1300 or 1350, under the leadership of Augsburg, Ulm, and Nürnberg, and was in close political and commercial relations both with Venice and Genoa. . . . If now we turn from trade routes in Europe itself to those which led to Europe from the East, we find that at the time of which we are now speaking there were three main streams of commerce. In the 12th century the caravan trade in Central Asia had passed along several different paths; but after the Crusades, and the decline of the Eastern empire by the capture of Constantinople (1204), the various tribes of Central Asia, rendered more fanatical and warlike than ever by these military and religious events, caused caravan trading to become very unsafe. The first of the three routes which now remained in the 13th century was from India and the western coasts of Asia, past Basra on the Persian Gulf to Bagdad by water. From Bagdad merchants went, still by water, along the Tigris to the point on that river nearest to Seleucia and Antioch, and so to Orontes, and then to the coast of the Levant. The second route followed the same course as the first till the point of leaving the Tigris, and then proceeded over the Highlands of Asia Minor and Armenia to the port of Trebizond on the Black Sea, where Venetian vessels used to meet Asiatic traders. For both these routes Bagdad formed a very important centre. . . . The third route from the far East was from India by sea to Aden, then by land across the desert to Chus on the Nile, which took nine days, and then again by water down the Nile to Cairo, a journey of thirteen days. From Cairo there was a canal, 200 miles long, to Alexandria, where again Venetian and Genoese merchants were ready to receive the rich spices, sugar, perfumes, precious stones, gum, oil, cotton, and silk brought from the East."—H. de B. Gibbins, *History of Commerce in Europe, bk. 2, ch. 5.*

The English.—"Whilst the Italians were vigorously pursuing their trade in India and Europe, and Spain was renowned for her manufactures; whilst the Hanse merchants were extending their factories, and Portuguese navigators were bent upon maritime discoveries; whilst the Dutch were struggling for independence, and France was planting the seeds of her industries; England was only known as possessing a few articles of commerce of great value. Her wools and her metals were eagerly sought by foreign traders, but she had no ships of her own to carry them abroad. She had many raw materials, but she produced no manufactures for exportation. Nor was her policy respecting foreign trade the most wise. The chief concern of the legislature in those days seemed to be to prevent foreign nations doing with English produce what, after all, the English could not do themselves. Again and again the export of wool was prohibited, or was hindered by prohibitory duties. . . . The people regarded the introduction of foreigners with the utmost jealousy. They resented their competition, they grudged their profits and their advantages. The guilds would not admit them as members, and it was hard for the poor strangers to establish a footing in England, even although Magna Charta had long before declared that all merchants shall have safety in coming to or going out of England, and in remaining and travelling through it, by land or water, for buying or selling, free from any grievous imposition. Anyhow, whatever the opposition of cities and corporations, the nation was benefited by the foreign merchants. Thankful, indeed, might England have been for the Lombards, who brought hither money and merchandise, banking and insurance; for the Flemings, who, driven by intestine dissension, found refuge on British soil, and became the founders of the woollen manufacture; and for the Huguenots, who brought with them the silk manufacture. . . . But a new era advanced. The discovery of the American continent by Columbus, and of a maritime route to India by Vasco da Gama, altered the course and character of commerce. Till then trade was essentially inland, thenceforth its most conspicuous triumphs were to be on the ocean. Till then, the Mediterranean was the centre of international trading. From thenceforth the tendency of trade was towards the countries bordering on the Atlantic. . . . It was not long . . . before England followed the lead of Spain and Portugal. John Cabot and his sons went in quest of land to North America; Drake went to circumnavigate the globe; Chancellor sailed up the White Sea to Russia; Willoughby went on his ill-fated voyage in search of a north-eastern passage to India; Sir Walter Raleigh explored Virginia; the Merchant Adventurers pushed their adventures to Spain and Portugal; and English ships began to be seen in the Levant. Meanwhile, English trade enlarged its sphere, English bravery at sea became most conspicuous, and English industry advanced apace."—L. Levi, *Hist. of British Commerce, 2d ed., introd.*—"In the 14th century the whole of the external, and much of the internal, trade of the country had been in the hands of foreigners; in the 15th our merchants began to push their way from point to point in the Mediterranean and the Baltic; in the 16th they followed slowly in the wake of other adventurers, or tried to establish themselves in unkindly regions which had attracted no one else. When Elizabeth ascended the throne England appears to have been behind other nations of Western Europe in the very industrial arts and commercial enterprise on which her present reputation is chiefly based."—W. Cunningham, *Growth of Eng. Industry and Commerce, v. 2, p. 2.*

Trade and Piracy.—"It would be wrong to infer from the prevalence of piracy at this period [the 15th century] that commerce must have declined. On the contrary, it was probably the increase of commerce, unaccompanied by the growth of adequate means for its defence, which made the pirate's calling so profitable. Nor was the evil confined to the professional pirate class, if we may use the expression. Even recognised associations of merchants frequently indulged in practices which can only be characterised as piracy. Commerce, in fact, was deeply imbued with the spirit of lawlessness, and in these circumstances it is probable that the depredations of pirates did not excite the same alarm nor discourage trade in the same degree as would be the case in more law-abiding times. In the 15th century the profession of Christianity and extreme respectability were not incompatible with a life of violence and outrage, and it is to be feared that in some cases the Govern-

ments which should have repressed pirates by the severest measures, encouraged their depredations. Certainly they have never enjoyed such immunity from the strong arm of the law as in the 15th century. Outrage and robbery went on unchecked along the coasts and in the track of merchant vessels. No trader was safe even in the rivers and ports of his own country. The pirates burnt and sacked towns as important as Sandwich and Southampton; they carried off not only the goods they could lay their hands on, but men and women, and even children, whom they held to ransom. Unable to look to the Government for protection of life and property while they were engaged in trade, the merchants were thrown upon their own resources to provide security. The best method of grappling with the pirates, and that which was most frequently adopted, was for merchant vessels to sail together in such numbers that they could repel attack; and these voluntary efforts were sometimes aided by the Government. In 1406 Henry IV. granted the merchants 3s. on every cask of wine imported, and certain payments on Staple exports for purposes of defence. Two Admirals were appointed, one for the north and the other for the south, with full jurisdiction in maritime affairs and power to organise naval forces. But this scheme was unsuccessful. A similar expedient was tried in 1453, but abandoned two years afterwards. The only satisfactory remedy would have been a strong navy, but the conditions necessary for this had not yet been realised. The country could not have supported the charge of maintaining a strong naval force. . . . That merchants were beginning to realise the importance of the subject, and were becoming wealthy enough to build vessels of a considerable size, is evident from the operations of John Taverner, of Kingston-upon-Hull, and the famous William Cannynges of Bristol, the latter of whom is said to have possessed 2,470 tons of shipping and some vessels of 900 tons burthen." —W. A. S. Hewins, *Industry and Commerce (in "Social England," ed. by H. D. Traill, ch. 7, v. 2).*

The Portuguese, and the finding of the Ocean Way to the Indies.—It was not by accident that the Portuguese rose all at once, in the closing years of the 15th century and the early years of the 16th, to a position in which they controlled and directed the main current of trade between Europe and the Eastern world. The discovery by Vasco da Gama of an ocean route to the Indies, and all the results (hereafter described), which it yielded to his countrymen for the time, were a reward of enterprise which the Portuguese had fully earned. They had worked for it, patiently and resolutely, through almost a hundred years. The undertaking was begun, at about the commencement of the 15th century, by a Portuguese prince who ought to enjoy greater fame than if he had conquered an empire; because his ambition was nobler and the fruits were of higher worth to the world. He was known as "Prince Henry the Navigator," and he was the third son of the Portuguese King John I. who was called the Great, on account of his success in wars with the Castillians and the Moors. But this young son, Prince Henry, was much the greater man of the two. He could not endure the ignorance of his time with regard to the mysterious ocean that stretched westward and southward from the shores of the little country which his father ruled. He was bent on knowing more about it; and he was specially bent on having the Portuguese sailors make their way down the shores of the African continent, to learn where it ended and what track to the farther side might be found. Beyond Cape Nun, at the southern extremity of the modern empire of Morocco, nothing was known of the western coast of Africa when Prince Henry began his work. The Phœnicians and Carthaginians, two thousand years earlier, had probably known more about it; but their knowledge was lost. Prince Henry studied everything that could give him light and became well convinced that round the continent of Africa there was a way to the Indies for bold sailors to find. Then he applied himself, with a zeal which never flagged, to the working out of that achievement. He was a young man when he began, and during more than forty years of his life he devoted his time and his means almost wholly to the fitting out and directing of exploring ships and he fixed his residence upon the most southerly promontory of Portugal, to watch their going and coming. But the art of navigation was so little understood and the navigators were so timid, that slow progress was made. Each explorer only ventured a little farther than the one before him; and so they went feeling their way, league by league, down the African coast. The forty-three years of Prince Henry's endeavors were consumed in reaching what is now the settlement of Sierra Leone, near the head of the gulf of Guinea. But even this added more than a thousand miles of the western coast of Africa to the maps of the 15th century and was a greater advance in geographical knowledge than had been made since Carthage fell. Before he died (A. D. 1460), Prince Henry secured from the Pope (who was supposed to have the giving of all heathen countries) a grant to Portugal of all these discoveries, both island and mainland, and of all which the Portuguese explorers might make in the future, between Europe and India. So he died well content, let us hope, with the work which he had done for his country and for mankind. The enthusiasm for exploration which Prince Henry had awakened in Portugal did not die with him, though his efforts had met with unending opposition and excited very much discontent. Repeated expeditions were still sent down the African coast, and they crept farther and farther toward the goal of desire. At last, in 1486, Bartholomew Diaz, with three ships, actually rounded the Cape of Good Hope without knowing it, and only learned the fact when he turned backward from his voyage, discouraged by storms. Eleven years later, Vasco da Gama set out, fired with fresh determination, by the great discovery of a new world which Columbus had so lately made for Spain, and this time there was no failure. He passed the Cape, sailed up the eastern shores of the African continent to Melinda, in Zanguebar, and thence across the Indian Ocean to Calicut in Hindostan. The ocean route to India was now fully proved; the new era was opened and its grand prize plucked by the Portuguese—thanks to Prince Henry the Navigator —See, also, PORTUGAL: A. D. 1415–1460 and 1463–1498.

Modern.

New Routes and New Marts.—There is nothing at all imaginary in the line which is drawn in history across the later years of the 15th and the early years of the 16th century, to mark the beginning of a new era in human affairs. It is a line very real and very distinct, dividing one state of things, known as the mediæval, from another state of things, known as the modern. It was fixed by the occurrence of a series of extraordinary events, which came quickly, one after the other, and which brought about, either singly or together, the most tremendous changes, in many ways, that ever happened to the world in the same space of time. The first of these was the invention of printing, which dates as a practical art from about 1454. The second was the discovery of the new world by Columbus, A. D. 1492. The third was the passage around the Cape of Good Hope by the Portuguese navigator, Vasco da Gama, A. D. 1497. The fourth was the religious reformation set in motion by Martin Luther, at Wittenberg, A. D. 1517. The combined effect of these great events was to make really a new starting point in almost every particular of human history, and to do so very quickly. The commercial changes which resulted are among the most remarkable. No sooner had the route by sea to southern and eastern Asia and the islands of the Indian ocean been found, than almost the whole traffic of Europe with that rich eastern world abandoned its ancient channels and ran into the new one. There were several strong reasons for this. In the first place, it cost less to bring goods by ship from India, Ceylon or China direct to European ports, than to carry them over long distances by land to the eastern shores of the Mediterranean and there ship them to the West. In the second place, by taking its new route, this commerce escaped the Moorish pirates in the Mediterranean, who had long been very troublesome. And, lastly, but not least in importance, the European merchants gained a great advantage in becoming able to deal directly with the East Indians and the Chinese, instead of trading at second hand with them, through Arabs and Mahometan Turks, who controlled the Asiatic and African routes. So the commerce of the Indies, as it was generally called, fled suddenly away from the Mediterranean to the Atlantic; fled away from the Venetians, the Genoese, the Marseillaise, and the Barcelonians; from Constantinople, lately conquered by the Turks; from Antioch and Alexandria; and from many cities of the Hansa League in the north, which had learned the old ways of traffic and were slow to learn anything new. Soon many of the great marts which had been busiest, grew silent and deserted and fell into slow decay. The most enriching commerce of the world was passing to different hands and bringing younger races into the front of history.

The Portuguese in the lead.—Having found the way to India by sea, the Portuguese were prompt in taking measures to make themselves strong in that part of the world and to control the trade with it. They were helped in this effort by the grant of imagined rights which Prince Henry had obtained from the Pope, long before. But they strengthened the rights which the Pope gave them, by the older fashioned methods of conquest and possession. They began at once to plant themselves firmly at important points in the eastern seas and on the Indian coast. They sent out one of their ablest military men, Francesco d'Almeida, with a strong force of ships and volunteers, and appointed him Viceroy of India. He took possession of several parts of the Malabar coast (the western coast of the southern extremity of Hindostan) and built forts in which garrisons were placed. He similarly established the Portuguese power in Ceylon, took possession of the Maldive Islands and founded trading settlements in Sumatra. The Venetians, who saw that their ancient trade with the East was doomed unless this new rivalry could be crushed, now joined their Mahometan allies of Egypt in a great effort to drive the Portuguese back. A formidable fleet was fitted out on the Red Sea and sent against Almeida. He was unfortunate in his first encounter with these allied enemies and lost the squadron that opposed them. But the resolute viceroy was undaunted. Recalled from his command, he refused to give it up until he had equipped and led another fleet against the navy of the Egyptians and completely destroyed it. The successor of Almeida, as viceroy of India, was a remarkable personage who is known in the annals of his time as "the great Afonso D'Albuquerque." The chronicle of his exploits in Africa and India, compiled by his son from his own letters and records, and entitled "The commentaries of the great Afonso D'Albuquerque," has been translated into English and published by the Hakluyt Society. He was a remarkably energetic commander, and very honest in his way, according to the notions of his time; but he did the work of subjugation and conquest which he was sent to do in a cruel and rapacious style. He was not rapacious on his own account; but he saw no wrong in anything done for the profit of his country. In the course of seven years he spread the Portuguese power so widely and fixed it so firmly on the East Indian coasts and in the neighboring seas that there was hardly an attempt for many years to disturb it. None but Portuguese ships dared enter the Indian ocean without special permits, and the few which received admission were forbidden to trade in spices — the most precious merchandise of the region. From the Indies the Portuguese made their way to the coasts of China and put themselves on friendly terms with its people. They were permitted to occupy the port of Macao and have possessed it ever since. Some years later they discovered the islands of Japan and opened the earliest European commerce with that singular country. So they held for a time the complete mastery of eastern trade and enlarged it to greater bounds than it had ever reached before. But they were satisfied with keeping the sources of the supply of eastern goods to Europe in their own hands. The first handling of the commodities was all that they tried to control. They brought to Lisbon the spices, silks, cotton, pearls, ivory, sugar, aromatic drugs and the like, which their ships and merchants gathered up, and there sold them to other traders, Dutch, English and German for the most part, who found the final markets for them and who enjoyed a good half of the profits of the trade. These latter derived great advantages from the arrangements — much more than they had gained in their trading with

Genoa and Venice — and the commerce of Holland and England grew rapidly as the result. But the glory and prosperity of the Portuguese, as masters of the rich traffic of the eastern world, were not of long duration. Before the 16th century closed, they had lost the footholds of their power and were slipping into the background very fast. By misfortunes and by folly combined, all the fruits of the patient wisdom of Prince Henry, the persevering courage of Vasco da Gama, the bold energy of Almeida, and the restless enterprise of Albuquerque, were torn out of their hands. Almost from the first, a greedy and jealous court had done all that could be done to destroy the grand opportunities in trade which the country had gained. Private enterprise was discouraged; the crown claimed exclusive rights over large parts of the commerce opened up, and these rights were sold, given to favorites and dealt with in many ways that are ruinous to successful trade. Royal jealousy sent three viceroys to divide among them the government of the Portuguese possessions in the East, when there should have been but one, and the same jealousy kept these viceroyalties ever changing. Of course, there was nowhere good government nor thrifty management of trade. In the midst of this bad state of things, the royal family of Portugal died out, in 1580, and Philip II. of Spain set up claims to the crown which he was strong enough to make good. Portugal thus became joined to Spain, for the next sixty years, and was dragged into Philip's wicked war with the Netherlands. Her Spanish masters did what they could to draw her trade away from Lisbon to Cadiz and Seville. The Dutch and English, her former customers and friends, made enemies now by Philip of Spain, pushed their way into the eastern seas, defying the mandates of the Pope, and broke down her supremacy there. When the Portuguese, in 1640, threw off the Spanish yoke and asserted their independence again, calling a prince of the house of Braganza to the throne, there was not much left of their former power or their former trade. They still held Goa, on the western coast of Hindostan, and the Chinese port of Macao — as they do to the present day; and they retained, as they still do, considerable possessions in Africa. But their brief importance in navigation, in colonization and trade, was quite gone and they dropped back to a humble position in the history of the world. Even the management of their home trade with other countries fell mostly, after a time, into the hands of the English, who became their special allies and friends.

The Spaniards.—While the Portuguese were pursuing glory and gain in the track of Vasco da Gama, which led them south and east, the Spaniards were doing the same in the wake of the three little ships which Columbus, with a bolder hand, had steered westward, to strange shores which he never dreamed of finding. These newly opened regions of the globe, in the Atlantic and on both sides of it, were divided between the two nations by the Pope, and it was a bold matter in those days to dispute his right. He gave to the Spaniards all islands and countries found west of a meridian line drawn 27½° west of the island of Ferro, in the Canary group. This nearly corresponds with the meridian 45½° west of Greenwich. To the Portuguese he assigned all discoveries east of it. So they both went on their appointed ways, with pious hearts and untroubled consciences, busily hunting for heathen lands to seize and despoil. But the eastern field, in which the Portuguese did most of their work, was one where commerce was old and where something of Europe and its people was already known. They were forced to look upon trade as the chief object of their pursuit. With the Spaniards the case was different. They found their way to a quarter of the world which Europe had never heard of and came upon people who never saw the faces of white men until then. These strange races of the new world were some of them quite as civilized, in certain respects, as the Spaniards who invaded them, and even more so, it would seem, in their notions of truth and in the refinement of their manners and modes of life. But they were simple and unsuspecting; they were not warlike in disposition and they were rudely and poorly armed. So the mail-clad cavaliers of Spain crushed them into helpless slavery with perfect ease. From the islands of the West Indies, which they discovered and occupied first, the Spaniards had soon made their way to the shores of the two continents of America, North and South. They found cities and nations which astonished them by their splendor and wealth and set them wild with greedy desires. Europe looked poor in comparison with the shining wealth of Mexico and Peru. The Spaniards went mad with the lust of gold. They lost human feeling and common sense in their greediness to grasp the metal treasures of the new world. They were indifferent to the more precious and abounding products that it offered, and neglected to build up the great commerce which might have filled their hands with lasting riches. They made the old fable of the goose which laid golden eggs a piece of real history. They killed the goose; they destroyed their source of wealth in Peru and Mexico by their eager extortions. Of true commerce between the old world and the new there was little while the Spaniards controlled it. They did, in the course of time, ship considerable quantities of sugar, tobacco, hides, logwood, indigo, cochineal, cocoa, cinchona, or Peruvian bark (from which quinine is extracted) and other American products, from their various colonies; but to no such extent as a wise and enterprising people would have done, having the same opportunities. Once a year, or once in two years, a fleet of ships was sent from Seville, at first, and afterwards from Cadiz, to Vera Cruz, for freights from Mexico, and another to Porto Bello, on the Isthmus of Panama, for the South American freights. The ships which made the latter voyage were distinguished from the Mexican fleet by being called the galleons. For a long time, twelve galleons in the one squadron and fifteen ships in the other, making their voyage once a year, and sometimes only every other year, conveyed all the trade that passed between Spain and America; which shows how little the Spaniards drew from their great possessions, except the enormous treasure of silver and gold which a few ships could transport. This glittering treasure formed, in fact, the main cargo of the Peruvian galleons and the Mexican fleet. Before the close of the reign of Philip II. the number of galleons was increased to about forty and that of the fleet to

fifty or sixty. It is quite certain that no country had ever before received such a quantity of gold and silver as came into Spain during the 16th century. Instead of enriching, it ruined the nation. Neither rulers nor people had sense enough to see what a treacherous and delusive kind of wealth it formed, if trusted to alone. They vainly fancied that, with such a store of precious metals to draw upon, they could afford to despise the homely labors by which other people lived. With such mad notions as these, the honest industries of Spain were treated with neglect or worse. Her trade with neighboring countries was looked upon as a business too insignificant for Spaniards to care for or trouble themselves about. It was mostly given over to the Dutch and Flemings, while they remained under Spanish rule, and it was afterwards kept up in great part by smugglers, Dutch and English. Agriculture decayed, and its destruction was helped by the formation of a great aristocratic company of sheep-farmers, called the Mesta, to which such tyrannical rights and privileges were given by the crown that the most fertile parts of Spain were finally turned into sheep-pasture, under its control. The best artisans and the most enterprising merchants of the kingdom were driven out, because they were Moors and Jews, or they were burned for Christian beliefs which the Church did not approve. The Inquisition was so busy, with its racks and its fires, that no other business could thrive. Every kind of production dwindled; and for the supplying of all descriptions of wants the Spaniards were soon driven to look to other countries. The few who laid hands upon the riches coming in from the plunder of America spent it recklessly, in extravagant ways, while costly foreign wars which had no success, and plots in France and England which came to nothing, drained the coffers of the king. And thus the great stream of gold and silver which flowed into Spain from the new world ran out of it quite as fast, until nearly every other country in Europe held more of it than Spain herself. The strong hand with which the Spaniards were able at first, and for some time, to hold the vast domain of sea and land which the Pope had given them and which their own sailors and soldiers had explored and seized, grew weak before the end of a hundred years after the memorable voyage of Columbus was made. The hardy Dutch, driven to revolt and enmity by tyrannical government and by cruel religious persecutions, attacked them everywhere, in the eastern and western world. The English, just beginning to grow ambitious and bold on the ocean, and constantly threatened by the armadas of Spain, did the same. But these were not the only enemies who harassed the Spanish colonies and fleets. In a general way, the whole world went to war with the insolent nation which claimed the lordship of the earth. There came into existence, in the 17th century, a powerful organization of pirates or freebooters, made up of daring men of all nations, who carried on for many years a villainous warfare of their own against the Spaniards at sea and against their American settlements. These Buccaneers, as they were called, gained strongholds in several islands of the West Indies, from which the Spaniards were not able to dislodge them. Under the attacks of all these enemies, combined with her own misgovernment and her contempt and abuse of thrifty industries and fair trade — which no people can neglect without ruin — Spain steadily and rapidly sank.

The Flemings and the Dutch.—In the first half of the 16th century, the people of the Netherlands were the tolerably contented subjects of that famous monarch, the Emperor Charles V., who ruled in Spain, in Naples, in Germany (the old Empire), and in Burgundy, as well as in the Lowland principalities, Flanders, Holland, and the rest. They were already very prosperous, working hard at many callings, trading shrewdly and busily with the rest of the world, and diligently picking up all kinds of knowledge everywhere. In the southern provinces (which we may call the Belgian, because they are mostly now embraced in the modern kingdom of Belgium) the chief industries were those of the loom, in all branches of weaving; and in skilful workmanship of every kind the people were tasteful and apt. These provinces were the seat of a much greater and more general activity in manufactures than appeared in the states to the north of them (which we will call the Dutch states, without distinction, because they are now included in the kingdom of Holland). The latter were more extensively employed in fisheries, in navigation and in shipbuilding, although most kinds of industry, manufacturing and agricultural, were thriftily and successfully carried on. At the time when Charles V. ruled the Netherlands, the city of Antwerp, in the Belgian circle of provinces, was the great metropolis of Netherland trade. It was much more than that. It was the foremost commercial capital of the world. The traffic which slipped away from Venice and Genoa, had fixed its central seat in this younger town on the Scheldt. It was sure to plant its new emporium somewhere in the Netherlands, because there was nowhere else in Europe so much energy, so much enterprise, so much industry, so much commercial wisdom, so much activity of domestic trade. Spain and Portugal held the wealth of the Indies and the Americas in their hands, but we have seen how incapable they were of using the commercial advantage it gave them. Lisbon, Cadiz and Seville were only depots for the transfer of merchandise; it was impossible to make them real capitals of trade, because they could not and would not furnish either the spirit, or the genius, or the organized agencies that it demands. The Netherlands, with their long schooling in commerce upon a smaller scale, were ready to meet every requirement when the new era opened and gave them their greater chance. There was no other mercantile organization so well prepared. The league of the Hansa Towns was breaking and failing; the English were just beginning to show their aptitude for manufactures and trade. Some one of the Netherland cities was sure to win the sovereignty in commercial affairs which Venice gave up, and Antwerp proved the winner, for a time. During most of the 16th century, it was the business center of Europe. It was the gathering-place of the merchants and the seat of the money-changers and bankers. Two and three thousand ships were often crowded in its harbor, at one time. It distributed the merchandise of the East and West Indies, which it took from Portugal and Spain, and the manifold

wares of the many manufacturing towns of Flanders, Brabant, southern Germany, to a great extent, and northern France. At the same time, its own looms, anvils, tanneries, glass-works, dyeing-vats and mechanic shops of various kinds were numerous and busy. Its thriving population was rapidly increased, for it welcomed all who came with skill or knowledge or money or strong hands to take part in its work. Such was Antwerp during the reign of Charles V., and at the time (A. D. 1555–1556) when that weary monarch gave up his many crowns to his evil son, Philip II. of Spain, and went away to a Spanish monastery to seek for rest. The government of Charles in the Netherlands had been hard and heavy, but the people were left free enough to prosper and to grow intelligent and strong. Under Philip the prospect changed. The story of his malignant persecutions and oppressions, of the revolt to which they drove the Netherland provinces, of the long, merciless war in which he strove to ruin or subdue them, of the independence which the Dutch provinces achieved and the prosperous career on which they entered, is told in another place — see NETHERLANDS. Antwerp, the great capital of trade, stood foremost in the struggle, as became its greatness, and it suffered correspondingly. The death-blow to its fortunes was given in 1585, when, after a siege that is almost unexampled, it was taken by the Spaniards under Alexander Farnese, Duke of Parma, and given up to pillage and slaughter. Its surviving inhabitants fled in large numbers, the greater part of them to Holland, some to England, and some to other countries. Commerce abandoned the port. The chief merchants who had made it the center of their undertakings chose Amsterdam for their future seat of business, and that city rose at once to the commercial rank of which Antwerp had been stripped by the stupid malice of its Spanish sovereign. While the Belgian Netherlands fell hopelessly under the fatal despotism of Spain, the Dutch Netherlands fought their way slowly to independence, which Spain was forced to acknowledge in 1648. But long before that time the Dutch Republic had become a power in Europe — much greater in every way than Spain. Its foundations had been laid by the union of the seven provinces of Holland, Zealand, Friesland, Utrecht, Groningen, Overyssel and Gelderland. It had grown firmer and stronger year by year, and the people, after a time, had not only found themselves able to thrive generally in the midst of their desperate war with Spain, but the war itself opened their way to wealth and power. They learned, early, as we have seen, that they could attack their enemy to the best advantage at sea. In pursuing this ocean warfare they were led on to the East and West Indies, and soon broke, in both regions, the exclusive power which the Spanish and Portuguese had held. When Portugal was dragged into a fatal union with Spain, under Philip II., it had to suffer the consequences of Philip's wars, and it bore more than its share of the suffering. The Dutch and the English forced their way pretty nearly together into the eastern seas, and, between them, the Portuguese were mostly driven out. They divided the rich commerce of that great Asiatic and Oceanic region, and, for a time, the most lucrative part of it was gained by the Dutch.

While the English got their footing on the coasts of Hindostan and were laying the foundations of their future empire in India, the Dutch gained control of the spice-growing islands, which, in that day, were the richer commercial prize. The first Dutch fleet that rounded the Cape of Good Hope and made its way into East Indian waters, sailed under the command of one Cornelius Houtmann, who had been in the service of the Portuguese and learned the route. He started in 1595 with four ships and returned, after a voyage of eighteen months, with only two. He had lost more than half his men, and he brought back very little cargo to pay for the adventurous undertaking. But the Dutch were well satisfied with the experiment; they knew that more experience would lead to better success. Another fleet of eight ships was sent out in 1598 and when four of them returned the next year with a precious cargo of spices and other merchandise from Java, which they had procured very cheaply in exchange for the cloths, the metal wares and the trinkets that they took out, the delight of the nation can hardly be described. Part of the fleet had remained in the East to hold and strengthen the position they had gained, and other ships were sent speedily to join them. Very soon the armed merchantmen of the Dutch were thickly swarming in that part of the world, ready for fight or for trade, as the case might be. So many companies of merchants became engaged in the business that too lively competition between them occurred and they threatened to ruin one another. But that danger was overcome in 1602 by joining the rival interests together in one strong association, to which the government gave exclusive rights of trade in the East. Thus the Dutch East India Company was formed, in which the merchants of Amsterdam, Rotterdam, Delft and other cities of the republic put their capital together. By its charter, this great company held powers of war as well as of commerce and it used them both with prodigious energy. At first, the chief trading stations of the Dutch in the East were at Bantam, in Java, and Amboyna, one of the group of the Moluccas or Spice Islands; but the city of Batavia, which they founded in Java in 1619, became afterwards their principal seat of trade and the capital of their surrounding possessions. The chief aim of the Dutch was to gather into their hands the profitable commerce of the island world of the Eastern Archipelago, but they did not fail to pursue their Spanish and Portuguese enemies in other quarters, where the chances of traffic looked inviting. They seized positions on the Guinea coast of western Africa and took their full share of the trade with its savage natives, who gave gold dust, ivory, ebony, gums, wax, ginger, pepper, palm oil, various choice kinds of wood, and slaves (for the West Indies and America, when the plantations there began to want labor), in exchange for trinkets and cheap goods. They also occupied and colonized the Cape of Good Hope, which the Portuguese had neglected, and made it, in time, a very prosperous and valuable possession. That they should carry their war with Spain into the West Indies and to the American coasts, was a matter of course. In 1623 a Dutch West India Company was chartered, to organize these operations in the western world, as the East India Company had organized undertakings in

the East. But the West India Company was much less commercial and much more warlike in its aims than the corporation of the orient. Its first object was to take spoils from the enemy, and it found the prizes of war so rich that not much else was thought of. On the North American continent, a most important lodgment was made, as early as 1614, at the mouth of the Hudson River, where the colony of New Netherland was founded. In this quarter, as everywhere, the Dutch and English were rivals, and before many years they came to open war. In the series of wars which followed (1652, 1665, 1672), and in the long contest with Louis XIV. of France which they shared with England, the Dutch expended more of their energies than they could afford. The English, with their well protected island, rich in soil and in minerals, had heavy advantages on their side, when once they had acquired the knowledge of commerce and the ability in labor which enabled them to compete with the Dutch. To the latter nature had always been wholly unfriendly. They had fought against circumstances at every step in their history, and had won their wealth, their knowledge, their high importance and influence in the world, by sheer hard work, tireless patience and indomitable will. But the natural advantages against which they struggled were sure to overcome them in the end. It must be said, too, that they did not grow in character as their fortunes rose. It is not difficult, therefore, to account for the fact that the Dutch nation slowly slipped back, during the 18th century, from the high and leading position in civilization to which it had climbed, and lost by degrees its commercial supremacy, while the English nation came to the front.

The English: 16-17th Centuries.—Commercial progress.—The East India Company.—As English commerce slowly freed itself from foreign hands, it fell under the control of monopolies at home. The merchants of the Middle Ages, in England and elsewhere, had formed themselves into societies, or guilds, just as the artisans and mechanics in different trades had done. Such associations had originally grown out of the disorderly state of the times, when government and law were weak, and when men who had common interests were forced to unite to protect themselves, and to establish customs and rules for regulating their business affairs. But the guilds almost always became, in time, oppressive monopolies, each acquiring, in its own department of business, such exclusive rights and privileges as practically shut out from that business all persons not admitted to its membership. This occurred among the merchants, as it did elsewhere, and English commerce grew up under the control of various societies of "Merchant Adventurers," as they were called — see, elsewhere, MERCHANT ADVENTURERS. The disputes and contests of these companies, at home and abroad, and their suppression of individual enterprise, appear to have hindered the growth of English commerce for a long period. But it did grow steadily, notwithstanding, and through the reigns of Henry VIII. and Elizabeth, the number of English ships set afloat and of English merchants trading abroad, was rapidly multiplied. Meantime the English people gained skill in weaving, dyeing and other arts, and were fast extending the manufacture at home of their own famous wool. This, in turn, made the sheep farming more profitable, and so much land was taken for that purpose that other products were diminished and most articles of food rose in price. That occurrence caused grave anxiety, and the meddling statesmen of the time, who thought that nothing could go well if their wisdom did not regulate it by law (as too many meddling statesmen think yet) began to frame acts of Parliament which directed how farming lands should be managed and how many sheep a single farmer should be permitted to own. The same kind of statesmanship took alarm at the spread of weaving, in a small way, among industrious villagers and country people, who set up looms and made and sold cloth, outside of the guilds of the town weavers. So the complaints of the latter were listened to, and Parliament forbade weaving to be done outside of certain towns, except for home use in the family of the weaver. There was much of that sort of legislation during Tudor times, and the industry and enterprise of the country had to struggle long and hard for freedom to fairly exercise themselves. But in spite of meddling statesmen and tyrannical monopolies, the people went on from year to year, learning more, doing more, producing more, wanting more, buying and selling more, and living in a better way. After about 1511, there appears to have been a considerable direct trade growing up between England and the countries of the eastern Mediterranean (the Levant), and consuls, to look after the rights and interests of English merchants, began to be appointed, at Candia, and elsewhere, as early as 1530. The voyage from London to the Levant and return then occupied from eleven months to a year. About 1535 the English made their appearance as traders on the Guinea coast of West Africa, disputing the exclusive rights which the Portuguese claimed there, and in 1537 they opened trade with the Moors of the Barbary coast, in northern Africa. In 1553 a chartered company of London merchants was formed with the object of exploring for a northeastern passage to China, around Europe, through the Arctic seas, as a means of dividing the trade of the East with the Portuguese, who controlled the southern route, around Africa. This is believed to have been the first joint stock corporation of shareholders that was organized in England. Sebastian Cabot, then "Grand Pilot of England," was at the head of it. The northwestern passage was not found, but the company opened a trade with Russia which proved to be exceedingly valuable. Accepting this, in lieu of the China trade which it could not reach, it became, as the Russia Company, a rich and powerful corporation. The success of the Russia Company stimulated the adventurous disposition of the English people and set other enterprises in motion. But still more energy was roused by the hostility of national feeling toward Spain. The destruction of the Armada broke the Spanish naval power and made the English bold. They began to navigate the sea from that time with intent to become its masters, though the Dutch were still superior to them in maritime strength and experience. During the reign of Elizabeth there rose a new race of Vikings, very much like the old Norse heroes of the sea, and pursuing a very similar career. The most daring and most famous among them, such as Grenville, Drake and Hawkins, were

more than half pirates, and their voyages were chiefly expeditions for plunder, directed against the Spaniards and Portuguese. The trade which they first gave attention to was the trade in negro slaves. But those piratical adventurers of the 16th century made England the "mistress of the seas." They trained for her a body of sailors who were able in time to more than cope with the Dutch, and they opened the newly known regions of the world for her merchants and colonists to spread over them. Before the end of the 17th century, the English had become the foremost power in the western world and were making the most of its opportunities for production and trade. Meantime they were pushing their way with equal energy in the East. On the last day of the year 1600 the "Company of Merchants of London trading into the East Indies," which became afterwards so great and famous as the "East India Company" of England, was chartered by the Queen. The Company sent out its first fleet of five vessels in 1601. The expedition returned, after an absence of two years and seven months, richly laden, in part with pepper from Sumatra and in part with the spoils of a Portuguese ship which it had captured in the straits of Malacca. It had settled a trading agency, or factory, at Bantam — and that was the beginning of the vast empire which England now rules in the East. — See INDIA: A. D. 1600–1702.

The English: 17-18th Centuries. — The Colonial or Sole Market Commercial System. — "The doctrine that the commercial prosperity of a country depends on the creation, maintenance, and extension of a sole market for its products and for its supplies, was prevalent from the discovery of the New World and the Cape Passage down to the war of American Independence. This was the principal object of Borgia's Bulls. This was what animated the Dutch, in their successful, in the end too successful, struggle, after a monopoly of the Spice islands. This was the motive which led to the charters of the Russian Company, the Levant Company, the East India Company, the Turkey Company, the Hudson's Bay Company, in England. The theory was organized in the colonial system, which Adam Smith examined, attacked, and as far as argument could go, demolished in his great work. But the dream of a sole market is still possessing the Germans and the French. . . . The early wars of Europe were wars of conquest. . . . After them came the wars of religion, from the outbreak of the Insurrection in the Low Countries, and the civil wars in France, down to the Peace of Westphalia in the middle of the 17th century. From that day to our own, European wars have been waged on behalf of the balance of power, the principal mischief-maker in the contest being France. The English, the French, and the Dutch were the competitors in the wars for a sole market. But Holland was practically ruined at the peace of Aix-la-Chapelle, and France was stripped . . . of her colonies at the peace of Paris, and England became not only the principal maritime, but the principal manufacturing and mercantile country in the world. As regards English trade, however, though India was an outlet to some extent for English goods, its trade was in the hands of a chartered company, whom the Seven Years' War had left in serious straits. The most important sole market which Great Britain had acquired by her wars was the sea-board of North America. To support the finances of the chartered company, the British Parliament determined on taxing the inhabitants of her sole market, and the result as you know was the war of American Independence. . . . The colonial or sole-market system was based on a strict reciprocity. The English Government admitted colonial produce into the English markets at differential duties, or prohibited the produce of foreign nations and foreign colonies altogether. The Colonies were not only the customers of English manufacturers only, to the absolute exclusion of foreign manufactures, but were prohibited from undertaking those manufactures themselves. The English Government adopted with their colonies the policy which they adopted with Irish manufactures, which they also prohibited, but with this difference, that they disabled the Irish from having any trade whatever with England, with the Colonies, and with foreign countries. They wished to extinguish, with one exception, every Irish product, and to constitute themselves the sole manufacturers and shopkeepers for the Irish. They allowed only the linen manufacture of Ulster. The Irish were to be, with this exception, agriculturists only, but they were to be disabled from selling their agricultural produce in England, or elsewhere. They were practically denied the right of trade. . . . It was the doctrine of the sole market in its most exaggerated form. . . . The colonial system, under which advantages were secured to the colonial producer by giving him a preferred market in Great Britain, while the colonist was debarred from engaging in manufactures, was a selfish one on the part of the English merchants and manufacturers. It gave the colonist a sole market, it is true. But it does not follow that a sole market is a high market. On the contrary, it is probable that the offer of a sole market is intended to secure a low market. The Virginian planter sent the whole of his tobacco to England. The English trader re-exported it to other countries, say Holland or Germany. It may be presumed that he made a profit on the original consignment, and on the re-exportation, or he would not have undertaken the business. . . . The colonial system did not preclude the plantations from sending, under the strict conditions of the Navigation Act, certain kinds of produce to other countries than England. These were called non-enumerated commodities, the principal being corn, timber, salted provisions, fish, sugar, and rum. There was a reason for this, which was to be found in the fiscal system of England. We did not want colonial corn, for there were duties on corn, levied in the interest of the landlords, nor colonial timber, salted meat and salted fish, for the home produce of these articles were similarly assisted. Sugar and rum were allowed to be exported, for the owners of the plantations in the Leeward isles were chiefly absentee English proprietors, who had already a monopoly of English supply, and were powerful enough in Parliament to get an extended market elsewhere. But in 1769, just before the troubles broke out with the American plantations, an Act was passed, disabling the colonists from sending even the non-enumerated commodities to any country north of Cape Finisterre,

in Northern Spain. . . . The enumerated goods, and there was a long list of them, could be exported to Great Britain only. They consisted, as Adam Smith says, of what could not be produced in this country, and what could be produced in great quantity in the Colonies."—J. E. T. Rogers, *The Economic Interpretation of Hist., lect.* 15.

The Americans: Colonial Trade.—"We are a nation of land-traffickers, but our ancestors in the colonies traded and traveled almost entirely by water. There were but twelve miles of land-carriage in all the province of New York; beyond Albany the Indian trade was carried on by 'three-' or 'four-handed batteaus,' sharp at both ends, like the Adirondack boat of to-day. Yachts, with bottoms of black oak and sides of red cedar, brought wheat in bulk and peltries down the Hudson; other craft carried on the domestic trade of New York town with the shores of Long Island, Staten Island, and the little ports beyond the Kill von Kull. . . . The first regular wagon-carriage from the Connecticut River to Boston did not begin until 1697; Massachusetts had then been settled seventy years. The flat-bottomed boat, which has since played so important a part in the trade of the Ohio and the Mississippi, and whose form was probably suggested by that of the 'west country barges' of England, appears to have been used for floating produce down the Delaware before 1685. In the Chesapeake colonies, until late in the provincial period, there were almost no roads but the numerous bays and water-courses, and almost no vehicles but canoes, row-boats, pinnaces and barks. Places of resort for worship or business were usually near the water-side. . . . But of all means of travel or trade the Indian canoe was the chief. . . . Roads in the colonies were hardly ever laid out, but were left where Indian trail or chance cart-track in the woods had marked them. . . . From England, along with bad roads, the colonists brought the pack-horse which, in Devon and Cornwall, at the close of the last century, still did the carrying, even of building-stones and cord-wood. Most of the inland traffic of the colonial period was done by packing. . . . The Germans, whose ancestors had four-wheeled vehicles in the days of Julius Cæsar, made good roads wherever they planted themselves. While their English neighbors were content to travel on horseback and to ford and swim streams, the Salzburgers in Georgia began by opening a wagon-road twelve miles long, with seven bridges, 'which surprised the English mightily.' Pennsylvania, the home of the Germans, alone of the colonies built good straight roads; and the facility which these afforded to ten thousand freight-wagons was the main advantage that gave Philadelphia the final preëminence among the colonial sea-ports, and made Lancaster the only considerable inland mart in North America. . . . Proximity to the wampum-making savages at one end of Hudson River navigation and to the beaver-catchers at the other made New York the chief seat of the fur trade. Wagon-roads, soil, climate, and an industrious people made Philadelphia the principal center of the traffic in bread and meat. The never-ending line of convenient shore that bordered the peninsulas of Maryland and Virginia, and gave a good landing-place at every man's door, with a tobacco currency, rendered it difficult to build towns or develop trade among the easy-going planters of the Chesapeake and Albemarle regions. A different coast-line, and rivers less convenient, made Charleston the rich and urbane commercial and social center of southern Carolina. Until about 1750 Boston was the leading sea-port, and its long wharf, 2,000 feet in length with warehouses on one side of it, was the New World wonder of travelers. Five or six hundred vessels annually cleared out of Boston in the middle of the 18th century for the foreign trade alone, and the city contained between twenty and thirty thousand people at the outbreak of the Revolution. But Newport, with its thirty distilleries to make rum of the molasses brought from the islands, and its seventeen sperm-oil and candle factories to work up the results of the whaling industry, had nearly half as many ships in foreign trade as Boston, and three or four hundred craft of all sorts in the coast-wise carrying trade. He was thought a bold prophet who said then that 'New York might one day equal Newport'; for about 1750 New York sent forth fewer ships than Newport, and not half so many as Boston. . . . But Philadelphia—planted late in the 17th century—outstripped all rivals, and for the last twenty years of the colonial period was the chief port of North America. . . . The imports and exports of the two tobacco colonies together were far larger than those of Philadelphia, but their profits were far less."—E. Eggleston, *Commerce in the Colonies* (*Century, June*, 1884).

The English: 18-19th Centuries.—Rising prosperity and commercial supremacy.—Successful War, Free Trade and Steam Power.—"If we look at the state of the European powers after the conclusion of the Seven Years' War in 1763, we shall see how favourable our position then was. In the first place, England had seriously crippled her commercial rival, France, both in her Indian and American possessions, and thereby had gained extensive colonial territories which afforded a ready market for British goods. Spain, which had been allied with France, had lost at the same time her position as the commercial rival of England in trade with the New World. Germany had for some time ceased to be a formidable competitor, and was now being ravaged by internal conflicts between the reigning houses of Austria and Prussia. Holland, which had once been England's most serious rival—especially in foreign commerce—was at this time in a similar condition, and had greatly declined from the prosperity of the 16th and 17th centuries. Hence England alone had the chance of 'the universal empire of the sole market.' The supply of this market was in the hands of English manufacturers and English workmen, so that the great inventions which came into operation after 1763 were thus at once called into active employment, and our mills and mines were able to produce wealth as fast as they could work, without fear of foreign competition. It is not surprising, therefore, to find that in the ten years, from 1782 to 1792, our entire foreign trade was nearly doubled, the exact figures being:—1782, imports £10,341,628, exports £13,009,458; 1792, imports £19,659,358, exports £24,905,200. And this remarkable progress was still kept up even during the great continental wars which were caused by the French Revolution, and which lasted for almost

a quarter of a century. . . . In spite of the almost entire loss of our trade in some directions, English commerce improved in others; and, in fact, any loss was more than counterbalanced by an increase in regard to the (now independent) United States, Russia, Venice, Germany, and Northern Europe, as well as with the West and East Indian colonies, both British and foreign. In fact, many of the countries whom France had compelled to become our enemies found themselves unable to do without British manufactures, especially as their own industries were suffering from the warfare that was going on on the Continent, and therefore had to find means to procure our goods. . . . The close of the 25 years of continental war (1815) is sometimes taken as being the date when the modern system of commerce may be said to have had its beginning. Up to that time, although great changes and advances had been made, the spirit of monopoly and the general restrictive policy which characterised previous centuries, were still, to some extent, in force. But not very long after the peace that was won by the battle of Waterloo, a remarkable change was made in the commercial policy of England. . . . We now come to the beginnings of freedom of trade."—H. de B. Gibbins, *British Commerce and Colonies, pp.* 91–102.—"When the wars of the French Revolution began, the foundations of a great empire had already been broadly laid; and when it ended, England stood out as a power which had grown greater in the struggle. . . . Dutchman, Dane, and Spaniard, Frenchman and Venetian, all ancient competitors of England, fell before her; and, when the sword was sheathed in 1815, it was no exaggerated boast to call her mistress of the seas. These facts should never be lost sight of in any consideration of the causes which have led us to where we now are. Without these preparatory steps, both in domestic industries and in foreign wars and conquests, England would not, with all her material advantages, have been so entirely the gainer by the progress of the last fifty years as she has so far proved to be. . . . There is the more need to remember this because the time immediately following the war was one of severe domestic suffering, and of much retrograde legislation, conceived with a view to, if possible, lessen that suffering. . . . The worst of all the laws which then restricted trade were those relating to the exports and imports of corn, which the younger men of to-day have well-nigh forgotten. . . . It was not till after long years of agitation by John Bright, Richard Cobden, and other leaders of the Anti-Corn Law League, that the landed party gave way sullenly, and assented, amid the most gloomy predictions of impending ruin, to the repeal of the sliding scale altogether, and the virtual abolition of all corn laws by the substitution of a fixed duty of 1 s. per quarter. Thus recently was one of the most oppressive pieces of fiscal legislation that man could have conceived withdrawn; and not until 1849, when that law came into force, could the industries of the country be said to be anything like unfettered. Yet twenty years more passed before this shilling duty—the last rag of protection—was itself flung aside, and the import of corn became perfectly free. . . . But many other changes had in the meantime taken place, all tending more and more to throw off the shackles of trade. . . . As late as 1840 our customs tariff was described in the report of a committee of the House of Commons as 'presenting neither congruity nor unity of purpose;' as 'often aiming at incompatible ends,' seeking both to produce revenue and to protect interests in ways incompatible with each other. There were no fewer than 1,150 different rates of duty chargeable on imported articles, . . . and the committee gave a list of 862 of such articles which were subject to duty, seventeen of which then produced 94 per cent. of a revenue amounting to £23,000,000. . . . The present customs tariff contains less than two dozen articles all told, and including those on which duty is imposed to countervail the excise charges on internal products. The ordinary import articles on which duty is charged number only seven. . . . But there is yet another hindrance the removal of which has to be noticed, and which, till removed, cramped England very seriously, viz. the navigation laws and the great trade monopoly of the East India Company. . . . It took longer time . . . to accomplish the complete deliverance of our mercantile marine from the baneful influence of 'protective' jealousy than to accomplish any other great free-trade reform. A tentative effort to lessen the consequences of confining the carrying trade of England to English ships was made in 1825 by Mr. Huskisson; but it was not till 1854 that complete free trade on the sea was granted by the abolition of any restriction as to the nationality of vessels engaged in the coasting trade of the kingdom. . . . Here, then, we have noted briefly the various steps and leading characteristics of the commercial reforms which, in this country, either paved the way for or secured the benefit of the great outburst of enterprise and influx of wealth which began in the second quarter of the present century. These various reforms constitute, so to say, the negative side of the modern commercial prosperity which this country built upon the foundations of her world-wide empire; and, in order to get a complete outline of the position which we at present occupy, we must now revert briefly to the positive side of the subject; we must find out where the great modern wealth has come from, and on what it has been based. Freedom of trade no doubt did much to call wealth and enterprise into being; but in what did this wealth consist? Happily the leading features are not difficult to trace. Although the foundations of the great manufacturing industries of this country lie far back in the past, their development, like the growth of free-trade principles, is quite modern, and dates in reality from the day when George Stephenson won the competition at Liverpool with his locomotive 'the Rocket,' settling thereby the question of railroad travelling by steam beyond dispute. The mere stimulus to all kinds of mining and manufacturing industries which this victory and the subsequent railway operations gave, was itself enough to cause the trade of this country to press forward by 'leaps and bounds.' Since November 1830, it may be said to have done so; and the mere fact that England was the originator of the railway systems of the world, and that she contained within herself almost boundless materials wherewith to supply those systems, would itself suffice to explain the pre-eminence which from that day to this has

been unquestionably hers. The great natural resources of the country were first employed in supplying the materials for home development, and then gradually the wealth thus acquired by digging in the bowels of the earth was utilised in tempting or leading other nations into a career of 'progress' similar to our own. In spite of the many losses which individuals suffered in the early days of this progress, the nation grew steadily richer and its stores of realised wealth increased with every new enterprise almost that it took up. . . . Each year the realised wealth of the one before told, as it were, in swelling the working power of the nation, and in enlarging the business capacities and scope of its credit. . . . Side by side with the increased produce of the country, the increased manufactures, and the increasing wealth, there were growing up facilities for intercommunication with all parts of the world, and with that an increasing tendency to emigration. The home hives were constantly throwing off young swarms, which, settling now in America, now in Australia, now in Africa, became so many new centres of demand, so many links in the trade chain that we had bound round the world."—A. J. Wilson, *British Trade* (*Fraser's Mag., Sept.*, 1876), *pp.* 271–277.—"The almost unlimited expansion which becomes marked about 1850 and culminates in 1873, has been pointed to by many different people as proof of the great effect of different measures or inventions; as a matter of fact, it was due to no one cause, but was rather the result of multitudinous discoveries and events, acting and reacting on each other. Perhaps the following list of dates shows this most clearly:—Opening of first English railway, 1830; Wheatstone's telegraph, 1837; first ocean steamer, 1838; settlement in New Zealand, 1840; reduction of duties on raw materials, 1842; repeal of Corn Laws, 1846; commercial treaty with France, 1860. Here are seven events of widely different natures, each of which must have had its effect in the period under consideration, and it would be useless, even if it were possible, to weigh the separate result of each. We cannot estimate, we can obtain no criterion of the vast effects of the adoption of Free Trade. Three things, however, are clear:—First, that till the suffocating restrictions were removed, trade could not expand; when exports were prohibited, imports could not be plentiful; when imports were taxed, the demand at enhanced prices could not be great. Secondly, if every restriction was removed from every branch of trade, there would be no increase without natural causes of manufacture and demand, no increased demand without a cheapening or improvement of supply; that, in fact, Free Trade is the method, not the source, of commerce, and that the claim of this increase as the direct result of freedom and a proof of its expediency is an inaccurate exaggeration. Thirdly, that the date of the marked commencement of the expansion coincides exactly with the reductions and abolitions of duties, pointing to the fact, borne out by all concurrent events, that the adoption of Free Trade was the opening of the valve which allowed the forces of commerce full play. . . . It was in the trades of comparatively recent establishment, in England especially, that there were immense outputs (of cotton goods and machinery, for instance), in great excess of the home demand; and this could only pay if the foreign demand grew in proportion to the growing efficiency; that is to say, our newer industries became the most important, and were marked as our division of international labour. The foreign demand, indeed, for our manufactures and our machines was extraordinary. Now, every country is trying to rival our goods, and each to produce for herself the manufactures she requires; then, rivalry was out of the question. . . . On every side new markets were opened; old trades were increased, new developed. The railways built with our materials opened up districts hitherto inaccessible; this acted as a fresh stimulus to our manufacturers—more capital was forthcoming, and more railways were built. Not only were countries, with which we had already established some trade, brought nearer and in closer relation, but new countries were discovered. Australia and New Zealand were ready to take our surplus population, and were not behindhand in the new system of development. Our older colonies also increased. With each emigration the number of our customers abroad was multiplied. In 1850 and 1852 this process was accelerated by the news of the gold discoveries in California and Australia. So great was the emigration and the consequent demand for ships that all freights were increased, and, with a short lull, this continued till 1856. . . . The last great impetus was given by the Suez Canal, by which the journey to India and the East was quickened by one-half, and, at the same time, rendered more secure."—A. L. Bowley, *England's Foreign Trade in the Nineteenth Century, ch.* 4. — See, also, TARIFF LEGISLATION (ENGLAND): A. D. 1842, and after.

The Americans: A. D. 1856-1895.—Decay of American shipping interests. — "Down to the year 1856, the United States had rapidly advanced in commercial greatness, and had overcome all the obstacles which had clustered about their path. At that time we were close upon the heels of England, and everything pointed to our speedily passing her in the race for commercial supremacy. Since then our commerce has steadily declined,—a misfortune usually attributed to the civil war, and subsequently to the competition of more profitable forms of investment. These circumstances no doubt hastened the loss of our commerce; but, as Lieutenant Kelley points out, they are not the true causes of its decline, inasmuch as that began before the civil war. The origin of our difficulties lay in the abandonment of our old policy, which, from the beginning of the century, consisted in surpassing all the world in the quality and speed of our ships and in our naval architecture. With the substitution of iron for wood we began to drop behind, until, with a population of 55,000,000, we have a tonnage but little greater than we had when half as numerous. Moreover, our percentage of wrecks is larger than that of any other seafaring people, and our ships and steamers are shorter-lived."—*The Question of Ships* (*Atlantic Monthly, June*, 1884, *pp.* 859–861). — "The first symptoms of the decadence appeared in 1856, in the falling-off in the sales of American tonnage to foreigners; the reduction being from 65,000 in 1855 to 42,000 in 1856, to 26,000 in 1858, and to 17,000 in 1860. During the war, however, the transfers of

American tonnage to foreign flags again increased very largely, and, for the years 1862 to 1865 inclusive, amounted to the large aggregate of 824,652 tons, or to more than one-fourth of all the registered tonnage (the tonnage engaged in foreign trade) of the United States in 1860. But these transfers, it is well understood, were not in the nature of ordinary business, but for the sake of obtaining a more complete immunity from destruction upon the high seas than the United States at that time was able to afford. The year 1856 also marks the time when the growth of our foreign steam-shipping was arrested, and a retrograde movement inaugurated; so that . . . our aggregate tonnage in this department was 1,000 tons less in 1862 than it was in 1855. The total tonnage of every description built in the United States also declined from 583,450 tons in 1855 (the largest amount ever built in any one year) to 469,393 in 1856, 378,804 in 1857, and 212,892 in 1860, a reduction of 68 per cent in five years. During the year 1855, American vessels carried 75.6 per cent of the value of the exports and imports of the United States. After 1855 this proportion steadily declined to 75.2 per cent in 1856, 70.5 in 1857, 66.9 in 1859, and 65.2 in 1861, the year of the outbreak of the war. . . . Of the enormous increase in the foreign commerce of the United States since 1860, as above noted, every maritime nation of any note, with the exception of the United States, has taken a share. American tonnage alone exhibits a decrease. Thus, comparing 1880 with 1856, the foreign tonnage entering the seaports of the United States increased nearly 11,000,000 of tons; whereas the American tonnage entered during the same period exhibits a decrease of over 65,000 tons. British tonnage increased its proportion from 935,000 tons in 1856 to 7,903,000 in 1880; Germany, during the same time, from 166,000 to 1,089,000; and Sweden and Norway from 20,662 to 1,234,000. Austria, limited to almost a single seaport, jumped up from 1,477 tons in 1856 to 206,000 tons in 1880, and had, in 1879, 179 large-class sailing-vessels engaged in the American trade. Sleepy Portugal increased during the same period from 4,727 tons to 24,449 tons. . . . How is it, that the United States, formerly a maritime power of the first class, has now no ships or steamers that can profitably compete for the carrying of even its own exports; not merely with the ships of our great commercial rival, England, but also with those of Italy, Sweden, Norway, Germany, Holland, Austria, and Portugal? . . . The facts already presented fully demonstrate that the war was not the cause, and did not mark the commencement, of the decadence of American shipping; although the contrary is often and perhaps generally assumed by those who have undertaken to discuss this subject. The war simply hastened a decay which had already commenced. . . . The primary cause was what may be termed a natural one, the result of the progress of the age and a higher degree of civilization; namely, the substitution of steam in place of wind as an agent for ship-propulsion, and the substitution of iron in the place of wood as a material for ship-construction. . . . The means and appliances for the construction of iron vessels did not then [in 1855] exist in the United States; while Great Britain, commencing even as far back as 1837 (when John Laird constructed his first iron steamers of any magnitude for steam navigation), and with eighteen years of experience, had become thoroughly equipped in 1855 for the prosecution of this great industry. The facilities for the construction of steam machinery adapted to the most economical propulsion of ocean vessels, furthermore, were also inferior in the United States to those existing in Great Britain; and, by reason of statute provisions, citizens of the United States interested in ocean commerce were absolutely prevented and forbidden from availing themselves of the results of British skill and superiority in the construction of vessels when such a recourse was the only policy which could have enabled them at the time to hold their position in the ocean carrying trade in competition with their foreign rivals. . . . The inability of the ships of the United States to do the work which trade and commerce required that they should do as well and cheaply as the ships of other nations having been demonstrated by experience, the decadence of American shipping commenced and was inevitable from the very hour when this fact was first recognized, which was about the year 1856. Here, then, we have the primary cause of the decay of the business of ship-building in the United States and of our commercial marine. . . . The question which next naturally presents itself in the order of this inquiry and discussion is, Why is it that the people of the United States have not been permitted to enjoy the privileges accorded to other maritime nations, of adjusting their shipping interests to the spirit and wants of the age? Why have they alone been debarred from using the best tools in an important department of commerce, when the using meant business retained, labor employed, and capital rewarded, and the non-using equally meant decay, paralysis, and impoverishment? The answer is, Because of our so-called navigation laws."—D. A. Wells, *Our Merchant Marine, ch.* 2–3. — "Somewhat curtailed, the navigation laws may be summarized as follows: No American is allowed to import a foreign-built vessel in the sense of purchasing, acquiring a registry, or using her as his property; the only other imports, equally and forcibly prohibited, being counterfeit money and obscene goods. An American vessel ceases to be such if owned in the smallest degree by a naturalized citizen, who may, after acquiring the purchase, reside for more than one year in his native country, or for more than two years in any other foreign state. An American ship owned in part or in full by an American citizen who, without the expectation of relinquishing his citizenship, resides in any foreign country except as United States Consul, or as agent or partner in an exclusively American mercantile house, loses its register and its right to protection. A citizen obtaining a register for an American vessel must make oath that no foreigner is directly or indirectly interested in the profits thereof, whether as commander, officer, or owner. Foreign capital may build our railroads, work our mines, insure our property, and buy our bonds, but a single dollar invested in American ships so taints as to render it unworthy of the benefit of our laws. No foreign-built vessel can, under penalty of confiscation, enter our ports and then sail to another domestic port with any new cargo, or with

any part of an original cargo, which has once been unladen previously, without touching at some port of some foreign country. This law is construed to include all direct traffic between the Atlantic and Pacific ports of the United States via Cape Horn, the Cape of Good Hope, or the Isthmus of Panama; and being a coasting trade, foreigners cannot compete. An American vessel once sold or transferred to a foreigner, can never again become American property, even if the transaction has been the result of capture and condemnation by a foreign power in time of war. Vessels under 30 tons cannot be used to import anything at any seaboard town. Cargoes from the eastward of the Cape of Good Hope are subject to a duty of 10 per cent. in addition to the direct importation duties. American vessels repaired in foreign ports must pay a duty on the repairs equal to one-half the cost of the foreign work or material, or pay 50 per cent. ad valorem, the master or owner making entry of such repairs as imports. This liberal provision, which dates from 1866, is made to include boats obtained at sea, from a passing foreign vessel, in order to assure the safety of our own seamen. . . All other nations have the power of buying ships for foreign trade in the cheapest market, and the effort to protect our shipbuilders by the denial of this right forbids the return of commercial prosperity."—J. D. J. Kelley, *The Question of Ships, ch.* 4–5.

The recent revolution in Commerce.—"All economists who have specially studied this matter are substantially agreed that, within the period named [1860–1885], man in general has attained to such a greater control over the forces of Nature, and has so compassed their use, that he has been able to do far more work in a given time, produce far more product, measured by quantity in ratio to a given amount of labor, and reduce the effort necessary to insure a comfortable subsistence in a far greater measure than it was possible for him to accomplish 20 or 30 years anterior to the time of the present writing (1889). In the absence of sufficiently complete data, it is not easy, and perhaps not possible, to estimate accurately, and specifically state the average saving in time and labor in the world's work of production and distribution that has been thus achieved. In a few departments of industrial effort the saving in both of these factors has certainly amounted to 70 or 80 per cent; in not a few to more than 50 per cent. . . . Out of such results as are definitely known and accepted have come tremendous industrial and social disturbances, the extent and effect of which — and more especially of the disturbances which have culminated, as it were, in later years — it is not easy to appreciate without the presentation and consideration of certain typical and specific examples. . . . Let us go back, in the first instance, to the year 1869, when an event occurred which was probably productive of more immediate and serious economic changes — industrial, commercial, and financial — than any other event of this century, a period of extensive war excepted. That was the opening of the Suez Canal. . . . The old transportation had been performed by ships, mainly sailing-vessels, fitted to go round the Cape, and as such ships were not adapted to the Suez Canal, an amount of tonnage, estimated by some authorities as high as two million tons, and representing an immense amount of wealth, was virtually destroyed. The voyage, in place of occupying from six to eight months, has been so greatly reduced that steamers adapted to the canal now make the voyage from London to Calcutta, or vice versa, in less than 30 days. The notable destruction or great impairment in the value of ships consequent upon the construction of the canal did not, furthermore, terminate with its immediate opening and use; for improvements in marine engines, diminishing the consumption of coal, and so enabling vessels to be not only sailed at less cost, but to carry also more cargo, were, in consequence of demand for quick and cheap service so rapidly effected, that the numerous and expensive steamer constructions of 1870–'73, being unable to compete with the constructions of the next two years, were nearly all displaced in 1875–'76, and sold for half, or less than half, of their original cost. And within another decade these same improved steamers of 1875–'76 have, in turn, been discarded and sold at small prices. . . . Again, with telegraphic communication between India and China, and the markets of the Western world, permitting the dealers and consumers of the latter to adjust to a nicety their supplies of commodities to varying demands, and with the reduction of the time of the voyage to 30 days or less, there was no longer any necessity of laying up great stores of Eastern commodities in Europe; and with the termination of this necessity, the India warehouse and distribution system of England, with all the labor and all the capital and banking incident to it, substantially passed away. Europe, and to some extent the United States, ceased to go to England for its supplies. . . . Importations of East Indian produce are also no longer confined in England and other countries to a special class of merchants; and so generally has this former large and special department of trade been broken up and dispersed, that extensive retail grocers in the larger cities of Europe and the United States are now reported as drawing their supplies direct from native dealers in both China and India. . . . In short, the construction of the Suez Canal completely revolutionized one of the greatest departments of the world's commerce and business; absolutely destroying an immense amount of what had previously been wealth, and displacing or changing the employment of millions of capital and thousands of men. . . . The deductions from the most recent tonnage statistics of Great Britain come properly next in order for consideration. During the ten years from 1870 to 1880, inclusive, the British mercantile marine increased its movement, in the matter of foreign entries and clearances alone, to the extent of 22,000,000 tons; or, to put it more simply, the British mercantile marine exclusively engaged in foreign trade did so much more work within the period named; and yet the number of men who were employed in effecting this great movement had decreased in 1880, as compared with 1870, to the extent of about 3,000 (2,990 exactly). What did it? The introduction of steam hoisting-machines and grain-elevators upon the wharves and docks, and the employment of steam-power upon the vessels for steering, raising the sails and anchors, pumping, and discharging the cargo; or, in other words, the ability, through the increased use of steam and improved machinery, to carry larger

cargoes in a shorter time, with no increase — or, rather, an actual decrease — of the number of men employed in sailing or managing the vessels. . . . Prior to about the year 1875 ocean-steamships had not been formidable as freight-carriers. The marine engine was too heavy, occupied too much space, consumed too much coal. . . . The result of the construction and use of compound engines in economizing coal has been illustrated by Sir Lyon Playfair, by the statement that 'a small cake of coal, which would pass through a ring the size of a shilling, when burned in the compound engine of a modern steamboat would drive a ton of food and its proportion of the ship two miles on its way from a foreign port.' . . . Is it, therefore, to be wondered at, that the sailing-vessel is fast disappearing from the ocean? . . . Great, however, as has been the revolution in respect to economy and efficiency in the carrying-trade upon the ocean, the revolution in the carrying-trade upon land during the same period has been even greater and more remarkable. Taking the American railroads in general as representative of the railroad system of the world, the average charge for moving one ton of freight per mile has been reduced from about 2.5 cents in 1869 to 1.06 in 1887; or, taking the results on one of the standard roads of the United States the (New York Central), from 1.95 in 1869 to 0.68 in 1885. . . . One marked effect of the present railroad and steamship system of transportation has been to compel a uniformity of prices for all commodities that are essential to life. . . . For grain henceforth, therefore, the railroad and the steamship have decided that there shall be but one market — the world."—D. A. Wells, *Recent Economic Changes, pp.* 27–47.—A recent English writer says: "Formerly we [the English] were the great manufacturers of the world; the great distributors and the great warehousemen of the world. Our country was the point on which the great passenger traffic impinged from America and from our Colonies, and from which passengers distributed themselves over the continent of Europe. The products of the world as a general rule came to English ports, and from English ports were distributed to their various markets. All this has much changed. Probably the alteration is more marked in our distributing trade than in that of our manufacturing trade or in any other direction. About twenty years ago all the silk that was manufactured or consumed in Europe was brought to England from the East, mostly in a raw state, and was thence distributed to continental mills. Notwithstanding the increased consumption in Europe, silk now coming to England for distribution is only about one-eighth of the quantity that came here some twelve years ago. This is one single example of an Oriental product. The same diversion of our distributing trade can be traced in almost every other commodity. Many people believe that the opening of the Suez Canal has caused this diminution of our distributing trade, and it cannot be denied that the Suez Canal has done much to divert Oriental trade from this country, and to send goods direct through the Canal to the continental ports, where they are consumed, or where they can be placed on railways and be forwarded without break of bulk to their destinations. But whatever the Suez Canal may have done to divert trade in Oriental goods such as tea or silk, it cannot account for the diversion of the trade coming from America. Yet we find the same diversion of American products which formerly came to England for distribution. With cotton the same result is found, and with coffee from the Brazil. Nor does the diversion of these articles merely demonstrate that our distributing trade is being lost to us: it also shows that the manufacturers of England now permit the raw material of their industries to be sent straight to the factories of their competitors on the Continent. It shows that the great manufactures of the world are being transferred from England to Belgium, France, Germany, and even to Portugal and Spain. In the train of these manufactures are rapidly following all the complex and complicated businesses which are the handmaidens of commerce. For instance, the financial business which used to centre in London is being transferred to Paris, Antwerp, and Germany, mainly because the goods to which this business relates are now consigned to continental countries instead of as formerly being brought to England to be distributed therefrom. . . . The loss of our distributing trade is to my mind in a great measure due to the fact that goods consigned to continental ports can be there put upon railways and sent straight to their destination; while goods sent to English ports must be put upon a railway, taken to our coast, there taken out of the railway, put on board a vessel, taken across to the Continent, there unloaded, then put on the railway and sent off to their ultimate destination. These transhipments from railway to vessel and from vessel to railway are always costly, always involve time, and in the case of some perishable articles render the transaction almost prohibitive. To get over this difficulty and to retain our distributing trade, there appears to me to be only one course open, and that is in some way to obtain direct railway-communication from Liverpool, from London, from Bristol, from Hull, from Glasgow, and from Dundee, to the continental markets where the goods landed at those ports are consumed."—H. M. Hozier, *England's Real Peril* (*Macmillan's Mag., July,* 1888).

Waterways and Railways in modern inland commerce.— "There are three great epochs in the modern history of canal navigation, each marked by characteristics peculiar to itself, and sufficiently unlike those of either of the others to enable it to be readily differentiated. They may be thus described:—1. The era of waterways, designed at once to facilitate the transport of heavy traffic from inland centres to the seaboard, and to supersede the then existing systems of locomotion — the wagon and the pack-horse. This era commenced with the construction of the Bridgewater Canal between 1766 and 1770, and terminated with the installation of the railway system in 1830. 2. The era of interoceanic canals, which was inaugurated by the completion of the Suez Canal in 1869, and is still in progress. 3. The era of ship-canals intended to afford to cities and towns remote from the sea, all the advantages of a seaboard, and especially that of removing and dispatching merchandise without the necessity of breaking bulk. The second great stage in the development of canal transport is of comparatively recent origin. It may, in fact, be

said to date only from the time when the construction of a canal across the Isthmus of Suez was proved to be not only practicable as an engineering project, but likewise highly successful as a commercial enterprise. Not that this was by any means the first canal of its kind. On the contrary, . . . the ancients had many schemes of a similar kind in view across the same isthmus. The canal of Languedoc, constructed in the reign of Louis XIV., was for that day as considerable an undertaking. It was designed for the purpose of affording a safe and speedy means of communication between the Mediterranean and the Atlantic Ocean; it has a total length of 148 miles, is in its highest part 600 ft. above the level of the sea, and has in all 114 locks and sluices. In Russia, canals had been constructed in the time of Peter the Great, for the purpose of affording a means of communication between the different inland seas that are characteristic of that country. The junction of the North and Caspian Seas, of the Baltic and the Caspian, and the union of the Black and the Caspian Seas, had all been assisted by the construction of a series of canals which were perhaps without parallel for their completeness a century ago. In Prussia a vast system of inland navigation had been completed during the last century, whereby Hamburg was connected with Dantzic, and the products of the country could be exported either by the Black Sea or by the Baltic. In Scotland the Forth and Clyde Canal, and the Caledonian Canal, were notable examples of artificial navigation designed to connect two seas, or two firths that had all the characteristics of independent oceans; and the Erie Canal, in the United States, completed a chain of communication between inland seas of much the same order. But, although a great deal had been done in the direction of facilitating navigation between differerent waters by getting rid of the 'hyphen' by which they were separated anterior to the date of the Suez Canal, this grand enterprise undoubtedly marked a notable advance in the progress of the world from this point of view. The work was at once more original and more gigantic than any that had preceded it. . . . The Suez Canal once completed and successful, other ship canal schemes came 'thick as autumnal leaves in Vallombrosa.' Several of these were eminently practical, as well as practicable. The Hellenic Parliament determined on cutting through the tongue of land which is situated between the Gulfs of Athens and Lepantus, known as the Isthmus of Corinth. This isthmus divides the Adriatic and the Archipelago, and compels all vessels passing from the one sea to the other to round Cape Matapan, thus materially lengthening the voyages of vessels bound from the western parts of Europe to the Levant, Asia Minor and Smyrna. The canal is now an accomplished fact. Another proposal was that of cutting a canal from Bordeaux to Marseilles, across the South of France, a distance of some 120 miles, whereby these two great ports would be brought 1,678 miles nearer to each other, and a further reduction, estimated at 800 miles, effected in the distance between England and India. The Panama Canal (projected in 1871, and actually commenced in 1880) is, however, the greatest enterprise of all, and in many respects the most gigantic and difficult undertaking of which there is any record. The proposed national canal from sea to sea, proposed by Mr. Samuel Lloyd and others for Great Britain, the proposed Sheffield Ship Canal, the proposed Irish Sea and Birkenhead Ship Canal, and the proposed ship canal to connect the Forth and the Clyde, are but a few of many notable examples of the restlessness of our times in this direction. . . . There are not a few people who regard the canal system almost as they might regard the Dodo and the Megatherium. It is to them an effete relic of a time when civilisation was as yet but imperfectly developed. . . . Canals do, indeed, belong to the past. . . . That canals also belong to the present, Egypt, the American isthmus, Manchester, Corinth, and other places, fully prove; and, unless we greatly err, they are no less the heritage of the future."—J. S. Jeans, *Waterways and Water Transport, sect.* 1, *ch.* 1.—"'The sea girt British Isles have upwards of 2,500 miles of canals, in addition to the Manchester Ship Canal, which is thirty-five and one-half miles, and is said to be one of the most remarkable undertakings of modern times.' . . . In 1878, Germany had in operation 1,289 miles of canals, and had ordered the construction of 1,045 miles of new canals. Belgium has forty-five canals. Italy, Hungary, Sweden, Holland and Russia have their respective systems of canals. France has expended a larger amount of money than any other European nation, to provide for canal navigation, and in 1887 the total length of its canals was 2,998 miles. About forty-eight per cent of the tonnage of that Republic was transported on its waterways. The average capacity of boats used therefor was 300 tons. The total length of the canals in operation in the United States in 1890 was upwards of 2,926 miles."—H. W. Hill, *Speech on Canals in N. Y. Const. Conv. of* 1894.—"In most of the leading countries of the world, a time arrived when the canal system and the railway system came into strong competition, and when it seemed doubtful on which side the victory would lie. This contest was necessarily more marked in England than in any other country. England had not, indeed, been the first in the field with canals, as she had been with railways. . . . But England having once started on a career of canal development, followed it up with greater energy and on a more comprehensive scale than any other country. For more than half a century canals had had it all their own way. . . . But the railway system, first put forward as a tentative experiment, and without the slightest knowledge on the part of its promoters of the results that were before long to be realised, was making encroachments, and proving its capabilities. This was a slow process, as the way had to be felt. The first railway Acts did not contemplate the use of locomotives, nor the transport of passenger traffic. The Stockton and Darlington Railway, constructed in 1825, was the first on which locomotives were employed [see Steam Locomotion (page 3029)]. Even at this date, there were many who doubted the expediency of having a railroad instead of a canal, and in the county of Durham . . . there was a fierce fight, carried on for more than twenty years. In the United States, the supremacy of waterways was maintained until a much later date. . . . A keen and embittered struggle was kept up between

the canal and the railroad companies until 1857. . . . In the annals of transportation, there is no more interesting chapter than that which deals with the contest that has been carried on for nearly half a century between the railways and the lakes and canals for the grain traffic between Chicago and New York."—J. S. Jeans, *Waterways and Water Transport, ch.* 26–27.—"The early railroad engineers overestimated the speed which could be readily attained. Fifty years ago it was generally expected that passenger trains would soon run at rates of from seventy-five to one hundred miles an hour—a prediction which has as yet remained unfulfilled. On the other hand, they underestimated the railroad's capacity for doing work cheaply. It was not supposed that railroads would ever be able to compete with water-routes in the carriage of freight, except where speedy delivery was of the first importance. Nor was it at that time desired that they should do so. The first English railroad charter contained provisions expressly intended to prevent such competition. A generation later, in the State of New York itself, there was a loud popular cry that the New York Central must be prohibited from carrying freight in competition with the Erie Canal. The main field of usefulness of railroads, and the means by which that field was to be developed, were not merely ignored, they were positively shunned. This period of railroad infancy ended about the year 1850. . . . The changes were: first, the consolidation of old roads; second, the construction of new ones in a great variety of conditions; third, and most important, the development of traffic by cheap rates and new methods. . . . Between 1850 and 1880 rates were reduced on an average to about one half their former figures, in spite of the advance in price of labor and of many articles of consumption. A variety of means were made to contribute to this result. The inventions of Bessemer and others, by which it became possible to substitute steel rails for iron, made it profitable for the railroads to carry larger loads at a reduction in rates. Improvements in management increased the effective use of the rolling stock, while the consumption of fuel and the cost of handling were diminished. By other changes in railroad economy it became possible to compete for business of every kind, with the best canals or with natural water-courses. The railroad rates of to-day are but a small fraction of the canal charges of two generations ago; while in volume of business, speed, and variety of use there is an inestimable advance."—A. T. Hadley, *Railroad Transportation, ch.* 1.—"The railway mileage in the United States on June 30, 1893, was 176,461.07 miles. . . . The total number [of men] in the service of railways in the United States on June 30, 1893, was 873,602, being an increase of 52,187 over the number employed the previous year."—Interstate Commerce Commission, *Statistics of Railways*, 1893, *pp.* 11 *and* 31.

TRAPPISTS.—The monks of La Trappe are often referred to as Trappists. "This celebrated abbey was one of the most ancient belonging to the Order of Cisteaux [the Cistercians]. It was established [A. D. 1140] by Rotrou, the second count of Perche, and undertaken to accomplish a vow made whilst in peril of shipwreck." In the 17th century the monks had become scandalously degenerate and dissolute. Their institution was reformed by M. de Rancé, who assumed the direction as abbot in 1662, and who introduced the severe discipline for which the monastery was afterwards famous.

Among its rules was one of absolute silence.—C. Lancelot, *A Tour to Alet and La Grande Chartreuse, v.* 1, *pp.* 113–186.

TREBIZOND: Origin of the city.—"Trebizond, celebrated in the retreat of the Ten Thousand as an ancient colony of Greeks, derived its wealth and splendour from the munificence of the Emperor Hadrian, who had constructed an artificial port on a coast left destitute by nature of secure harbours. The city was large and populous."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 10.

A. D. 258.—Capture by the Goths. See Goths: A. D. 258–267.

A. D. 1204-1461.—The Greek empire.—"The empire of Trebizond was the creation of accident. . . . The destruction of a distant central government, when Constantinople was conquered by the Frank Crusaders, left [the] provincial administration without the pivot on which it had revolved. The conjuncture was seized by a young man, of whom nothing was known but that he bore a great name, and was descended from the worst tyrant in the Byzantine annals. This youth grasped the vacant sovereignty, and, merely by assuming the imperial title, and placing himself at the head of the local administration, founded a new empire. Power changed its name and its dwelling, but the history of the people was hardly modified. The grandeur of the empire of Trebizond exists only in romance. Its government owed its permanence to its being nothing more than a continuation of a long-established order of civil polity, and to its making no attempt to effect any social revolution." The young man who grasped the sovereignty of this Asiatic fragment of the shattered Byzantine empire was Alexius, a grandson of Andronicus I., the last emperor at Constantinople of the family of Comnenos. This Alexius and his brother David, who had been raised in obscurity at Constantinople, escaped from the city before it was taken by the Crusaders, and fled to the coast of Colchis, "where their paternal aunt, Thamar, possessed wealth and influence. Assisted by her power, and by the memory of their tyrannical grandfather, who had been popular in the east of Asia Minor, they were enabled to collect an army of Iberian mercenaries. At the head of this force Alexios entered Trebizond in the month of April 1204, about the time Constantinople fell into the hands of the Crusaders. He had been proclaimed emperor by his army on crossing the frontier. To mark that he was the legitimate representative of the imperial family of Komnenos, and to prevent his being confounded with the numerous descendants of females, or with the family of the emperor Alexius III. (Angelos), who had arrogated to themselves his name, he assumed the designation of Grand-Komnenos. Wherever he appeared, he was acknowledged as the lawful sovereign of the Roman empire." For a time Alexius of Trebizond, with the help of his brother David, extended his dominions in Asia Minor with rapidity and ease, and he was brought very soon into collision with the other Greek emperor, Theodore Lascaris, who had established himself at Nicæa. It seemed likely, at first, that Trebizond would become the dominant power; but the movement of events which favored that one of the rival empires was presently stayed, and then reversed, even though Alexius took aid from the Latin emperor at Constantinople. Not many years later, in fact, the empire of Trebizond evaded extinction at the hands of the Turkish Sultan of Iconium, or Roum, only by paying tribute and acknowledging vassalage to that sovereign. For sixty years the so-called empire continued in a tributary relationship to the Seljuk sultans and to the grand khan of the Mongols who overthrew them in 1244. But, if not a very substantial empire during that period, it seems to have formed an exceedingly prosperous and wealthy commercial power, controlling not only a considerable coast territory on its own side of the Euxine, but also Cherson, Gothia, and all the Byzantine possessions in the Tauric Chersonesos; and "so close was the alliance of interest that these districts remained dependent on the government of Trebizond until the period of its fall." On the decline of the Mongol power, the empire of Trebizond regained its independence in 1280, and maintained it for nearly a century, when it was once more compelled to pay tribute to the later Mongol conqueror, Timur. At the end of the 14th century the little "empire" was reduced to a strip of coast, barely forty miles wide, extending from Batoun to Kerasunt, and the separated city of Oinaion, with some territory adjoining it. But, within this small compass, "few countries in Europe enjoyed as much internal tranquility, or so great security for private property." The commerce of Trebizond had continued to flourish, notwithstanding frequent quarrels and hostilities with the Genoese, who were the chief managers of its trade with the west. But the decay of the empire, politically, commercially, and morally, was rapid in its later years. First becoming tributary to the Ottoman conqueror of Constantinople, it finally shared the fate of the Byzantine capital. The city of Trebizond was surrendered to Mohammed II. in 1461. Its last emperor, David, was permitted to live for a time, with his family, in the European dominions of the Turk; but after a few years, on some suspicion of a plot, he was put to death with his seven sons, and their bodies were cast unburied to the dogs. The wife and mother

of the dead — the fallen empress Helena — guarded them and dug a grave for them with her own hands. The Christian population of Trebizond was expelled from the city and mostly enslaved. Its place was taken by a Moslem colony. — G. Finlay, *Hist. of the Empire of Trebizond* (*History of Greece and of the Empire of Trebizond*).

TRÈVES: Origin.— Trèves was originally the chief town of the Treviri, from whom it derived its name. When the Romans established a colony there they called it Augusta Trevirorum. In time, the Augusta was dropped and Trevirorum became Trèves, or Trier. See TREVIRI.

Under the Romans.—"The town of the Treveri, named Augusta probably from the first emperor, soon gained the first place in the Belgic province; if, still, in the time of Tiberius, Durocortorum of the Remi (Rheims) is named the most populous place of the province and the seat of the governors, an author from the time of Claudius already assigns the primacy there to the chief place of the Treveri. But Treves became the capital of Gaul — we may even say of the West — only through the remodelling of the imperial administration under Diocletian. After Gaul, Britain and Spain were placed under one supreme administration, the latter had its seat in Treves; and thenceforth Treves was also, when the emperors stayed in Gaul, their regular residence, and, as a Greek of the fifth century says, the greatest city beyond the Alps."—T. TRIAD SOCIETY, OR WATER-LILY SECT, The.— The most extensive of the many secret societies among the Chinese is "the Tienti hwui, or San-hoh hwui, i. e. the Triad Society. It was formerly known by the title of the Pih-lien kiau, or Water-lily Sect, but having been proscribed by the government, it sought by this alteration of name, and some other slight changes, to evade the operation of the laws. In fact, it still subsists in some of the remoter provinces under its old name and organization. The known and indeed almost openly avowed object of this society has been, for many years, the overturn of the Mant-chou dynasty."— *The Chinese Rebellion* (*North Am. Rev., July*, 1854).

TRIBUTUM, The.—The tributum, a war-tax, collected from the Roman people in the earlier periods of the Republic, was "looked upon as a loan, and was returned on the termination of a successful war out of the captured booty. . . . The principle that Rome was justified in living at the expense of her subjects was formally acknowledged when, in the year 167 B. C., the tributum — the only direct tax which the Roman citizens paid — was abolished, because the government could dispense with it after the conquest of Macedonia. The entire burden and expense of the administration were now put off upon the subjects."—W. Ihne, *Hist. of Rome, bk.* 6, *ch.* 7 (*v.* 4).

TRINIDAD.—The island of Trinidad, which lies close to the South American continent, off the delta of the Orinoco, was discovered by Columbus on his third voyage (1498); but the Spaniards made little use of it, except for slave hunting. Late in the 18th century a French settlement was established in the island, though under the government of Spain. In 1797 it was taken by the English, and it was ceded to England in 1802. United with the neighboring island of Tobago, it is one of the crown colonies of the British Empire. The area of Trinidad is 1754½ square miles. It is one of the most fertile of the West Indies islands. Its sole mineral wealth is in the extraordinary lake of half solid pitch or asphalt, of which a graphic description may be found in the eighth chapter of Charles Kingsley's account of his visit to Trinidad, in 1869, entitled "At Last."

TRINITY HOUSE.—"Perhaps there is throughout Britain no more interesting example of the innate power and varied developments of the old gild principle, certainly no more illustrious survival of it to modern times, than the Trinity House. It stands out now as an institution of high national importance, whose history is entwined with the early progress of the British navy and the welfare and increase of our sea craft and seamanship; in an age when the tendency is to assume state control over all matters of national interest the Trinity House, a voluntary corporation, still fulfils the public functions to which its faithful labours, through a long course of years, have established its right and title. Although its earliest records appear to be lost or burned, there seems to be no doubt that Henry VIII's charter of 1514 was granted to a brotherhood already existing. . . . In the charter itself we read that the shipmen or mariners of England 'may anew erect' a gild, and lands and tenements in Deptford Strond, already in possession, are referred to. Similar bodies were formed in other places. . . . The charitable side of the Trinity House functions has always been considerable; in 1815 they possessed no less than 144 almshouses, besides giving 7,012 pensions; but of late years their funds applicable to such purposes have been curtailed. . . . It is significant that in Edward VI's reign the name and style of Gild was abandoned by the brethren for the title of 'the Corporation of the Trinity House of Deptford Strond.' Gilds now had come into disrepute. The functions of the Trinity House have long been recognized of such value to the public service that their honourable origin, so consonant with other English institutions, is apt to be forgotten. . . . To cherish the 'science and art of mariners,' and to provide a supply of pilots, especially for the Thames up to London, were their prime duties. The Admiralty and Navy boards were established as administrative bodies in 1520, and the ship-building yard at Deptford, with the storehouses there, 'was placed under the direct control of the gild.' The Sea Marks Act of 1566, which throws considerable light on the position of the company at that time, endued them with the power of preserving old and setting up new sea marks or beacons round the coasts, among which trees came under their purview. How far their jurisdiction extended is not stated; it would be interesting to know whether their progress round the whole shores of Britain were gradual or not. It is, perhaps, for its work in connexion with light-houses, light-ships, buoys, and beacons, that the Trinity House is best known to the general public. . . . It was only in 1836 that parliament 'empowered the corporation to purchase of the crown, or from private proprietors, all lights then in existence,' which are therefore at present under their efficient central control. . . . The principal matters in their sphere of action — the important provision of pilots, the encouragement and supply of seamen, ballastage and ballast, lights and buoys, the suppression of piracy and privateers, tonnage measurement, the victualling of the navy, their intimate connexion with the gradual growth and armament of the navy, the curious right to appoint certain consuls abroad — all these receive illustration at first hand from the author's careful researches among state papers and the muniments of the corporation."—Lucy T. Smith, *Review of "The Trinity House of Deptford Strond"; by C. R. B. Barrett (English Historical Rev., April*, 1894).

TRINOBANTES, The.—The Trinobantes were the first of the tribes of Britain to submit to Cæsar. They inhabited the part of the country now embraced in the county of Essex and part of Middlesex. Their chief town, or stronghold ("oppidum") was Camulodunum, where the Romans afterwards founded a colony which became the modern city of Colchester. Cunobelin, the Cymbeline of Shakespeare, was a king of the Trinobantes who acquired extensive power. One of the sons of Cunobelin, Caractacus, became the most obstinate enemy of the Romans when they seriously began the conquest of Britain, in the reign of Claudius.—E. L. Cutts, *Colchester, ch.* 2–3.

TRIOBOLON.—Three oboli,—the daily compensation paid in Athens to citizens who served as judges in the great popular courts; afterwards paid, likewise, to those who attended the assemblies of the people.—A. Boeckh, *Public Economy of Athens, bk.* 2, *ch.* 15.

TRIPLE ALLIANCE, The.—There have been a number of Triple Alliances formed in European history; see, for example, Netherlands (Holland): A. D. 1668, and Spain: A. D. 1713–1725; but the one in recent times to which allusion is often made is that in which Germany, Austria-Hungary, and Italy, are the three parties. It was formed by treaty in February, 1882, and renewed in 1887. Its purpose is mutual defense, especially, no doubt, against the apprehended combination of Russia with France.

TRISAGION, The. See CONSTANTINOPLE: A. D. 511–512.

TRI-SKELION.—GAMMADION.—FYLFOT-CROSS.—SVASTIKA.—"One of the most remarkable instances of the migration of a symbol is that afforded by the 'tri-skelion,' or, as we more familiarly know it, 'the three legs of Man.' It first appears on the coins of Lycia, circa B. C. 480; and then on those of Sicily, where it was adopted by Agathocles, B. C. 317–307, but not as a symbol of the morning, midday, and afternoon sun, but of the land of Trinacria, i. e., 'Three Capes,' the ancient name of Sicily; and finally on the coins of the Isle of Man, on which it seems to refer rather to the position of that island between England, Scotland, and Ireland, than to its triangular shape. The tri-skelion of Lycia is made up of three cocks' heads. . . . But on the coins of Sicily and of the Isle of Man the tri-skelion consists of three human legs of an identical pattern, excepting that those of the latter island are spurred. This form of tri-skelion is borne on the arms of several old English families, and it was in all probability first introduced into this country [England] by some Crusader returning from the East by way of Sicily. . . . The tri-skelion is but a modification of the 'gammadion' or 'fylfot-cross,' the 'svastika' of the Hindus. The latter was long ago suspected by Edward Thomas to be a sun-symbol; but this was not positively proved until Mr. Percy Gardner found a coin of the ancient city of Mesembria in Thrace stamped with a gammadion bearing within its open centre an image of the sun—Mesembria meaning the city of 'Mid-day,' and this name being figured on some of its coins by the decisive legend *MEΣ卐*. . . . The gammadion has travelled further afield than any other symbol of antiquity. . . . Count Goblet d'Alviella traces it back at last to the Troad as the cradle of its birth, some time anterior to the 13th century B. C."—*The Athenæum, Aug.* 13, 1892 (*Reviewing Comte Goblet d'Alviella's "La Migration des Symboles"*).

TRITTYES. See PHYLÆ.

TRIUMPH AND OVATION, The Roman.—"The highest reward of the commander was the triumphal entrance. At first it was awarded by senate and people to real merit in the field, and its arrangement was simple and dignified; but soon it became an opportunity of displaying the results of insatiable Roman rapacity and love of conquest. Only the dictators, consuls, prætors, and, in late republican times, occasionally legates, were permitted by the senate to enter Rome in trumph, the permission to the legate being granted only in case he had commanded independently ('suis auspiciis'), and conducted the army to Rome from a victorious campaign 'in sua provincia.' As in later times it was impossible to conduct the whole army from distant provinces to Rome, the last-mentioned condition was dispensed with, the claim of the commander to a triumph being acknowledged in case in one of the battles gained by him 5,000 enemies had been killed. The senate granted the expenses necessary for the procession after the quæstor urbanus had examined and confirmed the commander's claim. Streets and squares through which the procession had to pass were festively adorned. The temples were opened, and incense burnt on the altars. Improvised stands were erected in the street, filled with festive crowds shouting 'Io triumphe!' The commander, in the meantime, collected his troops near the temples of Bellona and Apollo, outside the gates of Rome. . . . The victor was met at the 'porta triumphalis' by the senate, the city magistrates, and numerous citizens, who took the lead of the procession, while lictors opened a way through the crowd. After the city dignitaries followed tibicines, after them the booty. . . . Fettered kings, princes, and nobles followed, doomed to detention in the Mamertine prison. Next came sacrificial oxen with gilt horns, accompanied by priests; and, finally, preceded by singers, musicians, and jesters, the triumphal chariot drawn by four horses. Clad in a toga picta and the tunica palmata, temporarily taken from the statue of the Capitoline Jupiter, the triumphator stood in his chariot holding the eagle-crowned ivory sceptre in his hand, while a servus publicus standing behind him held the corona triumphalis over his head. The army brought up the rear of the procession, which moved from the Campus Martius through the circus of Flaminius to the Porta Carmentalis, and thence, by way of the Velabrum and the Circus Maximus, the Via Sacra and the Forum, to the Capitol. Here the triumphator deposited his golden crown in the lap of the Capitoline Jupiter, and sacrificed the usual suovetaurilia. . . . The ovatio was granted for less important conquests, or to a general for victories not won 'suis auspiciis.' The victor, adorned with the toga prætexta and the myrtle crown, originally used to walk; in later times he rode on horseback."—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 109.—See, also, VIA SACRA.

TROJA.—TROY.—TROAD.—ILIUM.—"In the whole long extent of this Western coast [of Asia Minor] no region occupies a fairer situation than the northern projection, the peninsula jutting out between Archipelago, Hellespont, and Propontis, of which the mountain-range of Ida, abounding in springs, forms the centre. Its woody heights were the seat of the Phrygian Mother of the Gods; in its depths it concealed treasures of ore, which the dæmons of mining, the Dactyli of Ida, were here first said to have been taught by Cybele to win and employ. A hardy race of men dwelt on the mountains so rich in iron, divided into several tribes, the Cebrenes, the Gergithians, and above all the beauteous Dardani, among whom the story went, how their ancestor, Dardanus, had, under the protec-

tion of the Pelasgian Zeus, founded the city of Dardania. Some of these Dardani descended from the highlands into the tracts by the coast, which has no harbours, but an island lying in front of it called Tenedos. Here Phœnicians had settled and established purple-fisheries in the sea of Sigeum; at a later period Hellenic tribes arrived from Crete and introduced the worship of Apollo. In the secure waters between Tenedos and the mainland took place that contact which drew the Idæan peninsula into the intercourse subsisting between the coasts of the Archipelago. . . . In the midst of this intercourse on the coast arose, out of the tribe of the Dardani, which had deserted the hills, the branch of the Trojans. . . . Thus, in the midst of the full life of the nations of Asia Minor, on the soil of a peninsula (itself related to either side) on which Phrygians and Pelasgians, Assyrians, Phœnicians, and Hellenic mariners met, grows up the empire of the Dardanides. The springs of the Ida range collect into rivers, of which two flow to the Propontis, and one, the Scamander, into the Ægean. The latter first flows through his bed high in the mountains, through which he then breaks in a narrow rocky gorge, and quitting the latter enters the flat plain of his water-shed, surrounded on three sides by gentle declivities, and open on the West to the sea. . . . In the innermost corner of this plain projects a rocky height with precipitous sides, as if it would bar the passage of the river breaking forth from the ravine. Skirted in a wide curve by Scamander on the East, it sinks to the West in gentle declivities, where numerous veins of water spring from the earth; these unite into two rivulets, distinguished by the abundance and temperature of their water, which remain the same at all seasons of the year. This pair of rivulets is the immutable mark of nature, by which the height towering above is recognized as the citadel of Ilium. They are the same rivulets to which of old the Trojan women descended from the Scæan gate to fetch water or to wash linen, and to this day the same ancient walls close around the flowing water and render it more easily available. The source of these rivulets was the seat of power. On the gentler declivity lay Troja; over which towered the steep citadel of Pergamus, the view from whose turrets commanded the entire plain, . . . and beyond the plain the broad sea itself. . . . No royal seat of the ancient world could boast a grander site than this Trojan citadel."—E. Curtius, *Hist. of Greece, bk.* 1, *ch.* 3.—The site contemplated by Dr. Curtius in the description quoted above is some five miles higher up the valley of the Scamander than Hissarlik, where Dr. Schliemann's excavations are believed by many scholars to have now established the location of ancient Troy.—H. Schliemann, *Ilios: the City and Country of the Trojans.*—"Dr. Schliemann described in his 'Troja' and 'Ilios' seven successive layers of city ruins found in his excavations at Hissarlik. This number was increased in 1890 to nine by the discovery of two layers intervening between the highest (or Roman) layer, formerly called the seventh, and the sixth, or so-called Lydian layer. These two layers were, from the character of the finds, attributed to the early and the later Greek period. Dr. Schliemann was baffled by the fact that he could discover no acropolis for the sixth, seventh, or eighth layers. Dr. Dörpfeld, who in May [1893] resumed the excavations at the expense of Dr. Schliemann's widow, makes in the Mittheilungen of the German Archæological Society (xviii, 2), which appeared November 7, a significant report clearly establishing the fact that the Romans, in building the great temple of Ilian Athene, cut down the highest part of the acropolis, and thus destroyed all traces of the acropolis belonging to those layers. The excavations of 1890 had brought to light two magnificent buildings in the sixth layer, besides 'Lydian' jars, much pottery, and one entire vase of the Mykenæan or Homeric period. The evidence favored the identification of this layer with the Homeric Troy or the period of Mykenæ and Tiryns. On the other hand, the fact that only two buildings and no city wall had been discovered for this layer seemed to indicate that the Troy of Priam must be referred to a lower level, namely, the second, where a magnificent wall of prehistoric style had been discovered, although its architecture and the character of the finds suggested a more primitive culture than that painted in Homeric song. The sixth layer has now in large part been exposed by Dr. Dörpfeld and reveals the most imposing wall of pre-Roman times. The remains of seven vast buildings have been brought to light which have in part the ground plan of the ancient Greek temples and of the halls of Tiryns and Mykenæ, though surpassing those in proportions and in the carefulness of their architecture. The remains of one admirable building contained a hall 37 feet by 30. . . . Further, Dr. Dörpfeld uncovered the fortifications of this city in many places, and found them some sixteen feet in thickness with a still greater height. On the outside the wall has a uniform slope. A strong-tower fifty-eight feet in diameter contains an inner staircase. In strength, proportions, and careful architecture this tower will compare favorably with any tower of Greek antiquity. The neat work of the corners and the nice dressing of the stones might refer it to a period later than Homer, to the historical Greek period, did we not know that in historical times Troy was too insignificant to need the erection of such walls. Moreover, the tower, built over in Greek times, and partly damaged by the addition of an outer stair, was finally in Roman times buried under massive foundations. The correspondences in stone-work of the wall and the houses place the tower and the buildings evidently in the same layer. In the houses were found both local pottery and also pottery of the Mykenæan style."—*The Nation, Nov.* 30, 1893.—"The latest news from the explorations at Hissarlik (Levant Herald July 7) comes to us from the owner of the site, Mr. Frank Calvert, United States consul, Dardanelles. It was readily seen that the second, or burned city which Dr. Schliemann enthusiastically assumed to be the city of Priam, instead of solving the question of the 'Iliad,' offered new problems to the archæologist. The precious objects and the works of art there found were evidently ruder and more ancient by some centuries than those of Mycenæ, and therefore decidedly earlier than Homeric Troy. In the sixth city, however, pottery of a Mycenæan type was discovered, and this led Dr. Dörpfield, assisted by Mrs. Schliemann, and later by the German Government, to extend excavations on this level, with results that are now proving fruitful, and

that may possibly be conclusive. Curiously enough, Dr. Schliemann's excavations obscured rather than aided this particular investigation. The area of the sixth city was twice as great as the space covered by the successive acropolises of the other five; and, in consequence, their debris was dumped on the very spot which Dr. Dörpfield has just been clearing. The massive walls he has uncovered, from five to six metres broad, the lofty towers, and the street which has been traced, may provisionally be assumed to belong to the Homeric Troy."—*The Nation, August* 9, 1894.

TROUBADOURS.—TROUVÈRES.—JOGLARS.—JONGLEURS.—"The poets of the South of France during the Middle Age called themselves 'Trobadors,' that is to say, 'inventers' or 'finders'; and they adapted the 'langue d'oc,' also called the Romansh of the South, or the Provençal, to the expression of poetical sentiments. It is probable that poets of this description existed as early as the formation of the idiom in which they wrote. At any rate, we know that toward the year 1000 they already enjoyed considerable distinction, although there is scarcely anything now left us from the earliest period of their existence. . . . In regard to the time within which the poetry of the Troubadours was in vogue, M. Fauriel assumes only two periods. But it may perhaps be more conveniently divided into three, as follows: The first commences with its origin, as a popular poetry, and extends to the time when it became an art and a profession, the poetry of the nobles and the courts, that is to say, from about 1090 to 1140. The second is the period of its culmination, which extends from the year 1140 to 1250. The third is the period of its decadence, from 1250 to 1290."—G. J. Adler, *Introd. to Fauriel's "History of Provençal Poetry."*—"Sufficient has been said . . . to show the superiority of lyrical over epic poetry in Provence. This inequality of the two branches implied a commensurate difference of praise and social esteem awarded to those who excelled in either of them, and it is perhaps from this point of view that the two great divisions of poets in the 'langue d'oc,' respectively described as 'joglars' and 'trobadors,' or, in the French and generally adopted form of the word, 'troubadours,' may be most distinctly recognised. . . . It seems sufficiently established that the verb 'trobar' and its derivative noun first and foremost apply to lyrical poetry. To speak therefore of the Troubadour as the singer of songs, of cansos and sirventeses and albas and retroensas is a correct and tolerably comprehensive definition."—F. Hueffer, *The Troubadours, ch.* 6.—"In the twelfth century, the Romance-Wallon [or the 'langue d'oil' of northern France] became a literary language, subsequent, by at least a hundred years, to the Romance-provençal. . . . The reciters of tales, and the poets, giving the name of Troubadour a French termination, called themselves Trouvères. With the exception of the difference of language, it may be thought that the Troubadour and the Trouvère, whose merit was pretty nearly equal; who were equally ignorant or well-informed; who both of them spent their lives at courts, at which they composed their poems, and where they mingled with knights and ladies; and who were both accompanied by their jongleurs and minstrels, should have preserved the same resemblance in their productions. Nothing, however, can be more dissimilar than their poems. All that remains of the poetry of the Troubadours is of a lyrical character, while that of the Trouvères is decidedly epic. . . . The Trouvères have left us many romances of chivalry, and fabliaux."—J. C. L. S. de Sismondi, *Literature of the South of Europe, ch.* 7 (*v.* 1).—"We know nothing of the rise or origin of the two classes of Trouveurs and Jongleurs. The former (which it is needless to say is the same word as Troubadour, and Trobador, and Trovatore) is the term for the composing class, the latter for the performing one. But the separation was not sharp or absolute."—G. Saintsbury, *Short Hist. of French Literature, bk.* 1, *ch.* 1.

TRUCE OF GOD, The.—"This extraordinary institution is the most speaking witness, at once to the ferocity of the times [11th century], and also to the deep counter feeling which underlay men's minds. Clergy and laity alike felt that the state of things which they saw daily before their eyes was a standing sin against God and man, repugnant alike to natural humanity and to the precepts of the Christian religion. States were everywhere so subdivided, governments were everywhere so weak, that, in most parts of Europe, every man who had the needful force at his command simply did that which was right in his own eyes. . . . Every man claimed the right of private war against every other man who was not bound to him by some special tie as his lord or his vassal. And the distinction between private war and mere robbery and murder was not always very sharply drawn. . . . A movement on behalf of peace and good will towards men could not fail in those days to assume an ecclesiastical form. As of old the Amphiktyonic Council, the great religious synod of Greece, strove to put some bounds to the horrors of war as waged between Greek and Greek, so now, in the same spirit, a series of Christian synods strove, by means of ecclesiastical decrees and ecclesiastical censures, to put some bounds to the horrors of war as waged between Christian and Christian. . . . The movement began in Aquitaine [A. D. 1034], and the vague and rhetorical language of our authority would seem to imply that all war, at any rate all private war, was forbidden under pain of ecclesiastical censures. It must not be forgotten that, in that age, it must have been exceedingly difficult to draw the distinction between public and private

war. . . . But the doctrine, hard as it might be to carry out in practice, was rapturously received at its first announcement. As the first preaching of the Crusade was met with one universal cry of 'God wills it,' so the Bishops, Abbots, and other preachers of the Truce were met with a like universal cry of Peace, Peace, Peace. Men bound themselves to God and to one another to abstain from all wrong and violence, and they engaged solemnly to renew the obligation every five years. From Aquitaine the movement spread through Burgundy Royal and Ducal. But it seems to have been gradually found that the establishment of perfect peace on earth was hopeless. After seven years from the first preaching of peace, we find the requirements of its apostles greatly relaxed. It was found vain to forbid all war, even all private war. All that was now attempted was to forbid violence of every kind from the evening of Wednesday till the morning of Monday. It was in this shape that the Truce was first preached in northern and eastern Gaul. The days of Christ's supper, of His passion, of His rest in the grave and His resurrection, were all to be kept free from strife and bloodshed."—E. A. Freeman, *Norman Conquest, ch.* 8, *sect.* 2 (*v.* 2).

TUATH.—"Among the people of Gaelic race [in Ireland and Scotland] the original social unit appears to have been the 'Tuath,' a name originally applied to the tribe, but which came to signify also the territory occupied by the tribe community. . . . Several of these Tuaths were grouped together to form a still larger tribe, termed a Mortuath or great tribe, over whom one of the kings presided as Ri Mortuath. . . . Then several of these Mortuath formed a province, called in Irish 'Cuicidh,' or a fifth. . . . Over each province was the Ri Cuicidh, or provincial king, and then over the whole was the Ardri, or sovereign of all Ireland. The succession to these several grades of Ri, or king, was the same as that of the Ri Tuath, and was regulated by the law of Tanistry, that is, hereditary in the family but elective in the individual, the senior of the family being usually preferred."—W. TUILERIES, The.—The palace of the Tuileries is said to have taken its name from the tile-making which had been carried on formerly in the vicinity of the ground on which it was built. "The history of it begins in the year 1564, when Catherine de Medicis conceived the idea of having a palace to herself near the Louvre, yet independent, in which she might be near enough to her son Charles IX. to have influence over him. . . . The palace was never very long or very closely connected with the history of the monarchy. It is not at all comparable to Windsor in that respect. Henry IV. liked it, Louis XIV. preferred Versailles, Louis XV. lived at the Tuileries in his minority. The chosen association of the palace with the sovereigns of France is very recent. Louis XVI. lived in it, and so did Charles X. and Louis-Philippe. The two Napoleons were fond of it. . . . The last inhabitant was the Empress Eugénie, as Regent. . . . The parliamentary history of the Tuileries is important, as it has been not only a palace but a parliament house. . . . The destruction of the Tuileries by the Communards [1871] was a lamentable event from the point of view of the historian and the archaeologist, but artistically the loss is not great."—P. G. Hamerton, *Paris in Old and Present Times, ch.* 5.

TUNNAGE AND POUNDAGE.—A tax or custom of two shillings on the tun of wine and sixpence on the pound of merchandise, which became, in England, from the fourteenth century, one of the regular parliamentary grants to the crown, for a long period. It grew out of an agreement with the merchants in the time of Edward II., to take the place of the former right of prisage; the right, that is, to take two tuns of wine from every ship importing twenty tuns or more,—one before and one behind the mast.—W. Stubbs, *Const. Hist. of Eng., ch.* 17, *sect.* 276–277 (*v.* 2).—See, also, ENGLAND: A. D. 1629.

TURAN.—"The old Persians, who spoke an Aryan tongue, called their own land Iran, and the barbarous land to the north of it they called Turan. In their eyes, Iran was the land of light, and Turan was the land of darkness. From this Turan, the land of Central Asia, came the many Turkish settlements which made their way, first into Western Asia and then into Europe."—E. A. Freeman, *The Ottoman Power in Europe, ch.* 2.

TURANIAN RACES AND LANGUAGES.—The name Turanian has been given to a large group of peoples, mostly Asiatic, whose languages are all in the agglutinative stage and bear evident marks of a family relationship. "This race, one of the largest, both numerically and with regard to the extent of territory which it occupies, is divided into two great branches, the Ugro-finnish and the Dravidian. The first must be again subdivided into the Turkish, including the populations of Turkestan and of the Steppes of Central Asia, as well as the Hungarians who have been for a long time settled in Europe; and the Uralo-finnish group, comprising the Finns, the Esthonians, the Tchoudes, and, in general, nearly all the tribes of the north of Europe and Asia. The country of the Dravidian branch is, on the contrary, to the south. This branch is in fact composed of the indigenous people of the Peninsula of Hindustan; Tamuls, Telingas, Carnates, who were subjugated by the Arian race, and who appear to have originally driven before them the negroes of the Australian group, the original inhabitants of the soil, who are now represented by the almost savage tribe of the Khonds. The Turanian race is one of the oldest in the world. . . . The skulls discovered in France, England and Belgium, in caves of the close of the quaternary epoch, appear from their characteristics to belong to a Turanian race, to the Uralo-finnish group, and particularly resemble those of the Esthonians. Wherever the Japhetic or pure Indo-European race extended, it seems to have encountered a Turanian population which it conquered and finally amalgamated with itself."—F. Lenormant, *Manual of Ancient Hist. of the East, bk.* 1, *ch.* 4.—"From the 'Shah-nameh,' the great Persian epic, we learn that the Aryan Persians called their nearest non-Aryan neighbours —the Turkic or Turcoman tribes to the north of them—by the name Turan, a word from which we derive the familiar ethnologic term Turanian."—I. Taylor, *Etruscan Researches, ch.* 2.

TURCOMANS, Russian subjugation of the. See RUSSIA: A. D. 1869–1881.

TURDETANI, The.—"There is a tradition that the Turdetani (round Seville) possessed lays from very ancient times, a metrical book of laws, of 6,000 verses, and even historical records. At any rate, this tribe is described as the most civilized of all the Spanish tribes, and at the same time the least warlike."—T. Mommsen, *Hist. of Rome, bk.* 3, *ch.* 7.—"The most mixed portion of the Peninsular population . . . is that of the water-system of the Guadalquiver and the parts immediately south and east of it, . . . the country of the Turdetani and Bastitani, if we look to the ancient populations—Bætica, if we adopt the general name of the Romans, Andalusia in modern geography; . . . it was the Iberians of these parts who were the first to receive foreign intermixture, and the last to lose it."—R. G. Latham, *Ethnology of Europe, ch.* 2.

TURDETANIA.—The ancient name of modern Andalusia, in Spain; known still more anciently as Tartessus.

TURIN PAPYRUS, The.—An Egyptian papyrus preserved in the Turin Museum, for which it was purchased from M. Drovetti, consul-general of France. "If this papyrus were entire, the science of Egyptian antiquities could not possess a more valuable document. It contains a list of all the mythical or historical personages who were believed to have reigned in Egypt, from fabulous times down to a period we

cannot ascertain, because the end of the papyrus is wanting. Compiled under Ramses II. (19th dynasty), that is, in the most flourishing epoch of the history of Egypt, this list has all the characteristics of an official document, and gives us the more valuable assistance, as the name of each king is followed by the duration of his reign, and each dynasty by the total number of years during which it governed Egypt. Unfortunately this inestimable treasure exists only in very small pieces (164 in number), which it is often impossible to join correctly."—F. Lenormant, *Manual of Ancient Hist. of the East, bk.* 3, *ch.* 1, *sect.* 2.

TURKESTAN.—"Few even of the leading authorities are of accord as to the exact meaning of such common expressions as Turkestán or Central Asia. The Russians themselves often designate as Central Asia the second great administrative division of their Asiatic possessions, which is mainly comprised within the Aralo-Caspian depression. But this expression is misguiding in a geographical sense. To the portion of this division directly administered by the Governor-General, whose headquarters are at Tashkent, they give the still more questionable name of Eastern Turkestán — the true Eastern Turkestán, if there be any, lying beyond his jurisdiction in the Chinese province of Kashgaria. . . . Russian Turkestán is bordered on the west by the Caspian, the Ural river and mountains, on the east by the Pamir plateau, the Tian-Shan and Ala-tau ranges separating it from the Chinese Empire, northwards by the low ridge crossing the Kirghis steppes about the 51st parallel, and forming the water-parting between the Aralo-Caspian and Ob basins."—*Stanford's Compendium of Geog. and Travel: Asia, pp.* 391–392.—Of the region sometimes called Chinese Turkestan, the name "Kashgaria," "lately current in Europe, has no raison d'être since the collapse of the independent state founded by Yakub of Kashgar. In the same way the expression 'Kingdom of Khotan' fell into disuse after the city of Khotan had ceased to be the capital. The term 'Little Bokhara,' still in use some thirty years ago, pointed at the former religious ascendancy of Bokhara, but is now all the less appropriate that Bokhara itself has yielded the supremacy to Tashkent. Lastly, the expressions Eastern Turkestan and Chinese Turkestan are still applicable, because the inhabitants are of Turki speech, while the Chinese have again brought the country under subjection."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 2, *ch.* 3.— See, also, Yakoob Beg.

TURKS.

6th Century.—Beginning of their career.—"At the equal distance of 2,000 miles from the Caspian, the Icy, the Chinese, and the Bengal seas, a ridge of mountains is conspicuous, the centre, and perhaps the summit, of Asia, which, in the language of different nations has been styled Imaus, and Caf, and Altai, and the Golden Mountains, and the Girdle of the Earth. The sides of the hills were productive of minerals; and the iron-forges, for the purpose of war, were exercised by the Turks, the most despised portion of the slaves of the great khan of the Geougen. But their servitude could only last till a leader, bold and eloquent, should arise to persuade his countrymen that the same arms which they forged for their masters might become in their own hands the instruments of freedom and victory. They sallied from the mountain; a sceptre was the reward of his advice. . . . The decisive battle which almost extirpated the nation of the Geougen established in Tartary the new and more powerful empire of the Turks. . . . The royal encampment seldom lost sight of Mount Altai, from whence the river Irtish descends to water the rich pastures of the Calmucks, which nourish the largest sheep and oxen in the world. . . . As the subject nations marched under the standard of the Turks, their cavalry, both men and horses, were proudly computed by millions; one of their effective armies consisted of 400,000 soldiers, and in less than fifty years they were connected in peace and war with the Romans, the Persians, and the Chinese. . . Among their southern conquests the most splendid was that of the Nephthalites, or White Huns, a polite and warlike people, who possessed the commercial cities of Bochara and Samarcand, who had vanquished the Persian monarch, and carried their victorious arms along the banks and perhaps to the mouth of the Indus. On the side of the west the Turkish cavalry advanced to the lake Mæotis [Sea of Azov]. They passed that lake on the ice. The khan, who dwelt at the foot of Mount Altai, issued his commands for the siege of Bosphorus, a city the voluntary subject of Rome and whose princes had formerly been the friends of Athens."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 42.—"The name Turks is the collective appellation of a vast number of tribes extending from the neighbourhood of the Lake Baikal, 110° E. longitude, to the eastern boundaries of the Greek and Sclavonic countries of Europe. . . . Although the name of the Turks first became known to the western nations in the sixth century, the people had appeared in the west a century earlier, for there is every reason to believe that the Huns belonged to the Turkish stock. The Turks of Mount Altai are called Thú-kiú by the Chinese writers and are regarded as the same people as the Hiong-nú of earlier times. . . . The Chinese name . . . appears to be a corruption of the Turkish word 'terk' . . . a 'helmit.' The Thú-kiú became very powerful under their leader Tumere, who conquered the Jéujen (the Geougen of Gibbon), united under his sway all the Turkish tribes . . . and assumed the title of Chagan or Khan, A. D. 546."—W. Smith, *Note to above.*

A. D. 815-945.—Slaves and masters of the Caliphate. See MAHOMETAN CONQUEST AND EMPIRE: A. D. 815–945.

A. D. 999-1183.—The Gaznevide empire.—The decline of the Caliphate at Bagdad in the 9th century was signalized by the rise to practically independent power of several dynasties in its Persian and Central Asian dominions. Among these was the dynasty of the Samanides who ruled, for a hundred and twenty-five years, an extensive dominion in northern Persia and modern Afghanistan and in the Turkoman regions to the Oxus and beyond. In this dominion of the Samanides was included the Turkish tribes which had submitted to Islam and which were presently to become the master champions of the faith. Their first attainment of actual empire in the Moslem world was accomplished by the overthrow of the Samanide princes, and the chief instruments of that revolution were two Turks of humble origin — Sebectagi, or Sabektekin, and his son Mahmud. Sebectagi had been a slave (in the service of a high official under the Samanides) who gained the favor of his masters and acquired command of the city and province of Gazna; whence his famous son Mahmud was called the Gaznevide, and the wide conquests which the latter made are sometimes distinguished as the Gaznevide empire. "For him the title of Sultan was first invented [see SULTAN]; and his kingdom was enlarged from Transoxiana to the neighbourhood of Ispahan, from the shores of the Caspian to the mouth of the Indus. But the principal source of his fame and riches was the holy war which he waged against the Gentoos of Hindostan. . . . The Sultan of Gazna surpassed the limits of the conquests of Alexander; after a march of three months, over the hills of Cashmir and Thibet, he reached the famous city of Kinoge, on the Upper Ganges, and, in a naval combat on one of the branches of the Indus, he fought and vanquished 4,000 boats of the natives. Delhi, Lahor, and Multan were compelled to open their gates; the fertile kingdom of Guzarat attracted his ambition and tempted his stay." The throne of Mahmud scarcely outlasted himself. In the reign of his son Massoud, it was nearly overturned by another Turkish horde — later comers into the region of Bokhara from the steppes beyond. In a great battle fought at Zendecan, in Khorassan, A. D. 1038, Massoud was defeated and driven from Persia to a narrowed kingdom in Cabul and the Punjaub, which survived for more than a century longer and then disappeared. —E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 57.

(Seljuk), A. D. 1004-1063. — Conquests of Seldjuk and Togrul Beg.—"The history of the origin of the Seldjukides is obscured by numerous myths, but it appears from it that Seldjuk, or more correctly Seldjik, the son of Tokmak, and Subash, commander of the army of a prince named Pigu or Bogu, were expelled from their native steppes for some crime, and forced to seek their fortunes in strange countries. Seldjuk, with 100 horsemen, 1,000 camels, and 50,000 sheep, migrated to a place on the southern confines of the desert, in the neighbourhood of Djend [described as distant twenty fersakhs from Bokhara]. He settled there and, with all his followers, embraced Islamism." Under Seldjuk and his two grandsons, Togrul and Tchakar, the Seldjukides grew formidable in numbers and power, on the border of the empire of Mahmud the Ghaznevide, then rising on the ruins of the principality of the Samanides. Thinking to control these turbulent kinsmen of his race, Mahmud unwisely proposed to them to quit the country they occupied, between the Oxus and the Jaxartes, and to settle themselves in Khorasan. "In the year . . . (1030), that is, within a year of the death of Sultan Mahmud, we find the Seldjukides west of Merv, on the ground now occupied by the Tekke-Turkomans, in the neighbourhood of the southern cities of Nisa and Abiverd, from which point they molested the rich province of Khorasan by constant raids, as grievously as is done by the Turkomans to this very day." When it was too late, the Ghaznevide Sultan attempted to expel the marauders. His armies were routed, and the grandsons of Seldjuk were soon (A. D. 1039) in undisputed possession of the whole of Khorasan, with the rich and flourishing cities of Merv, Balkh, and Nishabur. A few years later they had pushed forward "over the ruins of the former power of the Buyyides [or Bouides, of Persia] to Azerbaïdjan, and, in the year 446 (1054) the skirmishers of the Turkish army, led by Togrul Beg, penetrated into the interior of the eastern Roman Empire [that is, into Asia Minor]; and although the bold inhabitants of the desert in their raid on the land of the Cæsars were bent rather on plunder than on actual conquest, yet even their temporary success against the great name of Rome — so long one of awe to the ancient Asiatic — increased enormously the prestige and reputation of the Seldjukides. Togrul Beg was said to meditate a pilgrimage to Mecca, with the object at the same time of clearing the road thither, which the state of anarchy in Bagdad had long rendered unsafe."—A. Vámbéry, *Hist. of Bokhara, ch.* 6.—"Togrul Beg, under pretence of a pilgrimage to Mekka had entered Irak at the head of a strong army, and sought to obtain admission into Baghdad. The khalif, in opposition to the advice of his vizier and the officers of the Turkish militia, consented; on the 22nd Ramadan, 447 (December, 1050), the name of Togrul was inserted in the public prayer; and three days after he made his entry into the city. He had taken an oath, before entering, to be the faithful and obedient servant of the khalif; but it is needless to add that he broke this immediately afterwards, and occupied the city in force. A dispute broke out between the Seljuk soldiers and some shop-keepers. The Baghdad Turks took the side of the citizens, the foreigners were driven out, and several of them killed and wounded. This riot was followed by a general attack upon the ill-fated city by the army of Togrul Beg. It was useless for the khalif and his vizier to protest their innocence. The Turkish chief denounced them as the murderers of his soldiers, and summoned the vizier to his camp to

explain his conduct. On his arrival there he was arrested and flung into prison. With this occurrence the rule of the Bouides in Baghdad may be said to have terminated, and that of the Seljuks commenced. Togrul Beg remained for a year inactive in Baghdad, neither visiting the khalif nor heeding his entreaties to put an end to the ravages and outrages perpetrated by his fierce and lawless soldiery on the wretched townspeople." The khalif was forced, nevertheless, to crown Sultan Togrul with two crowns, one to represent the sovereignty of Persia and the other the sovereignty of Arabia, and to confer on him the title of "The Sultan of the Court, the Right Hand of the Chief of Believers, the King of the East and of the West." The Seljuk sultan was now master of the Asiatic Mahometan empire. But civil war was still protracted for a period, by struggles of the partisans of the Bouides, assisted by the Fatimite Kalif of Egypt, and the unfortunate city of Baghdad suffered terribly at the hands of each party in turn. Togrul Beg, in the end, destroyed the opposition to his rule, and was at the point of marrying one of the kalif's daughters, when a sudden illness ended his life, A. D. 1063. He was succeeded by his nephew, Alp Arslan, who extended the empire of the Seljukides in Asia Minor and Armenia. —R. D. Osborn, *Islam under the Khalifs of Baghdad, pt.* 3, *ch.* 2.

A. D. 1063-1073. — Conquests of Alp Arslan.—"Alp Arslan, the nephew and successor of Togrul Beg, carried on the havoc and devastation which had marked the career through life of his uncle. Togrul Beg had on two or three occasions invaded the Asiatic territories of the Byzantine Emperor; Alp Arslan carried these partial conquests to completion. He invaded in person the northern parts of Armenia and Iberia. He laid waste the country in the cruellest manner, for it was the notion of these barbarians that a country was not really conquered unless it was also depopulated. Iberia had been long celebrated for the industry of its inhabitants, the wealth of its numerous towns, and the valour of its people. There is no doubt they could have flung back the invaders had the Byzantine Empire come to their aid. But avarice was the dominant passion of the Emperor, Constantine X., and rather than disburse his loved hoards, he preferred to look idly on, while his fairest provinces were laid waste and overrun. The country was, in consequence, compelled to submit to the Seljuk Turks, and the invaders settling upon it, like a swarm of locusts, swiftly converted the happiest and most flourishing portion of Asia into a scene of poverty and desolation. From Iberia, Alp Arslan passed into Armenia. Ani, the capital, was stormed and taken, after a gallant defence, on the 6th June, 1064. . . . So great was the carnage that the streets were literally choked up with dead bodies; and the waters of the river were reddened from the quantity of bloody corpses."—R. D. Osborn, *Islam under the Khalifs of Baghdad, pt.* 3, *ch.* 2. —"So far as one can judge from the evidence of modern and mediæval travellers and of Byzantine historians, Asia Minor, at the time of the Seljuk invasion of Alparslan, was thickly occupied by races who were industrious, intelligent, and civilised — races with a certain mixture of Greek blood and mostly Greek as to language. The numerous provincial cities were the centres of civilisation. Their walls and amphitheatres, their works of art, aqueducts, and other public buildings, give evidence of a long-continued sense of security, of peaceful and progressive peoples, and of a healthy municipal life. Wealth was widely diffused. . . . It was against this prosperous portion of the Empire, which had contributed largely to the wealth of the capital, that Alparslan turned his attention when the border states were no longer able to resist his progress. . . . The Strong Lion of the Seljuks devoured many cities and devastated the fairest provinces. Cappadocia was laid waste; the inhabitants of its capital, Cæsarea, were massacred. . . . Mesopotamia, Mitylene, Syria, and Cilicia were plundered."—E. Pears, *The Fall of Constantinople, ch.* 2.—The career of Alp Arslan in Asia Minor was opposed by a courageous and vigorous emperor, Romanus Diogenes, or Romanus IV.; but Romanus exposed himself and his army rashly to the chances of a battle at Manzikert, A. D. 1071, on which all was staked. He lost; his army was routed, and he, himself, was taken prisoner. He was released on signing a treaty of peace and agreeing to pay a heavy ransom; but a revolution at Constantinople meantime had robbed him of the throne, deprived him of the means of fulfilling his engagements, and brought upon him, soon afterwards, a cruel end. Alp Arslan, provoked by the repudiation of the treaty, revenged himself on the ill-fated country which lay at his mercy. "Every calamity of this unfortunate period sinks into insignificance when compared with the destruction of the greater part of the Greek race, by the ravages of the Seljouk Turks in Asia Minor."—G. Finlay, *Hist. of the Byzantine and Greek Empires, bk.* 3, *ch.* 1, *sect.* 2.

A. D. 1073-1092. — The empire of Malek Shah and its subordinate Sultans.—Alp Arslan, assassinated in 1073, "was succeeded by his son, Malek Shah, in whose reign the power of the Seljukian Turks attained its greatest height. . . . Turkestan, the home of his race, including Bokhara and Samarcand, was annexed by Malek, and the rule of the shepherd Sultan was admitted at Cashgar. In addition to Persia and the countries just mentioned, his territory included at one time nearly the whole of what is now Turkey in Asia. . . . The Seljukian empire, however, broke up on the death of Malek, which took place in 1092, and, after a period of civil war, was divided into four parts. . . . The only one of the divisions . . . with which I am concerned is that which was carved out of the dominions of the Roman empire, and of which the capital was, for the most part, at Iconium, a city which to-day, under the name of Konieh, retains somewhat of a sacred character among the Turks, because of its connection with the first Sultans who obtained the right to be Caliphs. Sultan Malek, eighteen years before his death, had prevented a quarrel with Suliman, his cousin, by consenting to allow him to be Sultan of the Seljuks in the lands of the Christian empire. With Suliman there begins the famous line of robber chiefs who are known as Seljukian Sultans of Rome or Roum, or as Sultans of Iconium."—E. Pears, *The Fall of Constantinople, ch.* 2.—"The dominion of Suleiman over the greater part of Asia Minor was recognised by a treaty with the Byzantine empire in 1074, when Michael VII. purchased the assistance of a Turkish aux-

iliary force against the rebellion of Oursel and his own uncle John Dukas. Nicephorus III. ratified the treaty concluded with Michael VII., augmented the power of the Turks, and abandoned additional numbers of Christians to their domination, to gain their aid in dethroning his lawful prince; and Nicephorus Melissenos, when he rebelled against Nicephorus III., repeated a similar treason against the traitor, and, in hopes of gaining possession of Constantinople, yielded up the possession of Nicæa to Suleiman, which that chief immediately made the capital of his dominions. . . . When Alexius ascended the throne [Alexius I. A. D. 1081], the Seljouk conquests in Asia Minor were still considered as a portion of the dominions of the Grand Sultan Malekshah, the son of Alp Arslan, and Suleiman, the sultan of Nicæa, was only his lieutenant, though as a member of the house of Seljouk, and as cousin of Malekshah, he was honoured with the title of Sultan. The prominent position which his posterity occupied in the wars of the Crusaders, their long relations with the Byzantine empire, and the independent position they held as sultans of Iconium, have secured to them a far more lasting place in history than has been obtained by the superior but less durable dynasty of the grand sultans. . . . Toutoush, the brother of Malekshah, who acted as his governor at Damascus at the same time, became the founder of the Syrian dynasty of Seljouk sultans."—G. Finlay, *Hist. of the Byzantine and Greek Empires, from* 716 *to* 1453, *bk.* 3, *ch.* 2, *sect.* 1.—The empire of Malek Shah "was as vast as that of the Sassanian kings in the height of their glory. He encouraged the cultivation of science and literature, and his reign is famous for the reformation of the Calendar [in which work Omar el-Khayyam, the poet, was one of the astronomers employed]. An assembly of all the astronomers of Persia adopted a system of computing time which Gibbon says 'surpasses the Julian and approaches the accuracy of the Gregorian æra.' It was called the Jalalæan æra, from Jalalu-'d-Din, 'Glory of the Faith,' one of the titles of Malik-Shah, and commenced on March 15, 1079."—C. R. Markham, *Hist. of Persia, ch.* 6.

A. D. 1092-1160.—Dissolution of the empire of Malek Shah.—"Melikshah's reign was certainly the culminating point of the glory of the Seldjukides. . . . Mindful of the oriental adage, 'Perfection and decay go hand in hand,' he determined as far as possible to provide, during his own lifetime, against discord breaking out amongst those who should come after him, by dividing the empire between his different relations. Anatolia was given to Suleïman Shah, whose family had hitherto governed Gazan; Syria fell to his brother Tutush, the adversary of the Crusaders; Nushtekin Gartcha, who had raised himself from slavery to the rank of generalissimo, and who became later the founder of the dynasty of the Khahrezmides, was invested with Khahrezm; Aksonghar got Aleppo; Tchekermish Mosul, Kobulmish Damascus, Khomartekin Fars, and his son Sandjar was entrusted with the administration of Khorasan and Transoxania. These precautions proved, however, ineffectual to preserve the dynasty of the Seljukides from the common fate of oriental sovereign races, for after the death of Melikshah, which took place in 485 (1092), his son Berkyaruk (the Very Brilliant One) had scarcely ascended the throne before the flames of discord were kindled amongst the numerous members of the family, and they speedily fell a prey to the generals and the other relations of the deceased prince." Sandjar, who died in 1160, "was almost the only one of all his race who took to heart the decay of their power in their old hereditary dominions, or made any earnest endeavour to arrest it."—A. Vâmbéry, *Hist. of Bokhara, ch.* 6.

(Ottoman): A. D. 1240-1326.—Origin and rise of the modern Turkish power.—On the final defeat and death, in Kurdistan, of the last Khuarezmian or Carizmian prince, who was pursued relentlessly by the Mongols of Jingis Khan and his successors, there was dissolved an army which included various Turkish hordes. The fragments of this Khuarezmian force were scattered and played several important parts in the history of the troubled time. "The bolder and more powerful chiefs invaded Syria, and violated the holy sepulchre of Jerusalem; the more humble engaged in the service of Aladin, Sultan of Iconium, and among these were the obscure fathers of the Ottoman line. They had formerly pitched their tents near the southern bank of the Oxus, in the plains of Mahan and Nesa; and it is somewhat remarkable that the same spot should have produced the first authors of the Parthian and Turkish empires. At the head or in rear of a Carizmian army, Soliman Shah was drowned in the passage of the Euphrates. His son Orthogrul became the soldier and subject of Aladin, and established at Surgut, on the banks of the Sangar, a camp of four hundred families or tents, whom he governed fifty-two years both in peace and war. He was the father of Thaman, or Athman, whose Turkish name has been melted into the appellation of the Caliph Othman; and if we describe that pastoral chief as a shepherd and a robber, we must separate from those characters all idea of ignominy and baseness. Othman possessed, and perhaps surpassed, the ordinary virtues of a soldier, and the circumstances of time and place were propitious to his independence and success. The Seljukian dynasty was no more, and the distance and decline of the Mogul Khans soon enfranchised him from the control of a superior. He was situate on the verge of the Greek empire. The Koran sanctified his 'gazi,' or holy war, against the infidels; and their political errors unlocked the passes of Mount Olympus, and invited him to descend into the plains of Bithynia. . . . It was on the 27th of July, in the year 1299 of the Christian era, that Othman first invaded the territory of Nicomedia; and the singular accuracy of the date seems to disclose some foresight of the rapid and destructive growth of the monster. The annals of the twenty-seven years of his reign would exhibit a repetition of the same inroads; and his hereditary troops were multiplied in each campaign by the accession of captives and volunteers. Instead of retreating to the hills, he maintained the

most useful and defensible posts, fortified the towns and castles which he had first pillaged; and renounced the pastoral life for the baths and palaces of his infant capitals. But it was not till Othman was oppressed by age and infirmities that he received the welcome news of the conquest of Prusa, which had been surrendered by famine or treachery to the arms of his son Orchan. . . . From the conquest of Prusa we may date the true era of the Ottoman empire. The lives and possessions of the Christian subjects were redeemed by a tribute or ransom of thirty thousand crowns of gold; and the city, by the labors of Orchan, assumed the aspect of a Mahometan capital."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 64.—"Osman is the real Turkish name, which has been corrupted into Othman. The descendants of his subjects style themselves Osmanlis, which has in like manner been corrupted into Ottoman."—Dr. W. Smith, *Note to Gibbon, as above.*

A. D. 1326-1359.—Progress of conquests in Asia Minor.—The Janissaries.—"Orchan [the son and successor of Othman] had captured the city of Nicomedia in the first year of his reign (1326); and with the new resources for warfare which the administrative genius of his brother [Alaeddin] placed at his command, he speedily signalised his reign by conquests still more important. The great city of Nice [Nicæa] (second to Constantinople only in the Greek Empire) surrendered to him in 1330. . . . Numerous other advantages were gained over the Greeks: and the Turkish prince of Karasi (the ancient Mysia), who had taken up arms against the Ottomans, was defeated; and his capital city, Berghama (the ancient Pergamus), and his territory, annexed to Orchan's dominions. On the conquest of Karasi, in the year 1336 of our era, nearly the whole of the north-west of Asia Minor was included in the Ottoman Empire; and the four great cities of Brusa, Nicomedia, Nice, and Pergamus had become strongholds of its power. A period of twenty years, without further conquests, and without war, followed the acquisition of Karasi. During this time the Ottoman sovereign was actively occupied in perfecting the civil and military institutions which his brother had introduced; in securing internal order, in founding and endowing mosques and schools, and in the construction of vast public edifices. . . . Orchan died in the year 1359 of our era, at the age of seventy-five, after a reign of thirty-three years, during which the most important civil and military institutions of his nation were founded, and the Crescent was not only advanced over many of the fairest provinces of Asia, but was also planted on the European continent."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 2.—"It is with Othman's son Orkhan that the Ottoman Empire really begins. He threw off his nominal allegiance to the Sultan [of Iconium], though he still bore only the title of Emir. And in his time the Ottomans first made good their footing in Europe. But while his dominion was still only Asiatic, Orkhan began one institution which did more than anything else firmly to establish the Ottoman power. This was the institution of the tribute children. By the law of Mahomet . . . the unbeliever is allowed to purchase life, property, and the exercise of his religion, by the payment of tribute. Earlier Mahometan rulers had been satisfied with tribute in the ordinary sense. Orkhan first demanded a tribute of children. The deepest of wrongs, that which other tyrants did as an occasional outrage, thus became under the Ottomans a settled law. A fixed proportion of the strongest and most promising boys among the conquered Christian nations were carried off for the service of the Ottoman princes. They were brought up in the Mahometan faith, and were employed in civil or military functions, according to their capacity. Out of them was formed the famous force of the Janissaries, the new soldiers who, for three centuries, as long as they were levied in this way, formed the strength of the Ottoman armies. These children, torn from their homes and cut off from every domestic and national tie, knew only the religion and the service into which they were forced, and formed a body of troops such as no other power, Christian or Mahometan, could command. . . . While the force founded by Orkhan lasted in its first shape, the Ottoman armies were irresistible. But all this shews how far the Ottomans were from being a national power. Their victories were won by soldiers who were really of the blood of the Greeks, Slaves, and other conquered nations. In the same way, while the Ottoman power was strongest, the chief posts of the Empire, civil and military, were constantly held, not by native Turks, but by Christian renegades of all nations. The Ottoman power in short was the power, not of a nation, but simply of an army."—E. A. Freeman, *The Ottoman Power in Europe, ch.* 4.—"The name of Yeni Tscheri, which means 'new troops,' and which European writers have turned into Janissaries, was given to Orchan's young corps by the Dervish Hadji Beytarch."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 2.

A. D. 1360-1389.—The conquests in Europe of Amurath I.—"The dissensions of the elder and younger Andronicus [Emperors at Constantinople, the younger—a grandson—in revolt and the elder finally deposed, A. D. 1320–1328], and the mistaken policy of Cantacuzene [Great Domestic of the empire, regent, after the death of Andronicus the younger, A. D. 1341, and then usurper of the throne from 1341 until 1355], first led to the introduction of the Turks into Europe; and the subsequent marriage of Orchan with a Grecian princess was acceded to by the Byzantine court as a faint bond of peace between a dreaded conqueror and a crouching state. The expectation of tranquillity was, however, fatally blasted; and, in the last quarrel of Cantacuzene with his pupil [John Palæologus, the youthful son of Andronicus the younger, who was deprived of his crown for fourteen years by Cantacuzene], the disastrous ambition of the former opened the path of Solyman, the son of Orchan, across the Hellespont [A. D. 1356], and laid the northern provinces of the kingdom open to the temporary ravages of the barbarians, thus inflicting a lasting and irremediable injury on the liberties of Christendom. The exploits of Solyman, however, led to no other permanent results than the example which they left to the ambition of Amurath I., who, amongst his earliest achievements, led his victorious army across the Hellespont [A. D. 1360], ravaged the extended district from Mount Hæmus to the Straits, and, taking possession of Adrianople [A. D. 1361], made it the first seat of his royalty, and the first

shrine of Mahomedanism in Europe. His conquests had now drawn a circle round the enfeebled dominions of the Emperor; and the submission of John Palæologus, together with his political views in more distant quarters, alone prevented Amurath from contracting the circumference to the centre, and annihilating the empire of the East, by seating himself on the throne of Byzantium. For the present, he turned his back upon the city, and pursued his course towards the wilds of Bulgaria and Servia."—Sir J. E. Tennent, *Hist. of Modern Greece, v.* 1, *ch.* 4.—"Hitherto the Turkish victories in Europe had been won over the feeble Greeks; but the Ottomans now came in contact with the far more warlike Sclavonic tribes, which had founded kingdoms and principalities in Servia and Bosnia. Amurath also menaced the frontiers of Wallachia and Hungary. The Roman See, once so energetic in exciting the early crusades, had disregarded the progress of the new Mahometan power, so long as the heretical Greeks were the only sufferers beneath its arms. But Hungary, a country that professed spiritual obedience to the Pope, a branch of Latin Christendom, was now in peril; and Pope Urban V. preached up a crusade against the infidel Turks. The King of Hungary, the princes of Servia, of Bosnia and Wallachia, leagued together to drive the Ottomans out of Europe; and their forces marched towards Adrianople until they crossed the river Marizza at a point not more than two days' journey from that city." A single battle, fought on the Marizza, in 1363, broke this first Sclavonic league against the Turks, and Amurath proceeded in his acquisition of towns and territory from the Servians and Bulgarians until 1376, when both people purchased a short peace, the former by paying a heavy annual tribute of money and soldiers, the latter by giving their king's daughter to the Turk. The peace thus secured only gave an opportunity to the Sclavic nations to organize one more great attempt to cast out their aggressive and dangerous neighbor. Servia led the movement, and was joined in it by the Bulgarians, the Bosnians, and the Skipetars of Albania, with aid likewise promised and rendered from Hungary, Wallachia, and Poland. But nothing prospered in the undertaking; it served the ambition of the Turks and quickened their conquest of southeastern Europe. Amurath fell upon Bulgaria first (A. D. 1389), broke down all resistance, dethroned the king and annexed his state to the Ottoman dominions. A few weeks later in the same year, on the 27th of August, 1389, the great and famous battle of Kossova was fought, which laid the heavy yoke of Turkish tyranny upon the necks of the Servian people, and the memory of which has been embalmed in their literature. Amurath was assassinated in the hour of victory by a despairing Servian nobleman, but lived long enough to command the execution of the captive Servian king. —Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 3.

A. D. 1389-1403.—The conquests of Bajazet.—The Emir becomes Sultan.—His overthrow and capture by Timour.—"The character of Bajazet, the son and successor of Amurath, is strongly expressed in his surname of Ilderim, or the Lightning; and he might glory in an epithet which was drawn from the fiery energy of his soul and the rapidity of his destructive march. In the fourteen years of his reign he incessantly moved at the head of his armies, from Boursa to Adrianople, from the Danube to the Euphrates. . . . No sooner had he imposed a regular form of servitude on the Servians and Bulgarians than he passed the Danube to seek new enemies and new subjects in the heart of Moldavia. Whatever yet adhered to the Greek empire in Thrace, Macedonia, and Thessaly, acknowledged a Turkish master. . . . The humble title of emir was no longer suitable to the Ottoman greatness; and Bajazet condescended to accept a patent of sultan from the caliphs who served in Egypt under the yoke of the Mamelukes—a last and frivolous homage that was yielded by force to opinion, by the Turkish conquerors to the House of Abbas and the successors of the Arabian prophet. The ambition of the sultan was inflamed by the obligation of deserving this august title; and he turned his arms against the kingdom of Hungary, the perpetual theatre of the Turkish victories and defeats. Sigismond, the Hungarian king, was the son and brother of the emperors of the West; his cause was that of Europe and the Church; and on the report of his danger, the bravest knights of France and Germany were eager to march under his standard and that of the cross. In the battle of Nicopolis [September 28, A. D. 1396], Bajazet defeated a confederate army of 100,000 Christians, who had proudly boasted that if the sky should fall they could uphold it on their lances. The far greater part were slain or driven into the Danube; and Sigismond, escaping to Constantinople by the river and the Black Sea, returned, after a long circuit, to his exhausted kingdom. In the pride of victory, Bajazet threatened that he would besiege Buda; that he would subdue the adjacent countries of Germany and Italy; and that he would feed his horse with a bushel of oats on the altar of St. Peter at Rome. His progress was checked, not by the miraculous interposition of the apostle, not by a crusade of the Christian powers, but by a long and painful fit of the gout. . . . At length the ambition of the victorious sultan pointed to the conquest of Constantinople; but he listened to the advice of his vizir, who represented that such an enterprise might unite the powers of Christendom in a second and more formidable crusade. His epistle to the emperor was conceived in these words: 'By the divine clemency, our invincible scimitar has reduced to our obedience almost all Asia, with many and large countries in Europe, excepting only the city of Constantinople; for beyond the walls thou hast nothing left. Resign that city; stipulate thy reward; or tremble for thyself and thy unhappy people at the consequences of a rash refusal.' But his ambassadors were instructed to soften their tone, and to propose a treaty, which was subscribed with submission and gratitude. A truce of ten years was purchased by an annual tribute of thirty thousand crowns of gold." The truce was soon broken by Bajazet, who found a pretext for again demanding the surrender of Constantinople. He had established his blockade of the city and would surely have won it by famine or assault if Timour's invasion of Asia Minor (A. D.

1402) had not summarily interrupted his plans and ended his career. Defeated at the battle of Angora and taken prisoner by the Tartar conqueror, he died a few months later — whether caged like a beast or held in more honorable captivity is a question in some dispute.— E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 64–65. —See, also, Timour.

A. D. 1393.—Wallachian capitulation. See Balkan and Danubian States: 14–18th Centuries (Roumania, etc.).

A. D. 1402-1451.—Prostration and recovery. —Conquests of Mahomet and Amurath II.— It is one of the marvels of history that the Ottoman empire, broken and dismembered by Timour, recovered its vigor and re-entered upon a long career. After the fall of Bajazet, three fragments of his dominions were held by three of his surviving sons, while other portions were transferred by Timour to princes of the old Seljuk house. Civil war broke out between the brothers of the Ottoman race; it resulted in the triumph of Mahomet, the youngest (A. D. 1413), who reunited a large part of the dominions of his father. He reigned but eight years, which were years of peace for the Greeks, with whom Mahomet maintained a friendly intercourse. His son, Amurath II., was provoked to renew the state of war, and a formidable attack upon Constantinople was made in August, 1422. The first assault failed, and disturbances at home recalled Amurath before he could repeat it. The Roman capital was reprieved for thirty years; but its trembling emperor paid tribute to the sultan and yielded most of the few cities that remained to him outside of his capital. The Ottoman power had become threatening again in Europe, and Servians, Bosnians, Albanians, Wallachians, Hungarians, and Poles now struck hands together in a combination, once more, to oppose it. "A severe struggle followed, which, after threatening the utter expulsion of the house of Othman from Europe, confirmed for centuries its dominion in that continent, and wrought the heavier subjugation of those who were then seeking to release themselves from its superiority. In 1442 Amurath was repulsed from Belgrade; and his generals, who were besieging Hermanstadt, in Transylvania, met with a still more disastrous reverse. It was at Hermanstadt that the renowned Hunyades first appeared in the wars between the Hungarians and the Turks. He was the illegitimate son of Sigismond, King of Hungary, and the fair Elizabeth Morsiney. In his early youth he gained distinction in the wars of Italy; and Comines, in his memoirs, celebrates him under the name of the White Knight of Wallachia. After some campaigns in Western Christendom, Hunyades returned to protect his native country against the Ottomans." At Hermanstadt, and again at Vasag, Hunyades defeated the Turks with great slaughter and rivalled them in the ferocity with which his prisoners were treated. His fame now gave a great impulse to the Crusade against the Turks which Pope Eugenius had preached, and drew volunteers to his standard from all the nations of the West. In 1443, Hunyades led a splendid and powerful army across the Danube near Semendra, drove the Turks beyond the Balkans, forced the passage of the mountains with a boldness and a skill that is compared with the exploits of Hannibal and Napoleon, and extorted from the Sultan a treaty (of Szegeddin, July 12, 1444) which rescued a large Christian territory from the Moslem yoke. "The Sultan resigned all claims upon Servia and recognised George Brankovich as its independent sovereign. Wallachia was given up to Hungary." But the peace which this treaty secured was brief; Christian perfidy destroyed it, and the penalty was paid by whole centuries of suffering and shame for the Christians of the Danubian states. "Within a month from the signature of the treaty of Szegeddin the Pope and the Greek Emperor had persuaded the King of Hungary and his councillors to take an oath to break the oath which had been pledged to the Sultan. They represented that the confessed weakness of the Ottomans, and the retirement of Amurath [who had placed his son Mahomet on the throne and withdrawn from the cares of sovereignty] to Asia, gave an opportunity for eradicating the Turks from Europe which ought to be fully employed. The Cardinal Julian [legate of the Pope] pacified the conscientious misgivings which young King Ladislaus expressed, by his spiritual authority in giving dispensation and absolution in the Pope's name. . . . On the 1st of Sept., the King, the legate, and Hunyades, marched against the surprised and unprepared Turks with an army of 10,000 Poles and Hungarians. The temerity which made them expect to destroy the Turkish power in Europe with so slight a force was equal to the dishonesty of their enterprise." They advanced through Bulgaria to the Black Sea, and southward along its coast as far as Varna, which they took. There they were called to account. Amurath had resumed the sceptre, put himself at the head of 40,000 of the best warriors of Islam and on the 10th November he dashed them upon the Christian forces at Varna, with the broken treaty borne like a banner at their head. His victory was overwhelming. Cardinal Julian and the King of Hungary were both among the slain. Hunyades fled with a little remnant of followers and escaped to try fortune in other fields. "This overthrow did not bring immediate ruin upon Hungary, but it was fatal to the Sclavonic neighbours of the Ottomans, who had joined the Hungarian King against them. Servia and Bosnia were thoroughly reconquered by the Mahometans; and the ruin of these Christian nations, which adhered to the Greek Church, was accelerated by the religious intolerance with which they were treated by their fellow Christians of Hungary and Poland, who obeyed the Pope and hated the Greek Church as heretical. . . . The bigotry of the Church of Rome in preaching up a crusade against the sect of the Patarenes, which was extensively spread in that country [Bosnia], caused the speedy and complete annexation of an important frontier province to the Ottoman Empire. Seventy Bosnian fortresses are said to have opened their gates to the Turks within eight days. The royal house of Bosnia was annihilated, and many of her chief nobles embraced Mahometanism to avoid a similar doom." After once more attempting to escape from the throne, and being recalled by domestic disturbances, Amurath reigned yet six years, extending his dominions in the Peloponnesus, defeating once more his old antagonist, Hunyades, who invaded Servia (1448), but being successfully defied in Albania by the heroic Scanderbeg. He died in

1451.—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 4.

A. D. 1451-1481.—Conquest of Constantinople.—The Empire organized and perfected by Mahomet II.—Mahomet II., son of Amurath II., "finished the work of his predecessors; he made the Ottoman power in Europe what it has been ever since. He gave a systematic form to the customs of his house and to the dominion which he had won. His first act was the murder of his infant brother, and he made the murder of brothers a standing law of his Empire. He overthrew the last remnants of independent Roman rule, of independent Greek nationality, and he fixed the relations which the Greek part of his subjects were to bear both towards their Turkish masters and towards their Christian fellow-subjects. He made the northern and western frontiers of his Empire nearly what they still remain. The Ottoman Empire, in short, as our age has to deal with it, is, before all things, the work of Mahomet the Conqueror. The prince whose throne was fixed in the New Rome held altogether another place from even the mightiest of his predecessors. Mahomet had reigned two years, he had lived twenty-three, on the memorable day, May 29th 1453, when the Turks entered the city of the Cæsars and when the last Emperor, Constantine, died in the breach [see CONSTANTINOPLE: A. D. 1453]. . . . And now that the Imperial city was at last taken, Mahomet seemed to make it his policy both to gather in whatever remained unconquered, and to bring most of the states which had hitherto been tributary under his direct rule. Greece itself, though it had been often ravaged by the Turks, had not been added to their dominions. The Emperors had, in the very last days of the Empire before the fall of Constantinople, recovered all Peloponnesos, except some points which were held by Venice. Frank Dukes also reigned at Athens, and another small duchy lingered on in the islands of Leukas and Kephallenia and on the coasts of Akarnania. The Turkish conquest of the mainland, again saving the Venetian points, was completed by the year 1460, but the two western islands were not taken until 1479. Euboia was conquered in 1471. . . . The Empire of Trebizond was conquered in 1461, and the island of Lesbos or Mitylene in 1462. There was now no independent Greek state left. Crete, Corfu, and some smaller islands and points of coast, were held by Venice, and some of the islands of the Ægean were still ruled by Frank princes and by the Knights of Saint John. But, after the fall of Trebizond, there was no longer any independent Greek state anywhere, and the part of the Greek nation which was under Christian rulers of any kind was now far smaller than the part which was under the Turk. While the Greeks were thus wholly subdued, the Slaves fared no better. In 1459 Servia was reduced from a tributary principality to an Ottoman province, and six years later Bosnia was annexed also. . . . One little fragment of the great Slavonic power in those lands alone remained. The little district of Zeta, a part of the Servian kingdom, was never fully conquered by the Turks. One part of it, the mountain district called Tsernagora or Montenegro, has kept its independence to our times. Standing as an outpost of freedom and Christendom amid surrounding bondage, the Black Mountain has been often attacked, it has been several times overrun, but it has never been conquered. . . . To the south of them, the Christian Albanians held out for a long time under their famous chief George Castriot or Scanderbeg. After his death in 1459, they also came under the yoke. These conquests of Mahomet gave the Ottoman dominion in Europe nearly the same extent which it has now. His victories had been great, but they were balanced by some defeats. The conquest of Servia and Bosnia opened the way to endless inroads into Hungary, South-eastern Germany and North-eastern Italy. But as yet these lands were merely ravaged, and the Turkish power met with some reverses. In 1456 Belgrade was saved by the last victory of Huniades [see HUNGARY: A. D. 1442–1458], and this time Mahomet the Conqueror had to flee. In another part of Europe, if in those days it is to be counted for Europe, Mahomet won the Genoese possessions in the peninsula of Crimea [A. D. 1475], and the Tartar Khans who ruled in that peninsula and the neighbouring lands became vassals of the Sultan. . . . The last years of Mahomet's reign were marked by a great failure and a great success. He failed to take Rhodes [A. D. 1480], which belonged to the Knights of Saint John; but his troops suddenly seized on Otranto in Southern Italy. Had this post been kept, Italy might have fallen as well as Greece; but the Conqueror died the next year, and Otranto was won back."—E. A. Freeman, *The Ottoman Power in Europe, ch.* 4.

A. D. 1481-1520.—The sad story of Prince Jem and the Christians.—Massacre of the Shiites.—Selim's conquests in Persia, Syria and Egypt.—The Sultan becomes the successor of the Khalifs, the chief of Islam.—"The long reign of Bayezid [or Bajazet] II. (1481–1512) which surpassed that of his father and grandfather, so that the three together nearly completed a century, was marked by a general lethargy and incapacity on the part of the Turkish Government. . . . Family dissensions were indeed the leading incidents of Bayezid's reign, and for many years he was kept in a state of anxious uncertainty by the ingenious intrigues of the Christian Powers concerning the custody of his brother, the unfortunate Prince Jem. The adventures of Prince Jem (the name is short for Jemshid, but in Europe it has been written Zizim) cast a very unpleasant light upon the honour of the Christians of his time, and especially upon the Knights of Rhodes. Of the two sons of Mohammed II. Jem was undoubtedly the one who was by nature fitted to be his successor. . . . Jem however, was not the first to hear of his father's death, and a year's warfare against his brother ended in his own defeat. The younger prince then sought refuge with the Knights of

Rhodes, who promised to receive him hospitably, and to find him a way to Europe, where he intended to renew his opposition to his brother's authority. D'Aubusson, the Grand Master of Rhodes, was too astute a diplomatist to sacrifice the solid gains that he perceived would accrue to his Order for the sake of a few paltry twinges of conscience; and he had no sooner made sure of Prince Jem's person, and induced him to sign a treaty, by which, in the event of his coming to the throne, the Order was to reap many sterling advantages, than he ingeniously opened negotiations with Sultan Bayezid, with a view to ascertain how much gold that sovereign was willing to pay for the safe custody of his refractory brother. It is only fair to say that Bayezid, who had no particle of cruelty in his nature, did all he could to come to terms with Jem. . . . All negotiation and compromise having proved ineffectual, he listened to the proposals of the crafty Grand Master, and finally agreed to pay him 45,000 ducats a year, so long as he kept Jem under his surveillance. The Knights of St. John possessed many commanderies, and the one they now selected for Jem's entertainment was at Nice, in the south of France. In 1482 he arrived there, wholly unconscious of the plots that were being woven about him. . . . On one pretext or another the knights contrived to keep their prisoner at Nice for several months, and then transferred him to Rousillon, thence to Puy, and next to Sassenage, where the monotonies of captivity were relieved by the delights of love, which he shared with the daughter of the commandant, the beautiful Philipine Hélène, his lawful spouse being fortunately away in Egypt. . . . Meanwhile Grand Master D'Aubusson was driving a handsome trade in his capacity of jailor. All the potentates of Europe were anxious to obtain possession of the claimant to the Ottoman throne, and were ready to pay large sums in hard cash to enjoy the privilege of using this specially dangerous instrument against the Sultan's peace. D'Aubusson was not averse to taking the money, but he did not wish to give up his captive; and his knightly honour felt no smirch in taking 20,000 ducats from Jem's desolate wife (who probably had not heard of the fair Hélène) as the price of her husband's release, while he held him all the tighter. Of such chivalrous stuff were made the famous knights of Rhodes; and of such men as D'Aubusson the Church made cardinals! A new influence now appeared upon the scene of Jem's captivity. Charles VIII. of France considered that the Grand Master had made enough profit out of the unlucky prince, and the king resolved to work the oracle himself. His plan was to restore Jem to a nominal sultanate by the aid of Matthias Corvinus, Ferdinand of Naples, and the Pope. He took Jem out of the hands of the knights, and transferred him to the custody of Innocent VIII., who kindly consented to take care of the prince for the sum of 40,000 ducats a year, to be paid by his grateful brother at Constantinople." Innocent's successor, the terrible Borgia, Alexander VI., unsatisfied with this liberal allowance, opened negotiations with Constantinople looking to the payment of some heavy lump sum for summary riddance of poor Jem. But the sinister bargain was interrupted by Charles VIII. of France, who invaded Italy at this juncture, passed through Rome, and took the captive prince in his train when he went on to Naples. Jem died on the way, and few have doubted that Pope Alexander poisoned him, as he had poisoned many before. "The curious conclusion one draws from the whole melancholy tale is, that there was not apparently a single honest prince in Christendom to take compassion upon the captive." In 1512 Bayezid was deposed by his son Selim, and did not long survive the humiliation. To avoid troubles of the Prince Jem character, Selim slew all his brothers and nephews, eleven in number, making a family solitude around the throne. Then he prepared himself for foreign conquest by exterminating the sometimes troublesome sect of the Shias, or Shiites, in his dominions. "A carefully organized system of detectives, whom Selim distributed throughout his Asiatic provinces, revealed the fact that the number of the heretical sect reached the alarming total of 70,000. Selim . . . secretly massed his troops at spots where the heretics chiefly congregated, and at a given signal 40,000 of them were massacred or imprisoned. . . . Having got rid of the enemy within his gates, Selim now proceeded to attack the head of the Shias, the great Shah Ismail himself [the founder of the Sufi line of Persian sovereigns, who had lately established his authority over the provinces of Persia]. . . . Selim set forth with an army estimated at over 140,000 men, 80,000 of which were cavalry. . . . After weary and painful marching, the Ottomans forced Ismail to give battle at Chaldiran [or Tabreez — see PERSIA: A. D. 1499–1887]," and defeated him. "The victory of Chaldiran (1514) might have been followed by the conquest of Persia, but the privations which the soldiery had undergone had rendered them unmanageable, and Selim was forced to content himself with the annexation of the important provinces of Kurdistan and Dyarbekr, which are still part of the Turkish Empire; and then turned homewards, to prosecute other schemes of conquest. No peace, however, was concluded between him and the Shah, and a frontier war continued to be waged for many years. During the campaign against Persia, the Turks had been kept in anxiety by the presence on their flanks of the forces of the Mamluk Sultans of Egypt and Syria, whose frontiers now marched with the territory of the Ottomans." Turning his arms against the Mamluks, "Selim set out in 1516 for Syria, and meeting the Mamluk army on the field of Marj Dabik near Aleppo, administered a terrible defeat, in which the aged Sultan El-Ghuri was trampled to death. He found a brave successor in Tuman Bey, but in the interval the Turks had mastered Syria and were advancing to Gaza. Here the Mamluks made another stand, but the generalship of Sinan Pasha was not to be resisted any more than the preponderance of his forces. The final battle was fought at Reydaniya in the neighbourhood of Cairo, in January, 1517. . . . Twenty-five thousand Mamluks lay stark upon the field, and the enemy occupied Cairo. There a succession of street fights took place." The perfidious Turkish Sultan finally cheated the Mamluks into submission by offering amnesty, and then put them to the sword, giving the city up to massacre. "Tuman Bey, after some further resistance, was captured and executed, and Egypt became a Turkish province. . . . Sultan Selim returned to Constantinople in 1518, a much more dignified personage than he had set out. By the

conquest of the Mamluk kingdom he had also succeeded to their authority over the sacred cities of Arabia, Mekka and Medina, and in recognition of this position, as well as of his undoubted supremacy among Mohammedan monarchs, he received from the last Abbaside Khalif, who kept a shadowy court at Cairo, the inheritance of the great pontiffs of Baghdad. The 'fainéant' Khalif was induced to make over to the real sovereign the spiritual authority which he still affected to exercise, and with it the symbols of his office, the standard and cloak of the Prophet Mohammed. Selim now became not only the visible chief of the Mohammedan State throughout the wide dominions subdued to his sway, but also the revered head of the religion of Islam, wheresoever it was practised in its orthodox form. The heretical Shias of Persia might reject his claim, but in India, in all parts of Asia and Africa, where the traditional Khalifate was recognized, the Ottoman Sultan henceforth was the supreme head of the church, the successor to the spiritual prestige of the long line of the Khalifs. How far this new title commands the homage of the orthodox Moslem world is a matter of dispute; but there can be no doubt that it has always added, and still adds, a real and important authority to the acts and proclamations of the Ottoman Sultan." Selim died in 1520, and was succeeded by his son Suleyman, or Solyman, who acquired the name of "the Magnificent."—S. Lane-Poole, *Story of Turkey, ch.* 8–9.

A. D. 1498-1502.—War with the Venetians.—"During the first 17 years of Bajazet's reign, the peace between the Venetians and the Porte, though occasionally menaced, remained on the whole undisturbed. The Venetians complained of the Turkish incursions, and the definitive occupation of Montenegro, while the Porte, on its side, was jealous because the Republic had reduced the Duke of Naxos to dependence, and obtained possession of Cyprus (1489). At last, in 1498, the Turks, after making great naval preparations, suddenly arrested all the Venetian residents at Constantinople, and in the following year seized Lepanto, which surrendered without striking a blow (August 1499). Soon after, a body of 10,000 Turks crossed the Isonzo, carrying fire and desolation almost to the lagoons of Venice. In August 1500, Modon was taken by assault. . . . Navarino and Koron surrendered soon after, but towards the close of the year the Venetians were more successful. They captured Ægina, devastated and partly occupied Mytilene, Tenedos, and Samothrace, and with the help of a Spanish squadron, and 7,000 troops, under Gonsalvo de Cordova, reduced the island of Cephalonia. For this service the grateful Venetians rewarded Gonsalvo with a present of 500 tuns of Cretan wine, 60,000 pounds of cheese, 266 pounds of wrought silver, and the honorary freedom of their Republic. In 1501 the Venetian fleet was joined by a French, a Papal, and a Spanish squadron, but, through a want of cordiality among the commanders, little was effected. The Turks, however, had not made a better figure; and the Porte, whose attention was at that time distracted by the affairs of Persia, was evidently inclined for peace. The disordered state of the Venetian finances, and the decay of their commerce through the maritime discoveries of the Portuguese, also disposed them to negociation; although the sale of indulgences, granted to them by the Pope for this war, is said to have brought more than 700 pounds of gold into their exchequer. The war nevertheless continued through 1502, and the Venetians were tolerably successful, having captured many Turkish ships, and, with the assistance of the French, taken the island of Sta. Maura. But at length a treaty was signed, Dec. 14th, by which Venice was allowed to hold Cephalonia, but restored Sta. Maura, and permitted the Porte to retain its conquests, including the three important fortresses of Modon, Koron, and Navarino."—T. H. Dyer, *Hist. of Modern Europe, bk.* 1, *ch.* 6 (*v.* 1).

A. D. 1566-1571.—Reign of Selim II.—War with the Holy League of Spain, Venice and the Pope.—Conquest of Cyprus.—Great defeat at Lepanto.—"In 1566, Solyman the Magnificent closed his long and prosperous reign. His son and successor, Selim II., possessed few of the qualities of his great father. Bred in the Seraglio, he showed the fruits of his education in his indolent way of life, and in the free indulgence of the most licentious appetites. With these effeminate tastes, he inherited the passion for conquest which belonged, not only to his father, but to the whole of his warlike dynasty. . . . The scheme which most occupied the thoughts of Selim was the conquest of Cyprus. . . . Selim, resolved on the acquisition of Cyprus, was not slow in devising a pretext for claiming it from Venice as a part of the Ottoman empire. The republic, though willing to make almost any concession rather than come to a rupture with the colossal power under whose shadow she lay, was not prepared to surrender without a struggle the richest gem in her colonial diadem. War was accordingly declared against her by the Porte, and vast preparations were made for fit-

ting out an armament against Cyprus. Venice, in her turn, showed her usual alacrity in providing for the encounter. She strained her resources to the utmost. In a very short time she equipped a powerful fleet, and took measures to place the fortifications of Cyprus in a proper state of defence. But Venice no longer boasted a navy such as in earlier days had enabled her to humble the pride of Genoa, and to ride the unquestioned mistress of the Mediterranean. The defences of her colonies, moreover, during her long repose had gradually fallen into decay. In her extremity, she turned to the Christian powers of Europe, and besought them to make common cause with her against the enemy of Christendom." The only responses to her appeal came, first, from Pope Pius V., and finally, through his urgency, from Philip II. of Spain. After much deliberation, Philip agreed, in the spring of 1570, to enter into an alliance with Venice and the Pope against the Ottoman Porte. "The ensuing summer, the royal admiral, the famous John Andrew Doria, who was lying with a strong squadron off Sicily, put to sea, by the king's orders. He was soon after reinforced by a few galleys which were furnished by his holiness, and placed under the command of Mark Antonio Colonna. . . . On the last of August, 1570, the combined fleet effected its junction with the Venetians at Candia, and a plan of operations was immediately arranged. It was not long before the startling intelligence arrived that Nicosia, the capital of Cyprus, had been taken and sacked by the Turks, with all the circumstances of cruelty which distinguish wars in which the feeling of national hostility is embittered by religious hatred. The plan was now to be changed. A dispute arose among the commanders as to the course to be pursued. No one had authority enough to enforce compliance with his own opinion. The dispute ended in a rupture. The expedition was abandoned. . . . Still the stout-hearted pontiff was not discouraged;" nor did the king of Spain draw back. "Venice, on the other hand, soon showed that the Catholic king had good reason for distrusting her fidelity. Appalled by the loss of Nicosia, with her usual inconstancy, she despatched a secret agent to Constantinople, to see if some terms might not yet be made with the sultan." Her overtures, however, were coldly received by the sultan, and she was won back to the alliance. "Towards the close of 1570, the deputies from the three powers met in Rome to arrange the terms of the league." With much difficulty, a treaty was concluded, and ratified in May, 1571, to the effect that the operations of the league "should be directed against the Moors of Tunis, Tripoli, and Algiers, as well as against the Turks; that the contracting parties should furnish 200 galleys, 100 transports and smaller vessels, 50,000 foot and 4,500 horse, with the requisite artillery and munitions; that by April, at farthest, of every succeeding year, a similar force should be held in readiness by the allies for expeditions to the Levant; and that any year in which there was no expedition in common, and either Spain or the republic should desire to engage in one on her own account against the infidel, the other confederates should furnish 50 galleys towards it; that if the enemy should invade the dominions of any of the three powers, the others should be bound to come to the aid of their ally; that three-sixths of the expenses of the war should be borne by the Catholic king, two-sixths by the republic, the remaining sixth by the Holy See; . . . that each power should appoint a captain-general; that the united voices of the three commanders should regulate the plan of operations; that the execution of this plan should be intrusted to the captain-general of the league, and that this high office should be given to Don John of Austria [natural son of Charles V. and half-brother of Philip II.]. . . . Such were the principal provisions of the famous treaty of the Holy League." The sultan was not dismayed. "He soon got together a powerful fleet, partly drawn from his own dominions, and in part from those of the Moslem powers on the Mediterranean, who acknowledged allegiance to the Porte. The armada was placed under the command of Selim's brother-in-law, the Pacha Piali. . . . Early in the season [of 1571] the combined fleets sailed for the Adriatic, and Piali, after landing and laying waste the territory belonging to the republic, detached Uluch [dey of Algiers] with his squadron to penetrate higher up the gulf. The Algerine, in executing these orders, advanced so near to Venice as to throw the inhabitants of that capital into . . . consternation. . . . Meanwhile the Venetians were pushing forward their own preparations with their wonted alacrity,—indeed with more alacrity than thoroughness. . . . The fleet was placed under the command of Sebastian Veniero," and sailed before midsummer, "or as much of it as was then ready, for the port of Messina, appointed as the place of rendezvous for the allies. Here he was soon joined by Colonna, the papal commander, with the little squadron furnished by his holiness; and the two fleets lay at anchor . . . waiting the arrival of the rest of the confederates and of Don John of Austria." The latter reached Messina on the 25th of August. "The whole number of vessels in the armada, great and small, amounted to something more than 300. Of these full two thirds were 'royal galleys.' Venice alone contributed 106, besides six 'galeazzas.' These were ships of enormous bulk. . . . The number of persons on board of the fleet, soldiers and seamen, was estimated at 80,000. . . . The soldiers did not exceed 29,000. . . . On the 16th of September the magnificent armament . . . stood out to sea." Before encountering the Turkish fleet, the allies received tidings "that Famagosta, the second city of Cyprus, had fallen into the hands of the enemy, and this under circumstances of unparalleled perfidy and cruelty. . . . The fall of Famagosta secured the fall of Cyprus, which thus became permanently incorporated in the Ottoman empire." On Sunday, October 7th, the armada of the Turks was found and attacked in the gulf of Lepanto. The terrific fight which ensued lasted only four hours, but those were hours of indescribable destruction and carnage. "It was indeed a sanguinary battle, surpassing in this particular any sea-fight of modern times. The loss fell much the most heavily on the Turks. There is the usual discrepancy about numbers; but it may be safe to estimate their loss at nearly 25,000 slain and 5,000 prisoners. What brought most pleasure to the hearts of the conquerors was the liberation of 12,000 Christian captives, who had been chained to the oar on board the Moslem galleys, and who now came forth, with tears of joy streaming down their

haggard cheeks, to bless their deliverers. The loss of the allies was comparatively small,—less than 8,000." As to the armada of the Turks, "it may almost be said to have been annihilated. Not more than 40 galleys escaped out of near 250 which entered into the action. . . . The news of the victory of Lepanto caused a profound sensation throughout Christendom. . . . In Venice, which might be said to have gained a new lease of existence from the result of the battle, . . . the 7th of October was set apart to be observed for ever as a national anniversary. . . . It is a great error to speak of the victory of Lepanto as a barren victory, which yielded no fruits to those who gained it. True, it did not strip the Turks of an inch of territory. . . . But the loss of reputation—that tower of strength to the conqueror—was not to be estimated."—W. H. Prescott, *Hist. of Philip II., bk.* 5, *ch.* 9-11.

A. D. 1572-1573. — Withdrawal of Venice from the Holy League.—Conquest of Tunis by Don John of Austria and its recovery, with Goletta.—"Ulucciali, whom Selim . . . made commander-in-chief of all his naval forces, exerted himself with extraordinary vigour and activity in fitting out a new fleet, to supply the place of that which had been ruined in the battle of Lepanto; and such at this time were the resources of the Turkish empire, that he was ready by the month of April [1572] to leave Constantinople, with more than 200 galleys, besides a great number of other ships. With this fleet he coasted along Negropont, the Morea, and Epirus; put the maritime towns into a posture of defence; chastised with great severity many of those Christians who had been concerned in the invitation given to Don John [who had just been offered the sovereignty of Albania and Macedonia by the Christians of those countries]; and afterwards took his station at Modon in the Morea, with an intention to watch there the motions of the enemy. He had full leisure to finish all the preparations which he judged to be necessary. The allies disputed long with one another concerning the plan of their future operations," and were also held inactive by the Spanish king's fear of an attack from France. "It was the last day of August before the allies could effectuate a junction of their forces; and it was the middle of September before they came in sight of the enemy. . . . Ulucciali drew out his fleet, as if he intended to offer battle; but no sooner had he made a single discharge of his artillery . . . than he retired under the fortifications of Modon." The allies thought first of besieging Modon, but gave up the project. They then sent Alexander Farnese, prince of Parma—afterwards so famous in the Netherlands—to reduce Navarino; but he had no success and abandoned the siege. The expedition then returned to Messina. The Venetians, dissatisfied with the conduct of the war, now faithlessly negotiated a separate peace with the Turks; but Philip II. of Spain maintained his alliance with the Pope (now Gregory XIII.), and ordered his brother, Don John, to proceed the next spring to Africa and undertake the reduction of Tunis. Don John obeyed the order, "carrying with him for this purpose a fleet of 2,000 sail, having 20,000 foot on board, besides 400 light horse, 700 pioneers, and a numerous train of heavy artillery. Tunis was at this time in the hands of the Turks, commanded by Heder Basha, whom Selim had lately sent to govern the town and kingdom. Heder, seized with consternation at the approach of the Spanish fleet, left Tunis with his troops and a great number of the inhabitants, and Don John took possession of the place without meeting with the smallest opposition. Philip had instructed his brother, when he sent him on this expedition, to destroy Tunis, and to strengthen the fortifications of the isle and fortress of Goletta. But instead of complying with these instructions, Don John resolved to fortify the town more strongly than ever; and having laid the foundations of a new fort, or citadel, he treated all the inhabitants who remained with lenity and indulgence; and engaged many of those who had fled to return and submit to the Spanish government; after which he carried back his fleet to Sicily." It is believed that Don John had conceived ambitious hopes of a kingdom on the African border of the Mediterranean. "In the summer following [1573], Selim sent Ulucciali against Tunis, with a fleet consisting of 300 ships, having about 40,000 troops on board, under the command of his son-in-law, Sinan Basha. The new fort which Don John had begun to build was not yet complete. Nor was the garrison which he had left strong enough to hold out long against so great a force." Before Don John could reassemble a fleet with which to make his way to the protection of his African conquest, both Tunis and Goletta were carried by assault, and passed again into the possession of the Turks and their Moorish vassals. —R. Watson, *Hist. of Philip II., bk.* 9.

A. D. 1572-1623.—Beginning of the decline of the Ottoman power.—"The conquest of Cyprus was the last great exploit which ever added materially to the dominions of the Porte; the battle of Lepanto was the final blow which destroyed its naval superiority. The days of greatness had gone by. The kingdoms of the West were developing their strength, and had learnt the policy of union and of peace among themselves. Their armies had acquired the discipline and had learnt the lessons in which the Ottomans had shown so formidable an example; and their navy rode triumphant on the seas. The Empire, no longer in the hands of Charles V., with foreign interests to absorb its power, could bestow an undivided strength upon its own affairs; and the Emperor Ferdinand was looking forward with some hope to an incorporation of Hungary, which should end the weakness, and ensure the safety, of his eastern frontier. As the pre-eminence of the Porte, however, and the dread of it declined, a wider intercourse for her with Europe began. . . . Slowly the Sultans were beginning to take part in the schemes and combinations of the Christian Powers, from which they had hitherto so contemptuously stood aloof. Five reigns succeeded to that of Selim [the Sot, son of Solyman the Magnificent], during which the progress of decline continued marked. The indolence of Amurath III. [1574-

1595], the incapacity of Mahomet III. [1595-1603], the inexperience of Achmet I. [1603-1617], the imprudence of Othman II. [1618-1622], and the imbecility of Mustapha [1617-1618, and 1622-1623], contributed to bring the Ottoman Empire into a condition of anarchy and weakness. During the reign of Amurath hostilities with Austria were renewed, and successive losses testified to the enfeebled state of the Ottoman arms."—C. F. Johnstone, *Historical Abstracts, ch.* 3.

A. D. 1623-1640.—War with Persia.—Siege and capture of Bagdad.—Horrible massacre of the inhabitants.—"During the first twelve years of the reign of Amurath IV. [1623-1635], the Ottoman Empire had been occupied with active hostilities in different parts of Europe, and especially with Poland, Germany, and the maritime powers of the Mediterranean. . . . In the east, however, great losses had been sustained. Shah Abbas, a sovereign well entitled to the epithet 'Great,' had repossessed himself of Diarbekr, Baghdad [1623], the district of the Euphrates, with Kourdistan; and, on the north, he had regained Armenia, and a considerable part of Anatolia. The Sultan therefore resolved to undertake an expedition to recover the territories thus taken from him, and to this he was encouraged by the death of his formidable foe the Persian monarch. Amurath marched from his capital early in 1635, to superintend the operations of the campaign. . . . In passing through Asia, he took care personally to examine into the conduct of his various Pashas, and wherever it was requisite he subjected them to a severe punishment. One of them, the Pasha of Erzeroum, was put to death. Having at that city reviewed his army, he found them to amount to 200,000 men, and as his first object was the seizure of Armenia, the key of the Persian provinces, he besieged Erivan, and notwithstanding a vigorous defence, the fortress in a few days surrendered. Tauris and the surrounding provinces speedily fell into his hands, and Amurath returned in the winter to Constantinople, entering the city in great triumph. The affairs of Europe were in such a state of confusion, that it was several years ere he again appeared in the east, the scene of so many of his victories. The Khan of Tartary threw off his allegiance, the Polish serfs appeared suddenly on the Caspian shores, and, joining a body of Russians, attacked and carried the fortress of Azof. . . . The European war, which at this time occurred, rendered it unnecessary for the Sultan to entertain any serious apprehension from his enemies in the west, who were sufficiently occupied with their own affairs. He therefore directed his attention to Persia, resolved to subjugate that country, and to seize upon Baghdad. To this end his preparations were proportionally great. An immense army was collected on the Asiatic side of the Bosphorus. This mighty host numbered more than 300,000 armed men, and was accompanied by a numerous array of miners, as well as artillery. And after having consulted an astrologer, Amurath embarked amid all the display which Asiatic pomp could furnish, and directed his progress toward Persia. After a successful march, this immense army arrived at Baghdad. The city was strongly fortified, and defended by a resolute army of 80,000 men. The Shah, however, was absent in the northern part of his dominions, which had been threatened by an invasion from India, under Shah Jehan, father of the celebrated Aurungzebe. Baghdad, therefore, was left to its own resources. The operations of the siege began in October 1638. . . . The besieged made repeated sallies, with a force of five or six thousand men at a time, who, on retiring, were succeeded by a similar number, and thus the losses of the Ottoman army were sometimes very great. The 200 great guns, however, which played upon the ramparts, at length made a wide opening in the walls, and after five days' fighting in the breach thus made, where 'the slain lay in immense multitudes, and the blood was stagnated like a pool to wade through,' the city was taken. Quarter was given to 24,000 of the defenders, who remained alive, on condition that they would lay down their arms. But as soon as they had done so, the Sultan perfidiously issued orders to the Janizaries, and the work of butchery commenced, and was carried on by torch-light during the night on which the city was taken, and an indiscriminate slaughter took place, neither youth, nor age, nor sex being spared by the ruthless conqueror and his merciless soldiers. . . . In the morning of the 23d of December the Sultan marched into the city, passing with his army over the innumerable bodies of the unfortunate Persians, whose gallant defence merited a better fate. Some 15,000 women, children and old men were all that remained of the inhabitants, who, but a day or two before, filled every part of the magnificent capital. . . . The capture of Baghdad closed the military career of the Sultan."—R. W. Fraser, *Turkey, Ancient and Modern, ch.* 17.—"A peace with Persia, on the basis of that which Solyman the Great had granted in 1555, was the speedy result of Amurath's victories (15th September, 1639). Eriwan was restored by the Porte; but the possession of Bagdad and the adjacent territory by the Ottomans was solemnly sanctioned and confirmed. Eighty years passed away before Turkey was again obliged to struggle against her old and obstinate enemy on the line of the Euphrates. . . . Amurath died at the age of 28, on the 9th of February, 1640."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 13.

A. D. 1625-1626.—War in Hungary. See HUNGARY: A. D. 1606-1660.

A. D. 1640.—Accession of Ibrahim.

A. D. 1645-1669.—The war of Candia.—Conquest of Crete.—"The Turks attacked the island [of Crete] in 1645, and the war went on till 1669, when Crete was lost. This is called the war of Candia, from the long siege of the town of Candia, which was most gallantly defended by the Venetians, with the help of many volunteers from Western Europe. It must be remembered that, though the island has sometimes got to be called Candia, from the town of Candia and its memorable siege, yet the island itself has never changed its name, but has always been called Crete both by Greeks and Turks."—E. A. Freeman, *The Ottoman Power in Europe, p.* 145.

—"The war which cost the republic of Venice the island of Crete owed its origin to the incessant irritation caused by the Western corsairs in the Archipelago. Some strong measures adopted by the Venetians to suppress the piracies committed by Turkish and Barbary corsairs in the Adriatic, created much dissatisfaction on the part of the Othoman government, which looked chiefly to the Mohammedan corsairs as a protection against the Christian corsairs in the Levant, and considered it the duty of the Venetians to suppress the piracies of these Christians. The Porte at last resolved to seek a profitable revenge, and a pretext soon presented itself. In 1644 some Maltese galleys made a prize which offended the personal feelings of the reigning sultan, Ibrahim. . . . As he feared to attack Malta, he resolved to make the Venetians responsible for the shelter which Crete had afforded to the corsairs. The Porte affected to consider Venice as a tributary State, which was bound to keep the Archipelago free from Christian corsairs, in return for the great commercial privileges it enjoyed in the Othoman empire. Immediate preparations were made for attacking Crete, but the project was concealed from the Venetian senate, under the pretence of directing the expedition against Malta. . . . In the month of June 1645, the Othoman army landed before Canea, which capitulated on the 17th of August. This treacherous commencement of the war authorised the Christian powers to dispense with all the formalities of international law in lending assistance to the Venetians during the celebrated War of Candia, which lasted nearly 25 years. During this long struggle the Venetians generally maintained the superiority at sea, but they were unable to prevent the Othoman navy, whenever it exerted its full force, from throwing in supplies of fresh troops and ample stores, by which the Othoman army was enabled to command the whole island, and kept Candia, and the other fortresses in the hands of the republic, either blockaded or besieged. The Greeks generally favoured the Turks, who encouraged them to cultivate their lands by purchasing the produce at a liberal price, for the use of the army. . . . The squadrons of the republic often ravaged the coasts of the Othoman empire, and on one occasion they carried off about 5,000 slaves from the coast of the Morea, between Patras and Coron. In the year 1656, after Mocenigo's great victory at the Dardanelles, they took possession of the islands of Tenedos and Lemnos, but they were driven from these conquests by the Othoman fleet in the following year. At the end of the year 1666, the grand vizier, Achmet Kueprily, one of the greatest ministers of the Othoman empire, took the command of the siege of Candia. The whole naval force of Venice, and numerous bands of French and Italian volunteers, attempted to force the grand vizier to raise the siege; but the skill of the Italian engineers, the valour of the French nobles, and the determined perseverance of Morosini, were vain against the strict discipline and steady valour of the Othoman troops. The works of the besiegers were pushed forward by the labours of a numerous body of Greek pioneers, and the fire of the powerful batteries at last rendered the place untenable. At this crisis Morosini proved himself a daring statesman and a sincere patriot. When he found that he must surrender the city, he resolved to make his capitulation the means of purchasing peace for the republic. . . . On the 27th September 1669, Achmet Kueprily received the keys of Candia, and the republic of Venice resigned all right to the island of Crete, but retained possession of the three insular fortresses of Karabusa, Suda, and Spinalonga, with their valuable ports. No fortress is said to have cost so much blood and treasure, both to the besiegers and the defenders, as Candia; yet the Greeks, in whose territory it was situated, and who could have furnished an army from the inhabitants of Crete sufficiently numerous to have decided the issue of the contest, were the people on the shores of the Mediterranean who took least part in this memorable war. So utterly destitute of all national feeling was the Hellenic race at this period."—G. Finlay, *Hist. of Greece under Othoman and Venetian Domination, ch.* 2.

A. D. 1684-1696. — War with the Holy League.—Expulsion from Hungary.—Venetian conquests in Greece.—Revolution at Constantinople.—Accession of Solyman II.—Czar Peter's capture of Azov.—The first Russian acquisition on the Black Sea.—In 1684, "a league against the Turks, under the protection of the Pope, and thence called the Holy League, was formed by the Emperor, the King of Poland, and the Republic of Venice; and it was resolved to procure, if possible, the accession to it of the Czar of Muscovy. The Venetians were induced to join the league by the hope of recovering their former possessions, and declared war against the Sultan, Mahomet IV., July 15th. The war which ensued, now called the Holy War, lasted till the Peace of Carlowicz in 1699. Venice in this war put forth a strength that was little expected from that declining state. Many thousand Germans were enrolled in her army, commanded by Morosini, and by Count Königsmark, a Swede. The Austrians pursued the campaign in Hungary with success [steadily expelling the Turks—see HUNGARY: A. D. 1683–1699]. . . . While the war in Hungary had been conducted by the Emperor with such eminent success, the King of Poland had made only some fruitless attempts upon Moldavia. The Czar of Muscovy, Ivan Alexiowitsch, who, after settling some disputes about boundaries with the King of Poland, had joined the Holy League in 1686, did not fare much better. All the attempts of the Russians to penetrate into the Crimea were

frustrated by the Tartars. The Venetians, on the other hand, had made some splendid conquests. St Maura, Koron, the mountain tract of Maina, Navarino, Modon, Argos, Napoli di Romania, fell successively into their hands. The year 1687 especially was almost as fatal to the Turks in their war with Venice as in that with Hungary. In this year the Venetians took Patras, the castles at the entrance of the bay of Lepanto, Lepanto itself, all the northern coast of the Morea, Corinth, and Athens. Athens had been abandoned with the exception of the acropolis or citadel; and it was in this siege that one of the Venetian bombs fell into the Parthenon, which had been converted by the Turks into a powder magazine, and destroyed the greater part of those magnificent remains of classical antiquity. The acropolis surrendered September 29th. The fall of Athens, added to the disastrous news from Hungary, excited the greatest consternation and discontent at Constantinople," and brought about a revolution which deposed the sultan, raising his brother Solyman to the throne (1687) in his place. "By the capture of Malvasia in 1690, the Venetians completed the conquest of the Morea. The Isle of Chios, taken in 1694, was again lost the following year; but in Dalmatia and Albania the Venetian Republic made many permanent conquests, from the mountains of Montenegro to the borders of Croatia and the banks of the Unna. The operations of the Poles in the Turkish war were insignificant; but in July 1696, the Russians, under the Czar Peter, after many long and fruitless attempts, at length succeeded in taking Azov, at the mouth of the Don; a most important conquest as securing for them the entry into the Black Sea. It was the fall of this place, combined with the defeat at Zenta [in Hungary], that chiefly induced the Porte to enter into negociation for a peace."—T. H. Dyer, *Hist. of Modern Europe, bk.* 5, *ch.* 4 (*v.* 3).

A. D. 1714-1718.—War with Venice and Austria.—Recovery of the Morea and disasters in Hungary.—The Peace of Passarowitz.—"By the treaty of the Pruth the Russian conquest of Azof had been recovered. This success encouraged the hope of repairing the other losses that had been incurred in the former war. There were two states which had aggrandised themselves at Turkish expense, Austria and Venice. Of these the republic was far the less formidable and was naturally chosen as the first object of attack. A pretext was found in the protection which Venice had given to some Montenegrin fugitives, and in December, 1714, the Porte declared war. Venice was entirely unprepared, and moreover had failed to acquire popularity amongst her Greek subjects. In 1715, the grand vizier, Ali Cumurgi, landed in the Morea, and by the end of the year was master of the whole peninsula. Sailing thence he captured Suda and Spinalonga, the two last fortresses that Venice had been allowed to retain in Crete. The republic naturally appealed to her old ally, Austria, which had guaranteed her possessions by the treaty of Carlowitz. . . . As the Turk refused to give any satisfaction, war was inevitable. The intervention of Austria saved Venice from ruin. The grand vizier and the main body of the Turkish army had to be employed in Hungary. Still a considerable army and fleet was sent to attack Corfu. The Venetian troops were commanded by count Schulenburg, who had won a great reputation in the northern war, and whose services had been procured for the republic by Eugene. A heroic defence ended successfully, and in August, 1716, the Turks were compelled to raise the siege. 'It was the last glorious military exploit in the annals of the republic, and it was achieved by a German mercenary soldier.' Meanwhile the vizier, with an army of 150,000 men, had laid siege to Peterwardein, the most important of the Austrian border-fortresses in Hungary," and suffered death there, in a great defeat which prince Eugene inflicted upon his army, August 5, 1716. The same year, Eugene took Temesvar, and in August, 1717, he annihilated the Turkish army before Belgrad, capturing the town (see Hungary: A. D. 1699–1718). The result was the Treaty of Passarowitz, signed in July, 1718. "Austria retained all its conquests, thus completing its possession of Hungary by acquiring the Banat of Temesvar, and adding to it Belgrad and a strip of Servia. The Turks, on their side, kept the Morea, while Venice was confirmed in its possession of Corfu and Santa Maura, together with the conquests which it had made in 1717 in Albania and Dalmatia."—R. Lodge, *Hist. of Modern Europe, ch.* 16.

A. D. 1768-1774.—War with Russia on behalf of Poland.—Concession of independence to the Crim Tartars.—The Poles, in their struggle with Catherine II. of Russia found a strange champion in the Turk (see Poland: A. D. 1763–1773). "The Sultan, Mustafa III., was opposed to intervention in Poland; but his hand was forced by a rising in Constantinople, and he declared war against Russia in October, 1768. Hostilities were not commenced till the next year, and they never assumed considerable proportions. The Turkish army was in the last stage of inefficiency, and the Russians, who were wholly unprepared for war, were little better. Galitzin, an incompetent commander, defeated the grand vizier, and took Khoczim after his first attack had been repulsed. His successor, Romanzow, 'the Russian Turenne,' acted with greater energy. He drove the Turks from Moldavia, and in 1770 he occupied Wallachia, won a great victory over vastly superior numbers at Kaghul [August 1, 1770], and advanced into the Crimea. At the same time a Russian fleet appeared in the Mediterranean with the avowed intention of restoring Greece to independence. But the admiral, Alexis Orloff, mismanaged the expedition. After encouraging the Greeks to rebel, he left them to the horrors of a Turkish revenge, and sailed towards Constantinople. A victory over the Turkish fleet gave

him possession of Chios and other islands of the Archipelago, but he refused, in spite of his English officers, to attempt the passage of the Dardanelles." In May, 1772, a truce was arranged and a congress assembled to settle the terms of peace. "But the Russian demands were too excessive for the Porte to accept, and the Turks resumed hostilities in 1773. They attempted to recover Moldavia and Wallachia, and for a time they succeeded in forcing the Russians to retreat. Mustafa III. died in December, and was succeeded by his brother Abdul Hamid. In the next year Romanzow won a complete victory, and compelled the grand vizier to accept the terms dictated to him at Kutschuk Kainardji [July 16, 1774]. The Russians restored the conquered provinces except Azof and Kinburn, only stipulating for toleration for the Christian population. The Tartars of the Crimea and Kuban were declared independent of the Porte, and authorised to elect their own Khan. Russian ships were allowed free passage through the Dardanelles, and the right of sailing in the Turkish seas and on the Danube. Poland, for which the Turks had undertaken the war, was not even mentioned in the treaty."—R. Lodge, *Hist. of Modern Europe, ch.* 20, *sect.* 11–12.

Also in: F. C. Schlosser, *Hist. of the* 18*th Century, v.* 4, *pp.* 405–441.—See, also, Russia: A. D. 1762–1796.

A. D. 1774.—Accession of Abdul Hamid.

A. D. 1776-1792.—Acquisition of the Crimea by the Russians.—War with Russia and Austria.—The Treaties of Sistova and Jassy.—Territorial concessions.—"A peace of some years followed the treaty of Kainarji, if, indeed, that can be called peace where the most solemn engagements are perpetually evaded. On that treaty Catherine put what interpretation she pleased. . . . She offered her protection to the voivods of Wallachia and Moldavia, who, in consequence, were her vassals rather than those of the Porte. The Christians on the opposite bank of the Danube were in correspondence with Russia; they were encouraged to revolt, to claim her protection, to oppose the Turkish government in every way. . . . Though the Crimea had been declared independent, she proved that the word had reference merely to the authority of the sultan, and not to hers. . . . More than once . . . the Russian troops appeared in that peninsula. In 1776 they deposed the reigning khan, and elected in his stead another, who was easily induced to solicit the protection of the empress. Turkey threatened to resume the war. . . . At length . . . a new treaty, or rather a modification of the former, was signed at Constantinople in 1779. In it Russia promised to desist from some of her obnoxious pretensions in regard both to the two principalities and the Crimea; but promises cost little. . . . Almost every year brought new complaints and evasions. The foundation of the city of Cherson, about ten leagues from Otzakof, gave peculiar umbrage to the Porte. This place had now a population of 40,000; and the number of warlike vessels constructed in its arsenal were evidently intended to overawe Constantinople. In 1783 another insulting message was sent to the Turkish ministers,—that, let the conduct of the empress in regard to the Crimea be whatever it might, they should not interfere. At the same time she prevailed on the khan whom she had supported, Sahim Gherei, to make the most outrageous demands from the Porte. The khan's envoy was beheaded. Under the pretext of punishing the Turks for this insult to their 'good ally,' the Russians requested permission to march through his territory. It was immediately granted; but no sooner were they in the peninsula than, instead of proceeding against the Turkish fortifications on the island of Taman, they seized the towns, forced the Mahometan authorities, in the khan's presence, to take the oath of allegiance to the empress, and seized on the revenues of the country. . . . The khan was now forced to resign his authority, and transfer it to Catherine; in return, he received some estates in Russia. A manifesto declared that the Crimea, Kuban, and Taman, were for ever incorporated with the empire. In a document of some length, and of great force, the Turkish ministry exposed to the world the unprincipled encroachments of their neighbours." But Russia responded to it by marshalling three great armies on the frontiers, with an exhibition of formidable fleets in the Euxine and the Baltic. "The Porte, terrified at this menacing display, listened to the advice of France and Austria; and, by another treaty (signed at Constantinople early in 1784) recognised the sovereignty of the empress over the Crimea, Taman, and a great part of Kuban. To the first and last of these places she restored their ancient classical names, Taurida and Caucasus." The treaty of Constantinople did not put an end to Russian aggressions, and in August, 1787, the Sultan declared war. "The campaign was opened with ardour. Knowing that Otzakof would be the earliest object of hostility, the Sultan sent a considerable force to cover it. Another army marched to the Danube, and the vizier in person took the field. . . . On the other hand, Potemkin, the commander-in-chief, having under his orders some of the best generals in the service, hastened to the frontiers, which were soon covered by Russian troops. At the same time the emperor Joseph [according to a prior agreement with Catherine] sent 80,000 Austrians into Moldavia; while a powerful fleet in the Euxine prepared to co-operate with the allies, and another in the Baltic was ready to sail for the Mediterranean. It seemed, indeed, as if Catherine's favourite dream, the elevation of her grandson Constantine to the throne of the Greek empire, was about to be realised. Yet these mighty preparations had no commensurate effect. An attack on Kinburn by 5,000 Turks from the garrison of Otzakof was repulsed [by Suwarof] with heavy loss. But this advantage was counterbalanced by the dispersion of the Euxine fleet in a storm, with the loss of some vessels. These were the chief events of the first campaign. The second, of 1788, was more decisive. Otzakof was taken by assault, and the garrison [with nearly all the inhabitants] put to the sword. At the same time Joseph took Sobach; and his generals captured Soubitza [Dubitza?]. On the deep, too, fortune was equally adverse to the Turks. Their fleet was defeated in the Euxine. . . . In the following campaigns the superiority of the Russians was maintained. It would have been still more signal but for the jealousy of Potemkin, who could not tolerate success in any of his generals. . . . The death of Abdul Hamet, and the accession of Selim III., made no difference in the character of the war; it was still

adverse to the Turks. Fortress after fortress [including Belgrade, taken by General Loudon for the Austrians] was reduced by the enemy; and, though no general engagement was risked, the loss of men was not the less felt. Suwarof saved the Austrians [in Moldavia, defeating the Turks, who had nearly overwhelmed them, at Fockshani, July 30, and again at Rimnik, September 16, 1789]; Repnin forced the Seraskier, Hussein Pasha, to seek refuge in Ismail; Komenski reduced Galatza; Ackerman fell into the power of the Christians; Bender was forced to capitulate. In the following campaign, the important fortress of Ismail was assailed: the siege was conducted by Suwarof, the most dreaded of all the Russian generals. . . . It was taken . . . though the loss was most severe; and, in revenge, the garrison, with the greater part of the population [nearly 40,000 in all], was put to the sword. Other successes followed, both on the banks of the Caspian, and on those of the Danube. Bohada was stormed; at Kotzim 100,000 Turks were defeated by Repnin; Varna was menaced; and the road to Adrianople lay open. The grand vizier now sued for peace, which Catherine was ready to grant, on conditions much less onerous than might have been expected." Austria had already made peace with the sultan and withdrawn from the war. By the treaty of Sistova, which the new emperor, Leopold, signed on the 4th of August, 1791, the Austrians relinquished all their conquests except the town of Old Orsova and a small district in Croatia along the left bank of the river Unna. With these slight variations the same boundary between Austria and Turkey was reconstituted in 1791 that had been defined by the treaty of Belgrade in 1739. The treaty of the Turks with Russia was signed at Jassy on the 9th of January 1792. "By that treaty, Catherine retained the whole country between the Bog and the Dniester, but restored all the other conquests which she had made since 1787. This was the last of the hostilities between Russia and the Porte during the reign of this empress; and the peace of Jassy enabled her to carry into effect her designs on Poland."— R. Bell, *Hist. of Russia, v.* 2, *ch.* 11.

A. D. 1789-1812.—Attempted reforms of Sultan Selim III.—Their fate and his.— Palace revolutions.— Reign of Mahmud II.— War with Russia.—"Abd-ul-Hamid died on the 7th April, 1789, and was succeeded by his nephew, Selim III (1789-1807). Although Selim had been confined in the Seraglio by his uncle, he had been in other respects well treated. His love of information and his natural talents had induced him to carry on an active correspondence with several servants of his father and his uncle. Their information had, however, in no way satisfied him, and he had commenced a correspondence with Choiseuil, the French envoy at Constantinople in 1786, and had also sent his intimate friend Isaac Bey to France, to enquire into the state measures and administrative organization of that country. Selim had also entered into correspondence with Louis XVI, and this lasted till 1789, when the French Revolution broke out simultaneously with Selim's ascension of the throne. All this throws a clear light upon Selim's eventual exertions to cause reforms, which at last cost him both his throne and his life. His thirst for knowledge leads us to presume that he was not deficient in natural and sound talent. . . . But it was a mistake, that in his pursuit of knowledge, and desire to improve the institutions of Turkey — and the habits and character of its inhabitants — Selim should have applied to France, and to Frenchmen. That country was then on the eve of her great revolution. Theories of all kinds were afloat. . . . Selim would certainly have acted more wisely had he sought help from his own sensible mind; he would have easily perceived the palpable fact, that things which were suited for Christian nations were utterly inapplicable to the rude, uncivilized Turks. . . . Unfortunately he set about the task with very different ideas, and listened to the suggestions of the sciolists who surrounded him. The first thing to which they drew his attention was the formation of a council of state, which not only restricted the power of the Grand Vizier, but that of the Sultan, very materially. The Reis Effendi, Raschid, was the soul of the council, and the boldest of these sciolists; and he had perfect liberty to carry on the work of reform. He set the printing presses again in activity which had been introduced in a preceding reign, sent for French officers, who founded an engineer academy, built arsenals and foundries, and openly stated that he took science under his protection. But his chief care was to form an army after the European fashion, in order by their assistance to gain the mastery over the Janissaries, in whom old customs and traditions found their most zealous guardians. He took several steps, therefore, to call into life the new military organization, called the Nizam Djedid; and as money was required for the purpose, he laid a tax on articles of consumption. This was quite sufficient to cause the popular discontent to burst into a flame. The Ulema declared themselves hostile to the Nizam Djedid, and Pashwan Oglu, Pacha of Widdin, who placed himself at the head of the Janissaries, openly rebelled against the Porte, which could not effect anything to check him, but acquiesced in all that was demanded. The extraordinary conquests of Napoleon diverted attention from Turkey, and instead of seeking to divide the dominions of a weak neighbour, the Great Powers of the Continent were trembling for their own safety. Egypt became the battle field between England and France [see France: A. D. 1798-1799 (August—August), and 1801-1802], and its invasion by Napoleon obliged the Turks to unite with the Allied Powers against France. When the French were expelled from Egypt, that province was restored to Turkey, and peace concluded between the two Powers. Selim, under the influence of General Sebastiani who was then French ambassador at Constantinople, signed [seized?] what was considered by him a favourable opportunity for renewing the war with Russia [see below], in which, however, the Turks were defeated both by land and sea. These misfortunes the Janissaries attributed to the new troops or Seymens. . . . At the end of May, 1807, the chiefs of the Janissaries and the Ulema had already formed their plans for the overthrow of the Sultan, when Selim accelerated the outbreak by going to the mosque on Friday, accompanied by

a body of Seymens and the French ambassador, Sebastiani. The Janissaries, aroused by this, broke out in open revolt, which soon grew of such a menacing nature by the co-operation of the Mufti, that Selim was compelled to promise the abolition of the Nizam, and the heads of those of his advisers who had promoted the measure. But the insurgents were not satisfied with this: they demanded the abdication of the Sultan, whom the Mufti declared unworthy to be a successor of Muhammad, through his partiality for foreigners, and marched to the Seraglio, to carry their designs into effect. But when the Mufti and the Ulema entered it, they found a new Sultan. Selim, under the conviction that he could not resist the storm his attempts at reform had created, had retired to the Harem, where his nephew, Mustapha, was confined, and led him to the throne: he had then attempted to destroy his own life by a cup of poisoned sherbet, but had been prevented by Mustapha, and was led into the apartments of the Royal Princes, with a promise that he should ever be treated as a friend and an uncle. On the same afternoon, Sultan Mustapha III [IV] (who reigned from 31st May, 1807, to 28th July, 1808) rode in solemn procession for the first time to the great mosque, was invested in the traditional manner with the sabre of Muhammad, then immediately did away with the Nizam Djedid, and restored the old customs. But among the Pachas in the provinces, there were several devoted partisans of reform. The most influential of these was Mustapha Bairaktar, Pacha of Rustchuk, who set out in July 1808, at the head of 18,000 men, to restore Selim to the throne. He succeeded in taking possession of the capital, and keeping the Sultan so long in ignorance of his designs, until he sent him orders to resign the throne in favour of Selim. As the Sultan had only one hour allowed him for consideration, he was so helpless that he followed the advice of the Mufti and had Selim cruelly murdered. As the gates of the Seraglio were not opened at the appointed time, and Bairaktar hurried up to enforce his authority, Selim's lifeless body was thrown over the wall. Upon this the Pacha ordered the Seraglio to be stormed, seized the Sultan, destroyed all those who had advised the abolition of the plans of reform, and placed Mustapha's younger brother on the throne. Mahmud II, the second son of Abd-ul-Hamid, was born on the 2nd July, 1785, and was consequently twenty-three years of age when he ascended the throne. . . . Mahmud appointed Mustapha Bairaktar his Grand Vizier, and, regardless of the fate of his predecessor, restored all the measures of reform which Selim had undertaken. Within three months the Janissaries were again in open rebellion, and on the night of the 14th November, 1808, attacked the Seymens, destroyed a great number of them, and, after storming the new barracks, forced their way into the Grand Vizier's palace. He fled and appealed to the people for help, but the greater portion abused him as a renegade and joined the rebels. Bairaktar recognised his impending fate, but still ordered the execution of Mustapha, for fear he might reascend the throne. After this he retired with a body of Seymens into a stone tower, where he had before collected a quantity of gunpowder. He defended himself here for some time, but, at last, when the Janissaries rushed up in larger masses to the attack, he blew up the tower. The Janissaries then attacked the Seraglio, and, but for the fact that Mahmud was the last legitimate descendant of the race of Osman, they would have taken his life. But even this, probably, would not have saved him, had he not sent a deputation to the insurgents and given an unconditional assent to their demands. . . . As an additional guarantee for his own safety on the throne, ensanguined with the blood of his uncle and his brother, Mahmud ordered his brother's son, a child of three months old, to be strangled, and four of the Sultanas to be thrown into the Bosphorus. The reign of Mahmud is one of the longest and most important in the whole of Turkish history. It commenced with war. The Emperor Alexander menaced him on the Danube: the Hospodar of Servia, Czerny George, had rebelled against him. The campaign of the Turks in 1809, was, consequently, not a prosperous one. The contest lasted till 1812, when it was ended by the treaty of Bucharest, which surrendered the whole of Bessarabia, as far as the Pruth, to Russia. At the same time the Russian protectorate of the Greek Christian subjects of the Porte, which had been stipulated in the treaty of Kudjuk Kainardji, was again confirmed."— Sir J. Porter, *Turkey, v.* 1, *pp.* 194–204.

A. D. 1798.—In the Coalition against France. —War declared. See FRANCE: A. D. 1798–1799 (AUGUST — APRIL).

A. D. 1806-1807.—Alliance with Napoleon, and hostilities with Russia and England.—British fleet before Constantinople.—Its humiliating retreat. — The English again in Egypt.—Disastrous failure of their expedition. —"Before the end of 1806, Russia had driven Selim into the arms of France; and war was declared at the Porte just after Napoleon's victories in Prussia had filled Alexander with alarm. His troops had overrun some Turkish territory before war was declared; but just at this juncture he wanted all his forces for the defence of his own frontier. He dreaded the effects of withdrawing them from the Turkish provinces, which would immediately fight for France; but he must do it. He besought the British to undertake another of those 'diversions' which began to sound so disagreeably to the ears of Englishmen. . . . The Grenville Cabinet . . . gave orders to Sir John Duckworth, then cruising off Ferrol, to join Admiral Louis at the mouth of the Dardanelles. . . . Neither the efforts of Sebastiani [French representative at Constantinople] . . . nor any other warning that the English were coming, had roused the Turks to make the slightest preparation. The ships sailed proudly up the strait [February, 1807], undelayed by the fire of the forts at the narrowest part of the channel, and belching out flames and cannon-balls as they went. They took and burned some Turkish ships, and appeared before Constantinople, to the horror of the whole population, who were absolutely without means of defence. The Divan would have yielded at once; but Sebastiani prevented it, and instigated a negotiation which proved a fatal snare to Sir John Duckworth, notwithstanding express warnings and instructions, strong and clear, from Lord Collingwood. He was unwilling to destroy the city, and shoot down the defenceless inhabitants;

and he allowed himself to be drawn on, from day to day, exchanging notes and receiving promises. . . . Meantime, not a moment was lost by Sebastiani and the Turks, whom he was instructing in Napoleon's methods of warfare. Women and children, Christians and Mohammedans, worked day and night at the defences; and in a few days the whole coast was bristling with artillery, and the chance was over. . . . There was nothing to be done but to get away as safely as they yet might. . . . For thirty miles (reckoning the windings of the channel) the ships ran the gauntlet of an incessant fire — and such a fire as was never seen before. Stone balls, weighing 700 or 800 lbs., broke down the masts, crushed in the decks, snapped the rigging, and amazed the hearts of the sailors. The hills smoked from end to end, and the roar of the artillery rolled from side to side. In another week, Sir J. Duckworth declared in his dispatch, any return would have been impossible. The news of this singular affair spread fast over Europe. Every body thought the expedition gallantly conceived, and miserably weak in its failure. . . . So ended the second of the 'diversions' proposed under the Grenville Ministry. The third legacy of this kind that they left was a diversion on the side of Egypt. For some time, a notion had been gaining ground, in the minds of English politicians, that the Sultan would, some day soon, be giving Egypt to Napoleon, in return for the aid afforded to Constantinople, on the Danube, and elsewhere. Egypt was in an unhappy state. Mohammed Alee, the Viceroy, was at feud with the Memlooks; and the Arab inhabitants were made a prey of by both. The Grenville Ministry thought that a diversion in that direction would be of great service to Russia, and great injury to Napoleon; and they confidently reckoned on being enthusiastically received by the Arab inhabitants, and probably by the Memlooks also. In laying their plans, however, they strangely underrated the forces and the ability of Mohammed Alee; and they sent only between 4,000 and 5,000 men to the mouth of the Nile, instead of an army large enough to cope with the able and warlike Pasha of Egypt, and his Albanian troops. The small British force was drafted from the troops in Sicily. It landed without opposition on the 17th of March, supposing that Sir John Duckworth must by this time have conquered the Sultan, and that his province of Egypt would come very easily into our hands. No opposition was made to the landing of the troops, and Alexandria capitulated immediately. Only seven lives were lost on the British side. Within the city, however, no provisions were found." A detachment of 1,200 men sent to Rosetta for supplies were trapped in the city by Mohammed Alee's Albanians, and 400 of them, with their general, were shot down in the streets. Then Rosetta was besieged, with results of disastrous failure and the loss of 1,000 or 1,200 more men. General Fraser, the Commander, "was discouraged from home, and hourly harassed by the enemy. . . . More and more of the enemy came up as his little force dwindled away; and at last, on the appearance of a column which he was unable to encounter, he sent out a flag of truce, with an offer to evacuate Egypt on the restoration of the prisoners taken since the invasion. This was in August, 1807; and in September the last English soldier left the mouth of the Nile. By this time, the Sultan had declared war against England, and had caused a seizure of all the British property in his dominions."—H. Martineau, *Hist. of Eng.*, 1800–1815, *bk.* 2, *ch.* 1.

A. D. 1826.—Reforms of Mahmud II.—Insurrection of the Janissaries.—Their subjugation and destruction.—"While the struggle in Greece was proceeding, Mahmud had been busily engaged with his internal reforms, many of which were of a nature to offend the prejudices of his subjects. His great object was to give a European character to the institutions and the manners of his country. He introduced the western style of dress into Turkey; abandoned the use of the turban, which Mohammedans generally regard with much veneration; and gave musical and theatrical entertainments within the sacred enclosure of the Seraglio. He resolved also to recommence the military reforms of his uncle Selim, and again to establish the Nizam Jedid, or body of troops organized after European models. This last design roused once more the savage fanaticism of the Janizaries. On the 15th of June, 1826, when the Sultan and the Grand Vizier were in the country, the dissatisfied troops rose in insurrection, and committed great excesses. The Grand Vizier, hastily recalled to the metropolis, took measures for vindicating his master's authority, and at once found himself supported, not only by the new troops, but by the Ulemas and Students. Mahmud arrived shortly afterwards at the Seraglio, and by his orders the Mufti unfolded the standard of the Prophet, and summoned all faithful Mohammedans to rally round that holy symbol. The city was soon divided into two hostile factions. The Janizaries concentrated their forces in one of the great squares, and threw up entrenchments. The supporters of the Sultan gathered in their front, and an attack was made by ordnance, before which the Janizaries retired into their fortified barracks, where they continued to fight with the resolution of despair. . . . The building was presently on fire from one end to the other. The frightful struggle was continued in the midst of the flames; all who endeavoured to escape were at once shot down; and before the day was over 6,000 Janizaries had perished at the hands of their fellow-troops. Fifteen thousand who had not taken part in the movement were exiled to different places in Asia Minor, and on the following day a Hatti-Sherif pronounced the abolition of a corps which had contributed so much to the military predominance of Turkey, but which had at length become a source of internal danger too great to be suffered."—E. Ollier, *Cassell's Ill. Hist. of the Russo-Turkish War*, *v.* 1, *ch.* 23.

A. D. 1826-1829.—Convention of Ackerman.—War with Russia.—Surrender of Varna and Silistria.—Disastrous battle of Koulevscha.—Treaty of Hadrianople.—Cessions of territory.

—"It was not to be expected that an event so remarkable as the destruction of the Janizaries would fail to be taken advantage of by the court of St. Petersburg. The Emperor Nicholas had brought with him to the Russian throne a thorough determination to carry out that aggressive policy of the Empress Catherine, of which the terms of the celebrated treaty of Kutschouc-Kainardji [see above: A. D. 1768-1774] afforded so striking an illustration, and the annihilation of the Ottoman army, as well as the distracted condition of many of the provinces of that empire, afforded an opportunity too tempting to be neglected. The Czar, therefore, demanded that the Sultan should conclude with him a treaty, the provisions of which were made the subject of discussion at Ackerman, a town in Bessarabia; and Mahmoud, pressed by the necessity of his condition, . . . had found it requisite to conclude the arrangement, and the celebrated convention of Ackerman was ratified in October 1826. This treaty proved of great importance to Russia. In addition to other provisions, it recognised the whole stipulations of the two treaties of Bucharest and Kainardji, by which Russia claimed the right to interpose in behalf of the members of the Greek church in the Ottoman dominions. . . . During the year which succeeded the ratification of the convention of Ackerman, Russia was occupied with the Persian war, which was prosecuted with great vigour by General Paskewitch, by whom very considerable advantages were obtained; and in November 1827 the treaty of Tourkmantchai was concluded between Russia and Persia. . . . It left the Emperor . . . at leisure to carry out those hostile intentions which his ready interference in the affairs of Greece, and a variety of other considerations, clearly proved him to entertain. The approaching war was indicated by the mutual recriminations of the hostile powers. Russia accused the Porte of an endeavour to cause a revolution in the Caucasus, and of a violation of treaties by closing the Bosphorus against Russian ships, and by its conduct towards its Christian subjects. There was no inconsiderable foundation for such a complaint, and especially for the latter part of it. . . . Both sides immediately prepared for the struggle, which a variety of circumstances have proved that the Czar had long contemplated, and only waited for a suitable opportunity of entering upon. . . . In the month of May [1828] the [Russian] force began to assemble on the banks of the Pruth, and crossed that river at three different points. Being unopposed by the Ottomans, the Russian forces almost immediately entered Jassy and Bucharest, took possession of Galatz, and in a few weeks had occupied the whole of the left bank of the Danube. To accomplish as rapidly as possible the objects of the campaign, as well as to avoid having their very widely extended line exposed to the enemy, it was resolved by the leaders of the Russian forces to cross the Danube at Brahilow, and thence to advance with rapidity upon Silistria, Varna, and Schumla. This resolution they immediately proceeded to carry into effect. . . . About the middle of July, the Russian force under General Rudiger on the right, and Generals Woinoff and Diebitch on the left wing, accompanied by the Emperor Nicholas, moved toward Schumla; and the Ottoman army, whose instructions were to avoid general actions, and to throw their whole energy upon the defence of their fortifications, having engaged in battle with the enemy, retired within the entrenched camp surrounding that fortress, which now contained a force of 40,000 men. . . . The Emperor . . . resolved . . . to leave a corps of observation of 30,000 men before Schumla, under General Wittgenstein, and to direct the principal efforts of his army, in the first instance, to the reduction of Varna. . . . On the 5th of September, after having been absent at Odessa for about a month, during which he was engaged making arrangements for obtaining levies from Russia, and in negociating loans in Holland, the Emperor Nicholas arrived at Varna, to inspect the progress and encourage the operations of the besiegers. . . . The besieging force, towards the end of August, amounted to 40,000 men, which, on the arrival of the Emperor, were reinforced by more than 20,000, with a great addition to the artillery already possessed by the invading army. This large force was further supported by the Russian fleet. . . . The details of the siege exhibit a series of assaults repulsed with the utmost valour and spirit by the besieged, and entailing an immense loss upon the Russians, both in men and superior officers; but the circumstance that the reinforcement sent to relieve the garrison could not approach, so closely was the place invested, and the destruction of a part of the walls by the cannon of the Russians, led to a surrender, and Jussouf Pasha delivered up the fortress to the Emperor on the 10th of October, after a siege of more than two months. The utmost efforts were made to reduce Silistria, after Varna had been surrendered, but the advance of the season, and the difficulties of the attempt, as well as the disastrous circumstances of the Russian army before Schumla, soon proved that nothing more could be attempted till the following spring. The campaign, therefore, was brought to a conclusion, and orders were issued for the Russians to retire beyond the Danube, and take up their winter quarters in Wallachia. The fall of Brahilow and Varna were the only important events of the campaign of 1828 in Europe, and even these successes had been attained at a vast expense of human life. Out of nearly 160,000 men who had crossed the Danube at the beginning of the campaign, only about one-half remained. . . . In Asia operations were carried on by the Russians with equal vigour and much more success, in consequence, in a great measure, of the military genius and experience of General Paskewitch, who commanded the troops on the east of the Black Sea. . . . The first attack of the Russians in Asia was made upon the fortress of Anapa. . . . After a siege of about a month, the place was taken, with 85 guns and 3,000 prisoners, and the fleet sailed immediately to Varna. . . . After some other successes, General Paskewitch resolved upon attacking the town and fortress of Akhalzikh, a very important place in the pashalik of that name, and which was not only strongly fortified by nature and art, but had for its chief strength a resolute garrison of 10,000 Ottomans, besides the armed inhabitants of the place. The Sultan's troops defended this important fortress with the most undaunted resolution. . . . The surrender of Akhalzikh was followed by that of other important places of strength, which closed the campaign of 1828 in Asia. . . . The campaign of 1828 had rendered the most active

preparations requisite on the part of both belligerents for the commencement of hostilities in the following spring. The Ottoman soldiers, according to their usual custom, hastened from the garrisons to pass the winter in their homes, but the utmost efforts were made by the Porte to gather an adequate force to meet the exigencies of the struggle so soon to be renewed. Although only 10,000 men were left in Schumla during the winter, 40,000 assembled in that fortress early in spring. They were, however, for the most part new levies. . . . The Russians, on the other hand, were no less energetic in their arrangements. . . . It was impossible, however, before the month of May, from the condition of the Danube, to commence the campaign with the whole force, but by the tenth of that month the passage of the river was completed at Hirchova and Kalavatsch, below Silistria, the siege of which was immediately begun, while General Kouprianoff was stationed with a force at Pravadi, a fortress on the east of Schumla, and which, lying in the line of communication between Silistria and Varna, was important to the Russians as the means of keeping open a communication between the army of General Roth near Varna and the troops destined to act upon Silistria. Redschid Pasha, who on being recalled from Greece had been appointed Grand Vizier, had arrived at Schumla on the 21st of March, and on perceiving the position of the invading army, formed the well-conceived design of attacking Pravadi and the force under General Roth. . . . This movement of the Vizier became immediately known to General Roth, who by means of a courier conveyed information of it to Count Diebitch. That General was too acute not to perceive the purpose of his adversary, and too enterprising not to endeavour immediately to take advantage of it. The Count therefore adopted a movement of the highest importance, and which, indeed, had the effect of deciding the campaign. Instead of marching to attack Redschid Pasha at Pravadi, he resolved to intercept his communication with the fortress he had quitted, and thus compel the Ottoman general either to come to a general engagement, which could hardly fail to result to the advantage of the Russians, or to fight his way towards Schumla through the Russian army, or leave the fortress of Schumla to its fate, which, feebly garrisoned as it was, could not be long delayed. This skilful manœuvre was no sooner resolved upon than it was carried into execution. . . . While the Russian force were rapidly advancing towards Koulevscha, a village between Pravadi and Schumla, and scarcely three miles from the latter, the Grand Vizier remained wholly ignorant of the fact that Diebitch had quitted Silistria, and persisted in the belief that the only opponents of his retreat to Schumla were Generals Roth and Rudiger. . . . The mistake was fatal. The Ottoman cavalry attacked the infantry of the Russians, who were overwhelmed by their charge; and Diebitch, having waited in expectation that the Vizier would descend from the eminence on which he was posted to complete his supposed victory, and finding that he did not make this movement, broke from his concealment among the hills, and suddenly attacked the Ottoman troops with his whole force. The effect was instantaneous. A universal panic seized the Vizier's forces, his cavalry and infantry fled in confusion, every attempt to bring them to a stand proved abortive, and he himself escaped with difficulty. The artillery and baggage all fell into the hands of the enemy. . . . The muster at Schumla on the return of the Vizier and his remaining troops exhibited the magnitude of their loss. Out of a fine army of 40,000 men, who a few days before had marched from the fortress full of confidence, only 12,000 foot and about 6,000 cavalry remained. After the fatal battle of Koulevscha, the siege of Silistria was carried on with redoubled vigour, and on the 30th of June the fortress surrendered, when the whole garrison were made prisoners of war, and to the number of 8,000, and the Russians found on the ramparts 238 cannon, in addition to those on board the vessels in the harbour. The fall of Silistria now determined the Russian commander-in-chief to push across the Balkans. . . . After defeating with great facility such troops as opposed their advance, the Russian army pressed on with the utmost activity towards Hadrianople, and entered the city not only unopposed, but amidst the rejoicings of a multitude of the Greek population. . . . The terror which this extraordinary event inspired at Constantinople may easily be imagined to have been extreme. The very heart of the empire had been assailed by the victorious invaders in Europe, while the tidings from the Asiatic provinces of the defeats sustained by the Sultan's forces opposed to General Paskewitch, greatly contributed to the public alarm. . . . In the midst of this tumult of public feeling, the ambassadors of England and Austria exerted themselves to the utmost to bring about a pacification; and . . . the Sultan reluctantly agreed to the conclusion of a treaty of peace. . . . The celebrated treaty of Hadrianople, which concluded the war of 1828–29, . . . contained sixteen distinct articles, by which, among other matters, the following conditions were agreed upon: — The principalities of Wallachia and Moldavia, and all the conquered places in Bulgaria and Roumelia, were restored to the Porte, with the exception of the islands at the mouth of the Danube, which were to remain the possession of Russia. In Asia all the recent conquests were to revert to the Porte, with the exception of Anapa, on the north-eastern shore of the Black Sea, several important fortresses, together with an extensive district situated to the north and east of a line of demarcation supposed to be drawn from the then existing boundary of the province of Gouriel, and thence by that of Imeritia direct to the point where the frontiers of Kars unite with those of Georgia. The conditions of the treaties of Kainardji, Bucharest, and Ackerman were confirmed; . . . the passage of the Dardanelles was declared open to all Russian merchant ships, as well as the undisputed navigation of the Black Sea; an indemnity for losses by Russian subjects was fixed at £750,000, to be paid in eighteen months; and the expenses of the war were to be paid to the Russian Government, amounting to 10,000,000 ducats, about £5,000,000. . . . To this treaty two separate acts were annexed, the provisions of which are of scarcely less importance than the treaty itself. By these acts it was arranged that the Hospodars of Moldavia and Wallachia should be elected for life instead of for seven years; that no interference in the affairs of these provinces by any of the officers of the Porte should take

place; that no fortified towns, nor any establishment of Muslims, should be retained by the Porte on the left bank of the Danube; that the Turkish towns on that bank of the river should belong to Wallachia; and that the Mussulmans who possessed property in such places should be required to sell it in the space of eighteen months. . . . The conclusion of these treaties, on the 14th September 1829, terminated the war between Russia and the Ottoman Empire."—R. W. Fraser, *Turkey, Ancient and Modern, ch.* 30–31.

A. D. 1830.— Recognition of the autonomy of Servia. See Balkan and Danubian States: 14–19th Centuries (Servia).

A. D. 1831-1840. — Rebellion of Mehemed Ali, Pasha of Egypt.—Intervention of Russia and the Western Powers.— Egypt made an hereditary pashalik.—"The peace of Adrianople (1829) had greatly discredited the authority of the Porte; insurrections multiplied, and Turkish armies had to enter Bosnia and Albania. In these and all other matters by which the embarrassment of the Porte was increased, the ambitious Mehemed Ali, Pasha of Egypt, had a hand. As payment for his services against the Greeks, he had demanded the pashalik of Damascus. Sultan Mahmoud II. had refused the demand, and only given him the promised Candia. Hence, while the Western powers were occupied with the consequences of the July revolution [in France], and all Europe appeared to be on the verge of a new upheaval, he undertook to seize his booty for himself. In consequence of a quarrel with Abdallah, Pasha of Acre, Ibrahim Pasha [son of Mehemed Ali], notorious for his barbarous conduct of the war in Peloponnesus, crossed the Egyptian frontier, October 20th, 1831, with an army organized on the European system, took Gaza, Jaffa and Jerusalem without resistance, and besieged Acre, which was resolutely defended by Abdallah. Mehemed Ali now demanded both pashaliks — Damascus and Acre. The sultan commanded him to evacuate Syria. The demand was naturally refused; so Mehemed and his son Ibrahim were outlawed. But the latter proceeded with his operations, took Acre by storm May 25th, 1832, and entered Damascus. In the mean time, a Turkish army, under Hussein Pasha, had advanced into Syria. Mehemed Pasha, Hussein's lieutenant, was defeated at Homs, July 9th. Hussein himself, attempting to retrieve this loss, was defeated at Beylan July 27th, and his army scattered. The sultan sent a new army against Ibrahim, under Reshid Pasha, the Grand Vizier, who had displayed great efficiency in the reduction of the Albanians and Bosnians. Reshid . . . was utterly defeated at Konieh December 20th, and was himself taken prisoner. The sultan was in a critical situation. He could not at the moment bring together another considerable army, while Ibrahim had 100,000 well-trained troops, and the road to Constantinople lay open before him." Russia, having no wish to see the energetic Pasha of Egypt in possession of that coveted capital, offered her help to the sultan and he was driven to accept it. "A Russian fleet appeared in the Bosphorus, and landed troops at Scutari, while a Russian army was on the march from the Danube to cover Constantinople. . . . At length England and France perceived how dangerous it was to forget the East in their study of the Dutch Belgian question. Their ambassadors had enough to do, by a hasty peace, to make Russia's help unnecessary. As their threats made no impression on the victorious Mehemed Ali, they filled the sultan with distrust of Russia, and by representing a cession of territory to his vassal as the lesser of the two evils, persuaded him into the peace of Kutayah (May 6th, 1833), by which Mehemed Ali received the whole of Syria and the territory of Adana, in south-eastern Asia Minor. Russia had to retire with her object unattained, but had no sooner been thrown out at the front door than she came in at the back. She called the sultan's attention to the favor shown to the insatiable pasha by England and France in the peace of Kutayah, and concluded with him, July 8th, 1833, the treaty of Unkiar-Skelessi, by which he entered into a defensive alliance with Russia for eight years, and pledged himself to permit no foreign vessel of war to pass through the Dardanelles. The Western powers took this outwitting very ill, and from that time on kept a sharp eye on Constantinople." Mehemed Ali was meantime giving another direction to his ambition. "The west coast of Arabia, as far as the English post at Aden, had been in his possession since 1829. He now sought to extend his sway over the eastern coast, and subdue the sultan of Muscat. . . . If this were to continue, the two most important roads to the East Indies, by Suez and by the Persian Gulf, would be in the hands of Mehemed Ali. . . . With Egypt, Syria, and Arabia in his hands, England's position in the East would receive a blow that must be felt. So it was a foregone conclusion which side England would take. In 1838 she concluded with the Porte a commercial treaty by which the abolition of all monopolies, as well as free exportation from all parts of the Turkish empire, including Egypt and Syria, was secured to her. Mehemed Ali hesitated about accepting this treaty; and Mahmoud, full of hate against a vassal who threatened ultimately to devour him, declared him a traitor, deprived him of all his dignities, and caused an army to advance into Syria under Hasiz Pasha. But again fortune was not favorable to the Turks. In their camp, as military adviser of the commander-in-chief, was a Prussian captain, Hellmuth von Moltke. For two years he had been assisting the sultan in planning and putting into execution military reforms. Recognizing the weakness and unreliable character of the Turkish army, he advised Hasiz Pasha to fall back on the strong camp at Biridshik, bring up the re-enforcements which were under way, and then risk a battle. But the Pasha would not listen to Moltke's advice, pronouncing retreat a disgrace. He was completely routed at Nisib, on the Euphrates, June 24th, 1839, and his army scattered. For the second time the road to Constantinople lay open to Ibrahim. Misfortunes fell thick and fast upon the Turks. Sultan Mahmoud died June 30th, and the empire fell to a sixteen-year old youth, his son Abdul Medshid. Five days later, Capudan Pasha, with the Turkish fleet, sailed out of the Dardanelles under orders to attack the Egyptians. Instead of this he went over to Mehemed Ali with his whole fleet — in consequence of French bribery, it was said. . . . In order to prevent Turkey from casting herself a second time into Russia's arms, four great

powers — England, France, Austria, and Prussia — declared, July 27th, 1839, that they would themselves take the Eastern question in hand. To save herself from being wholly left out, Russia had to give her consent, and become a party to the treaty. But there were very different views as to the way in which the question was to be settled. France, which was striving after the control of the Mediterranean, and which, since Napoleon's campaign, had turned its eyes toward Egypt, wished to leave its friend Mehemed Ali in full possession. England saw her interests endangered by the pasha, thought France's occupation of Algiers quite enough, and was afraid that if Turkey were too weak she might become the defenceless prey of Russia. The latter wished at no price to allow the energetic pasha to enter upon the inheritance of Turkey, or even of a part of it, and was pleased at seeing the cordial understanding between France and England destroyed. Austria and Prussia supported England and Russia, and so France was left alone. The Anglo-Russian view found expression in the quadruple alliance which the great powers, with the exception of France, concluded in London, July 15th, 1840. By this the hereditary possession of the pashalik of Egypt, and the possession for life of a part of Syria, were secured to Mehemed Ali, in case he submitted to the conclusions of the conference within ten days. . . . The allied powers began hostilities against Mehemed Ali, who, relying on French assistance, refused to submit. The Anglo-Austrian fleet sailed to the Syrian coast, and took Beirut and Acre; and Alexandria was bombarded by Commodore Napier. This and the fall of the Thiers ministry brought Mehemed Ali to a full realization of his mistake. He might consider himself lucky in being allowed to hold Egypt as hereditary pashalik upon evacuating Syria, Arabia, and Candia, and restoring the Turkish fleet. For this favor he had to thank England, which sought by this means to secure his friendship and the Suez road to India. The catastrophe of the 'sick man' [the Turk] was again put off for a few years." — W. Müller, *Political Hist. of Recent Times, sect.* 11.

A. D. 1861-1876.—The reign of Abd-ul-Aziz, and accession of Abd-ul-Hamid. — "Troubles broke out in the Lebanon in 1860, a French army was dispatched to restore order, and in the adjustment of rival claims an opportunity was afforded to Lord Dufferin for displaying those diplomatic talents for which he is renowned. In 1861 the Sultan Abd-ul-Mejid died, and with him passed away the hope of regenerating Turkey. His brother and successor Abd-ul-Aziz was an ignorant bigot, whose extravagance brought his country to avowed insolvency (1875), and thus deprived her of that sympathy which is seldom given to the impecunious. The only remarkable thing he did was to travel. No Ottoman Sultan had ever before left his own dominions, except on the war path, but Abd-ul-Aziz ventured even as far as London, without, however, awakening any enthusiasm on the part of his Allies. In 1876 he was deposed, and — found dead. How he came by his death is a matter of doubt, but his end is said to have turned the brain of his successor, Murad V., a son of Abd-ul-Mejid, who after three months was removed as an imbecile, and succeeded by his brother, . . . Abd-ul-Hamid." —S. Lane-Poole, *The Story of Turkey, ch.* 17.

A. D. 1861-1877.— Union of Wallachia and Moldavia.— Revolt in Bosnia and Herzegovina.—Reforms demanded by the Great Powers.—War with Servia.—Conference at Constantinople.—Russian preparations for war.— "Before four years were over [after the termination of the Crimean War by the Treaty of Paris], one of the chief stipulations of the treaty was set aside. Wallachia and Moldavia, which it had been the policy of the Powers to separate, displayed a constant desire to join. Two of the great Continental Powers — France and Russia — favoured the junction. England, Austria, and Turkey, thinking that the union would ultimately lead to their independence, opposed their fusion under one prince. At last, after discussions, which at one moment seemed likely to rekindle the flames of war, an administrative union was arranged, which resulted, in due course, in the formal union of the two provinces in 1861. [In 1858, the two provinces chose the same prince, or hospodar, in the person of Prince John Couza, who took the title of Prince of Roumania. The Porte protested, but was induced, in 1861, to recognize this union of the coronets. Prince Couza aspired to absolutism, and was forced to abdicate in 1866. Then a German, Prince Charles of Hohenzollern, was chosen by the two provinces to be his successor.] Thus, five years after the Peace of Paris, one of the stipulations on which England had insisted was surrendered. In 1870 the Franco-German War led to the obliteration of another of them. In November, when the armies of France were either beaten or besieged, Russia repudiated the clause of the Treaty of Paris which had limited the forces of Russia and Turkey in the Black Sea. The declaration of the Russian Government came as a painful shock to the British people. The determination of a great European state to tear up the clause of a treaty excited indignation. It was recollected, moreover, that it was for the sake of this clause that the Crimean War had been prolonged after the Vienna negotiations; and that all the blood which had been shed, and all the money which had been spent, after the spring of 1855, were wasted in its abandonment. . . . All that diplomacy was able to do was to lessen the shock by persuading the Russian Government to submit its proposal for the abrogation of the clause to a conference. . . . The conference met. . . . It had practically nothing to do but to record its assent to the Russian proposal. . . . For five years more the Eastern Question remained undisturbed. In the spring of 1875 an insurrection broke out in Bosnia and Herzegovina, two of the northern provinces of European Turkey. The Porte failed to quench the disturbance; and, its efforts to do so increasing its pecuniary embarrassments, was forced in the autumn to repudiate the claims of its many creditors. . . . In the meanwhile the insurrection continued to spread, and attracted the attention of the great European Powers. At the instigation of Austria a note was drawn up [by Count Andrassy, and

known, therefore, as the Andrassy Note], which was at once signed by all the European Powers except England, and which was ultimately accepted by England also, declaring that 'the promises of reform made by the Porte had not been carried into effect, and that some combined action by the Powers of Europe was necessary to insist on the fulfilment of the many engagements which Turkey had made and broken.' As the note failed to effect its object, the representatives of the Northern Powers — Germany, Austria, and Russia — met at Berlin, proposed a suspension of arms for two months, and intimated that if Turkey in the two months failed to fulfil her broken promises, 'force would be used to compel her' to do so. The British Government, unwilling to join in a threat, refused to sign this new note. The insurrection went on; Servia, sympathising with the insurgents, declared war against Turkey; Russian officers and Russian troops fought in the Servian battalions; and Russia herself, setting her legions in motion, evidently prepared for hostilities. When these events occurred, large numbers of the English people were prepared to support the Turk. Though they had been partially estranged from the cause of Turkey by the repudiation of the Ottoman debt in the previous autumn, they recollected the sacrifices of the Crimean War; they were irritated with the manner in which one part of the Treaty of Paris had been torn up in 1870; and they were consequently prepared to resist any further movement on the part of Russia. The Porte, however, dreading the extension of revolt, allowed its officers to anticipate disorder by massacre. The atrocious cruelty with which this policy was executed [especially in Bulgaria — see BALKAN and DANUBIAN STATES: A. D. 1875–1878] excited a general outburst of indignation in this country [England]; and the British Ministry, whose leader had hitherto displayed much sympathy with the Turks, found himself forced to observe a strict neutrality. In the short war which ensued in the autumn of 1876, the Servian troops proved no match for the Turkish battalions. At the request or command of Russia the Porte was forced to grant an armistice to the belligerents; and, on the suggestion of the British Ministry, a Conference of the Great Powers was held at Constantinople to provide for the better government of the Turkish provinces. The Constantinople Conference, held at the beginning of 1877, formed in many respects an exact parallel to the Vienna Conference held in the summer of 1855. . . . The Porte rejected all the proposals on which the other Powers were agreed. . . . In each case the failure of the Conference was followed by war. But the parallel ends at this point. . . . In the Russo-Turkish war of 1877-8, Turkey was left to fight her own battle alone."— S. Walpole, *Foreign Relations, ch.* 3.

A. D. 1877-1878. — War with Russia. — Heroic defense of Plevna.—Defeat and surrender.—"Russia had already massed large numbers of troops on her frontier, and Turkey was also engaged in the work of mobilization. On the 24th April the Emperor of Russia issued a manifesto to his subjects, in which he recited the interest of the empire in the Christian population of the Balkan peninsula, and the general desire that their condition should be ameliorated. He declared that all efforts at peace had been exhausted. . . . He had given the orders for the army to cross the frontier, and the advance upon Turkey was begun without delay. . . . The Turks had not been idle, though their preparations were by no means as complete as those of Russia. They had massed heavy bodies of troops along the Danube, and were prepared to resist the movements of the Russians south of that stream. . . . The first crossing [of the Russians] was made at Galatz, on the 22d June, by General Zimmermann, who went over with two regiments in pontoons and drove out the Turks who were posted on the heights on the opposite shore. Having obtained a footing in the Dobrudja, as the peninsula between the Danube and Black Sea is called, the Russians were able to throw bridges over the great stream, by which the whole left wing of the army moved across. Meantime the right wing, on the 26th June, sent a pontoon force over the Danube from Simnitza, under command of General Skobeleff, who drove out the small force of Turks posted there, though not without hard fighting. More pontoons followed, and then a bridge was thrown across on which the army could march. . . . By the first week of July the whole Russian army was safely encamped on the southern bank of the Danube, and getting in readiness to assume the offensive. . . . The advance did not begin in force until after the middle of the month. But before that time General Gourko . . . had pushed forward on the road to the Balkans, heading first for Tirnova. . . . On the 5th July the cavalry occupied Biela, . . . and on the 7th Gourko was in possession of Tirnova. . . . The Emperor joined the army at Biela on the 8th or 9th. Gourko was soon reported past the Balkans. . . . The first check of the Russians was at Plevna. They had previously captured Nicopolis with its garrison of 7,000 men, having themselves lost about 1,300 officers and men killed and wounded. Orders had been given to occupy Plevna as soon as possible, and Baron Krudener sent forward General Schilder-Schuldner to carry out the orders. . . . Schilder-Schuldner had 6,500 men and 46 guns in the division with which he went to capture Plevna; he was attacked by a vastly superior force of Turks before he had reached his objective point, and the first battle of Plevna was disastrous to the Russians. . . . Nearly 3,000 men and 74 officers were killed or wounded. . . . The Russians retired to Nicopolis, and the Turks set to work to strengthen Plevna. . . . From the 20th to the 30th of July the Russians were engaged in bringing up reinforcements and getting ready for another attack. An order came for the assault of the Turkish position; Baron Krudener did not believe the assault advisable, but the command of the Grand Duke Nicholas left him no discretion." The assault was made on the 31st of July, and was repulsed, with a loss to the Russians of 170 officers and 7,136 men. "There was nothing for the Russians to do but send for reinforcements, and wait until they arrived. The advance into Turkey had received a severe check, from which recovery was not easy. From the offensive the Russians were thrown upon the defensive, and all as the result of a single battle of six or eight

hours' duration. Happily for Russia, the Turkish army had no competent leader, or the army of the Czar might have been captured or drowned in the Danube. The Turks had three armies in the field. . . . Mehemet Ali was at Shumla with 65,000 men; Osman Pasha at Plevna, with 50,000; and Suleiman Pasha at Yeni Zagra, with 40,000. . . . The order of the Czar for reinforcements was quickly issued, and resulted in the despatch of 120,000 regulars and 180,000 militia for the front. With these reinforcements went 460 pieces of artillery. . . . General Gourko took up his position in the Shipka Pass whence Suleiman Pasha sought in vain to dislodge him. . . . Towards the end of August the Russian reinforcements were assembled in such numbers that an advance could again be ventured. . . . The total Russian and Roumanian force for the attack of Plevna amounted to 90,000 men and 440 guns, while the Turks were estimated to have about 56,000 men—and Osman Pasha. . . . The attack began with a bombardment on the 6th September," which was kept up until the 11th, when the Russians again endeavored to carry the Turkish works by assault. Skobeleff, conspicuous, as he always was, in daring and in success, took one of the redoubts and held it until the next day, waiting vainly for reinforcements which were not sent. Elsewhere the assault failed. "The Russian killed and wounded were estimated at 18,000 to 20,000, and the Turkish about 5,000 less than the Russian. The capture by assault having been given up, the Russians sat down to invoke the aid of that engine, more powerful than all their batteries, the engine of starvation. . . . One by one the roads leading into Plevna were occupied, but it was nearly two months from the terrible battle of the 11th September before the routes for supplies and reinforcements destined for Osman Pasha could be secured. The investment was completed on the 3d November; 120,000 Russians and Roumanians were around Plevna." On the morning of December 10 the beleaguered Turks made a desperate sortie, attempting to break the line of investment, having failed in which their stout-hearted commander surrendered unconditionally. "With the fall of Plevna and the surrender of its garrison of 40,000 men, the Turkish opposition practically ceased. Within a month from that event General Gourko had captured Sophia, and General Radetsky took the village of Shipka, in the Shipka Pass, and compelled the surrender of a Turkish army of 23,000 men. . . . Gourko and Skobeleff advanced upon Philippopolis by different routes and narrowly missed capturing Suleiman Pasha with his entire force. Skobeleff advanced upon Adrianople, which the Turks abandoned, and Slivno and Yeni-Zagra were occupied, all inside of thirty days. Plevna had made the Russians the masters of the situation, and they advanced upon Constantinople, the Turks retiring before them, and occasionally making a feeble resistance. Turkey asked the mediation of England, and finally, despairing of her aid, signed an armistice that became the basis of the treaty of San Stefano."—T. W. Knox, *Decisive Battles since Waterloo, ch.* 21.—The campaign of the Russians in Bulgaria was accompanied by another in Asiatic Turkey, where they, likewise, met with a temporary check, after pushing their first advance too confidently, and with an insufficient force. They invested Kars and advanced against Erzeroum, in May, 1877; but were defeated at Sevin and withdrew from both undertakings. Having received reinforcements, they resumed the offensive in October, attacking the main Turkish army, under Mukhtar Pasha, in its strong position at Aladsha, or on the Little Yahni and Great Yahni hills. Their first attack, on the 2d, was repulsed; they repeated it on the 15th with success, driving one wing of the enemy into Kars and forcing the other to surrender. Kars was then besieged and taken by assault November 17. The Turks suffered another defeat at Deve-Boyun, near Erzeroum, November 4, and they evacuated Erzeroum itself in February, 1878.—E. Ollier, *Cassell's Illustrated Hist. of the Russo-Turkish War.*

A. D. 1878.—Excitement in England over the Russian advance.—The British fleet sent through the Dardanelles.—Arrangement of the Berlin Congress.—"At the opening of 1878 the Turks were completely prostrate. The road to Constantinople was clear. Before the English public had time to recover their breath and to observe what was taking place, the victorious armies of Russia were almost within sight of the minarets of Stamboul. Meanwhile the English Government were taking momentous action. . . . Parliament was called together at least a fortnight before the time usual during recent years. The Speech from the Throne announced that her Majesty could not conceal from herself that, should the hostilities between Russia and Turkey unfortunately be prolonged, 'some unexpected occurrence may render it incumbent on me to adopt measures of precaution.' This looked ominous to those who wished for peace, and it raised the spirits of the war party. There was a very large and a very noisy war party already in existence. It was particularly strong in London. It embraced some Liberals as well as nearly all Tories. It was popular in the music-halls and the public-houses of London. . . . The men of action got a nickname. They were dubbed the Jingo Party. . . . Some Tyrtæus of the tap-tub, some Körner of the music-halls, had composed a ballad which was sung at one of these caves of harmony every night amidst the tumultuous applause of excited patriots. The refrain of this war-song contained the spirit-stirring words: 'We don't want to fight, but, by Jingo, if we do, We've got the ships, we've got the men, we've got the money too.' Some one whose pulses this lyrical outburst of national pride failed to stir called the party of its enthusiasts the Jingoes. . . . The name was caught up at once, and the party were universally known as the Jingoes. . . . The Government ordered the Mediterranean fleet to pass the Dardanelles and go up to Constantinople. The Chancellor of the Exchequer announced that he would ask for a supplementary estimate of six millions for naval and military purposes. Thereupon Lord Carnarvon, the Colonial Secretary, at once resigned. . . . Lord Derby was also anxious to resign, and indeed tendered his resignation, but he was prevailed upon to withdraw it. The fleet meanwhile was ordered back from the Dardanelles to Besika Bay. It had got as far as the opening of the Straits when it was recalled. The Liberal

Opposition in the House of Commons kept on protesting against the various war measures of the Government, but with little effect. . . . While all this agitation in and out of Parliament was going on . . . the news came that the Turks, utterly broken down, had been compelled to sign an armistice, and an agreement containing a basis of peace, at Adrianople. Then, following quickly on the heels of this announcement, came a report that the Russians, notwithstanding the armistice, were pushing on towards Constantinople with the intention of occupying the Turkish capital. A cry of alarm and indignation broke out in London. One memorable night a sudden report reached the House of Commons that the Russians were actually in the suburbs of Constantinople. The House for a time almost entirely lost its head. The lobbies, the corridors, St. Stephen's Hall, the great Westminster Hall itself, and Palace Yard beyond it, became filled with wildly excited and tumultuous crowds. If the clamour of the streets at that moment had been the voice of England, nothing could have prevented a declaration of war against Russia. Happily, however, it was proved that the rumour of Russian advance was unfounded. The fleet was now sent in good earnest through the Dardanelles, and anchored a few miles below Constantinople. Russia at first protested that if the English fleet passed the Straits Russian troops ought to occupy the city. Lord Derby was firm, and terms of arrangement were found — English troops were not to be disembarked, and the Russians were not to advance. Russia was still open to negotiation. Probably Russia had no idea of taking on herself the tremendous responsibility of an occupation of Constantinople. She had entered into a treaty with Turkey, the famous Treaty of San Stefano, by which she secured for the populations of the Christian provinces almost complete independence of Turkey, and was to create a great new Bulgarian State with a seaport on the Egean Sea. The English Government refused to recognise this Treaty. Lord Derby contended that it involved an entire readjustment of the Treaty of Paris, and that that could only be done with the sanction of the Great Powers assembled in Congress. Lord Beaconsfield openly declared that the Treaty of San Stefano would put the whole south-east of Europe directly under Russian influence. Russia offered to submit the Treaty to the perusal, if we may use the expression, of a Congress; but argued that the stipulations which merely concerned Turkey and herself were for Turkey and herself to settle between them. This was obviously an untenable position. . . . Turkey meanwhile kept feebly moaning that she had been coerced into signing the Treaty. The Government determined to call out the Reserves, to summon a contingent of Indian troops to Europe, to occupy Cyprus, and to make an armed landing on the coast of Syria. . . . The last hope of the Peace Party seemed to have vanished when Lord Derby left his office [which he did on the 28th of March]. Lord Salisbury was made Foreign Minister. . . . Lord Salisbury's first act in the office of Foreign Secretary was to issue a circular in which he declared that it would be impossible for England to enter a Congress which was not free to consider the whole of the provisions of the Treaty of San Stefano. . . . Prince Bismarck had often during these events shown an inclination to exhibit himself in the new attitude of a peaceful mediator. He now interposed again and issued invitations for a congress to be held in Berlin to discuss the whole contents of the Treaty of San Stefano. After some delay, discussion, and altercation, Russia agreed to accept the invitation on the conditions proposed, and it was finally resolved that a Congress should assemble in Berlin on the approaching June 13. To this Congress it was supposed by most persons that Lord Salisbury would be sent to represent England. Much to the surprise of the public, Lord Beaconsfield announced that he himself would attend, accompanied by Lord Salisbury, and conduct the negotiations in Berlin. The event was, we believe, without precedent. . . . The Congress was held in the Radzivill Palace, a building with a plain unpretending exterior in one of the principal streets of Berlin, and then in the occupation of Prince Bismarck. The Prince himself presided. . . . The Congress discussed the whole or nearly the whole of the questions opened up by the recent war. . . . The great object of most of the statesmen who were concerned in the preparation of the Treaty which came of the Congress, was to open for the Christian populations of the south-east of Europe a way into gradual self-development and independence. But on the other hand it must be owned that the object of some of the Powers, and especially, we are afraid, of the English Government, was rather to maintain the Ottoman Government than to care for the future of the Christian races. These two influences, acting and counteracting on each other, produced the Treaty of Berlin."—J. McCarthy, *Hist. of Our Own Time, ch.* 65 (*v.* 4).

A. D. 1878.—The Treaties of San Stefano and Berlin.—"The First Article of the Treaty of San Stefano had reference to the new boundaries to be assigned to Montenegro. The accession of territory, which was not very large, was taken from the provinces of Bosnia and Albania, and lay to the north, east, and south of the original State. . . . It gave to the mountaineers their much-coveted admission to the sea. It was next provided that a European Commission, on which the Sublime Porte and the Government of Montenegro were to be represented, should be charged with fixing the definite limits of the Principality. . . . By Article II., the Sublime Porte recognized definitively the independence of the Principality of Montenegro. . . . Article III. dealt with Servia, which was recognized as independent. The new frontier of this Principality was to follow the course of the Drina, the Dezevo, the Raska, the Ibar, the Morava, and some other streams, and was drawn so as to give Little Zwornik, Zakar, Leskovatz, Ak Palanka, and Nisch, to the Servians. . . . In Article V., the Sublime Porte undertook to recognize the independence of Roumania, which would thus acquire a right to an indemnity, to be hereafter discussed between the two countries. The most important sections of the Treaty were of course those which had relation to Bulgaria. They commenced with Article VI., which set forth that Bulgaria was constituted an autonomous, tributary Principality, with a Christian Govern-

ment and a national militia. The definitive frontiers of the new Principality were to be traced by a special Russo-Turkish Commission before the evacuation of Roumelia by the Russian army. . . . The new Bulgaria was of very considerable dimensions. It extended from the Danube in the north to the Ægean in the south; and from the borders of Albania in the west to the Black Sea in the east. All that was left to Turkey in this part of her Empire was an irregular aud somewhat narrow territory, running westward from Constantinople along the shores of the Sea of Marmora and the Ægean until it touched the limits of the new Principality, and extending no farther north than was sufficient to include Adrianople and its immediate neighbourhood. By this arrangement, the territory so left to the Sultan was completely separated from Thessaly and Albania. . . . According to Article VII., the Prince of Bulgaria was to be freely elected by the people, and confirmed by the Sublime Porte with the assent of the Powers. No member of the reigning dynasties of the Great European Powers should be capable of being elected Prince of Bulgaria. . . . The introduction of the new system into Bulgaria, and the superintendence of its working, would be entrusted for two years to an Imperial Russian Commissioner. . . . By Article VIII., the Ottoman army would no longer remain in Bulgaria, and all the ancient fortresses would be razed at the expense of the local Government. . . . Until the complete formation of a native militia, the country would be occupied by Russian troops. . . . Article IX. declared that the amount of the annual tribute which Bulgaria was to pay the Suzerain Court would be determined by an agreement between Russia, the Ottoman Government, and the other Cabinets. . . . By Article X., the Sublime Porte was to have the right to make use of Bulgaria for the transport, by fixed routes, of its troops, munitions, and provisions, to the provinces beyond the Principality, and vice versâ. . . . Article XII. provided that all the Danubian fortresses should be razed, and that in future there should be no strongholds on the banks of the Danube, nor any men-of-war in the waters of Roumania, Servia, or Bulgaria. . . . Article XIV. imposed on Turkey the obligation to introduce reforms into Bosnia and the Herzegovina." Articles XV. and XVI. stipulated reforms in government of Crete, Epirus, Thessaly, Armenia, and other parts of the Ottoman Empire. "The question of the war-indemnities was arranged in Article XIX., which set forth that the Emperor of Russia claimed, in all, 1,410,000,000 roubles for losses imposed on Russia during the contest. . . . The Emperor, however, did not desire to receive the whole of this indemnity in the form of money-payments, but, taking into consideration the financial embarrassments of Turkey, and acting in accordance with the wishes of the Sultan, was willing to substitute for the greater part of the sums enumerated certain territorial cessions, consisting of the Sandjak of Tultcha, on the Danube (including the Delta Islands and the Isle of Serpents), and, in Asia, Ardahan, Kars, Batoum, Bayazid, and the territory extending as far as the Soghanli Dagh. With respect to the Sandjak of Tultcha and the Delta Islands, Russia, not wishing to annex that territory, reserved to herself the right of exchanging it for the part of Bessarabia detached from her by the Treaty of 1856. . . . The ceded territories in Europe and Asia were to be taken as an equivalent for the sum of 1,100,000,000 roubles." The remaining Articles of the Treaty of San Stefano related to details of minor importance. "The Treaty of Berlin, signed by the Plenipotentiaries on the 13th of July, 1878, and of which the ratifications were exchanged on the 3rd of August, was the Treaty of San Stefano, with additions, subtractions, and amendments. . . . Speaking generally, it may be said that the objects of the Treaty of Berlin, as distinguished from its predecessor, were to place the Turkish Empire in a position of independence, and to protect the jeopardised rights of Europe. These ends it accomplished, or partially accomplished, by several important provisions. It divided the so-called Bulgaria into two provinces, of which the one to the north of the Balkans was formed into a tributary Principality, while the one to the south, which was to be designated Eastern Roumelia, was to remain under the direct authority of the Sultan, with administrative autonomy and a Christian Governor-General. It left to the Sultan the passes of the mountains, and the right of sending troops into the interior of Eastern Roumelia whenever there might be occasion. It reduced the stay of the Russian army in European Turkey. . . . It secured to Roumania, as compensation for the loss of that portion of Bessarabia which had been annexed to Moldavia by the Treaty of Paris (1856), a larger amount of territory, south of the Danube, than had been granted at San Stefano. It restored to Turkey the whole of the northern shores of the Ægean, a wide extent of country in Europe, and, in Asia, the valley of Alashgerd and the town of Bayazid. . . . It gave far ampler guarantees for religious liberty than had entered into the projects of the Czar."—E. Ollier, *Cassell's Illustrated Hist. of the Russo-Turkish War, v. 2, ch. 9 and* 21.—"In her private agreement with Russia, England had consented to the cession of Batoum, but she now sought to diminish the value of that post by stipulating that the fortifications should be demolished and the port declared free. The dispute, which at one time assumed a serious character, was finally settled by a declaration on the part of the Czar that Batoum should be a free port. Kars, Ardahan, and Batoum were ceded to Russia, the district of Khotur to Persia, and the Sultan pledged himself to carry out the requisite reforms in Armenia without loss of time, and to protect the inhabitants against the Kurds and Circassians. At the same time a secret treaty was made known which had been contracted between England and Turkey on the 4th of June. By this treaty the Porte pledged itself to carry out reforms in Asia Minor, and England, on her part, guaranteed the integrity of the Sultan's Asiatic possessions. To put England in a position to fulfil her part of the treaty, and as a pledge for the execution of the promised reforms, the Porte surrendered Cyprus to England as a naval and military station, the latter agreeing to regard the island as an integral part of the Turkish empire, and to make over the surplus revenue to the Sultan. This treaty, which had received the consent of Germany and Russia at the time of its execution, aroused great indignation in France and Italy. . . . To pacify the former state, Beaconsfield and Salisbury entered into a secret arrangement with Wadding-

ton, in accordance with which England was to put no obstacles in the way of a French occupation of Tunis—an arrangement of which the French government finally took advantage in the year 1881. The English representatives had also entered into an arrangement with Austria in reference to Bosnia and Herzegovina. In the sitting of June 29th Andrassy read a memorandum in which he set forth that Austria had been disturbed for a whole year by the insurrection in those provinces, and had been compelled to receive and provide for over 150,000 Bosnian fugitives, who positively refused again to submit to the hardships of Turkish misrule; that Turkey was not in a position to restore order in the disturbed districts. . . .Thereupon the Marquis of Salisbury moved that Austria be charged with the occupation and administration of Bosnia and Herzegovina, and . . . the congress . . . decided to hand over those two provinces to Austro-Hungary. . . . The independence of Servia and Montenegro was recognized on condition that full freedom and political equality were accorded to the members of all religions. Servia received an addition to her population of 280,000 souls, her most important acquisition being the city and fortress of Nish. She also assumed a part of the Turkish debt. The recognition of Roumanian independence was conditioned on the cession of Bessarabia to Russia, and the admission to political equality of the members of all religions—a condition which had special reference to the Jews. In compensation for Bessarabia Roumania was to receive the Dobrudsha and the islands at the mouth of the Danube. . . . Austria took possession of her share of the booty at once, but not without the most obstinate resistance."—W. Müller, *Political Hist. of Recent Times, sect.* 30.

A. D. 1894.—Reported Atrocities in Armenia.—A disturbance of some nature—the causes and extent of which have not yet been ascertained—occurring in Turkish Armenia during the late weeks of summer or early part of autumn, gave occasion for what is claimed to have been more horrible atrocities on the part of the Turkish soldiery than were committed in Bulgaria during the year 1877. The scene of alleged massacres is in the mountainous district of Sassoun, near the western end of Lake Van, where 6,000 men, women and children are said to have been slain. The Christian world having been roused, though not very promptly, by the reports of this fresh outbreak of barbarism, the Porte has been forced by pressure from the Powers to consent to the formation of a commission to investigate the affair. England, France and Russia are to be represented on the commission.

TUSCANY: A. D. 685-1115.—The founding of the duchy.—The reign of Countess Matilda.—The rise of the free cities.—"The first Lombard duke of whom any sure record remains is a certain 'Alovisino' who flourished about the year 685; and the last, though of more doubtful existence, is 'Tachiputo,' in the 8th century, when Lucca was the principal seat of government, with the privilege of coining, although her Counts were not always Dukes and Marquises of Tuscany. About the year 800, the title of Duke seems to have changed to that of Count, and although both are afterwards used the latter is most common: Muratori says, that this dignity was in 813 enjoyed by a certain Boniface whom Sismondi believes to be the ancestor of Countess Matilda; but her father, the son of Tedaldo, belonged to another race: he was the grandson to Attone, Azzo, or Adelberto, Count of Cannosa. . . . The line of Boniface I. finished in 1001 by the death of Hugo the Great. . . . After him, on account of the civil wars between Ardoino and Henry, there was no permanent Duke until 1014, when the latter appointed Ranieri, whom Conrad the Salique deposed in 1027, making room for Boniface the father of Countess Matilda. This heroine died in 1115 after a reign of active exertion for herself and the Church against the Emperors [in the 'War of Investitures,' see Papacy: A. D. 1056–1122], which generated the infant and as yet nameless factions of Guelph and Ghibeline. . . . The fearless assertion of her own independence by successful struggles with the Emperor was an example not overlooked by the young Italian communities under Matilda's rule. . . . These seeds of liberty began first to germinate amongst the Lombard plains, but quickly spreading over the Apennines were welcomed throughout Tuscany [see Italy: A. D. 1056–1152]. . . . It seems probable that in Tuscany, towards the commencement of the 12th century, the Count's authority had passed entirely into the principal communities, leaving that of the Marquis as yet untouched; but there are reasons for believing that the Countess Matilda in some of her difficulties was induced to sell or cede a portion of her power, and probably all that of the Count's. . . . Altogether, there appears little reason to doubt the internal freedom of most Tuscan cities very early in the 11th century."—H. E. Napier, *Florentine History, bk.* 1, *ch.* 4 (*v.* 1).

TUSCARORAS, The. See AMERICAN ABORIGINES: IROQUOIS CONFEDERACY, and IROQUOIS TRIBES OF THE SOUTH.

TUSCULAN VILLAS.—"In Cicero's time the number of country-houses which a wealthy Roman considered it necessary to possess had evidently become considerable, and the amount spent upon them very great. The orator himself had villas at Tusculum, Antium, Formiæ, Baiæ, and Pompeii, besides his town-house on the Palatine, and his family seat at Arpinum. . . . The Tusculanum of Cicero had formerly been in the possession of Sylla. . . . Close to the Villa of Cicero, and so near that he could go across to fetch books from the library, was the Villa of Lucullus. . . . Many other Roman villas lay on the Tusculan hills."— R. Burn, *Rome and the Campagna, ch.* 14, *pt.* 3.

TUSCULUM.—"In the times of the Latin League, from the fall of Alba to the battle of Lake Regillus, Tusculum was the most prominent town in Latium. It suffered, like the other towns in Latium, a complete eclipse during the later Republic and the Imperial times; but in the ninth, tenth, eleventh and twelfth centuries, under the Counts of Tusculum, it became again a place of great importance and power." The ruins of Tusculum, about fifteen miles from Rome, on the Alban hills, have been considerably explored.—R. Burn, *Rome and the Campagna, ch.* 14, *pt.* 2.—See, also, ALBA.

TWO SICILIES, The Kingdom of the.—The kingdom founded in Southern Italy and Sicily by the Norman conquest in the 11th century (see ITALY: A. D. 1000–1090, and 1081–

1194) maintained its existence until recent times, sometimes as a unit, and sometimes divided into the two dominions, insular and peninsular, of Sicily and Apulia, or Naples. The division occurred first after the rising against the French and the massacre known as "the Sicilian Vespers" (see ITALY: A. D. 1282–1300). The crown of Sicily was then acquired by Peter, king of Aragon, succeeded by his son Frederick. Charles of Anjou and his successors were left in possession of the kingdom of Naples, alone, although still claiming Sicily in union with it. "As the king who reigned at Naples would not give up his right to Sicily, . . . his kingdom is often called Sicily as well as the Island Kingdom; and so when at last the two kingdoms became one [again—see ITALY: A. D. 1412–1447], the strange name of the Kingdom of the Two Sicilies arose."—W. Hunt, *Hist. of Italy, p.* 93.—See, also, NAPLES, and SICILY.

TYCHE.—One of the variously named parts of the ancient city of Syracuse, Sicily. Its position was northwest of Achradina.

TYPHOID FEVER, Appearance of. See PLAGUE: 18TH CENTURY.

TYRANTS, Greek.—"A 'tyranny,' in the Greek sense of the word, was the irresponsible dominion of a single person, not founded on hereditary right, like the monarchies of the heroic ages and of many barbarian nations, nor on a free election, like that of a dictator or æsymnete, but on force. It did not change its character when transmitted through several generations, nor was any other name invented to describe it when power, which had been acquired by violence, was used for the public good; though Aristotle makes it an element in the definition of tyranny, that it is exercised for selfish ends. But, according to the ordinary Greek notions, and the usage of the Greek historians, a mild and beneficent tyranny is an expression which involves no contradiction."—C. Thirlwall, *Hist. of Greece, ch.* 10.—"In spite of the worst which has been said against them, the tyrants hold a legitimate place in the progress of Greek constitutional history. They were the means of breaking down the oligarchies in the interests of the people. . . . It was at Sicyon that the first tyrannis arose. . . . About the year 670 B. C. a certain Orthagoras, who is said to have been a cook, succeeded in establishing himself as tyrant in Sicyon. Of his reign no incident is recorded. He was succeeded by his son Myron."—E. Abbott, *Hist. of Greece, pt.* 1, *ch.* 12.

TYRAS, The.—The ancient name of the river Dniester.

TYRCONNEL'S DOMINATION IN IRELAND. See IRELAND: A. D. 1685–1688.

TYRE.—"Justin represents Tyre as having been founded a year before the Capture of Troy, thus apparently reducing by about 1,500 years the date assigned to it by the priests of the temple of Hercules. . . . Josephus places the settlement of Tyre 240 years before the building of Solomon's Temple. He refers no doubt to the same event as Justin, the occupation of the island by the Sidonians, as he cannot have been ignorant of the mention of Tyre in the Old Testament more than 240 years before Solomon. The date of the building of Solomon's Temple is itself disputed, estimates varying from 1012 B. C. to 969 B. C. . . . Tyre consisted of two parts, an island about three-quarters of a mile in length, separated from the mainland by a strait four stadia, about half a mile, in width at its northern end, and a town on the shore. The latter was distinguished as Palæ-Tyrus, or Ancient Tyre, and was the chief seat of the population, till the wars of the Assyrian monarchs against Phœnicia. It extended along the shore from the river Leontes in the north to the fountain of Ras-el-Ain in the south, a distance of seven miles, great part of which would be suburb rather than city. Pliny, who wrote when its boundaries could still be traced, computes the circuit of Palæ-Tyrus and the island together at nineteen Roman miles, that of the island town being 22 stadia. . . . Though called Old Tyre, because it lay in ruins, when the younger city on the island was in the height of its prosperity, it was from the first connected with it; and the name of Tyre (Tsour), 'a rock,' would hardly be appropriate, except to the island. . . . It is probable that, from the first, the island, from the excellence of its natural harbour, was a naval station to the city on the mainland, and, as a place of security, the seat of the worship of the national deities, Astarte, Belus, Hercules. . . . The situation of Palæ-Tyrus was one of the most fertile spots on the coast of Phœnicia. The plain is here about five miles wide, the soil is dark, and the variety of its productions excited the wonder of the Crusaders. Near the southern extremity of the city was a fountain, which, communicating with some natural receptacle in the mountains above, poured forth copious and perennial streams of pure and cool water. An aqueduct distributed them through the town. . . . Whatever may have been the relative importance of Palæ-Tyrus and the island, previous to the great migration from Sidon, occasioned by the victory of the Ascalonites, there can be no doubt that from this time the population of the island greatly increased. The colonization of Gades took place about a century later. But we have no connected history of Tyre till near the age of Solomon."—J. Kenrick, *Phœnicia: Hist., ch.* 1.—See PHŒNICIANS, and TRADE.

The founding of the colony of Carthage. See CARTHAGE: THE FOUNDING OF.

B. C. 598-585.—Siege by Nebuchadnezzar. See PHŒNICIANS: B. C. 850–538.

B. C. 332.—Siege and capture by Alexander the Great.—After defeating the Persians at Issus (see MACEDONIA: B. C. 334–330), Alexander turned his attention to the tributary Phœnician cities, whose fleets gave to the Great King a naval power more formidable than the hosts of the nations which marched at his command. Sidon, Byblus, and other towns submitted promptly to the conqueror. Tyre offered a qualified surrender, which did not satisfy the haughty Macedonian, and he instantly laid siege to the city. Having no adequate fleet with which to reach the island-town, he resolved to carry a causeway across the channel which separated the island from Old Tyre, on the mainland, and he demolished the buildings of the latter to provide materials for the work. It was an undertaking of immense magnitude and difficulty, and the ingenious Tyrians found many modes of interfering with it. They succeeded in destroying the mole when half of it had been built; but Alexander, with obstinate perseverance, began his work anew, on a larger scale than before. He also collected a strong fleet of war-galleys, from Cyprus and from the Phœnicians who had submitted to him, with which the opposition of the enemy was checked and his own operations advanced. After seven months of prodigious labor and incessant battle, the strong walls of Tyre were beaten down and the city taken. "It soon became a scene of unresisted carnage and plunder. The Macedonians, exasperated by the length and labours of the siege, which had lasted seven months, and by the execution of their comrades [Greek prisoners, whom the Tyrians had put to death on the walls, before the eyes of the besiegers, and cast into the sea], spared none that fell into their hands. The king — whom the Greeks call Azelmicus — with the principal inhabitants, and some Carthaginian envoys who had been sent with the usual offerings to Melkart, took refuge in his sanctuary: and these alone, according to Arrian, were exempted from the common lot of death or slavery. It was an act of clemency, by which the conqueror at the same time displayed his piety to the god. Of the rest, 8,000 perished in the first slaughter, and 30,000, including a number of foreign residents, were sold as slaves. But if we may believe Curtius, 15,000 were rescued by the Sidonians [of Alexander's navy], who first hid them in their galleys, and afterwards transported them to Sidon — not, it must be presumed, without Alexander's connivance or consent. It sounds incredible, that he should have ordered 2,000 of the prisoners to be crucified. . . . Tyre was still occupied as a fortress, and soon recovered some measure of her ancient prosperity."—C. Thirlwall, *Hist. of Greece, ch.* 50.

ALSO IN: Arrian, *Anabasis of Alexander, bk.* 2, *ch.* 15–24.

B. C. 332-A. D. 638.—Under Greek and Roman domination.—"The Carians, with whom Alexander repeopled the city [of Tyre] fell into the habits of the former population, and both Tyre and Sidon recovered much of their commercial greatness. After a long struggle between the kingdoms of Egypt and Syria, Phœnicia was finally secured to the latter by Antiochus the Great (B. C. 198). But the commercial rivalry of Egypt proved more serious even than political subjection; and the foundation of Berenice on the Red Sea diverted to Alexander much of the oriental commerce that had previously flowed through Tyre and Sidon. But still they did not succumb to their younger rival. Under the Romans, to whom Phœnicia was subjected with Syria [by Pompeius the Great, B. C. 64], Tyre was still the first commercial city of the world."—P. Smith, *Hist. of the World: Ancient, ch.* 24.

A. D. 638.—Capture by the Moslems.—After the taking of Jerusalem by the Caliph Omar, the Moslems made themselves masters of the remainder of Palestine very quickly. Tripoli was first won by treachery, and then the same traitor who had delivered it, making his way to Tyre, succeeded in bringing about the betrayal of that place. Many of the inhabitants were put to the sword; but many others are said to have saved their lives by accepting the religion of the victors. The fall of Tyre was followed by the flight from Cæsarea of Constantine, son of the Emperor Heraclius, who commanded in Syria, and the entire abandonment of that rich province to the Moslems.—S. Ockley, *Hist. of the Saracens, pp.* 251–253 (*Bohn ed.*).

A. D. 1124.—Siege and Conquest by the Venetians and Crusaders.—The Venetians took little or no part in the First Crusade, being largely engaged in commerce with the Saracens. But in 1124—a full quarter of a century after the taking of Jerusalem — they found it wise to obtain an interest in the Christian conquests that were spreading along the Levantine coasts. They accordingly sent their doge, with a formidable fleet, to offer aid to the Latin king of Jerusalem — then Baldwin II. — for the reduction of either Ascalon or Tyre, both of which cities were still held by the Moslems. Finding it difficult to make choice between the two places, a solemn drawing of lots took place, at the altar of the Holy Sepulchre, as a means of ascertaining the will of God. The lot decided that Tyre should be attacked, and operations were accordingly begun. But "the Venetians, more devoted to the interests of their commerce and of their nation than to those of a Christian kingdom, demanded, before beginning the siege of Tyre, that they should enjoy a church, a street, a common oven, and a national tribunal in every city in Palestine. They further demanded other privileges and the possession of a third of the conquered city." The demands of the Venetians were complied with, and Tyre, after a siege of over five months, beleaguered by land and sea, was taken. The capitulation was an honorable one and honorably respected. The Moslem inhabitants were permitted to leave the city; the Christians entered it triumphally, and the day on which the news reached Jerusalem was made a festival.—J. F. Michaud, *Hist. of the Crusades, bk.* 5.

TYROL: Origin of the county and its name.—"Tyrol freed herself from the suzerainty of Bavaria in very early times. She was divided among a number of princes, lay and ecclesiastical. The principal of these were the counts of the Adige or of the Tyrol, and the counts of Andechs, who obtained the title of duke from Frederick I. [1152–1190], and called themselves dukes of Meran. Their race came to an end in 1248, and their domains were united to those of the counts of Tyrol who thus became possessed of the larger part of the lands

between the Inn and the Adige. Tyrol takes its name from the castle of Tirol, which was built on the site of the Roman station Teriolis, not far from Meran, on the upper waters of the Adige." — L. Leger, *Hist. of Austro-Hungary, p.* 144, *footnote.*—"After the dissolution of the classic Roman Empire, the Province of Rætia split up into parcels. . . . It is impossible, in a sketch like this, to follow the various dynastic and other changes, most of them extremely perplexed and obscure, which ensued between the 5th and 10th centuries. At the end of this period, the main constituents of the old province had assumed something like the shape which they now bear. That is to say, Rætia Secunda was separated from Rætia Prima, which had also lost what formerly belonged to it south of the Alpine ridge. . . . Tirol again had been detached from Rætia Prima, and had begun to form a separate entity. Meanwhile a power of first rate importance in the future history of Graubünden [the Grisons] had arisen: namely the Bishopric of Chur. . . . The Bishops of Chur took rank as feudal lords of the first class. . . . Originally an insignificant house, exercising . . . the functions of Bailies to the See of Chur, the Counts of Tirol acquired influence and territory under the shadow of distant ecclesiastical superiors."—J. A. Symonds, *Hist. of Graubünden* (*In Stricklland's "The Engadine"*), *pp.* 23–27.

UGANDA.—"It was in 1858 that the travellers Burton and Speke, starting from Zanzibar, first made Europe acquainted with the existence of that vast inland sea, the Victoria Lake, of which Rebmann and Ernhardt had already heard native reports. Four years later Speke and Grant, passing round the western shore, reached Uganda; and they found here, if I may employ the paradox, a singular, barbaric civilisation. Combined with the most barbarous usages and the grossest superstition were many of those advances in the scale of humanity which we are wont to accept as indications of civilisation. There was an appeal to law, and cases were decided after a formal hearing. The administration was vested in the king,—an absolute despot,—and from him downwards there existed a regular chain of delegated power and control. Well-made roads, kept constantly in repair, intersected the country in all directions. Rough bridges were constructed across river swamps. An army was maintained, and also a fleet of canoes on the waters of the lake. The arts of building, smith-work, &c., were very far in advance of anything to be found between Uganda and the coast. The ideas of decency, the use of clothing, and the planting of trees, were indications of long years of development, of which the intricate customs and etiquettes surrounding the Court were an additional proof. Speke traces the earliest developments of this civilisation to Unyoro and its shepherd kings, descendants of a nomadic, pastoral race — the Wahuma — whom he supposes to be an offshoot from the Abyssinians or Gallas. Uganda and the countries lying along the lake shore, being the richest province of this Wahuma empire — called Kitara — had to bring large quantities of produce to Unyoro for the king's use, and their inhabitants were looked on as slaves. The legend relates that a hunter named Uganda headed a revolt, and was proclaimed king under the name of Kimera. Mtesa was the seventh of the dynasty, according to Speke, which shows it to be of some little antiquity. Speke was enthusiastic about the fertility of Uganda, and the development of its people as compared with the savage tribes of Africa. The next European to visit the country was Colonel Chaillé Long, who was sent by Gordon in the summer of 1874. Stanley followed in 1875, and simultaneously Linant arrived in the country. In 1876 Gordon sent Emin with a party of soldiers to Mtesa's capital. They were for some time quartered there, and Gordon had views of annexing Uganda to the Egyptian Sudan. . . . Stanley was even louder in his praises of Uganda than Speke had been, and described it as the 'Pearl of Africa.' In consequence of his appeal on behalf of the people, a fund was started, and missionaries were despatched to Uganda. These arrived in June 1877. . . . Some two years later — February 1879 — the French (R. Catholic) Algerian Mission despatched a party of 'White Fathers' to

begin mission-work in Uganda. The religious differences between these two conflicting creeds, which marked the very inauguration of the R. Catholic mission, much puzzled and confused Mtesa, since both alike called themselves 'Christians.' The Arabs from the coast had already settled in Uganda, and brought with them the religion of Islam. . . . Mtesa showed great toleration to all creeds, though at one time he had leaned to Mohammedanism, and had ordered all Uganda to embrace that creed. Shortly after, however, as the followers of Islam refused to eat the king's meat because it was not killed in the orthodox way according to the Koran, he ordered the massacre of all Mohammedans. . . . Mtesa died in the autumn of 1884, and Mwanga, then about eighteen years old, succeeded him — being selected from among Mtesa's sons on account of his personal likeness to the late king, since in Uganda paternity is often difficult to prove. At this time the three religions had made great progress, and their disintegrating influences on the old customs began to be more and more apparent. This was especially the case with regard to the Christians, who no longer regarded the king as divine, nor his acts, however gross and cruel, as having a divine sanction. They owned a Higher allegiance, though they remained obedient subjects, and distinguished themselves by bravery in war. Such an attitude was, of course, intolerable to a cruel despot like Mwanga. . . . There was still a further reason for suspicion and fear of the white men. . . . The Egyptian flag had been hoisted at Mruli and Fauvera in Unyoro, only just beyond the borders of Uganda, and Gordon's envoys — Colonel Long and Emin — and his troops had penetrated to Mtesa's capital. The Arabs also told of the doings of the Belgians on the Congo. At a later period reports reached Mwanga of German annexations in Usagara on the East Coast. Last, and most disturbing of all, was the news of Mr. Thomson's arrival near Usoga in the East — the route from the coast by which native tradition said that the conquerors of Uganda would come. Mwanga had succeeded his father in November 1884. Early in 1885 he determined to stamp out those dangerous religions, Mohammedan and Christian alike, which were disintegrating his country. The missionaries Mackay and Ashe, were seized, and their followers persecuted. But the religion spread the more. A plot to depose Mwanga was discovered and crushed. With varying fortunes — sometimes treated leniently, sometimes the victims of violent persecution — the missionaries held their own till the autumn of 1885. Then came news of Bishop Hannington's approach." Unhappily the Bishop came by the forbidden Usoga route, and Mwanga ordered that he be killed, with all his men, which was done in October, 1885. "After this the position of the Europeans was very precarious, but not till the following May (1886) did the storm burst. Mwanga then threw aside all restraint, and butchered the Christian converts wholesale. . . . But in spite of the martyrdom by torture and burning, the religion grew. . . . The heroism inspired by religion in the early history of our own Church was repeated here in the heart of Africa." At length, in 1888, there was a revolt, in which Christians and Mohammedans seem to have combined, and Mwanga fled to an island at the south of the Lake. His brother Kiwewa was made king, and for a time, the Christians were in control of affairs. But the Mohammedans grew jealous, and by a sudden rising drove the Christians out. Kiwewa refusing to accept the creed of Islam, was deposed, and another brother, Karema, was raised to the throne. The exiled Christians now made overtures to Mwanga, and an alliance was concluded, which resulted in the overthrow of the Mohammedan or Arab party, and the restoration of Mwanga to the throne, in October, 1889. The two Christian factions, Catholic and Protestant, or French and English, divided the country and all the offices of government between them, but were bitterly jealous of each other and perpetually quarreled, while the defeated Mohammedans were still strong and unsubdued. Affairs were in this state when Dr. Peters, the explorer in command of the German "Emin Relief Expedition," came to Uganda, having learned of the rescue of Emin Pasha by Stanley. Dr. Peters, with the aid of the French party, succeeded in arranging some kind of treaty with Mwanga, and this alarmed the Imperial British East Africa Company (see AFRICA: A. D. 1884–1891) when news of it had been received. That alarm was soon increased by intelligence that Emin Pasha had entered the German service and was about to conduct a strong expedition to the south of Lake Victoria Nyanza. These and other circumstances led to the despatching of Capt. Lugard with a small force to Uganda to represent the British East Africa Company and establish its influence there. Capt. Lugard arrived at Mengo, the capital of Uganda, on the 18th of December, 1890. Meantime Great Britain and Germany, by the Anglo-German Agreement of July 1, 1890 (see AFRICA: A. D. 1884–1891) had settled all questions between them as to their respective "spheres of influence," and Uganda had been definitely placed within the British "sphere." This enabled Captain Lugard to secure the signing of a treaty which recognized the suzerainty of the Company, established its protectorate over Uganda, and conceded to it many important commercial and political powers. He remained in the country until June, 1892, during which time he was driven to take part in a furious war that broke out between the Catholic and Protestant parties. The war ended in a partition of territory between the factions, and three small provinces were, at the same time, assigned to the Mohammedans. After maintaining Captain Lugard and his force in the country for eighteen months, the Company found the cost so heavy and the prospect of returns so distant, that it came to a resolution to withdraw; but was induced by a subscription of £16,000 from the Church Missionary Society to remain for another year in the exercise of the control which it had acquired. At the end of 1892 the Company renewed its resolution to evacuate the region west of Lake Victoria, and the British Government was urgently pressed to take upon itself the administration of the country. It was only persuaded, however, to assume the cost of a further occupation of Uganda for three months by the Company's officers, in order to give more time for ensuring the safety of missionaries and other Europeans. It consented, moreover, to despatch a Commissioner to investigate the situation and report upon it. The official selected for that duty was Sir Gerald Porter, Consul-General at

Zanzibar. Sir Gerald returned to England with his report in December, 1893, and died of typhoid fever in the month following. His report urged the maintenance of an effective control over the government of Uganda, to be exercised directly by the British Government, in the form of a Protectorate, keeping the king on his throne, with a Commissioner at his side to direct his action in all important particulars. After much discussion, the decision of the Government was announced at the beginning of June, 1894. It determined to establish the proposed Protectorate in Uganda, not extending to Unyoro, and to place a Sub-Commissioner on duty between Lake Victoria and the sea, for the purpose of watching over communications, and apparently without political powers. The Government declined to undertake the building of the railway from Mombassa on the coast to the Lake, for which the Imperial British East Africa Company had made surveys.—Capt. F. D. Lugard, *The Rise of our East African Empire.*

ULTRAMONTANE.—ULTRAMONTANISM.—The term ultramontane (beyond the mountain) has been used for so long a time in France and Germany to indicate the extreme doctrines of Papal supremacy maintained beyond the Alps—that is, in Italy, and especially at Rome—that it has come to have no other meaning. The ultramontanists in each country are those who make themselves partisans of these doctrines, in opposition to the more independent division of the Roman Catholic Church.

UMBRIANS, The.—"The Umbrians at one time possessed dominion over great part of central Italy. Inscriptions in their language also remain, and manifestly show that they spoke a tongue not alien to the Latin. The irruption of the Sabellian and of the Etruscan nations was probably the cause which broke the power of the Umbrians, and drove them back to a scanty territory between the Æsis, the Rubicon, and the Tiber."—H. UNIFORMITY, Acts of.—Two Acts of Uniformity were passed by the English Parliament in the reign of Edward VI. (1548 and 1552), both of which were repealed under Mary. In 1559, the second year of Elizabeth, a more thoroughgoing law of the same nature was enacted by the provisions of which, "(1) the revised Book of Common Prayer as established by Edward VI. in 1552, was, with a few alterations and additions, revised and confirmed. (2) Any parson, vicar, or other minister, whether beneficed or not, wilfully using any but the established liturgy, was to suffer, for the first offence, six months' imprisonment, and, if beneficed, forfeit the profits of his benefice for a year; for the second offence, a year's imprisonment; for the third, imprisonment for life. (3) All persons absenting themselves, without lawful or reasonable excuse, from the service at their parish church on Sundays and holydays, were to be punished by ecclesiastical censures and a fine of one shilling for the use of the poor."—T. P. Taswell-Langmead, *English Const. Hist., ch.* 12.—See, also, England: A. D. 1559.—In 1662, soon after the Restoration, another Act of Uniformity was passed, the immediate effect of which was to eject about 2,000 ministers from the Established Church. See England: A. D. 1662–1665.

UNITARIANISM.—"In its restricted sense Unitarianism means belief in the personal unity of God instead of in a community of divine persons. . . . Among the articles of Unitarian faith so understood, besides the doctrine of one supreme divine person, may be enumerated belief in human nature, in moral freedom, in human reason, in character as of more worth than ritual or creed, in the equal justice not to say mercy of God, in the unreality of a devil, not to say of evil, and in the ultimate salvation, or evolution into something better, of all souls. Without being in any sense the first article of the faith, either in the historical order as having been the starting-point, or in the logical order as underlying the whole system, or in the order of importance as being with us the doctrine of doctrines, it has happened in spite of a thousand protests that belief in God's personal unity has given its name to the entire confession. The movement first called Socinian, then Arminian, and finally Unitarian, began as a protest of the 'natural man' against two particularly hateful doctrines of Calvinism, that of total depravity and that of predestination."—S. C. Beach, *Unitarianism and the Reformation* (*Unitarianism: its Origin and History*).—"The establishment of distinct Unitarian churches in England dates back to 1774, when Theophilus Lindsey left the Church of England and went up to London to start the first avowedly Unitarian place of worship in the country. But that was not the beginning of Unitarianism. Centuries before this, Unitarianism began in England as an individual opinion, had first its martyr-age, then a period when it was a great ferment of controversy, and finally the distinct development of it which stands today in our English Unitarian body. The names of some of the Unitarian martyrs on the continent of Europe are comparatively well known,— Servetus, burned by Calvin; Valentine Gentilis the Italian; and other isolated students here and there, who had been stirred up by the Reformation spirit to read the Bible for themselves, and who could not stop where Luther and Calvin stopped. . . . What is called the 'era of toleration' began immediately after the overthrow of the Stuarts in 1688. The sects were now at liberty to go quietly on in their own way. On the one hand there was the great established Episcopal Church,— at a pretty low ebb in religious life, for its most earnest life had gone out of it on that 'black Bartholomew's Day, 1662,' when the two thousand Puritan clergy were ejected [see ENGLAND: A. D. 1662–1665]. On the other hand were these Puritans,—'Dissenters' they began now to be called, —divided into three great sects, Baptists, Independents, and English Presbyterians. Now, these were all free. They could build churches, and they did. From 1693 to 1720 was the great 'chapel'-building time. . . . But now, in this great development of chapel-building by these three denominations, a curious thing took place, which unexpectedly affected their after history. That curious thing was, that while the Baptists and Independents (or Congregationalists) tied down all these new chapels to perpetual orthodox uses by rigid doctrinal trust-deeds, . . . the English Presbyterians left theirs free. It seems strange that they should do so; for the Presbyterians had begun by being the narrowest sect of the Puritans, and the Scotch Presbyterians always remained so. But the English Presbyterians had very little to do with the Scotch ones, and through all the changes and sufferings they had had to go through they had become broadened; and so it came to pass that now, when they were building their churches or chapels up and down the country, they left them free. . . . The English Presbyterians, thus left free, began to grow more liberal. . . . A general reverence for Christ took the place of the old distinct belief in his deity. . . . They opened the communion to all; they no longer insisted on the old professions of 'church-membership,' but counted all who worshipped with them 'the church.' Thus things were going on all through the middle of the last century. Of course it was not the same everywhere; some still held the old views. . . . One man among them, . . . Dr. Joseph Priestley, . . . was one of the leading scientists of his time,— a restless investigator, and at the same time an earnest religious thinker and student, just as eager to make out the truth about religion as to investigate the properties of oxygen or electricity. So he investigated Christianity, studied the creeds of the churches, came to the conclusion that they were a long way from the Christianity of Christ, and gradually came to be a thoroughgoing Unitarian. When he came to this conclusion he did not hide it; he proclaimed it and preached it. . . . The upshot of it was, that at length he aroused a large part of the body to the consciousness that they were really Unitarians. They still did not take the name; they disliked sect-names altogether. . . . And so, though they mostly continued to call themselves English Presbyterians, or simply Presbyterians, all the world began to call them Unitarians; and more and more the Baptists and Independents, or Congregationalists, who had formerly fellowshipped and worked with them, drew apart, and left them, as they are to-day, in the reluctant isolation of a separate Unitarian body. Two other movements of thought of a somewhat similar kind increased and strengthened this development of a separate Unitarian body,— one among the General Baptists, the other in the great Episcopal Church itself."—B. Herford, *Unitarianism in England* (*Unitarianism: its Origin and History*).—"It is hard to trace the early history of Unitarianism in New England. The name was seldom used, yet not omitted with any view to concealment; for we have abundant proof that the ministers to whom it belonged preached what they believed clearly and fully. . . . But a marvellous change had taken place in the last century, at the beginning of which the denial of the Trinity would have seemed no better than blasphemy; while at its close nearly all the clergy of Boston

and its vicinity and many others in Massachusetts were known to dissent from the ancestral creed, to have ceased to use Trinitarian doxologies, and to preach what was then known as Arianism, regarding Jesus Christ as the greatest and oldest of created beings, but in no proper sense as God. At the same time, so little stress was laid on the Trinity by its professed believers that, with two or three exceptions, these Arians remained in full church fellowship with those of the orthodox faith. In the territory now within the limits of Boston there were, a century ago, but two professedly Trinitarian ministers, one of them being Dr. Thacher, of the liberal Brattle Square Church, while Dr. Eckley, of the Old South Church, was known to entertain doubts as to the deity of Christ."—A. A. D. 1492-1620.—Discovery and exploration of the Atlantic coast. See AMERICA.

A. D. 1607-1752.—First settlement and organization of the thirteen original English colonies.—The earliest attempts at European settlement (as distinct from exploration) within the present limits of the United States were made by French Huguenots, under the patronage of Admiral Coligny; first at Port Royal, on Beaufort River, Florida, where Jean Ribaut, in 1562, placed a few colonists who soon abandoned the spot, and, two years later, at Fort Caroline, on St. John's River, in the same peninsula. The second colony, commanded by René de Laudonnière, was considerable in numbers but unpromising in character, and not likely to gain a footing in the country, even if it had been left in peace. It was tragically extinguished, however, by the Spaniards in September, 1565. The Spaniards had then established themselves in a fortified settlement at St. Augustine. It was surprised and destroyed in 1567 by an avenging Huguenot, but was promptly restored, and has survived to the present day,—the oldest city in the United States. (See FLORIDA.)—The first undertakings at colonization from England were inspired and led by Sir Walter Raleigh. After unsuccessful attempts, in conjunction with his elder half-brother, Sir Humphrey Gilbert, to establish settlements in Newfoundland, Raleigh obtained a grant from Queen Elizabeth, in 1584, under which he planted a colony of 108 settlers, commanded by Ralph Lane, on Roanoke Island, within the boundaries of the present State of North Carolina. In honor of the virgin queen of England, the name Virginia was given to the region at large. Lane's colonists had expected to find gold, silver and pearls, and lost interest in the country when none could be discovered. In June, 1586, they persuaded Sir Francis Drake, who had touched at Roanoke with his fleet, to carry them home. Soon afterwards, several ships, sent out by Raleigh with reinforcements and supplies, arrived at the island, to find it deserted. They left fifteen men to hold the ground; but a year passed before another expedition reached the place. The fort was then found in ruins; the fifteen men had disappeared, and nothing of their fate could be learned. The new colony perished in the same way—its fate an impenetrable secret of the savage land. This was Raleigh's last venture in colonization. His means were exhausted; England was absorbed in watching and preparing for the Spanish Armada; the time had not come to "plant an English nation in America." Sir Walter assigned his rights and interests in Virginia to a company of merchant adventurers, which accomplished nothing permanently. Twenty years passed before another vigorous effort of English colonization was made. In 1606 King James issued a royal charter to a company singularly formed in two branches or divisions, one having its headquarters at London, and known as the London Company, the other established at Plymouth and known as the Plymouth Company. Between them they were given authority to occupy territory in America from the 34th to the 45th degree of latitude; but the two grants overlapped in the middle, with the intention of giving the greater domain to the company which secured it by the earliest actual occupation. The London Company, holding the southward grant, despatched to Virginia a company of 105 emigrants, who established at Jamestown, on the northerly bank of James River (May 13, 1607), the first permanent English settlement in America, and founded there the colony and the subsequent State of Virginia. The colony survived many hardships and trials, owing its existence largely to the energy and courage of the famous Captain John Smith, who was one of its chief men from the beginning. Its prosperity was secured after a few years by the systematic cultivation of tobacco, for which the demand in England grew fast. In 1619, negro slavery was introduced; and by that time the white inhabitants of Virginia had increased to nearly 4,000 in number, divided between eleven settlements. (See VIRGINIA.)—Meantime, the Plymouth Company had done nothing effectively in the northward region assigned to it. Bartholomew Gosnold, in 1602, had examined the coast from Maine to Cape Cod, and built a lonely house on the island of Cuttyhunk; Martin Pring, in 1603, had loaded two ships with sassafras in Massachusetts Bay; a colony named in honor of the chief justice of England, Sir John Popham, had shivered through

the winter of 1607–8 near the mouth of Kennebec River and then gone home; Captain John Smith, in 1614, had made a voyage to the country, in the interest of London merchants, and had named it New England; but no lasting English settlement had been made anywhere within the bounds of King James' grant to the Plymouth Company, at the waning of the year 1620, when Virginia was well grown. It was then by chance, rather than by design, that the small ship Mayflower landed a little company of religious exiles on the Massachusetts coast, at Plymouth (December 21, 1620), instead of bearing them farther south. Driven from England into Holland by persecutions, twelve years before, this congregation of Independents, or Separatists, now sought liberty of conscience in the New World. They came with a patent from the London, or South Virginia Company, and expected to plant their settlement within that company's territorial bounds. But circumstances which seemed adverse at the time bent their course to the New England shore, and they accepted it for a home, not doubting that the proprietors of the land, who desired colonists, would permit them to stay. The next year they received a patent from the Council for New England, which had succeeded to the rights of the Plymouth Company. Of the hardships which these Pilgrim Fathers endured in the first years of their Plymouth Plantation, who does not know the story! Of the courage, the constancy and the prudence with which they overcame their difficulties, who has not admired the spectacle! For eight years they remained the only successful colony in New England. Then came the memorable movement of Puritans out of Old England into New England, beginning with the little settlement at Salem, under John Endicott; expanding next year into the "Governor and Company of Massachusetts Bay"; founding Dorchester, Roxbury, Charlestown, Watertown, and Boston, in 1630, and rapidly possessing and putting the stamp of the stern, strong Puritan character on the whole section of America which it planted with towns. In the Puritan colony of Massachusetts Bay a cleavage soon occurred, on lines between democratic and aristocratic or theocratic opinion, and democratic seceders pushed southwestwards into the Connecticut Valley, where Dutch and English were disputing possession of the country. There they settled the question decisively, in 1635 and 1636, by founding the towns of Hartford, Windsor, Wethersfield and Springfield. Three years later the three towns first named confederated themselves in a little republic, with a frame of government which is the first known written constitution, and so gave birth to the future State of Connecticut. In 1638 New Haven was founded by a company of wealthy nonconformists from England, under the lead of their minister, John Davenport, and was a distinct colony until 1662, when it was annexed to Connecticut by a royal charter. Another State, the smallest of the New England commonwealths, was taking form at this same time, in a little wedge of territory on Narragansett Bay, between Connecticut and Massachusetts. Roger Williams, the great apostle of a tolerant Christianity, driven from Salem by the intolerant Puritanism of the Bay, went forth with a few followers into the wilderness, bought land from the Narragansett Indians, and laid the foundations (1636) of the town of Providence. In that same year another small company of people, banished from Boston for receiving the teachings of Mrs. Anne Hutchinson, bought the island of Aquidneck or Aquetnet from the Indians and settled at its northern end. This community was soon divided, and part of it removed to the southern end of the island, beginning a settlement which grew to be the town of Newport. The island as a whole received the name of the Isle of Rhodes, or Rhode Island; and in 1644 its two settlements were united with Providence, under a charter procured in England by Roger Williams, forming the colony of Providence Plantations. In 1643 the colonies of Massachusetts, Plymouth, Connecticut and New Haven, entered into a confederation, from which Rhode Island was excluded, calling themselves "The United Colonies of New England." The object of the confederation was common action in defence against the Indians and the Dutch on the Hudson. It was the beginning of the cementing of New England. Before this time, small settlements had been planted here and there in northern New England, within territory covered by grants made to Sir Ferdinando Gorges and Captain John Mason. The province claimed by Gorges was subsequently called Maine, and that of Mason, New Hampshire; but Maine never rose to an independent colonial existence. After years of dispute and litigation, between 1651, and 1677, the jurisdiction of Massachusetts was extended over the province, and it remained the "District of Maine" until 1820, when Massachusetts yielded the separation which made it a sovereign state in the American Union. The New Hampshire settlements were also annexed to Massachusetts, in 1641, after Captain Mason's death; were separated in 1679, to be organized as a royal province; were temporarily reclaimed without royal authority in 1685; but finally parted from Massachusetts in 1692, from which time until the Revolution they remained a distinct colony. (See NEW ENGLAND; also MASSACHUSETTS, CONNECTICUT, RHODE ISLAND, NEW HAMPSHIRE, and MAINE.)— While the English were thus colonizing New England at the north and Virginia at the south, the Dutch, not recognizing their claims to the country between, had taken possession of the important valley of the Hudson River and the region around its mouth, and had named the country "New Netherland." The river had been discovered in 1609 by Henry Hudson, an English sailor, but exploring in the service of the Dutch. Trading with the Indians for furs was begun the next year; the coast and the rivers of the region were actively explored; a New Netherland Company was chartered; a trading-house, called Fort Nassau, was built on the Hudson as far to the north, or nearly so, as Albany; but no real colonization was undertaken until 1623. The New Netherland Company had then been superseded by the Dutch West India Company, with rights and powers extending to Africa as well as the West Indies and the North American coasts. It bought Manhattan Island and large tracts of land from the Indians, but had little success for several years in settling them. In 1629 it introduced a strange experiment, creating a kind of feudal system in the New World, by conveying great estates to individuals, called Patroons, or Patrons, who would undertake to colonize them, and who received with their territorial grant much of the

powers and many of the characteristics of a feudal lord. Several Patroon colonies were established on a baronial scale; but, generally, the system did not produce satisfactory results, and in 1640 the Company tried the better experiment of making the trade of New Netherland free to all comers, offering small independent grants of land to settlers, and limiting the Patroons in their appropriation of territory. The Company government, however, as administered by the directors or governors whom it sent out, was too arbitrary to permit a colonial growth at all comparable with that of New England. Collisions with the English in Connecticut arose, over questions of boundary, but the latter held their ground. Southward, on the Delaware, the Swedes made a settlement where the city of Wilmington now stands, and refused to be warned off by the Dutch, who claimed the region. This Swedish colony prospered and enlarged itself during sixteen years, but was overcome by Director Stuyvesant of New Netherland in 1654. A little later than the appearance of the Swedes on the Delaware, certain colonists from New Haven bought lands from the Indians on both banks of the Delaware and made attempts at settlement, in what is now New Jersey and on the site of the future city of Philadelphia. The Dutch and Swedes combined against them and they failed. In 1664 the whole situation in this middle region was changed by the English conquest of New Netherland. The territory so acquired — or regained, if the original English claim had been good — passed then, by royal grant, to the Duke of York (afterwards King James II.), and became the proprietary province of New York. (See NEW YORK).—The Duke of York, in turn, the same year, transferred to Lord John Berkeley and Sir George Carteret the part of his domain which lay between the Hudson and the Delaware, and it received the name of New Cæsarea, or New Jersey. Under encouragement from Berkeley and Carteret the New Haven colonization was resumed. Ten years later Berkeley sold his rights to a party of Quakers who were seeking a refuge for their persecuted sect in the New World. A division of the province was made and the Quaker proprietors received West Jersey, while East Jersey remained to Carteret. (See NEW JERSEY.)—Before this time, William Penn had become the principal owner of the West Jersey interest. Not long afterwards (1681), by surrendering a claim which his father held against the British government, Penn procured from King Charles II. a much greater proprietary domain, on the western side of the Delaware, being no less than the vast tract, 40,000 square miles in extent, which received the name of Pennsylvania. To his title from the king he added a deed of purchase from the Indians. Penn's scheme of colonization was very liberally framed, and it was conducted with marked success. Philadelphia, first laid out in 1683, had 2,000 inhabitants in 1685, and Pennsylvania at large had 8,000. Penn himself did not find peace or happiness in his position as a princely proprietor; but he founded a great and prosperous commonwealth on noble lines. (See PENNSYLVANIA.)—In order to possess one bank of the Delaware River and Bay to the sea, William Penn, after securing his grant from the king, bought additionally from the Duke of York the claims of the latter to that strip of territory which the Swedes had settled on and struggled for with the Dutch, and which took an independent political form in later days as the State of Delaware. The Delaware "territories," as they were called, never accepted their dependent relationship to Pennsylvania, and as early as 1702 it was found necessary to concede them a separate legislature, though they continued under Penn's proprietary government. (See DELAWARE.)—Adjoining Penn's province on the south was the domain of another great proprietor, Lord Baltimore, whose title deed, from the same royal source as that of Penn, but prior in time by half a century, gave rise to conflicts which troubled the whole life of the peaceful Friend. The first Lord Baltimore (George Calvert) received from James I. in 1632 a patent which gave him territory on the northerly side of the Potomac River, stretching to the Delaware Bay and River and to the 40th parallel of north latitude. By its terms it did undoubtedly take in Delaware and part of Pennsylvania; but the intervening occupation by the Swedes and Dutch, the English conquest, and the royal grant to the Duke of York, confused the title. The controversy was not settled until 1761–7, when "Mason and Dixon's line" was run as the accepted boundary between Maryland and Pennsylvania. The lords proprietary of Maryland had been in conflict long before Penn's time with their neighbors at the south, in Virginia, and had many difficulties to encounter and many troubles in their undertaking to found a state. The powers they had received with their grant from the king were the largest that royalty could concede to a subject, and gave to their province the character of a palatine principality. But they exercised their substantial sovereignty with an admirable moderation. They were Catholics, and the early settlers in Maryland were largely though not wholly of that faith. But they introduced a policy of tolerance which was strange at the time to every other part of the New World except Rhode Island, and made their province free to all religions. Numerous Puritans entered it, especially from Virginia, where they were unwelcome; and these, it can hardly be denied, made ill returns for the tolerant hospitality they received. During the time of the Civil War, the Commonwealth and the Protectorate in England, the Maryland Puritans were hostile, not only to the proprietary government, but to its tolerant principles, and used the ascendancy which they frequently gained in a spirit that does not compare favorably with that of their adversaries. Subsequently the ascendancy of the Puritans gave way to that of the Anglican Church, without restoring the toleration which Catholicism in power had established — a rare instance in history — and which Protestantism in power had suppressed. (See MARYLAND.)—Beyond the Virginia plantations, in the South, the coasts to which Raleigh had sent his first colonists, and to which the virgin queen had intended to give her name, waited long for settlement. The first durable colony within that territory which took its name in time from a less worthy sovereign was planted in 1653, at Albemarle, on the Chowan River, by a small company of dissenters from Virginia. In 1665 a considerable party of emigrants from the Barbadoes, headed by a wealthy planter of that island,

Sir John Yeamans, established themselves on Cape Fear River, near its mouth, in the district which was afterwards called Clarendon. Two years before this time, in 1663, King Charles II. had discharged some part of his heavy obligations to his loyal supporters by granting that whole section of the American continent which lies between the 31st and 36th parallels of latitude to a company of courtiers, including Clarendon, Monk, Shaftesbury, and others, and the province was named Carolina. It was divided into two great counties, Albemarle and Clarendon, and these corresponded somewhat nearly to the North Carolina and South Carolina of the present day. In 1670 the lords proprietors sent out a colony under William Sayle, which settled first at Port Royal; but Sayle died soon after landing, and the colonists were induced to migrate northwards to the Ashley River, where Sir John Yeamans met them with a considerable part of his Clarendon colony, and became the head of the united settlements. There they founded "Old Charleston," and, after a few years, shifting the site to the confluence of the Ashley and the Cooper, they began the building of the present city of Charleston. This became the nucleus of the subsequently distinct colony of South Carolina, as Albemarle did of that of North Carolina. The division was made in 1729, when the rights of the Proprietors were bought by the Crown, and the Carolinas became crown colonies. Until that time, the southern colony had made far greater progress than its northern twin. It had received a considerable immigration of Huguenots from France and of Scotch-Irish from the north of Ireland, as well as of English, and Charleston was becoming an important port, especially frequented by buccaneers. But after the displacement of the proprietary government, North Carolina began quickly to receive more than its share of the Scotch-Irish immigration and no small number of Highland Scotch. The colony was developed almost wholly in the agricultural direction, with few and small towns. Slavery was introduced at an early day, and rooted itself in the industrial system, as it did in that of all the southern settlements. (See NORTH CAROLINA and SOUTH CAROLINA.)—The last of the "Thirteen Colonies" to come into existence was the colony of Georgia, founded so late as 1733 by General James Oglethorpe. It occupied territory too close in neighborhood to the Spaniards of Florida to be attractive to settlers in the 17th century. Its colonization was undertaken by General Oglethorpe primarily as a philanthropic enterprise for the benefit of unfortunate English debtors, who were released from prison and permitted to emigrate under his care; but secondarily to strengthen the defence of the English colonies against the Spaniards. He obtained his grant from George II. "in trust for the poor," and the colony was governed by trustees until 1752, when it was surrendered to the crown. The first emigrants left England in the fall of 1732, and early in the next year Savannah was laid out by Oglethorpe in person. His scheme of colonization proved highly attractive, not only in England but on the continent, and numbers of Protestant Germans came over to become part of the original population of Georgia. At the outset, slavery was strictly prohibited; but the settlers thought themselves grievously oppressed by the denial of slaves, and their discontent became so great that in 1749 the trustees rescinded the prohibition. (See GEORGIA.)

A. D. 1620-1776.—Constitutional relations of the colonies to the English Crown and Parliament.—The working of the leaven of independence in New England Puritanism.—The history of the development of the question between England and her colonies, as to their constitutional relations to one another, "falls naturally into two periods: first, from the beginning of English colonization in America to the Revolution of 1688; second, from 1688 to the Declaration of Independence. . . . Passing now to the history of the first period, it is to be observed that the leading institution in the English government at that time was the King in Council. . . . But in the 17th century, owing to a combination of very strong political and religious forces, the struggle between the King in Parliament and the King in Council was . . . opened and pushed with vigor. It continued with alternations of success, but on the whole with results favorable to Parliament, till 1688. Then the King in Parliament finally gained the ascendancy, and this result was so secured by statute as never afterwards to be seriously called in question. The supremacy of Parliament was established by a series of royal concessions. The parliamentary party viewed these as compromises between Parliament and king. This gavè color to the theory of social contract, which was now given new impulse and form by the parliamentarian writers of the 16th and 17th centuries. . . . It naturally follows from what has been said that the administration of colonial affairs previous to 1688 was in the hands of the King in Council. Such was the fact. The enterprises of discovery were fitted out under the patronage of the crown; the territories discovered or visited were taken possession of in its name; and grants of land, of rights of government and trade, were made to actual settlers by the kings. Every colonial charter is a proof of this. As the king was by the theory of English law feudal proprietor of England, so he became proprietor of colonial territory, though that territory was granted out in socage, one of the freest forms of English tenure. Certain superficial distinctions were introduced in the form of colonial governments, as royal, proprietary, and charter; but they all emanated from the crown. Its supremacy extended around and beneath them all. The fact that they were established by grant is proof of this, even though there had been no subsequent acts to enforce the control. They were colonies of the English crown; their inhabitants were its subjects. The true doctrine of sovereignty and allegiance necessitates this conclusion. . . . Parliament passed few statutes affecting the colonies. Yet, not to mention others, there were five such of very great importance which fall within this period: the Act of Supremacy (1 Eliz. cap. 1), and the four Navigation acts. In all these the colonies were expressly mentioned. But the relative position of crown and Parliament is illustrated by the fact that when in 1624 the Council was proceeding to annul the third Virginia charter, the House tried to interfere but was warned off — because the business concerned only the king and his advisers. Moreover there was no lack of precedents

for the extension not only of common law but of royal ordinances and statute law outside of the original realm of England. . . . Such in outline was the status of English colonial law previous to 1688. It was in the process of formation and adaptation to the new empire. There were ample precedents for the exercise of the rights of British sovereignty in America, but those rights had not yet been called into the fullest operation. Their legitimacy however was in general fully acknowledged by the colonists. They had been allowed great liberty in establishing their governments, erecting courts, levying taxes, organizing and calling out their militia for defence against the Indians. Colonial society had been allowed to develop freely in all lines and the product was far different from anything which existed in the mother country. It was democratic rather than aristocratic; it was also extremely particularistic, and too remote from England to feel much interest in the general concerns of the empire. In this divergence of social organization and interests, as between the colonies and the mother country, lay the germ which might develop into resistance on the part of the plantations, if at any time England should attempt to enforce her rightful supremacy over them. But as yet there was too little of the spirit of union among the colonists to make possible any combined action. Also those dynasties whose government had been most arbitrary in England, the Tudors and Stuarts, had, till the reign of James II, treated the colonies with great leniency. But the statements just made do not cover the whole ground. They describe the attitude of the colonies in general toward the mother country, but they do not describe the special conditions which prevailed in New England. If we wish to know how the theory of colonial independence originated, we must look in that direction. The American revolution cannot be explained without reference to the political character and tendencies of Puritanism. . . . Puritanism then was a political as well as a religious movement. On the one hand its doctrines contained a strong democratic leaven; on the other they contained principles which might lead to the separation of church and state. How the former tendency worked itself out in New England is familiar; how the latter failed of accomplishment there is equally well known. The Puritans of Massachusetts were not opposed to the union of church and state or to the employment of the secular power to enforce religious conformity. . . . What they were opposed to was every other form of state church except their own. . . . In order to maintain her peculiar system, Massachusetts had to be on her guard against all interference from outside. . . . The Massachusetts charter was brought over to this country. A few years later the Plymouth company was dissolved, and representation of the colony in England, except by such agents as she might send, ceased. The terms of the charter were very liberal; but like all the others it was a royal grant, and expressly stated that the inhabitants of the colony were to be subjects of England and were to enjoy all the liberties and immunities of such, as if they were in the realm of England. The oaths of supremacy and allegiance were to be administered to all who should go to the colony. The company was made a 'body corporate and politic' and was given ample powers of government; but its laws, statutes, and ordinances were not to be contrary to the laws of England. The admission of freemen was left in the hands of the corporation. How did the Puritan oligarchy make use of this charter for serving the purposes of their government? In a word, they interpreted the expression 'body corporate and politic' to mean an independent state, and virtually abandoned all legal connection with England except an empty acknowledgment of allegiance. The oath of allegiance was not administered, but instead an oath of fidelity to the government of Massachusetts. An ecclesiastical system wholly different from that of England was established. Only those were admitted to political rights, made freemen, who were members of a Congregational church. . . . The colony also exercised full legislative and judicial powers, and denied the right of appeal both practically and theoretically. The proof of this is most direct and convincing. To illustrate: in 1646 the General Court refused to permit the appeal of Dr. Child and others who, as Presbyterians, desired to lay before Parliament the wrongs they suffered in Massachusetts. Not only was the right denied, but the petitioners were prevented by force from carrying their case to England. The same course was pursued in reference to appeals in ordinary judicial cases. During the discussion of the affair just mentioned it was boldly affirmed in the General Court that subjects were bound by English laws only so long as they lived in England; that neither statutes nor royal ordinances were in force beyond the seas. A little later than this both the magistrates and the elders were called upon to give their views on the legal relations between the colony and England. Both agreed that by their charter they 'had absolute power of government'; that their government was perfect and sufficient in all its parts, not needing the help of any superior to make it complete. They acknowledged that they had received the charter from England, and 'depended upon that state for protection and immunities as freeborn Englishmen'; but the duties which were correlative to those immunities, and which are necessary to a true conception of allegiance, were not mentioned. This position was consistently maintained by the Puritans of Massachusetts as long as they remained in power. In their correspondence with the home government and its officials between 1664 and 1684 the right of appeal was always denied. Its exercise was never allowed. If we add to this the further statements that Massachusetts coined money; strove to enlarge the bounds of her patent, not only without consulting the king, but in defiance of his absolute prohibition; taxed English imports; and, without the consent of the home government, entered the New England confederation, some notion can be formed of the degree of independence claimed and exercised by that colony. The exercise of this independence however did not make it legal. It only illustrates the fact that the roots of the American revolution extend back into the times of which we are speaking. . . . It was to be expected that England would interfere to bring Massachusetts within the bounds of constitutional dependence. Complaints against the colony, on the part of Gorges and of those who had been banished by the Puritans, began very early. These led to

'quo warranto' proceedings for the recall of the charter in 1635. But civil strife at home compelled the government of Charles I to abandon the project. Then came the period of the Commonwealth, when the views of the English government were so fully in harmony with those of the New England leaders that the practical independence of the colony was ignored. . . . From the restoration dates the beginning of a more comprehensive colonial policy." With the fall of the Massachusetts charter, in 1684, "closes the first stage in the development of the idea of colonial independence. The struggle between the Puritans of Massachusetts and the crown is the most significant fact in American history previous to 1760. The Puritans were defeated; the authority of England was reasserted. . . . But for our purpose the important result is that the Puritans left behind them an armory full of precedents and arguments in favor of colonial independence. They had constructed the American theory on that subject. That was the chief permanent result of their experiment. They had from first to last adhered to the theory which expediency taught them to adopt. They taught the colonists how to resist the exercise of the ecclesiastical and judicial supremacy of the crown. If now at any time in the future the Americans should consider themselves aggrieved by the acts of the English government, the Puritan spirit and theory would be likely to appear. Such was the aspect of affairs at the close of the first period of colonial history. After the revolution of 1688, Parliament assumes more and more the control of American concerns. Statutes on those subjects multiply. The administration of the colonies becomes a branch of the ministerial government of Great Britain. The development of an imperial as distinguished from an insular policy is begun. The interference of England in colonial affairs became more frequent and the control asserted more extensive than heretofore. . . . The attitude of the colonists during this period was one of passive rather than active resistance. Parliamentary restrictions were so far evaded as not to be burdensome. . . . The records show that the burden of opinion in the colonies was jealousy of all government, so far as it operated as a restraint. The interference of government, whether colonial or imperial, was welcomed by the colonists, when it could be used for the advancement of their private or local interests; when larger objects were aimed at, it was if possible ignored or resisted. . . . The political condition of the colonies was for the first time clearly revealed during the French and Indian war. The history of Germany can furnish no more vivid spectacle of the evils of particularism than does that struggle. . . . The condition of anarchy and helplessness revealed by the war was such as to convince all the servants of the crown in America that active parliamentary interference was necessary, if the colonies were to be defended and retained as an integral part of the British empire. The fact that the British government, within a reasonable time after the close of the war, proceeded to put this suggestion into execution, implies nothing arbitrary or unreasonable. It had the undoubted constitutional right to do so; and so far as could be seen at the time, expediency prompted in the same direction. But during the century since the Puritan oligarchy of Massachusetts yielded to the supremacy of the crown, the theory of social contract had been fully developed. It had formulated the needs of the opposition in all the European countries to the system of absolutism. It was the theory of government very generally held by the Puritans in both England and America. . . . This theory, as soon as it was understood, would naturally find general acceptance in the colonies. . . . The American revolution, as truly as the French, was the outgrowth of the doctrine of natural rights and social contract. By this I mean simply that the doctrine in question formed the theoretical basis of both movements. So far as the American revolution is concerned the proof of this statement is contained in the writings of the patriot leaders at the time, the various state papers that were issued, and the doctrine that was held respecting the right of imperial taxation. No man contributed so much to bringing about the revolution as Samuel Adams; and his mind was saturated with the theory of social contract. He made it the basis of all his reasonings. . . . The reason why New England became the leader of the movement clearly appears. The process of development through which the colonies passed was a natural, and therefore a necessary one. It was slow and obscure, and therefore could not be clearly recognized at the time. But that it was nevertheless revolutionary becomes evident when we compare the views and aims of the colonists with the constitution of the British empire. When the two systems came into collision the colonists adopted a theory which was 'in the air' at the time, but one under which no government can be successfully carried on. When they came to erect a government of their own, they had to abandon it. It is not claimed that the doctrine of natural rights ever found such general acceptance in America as in France. The character of the people and the absence of a despotic government prevented that. But that the American revolution cannot be explained without assigning it a prominent place is evident. It is not intended to convey the impression that the colonists had no grievances. There were causes for complaint, but they were doubtless greatly exaggerated. A mind filled with the democratic theories of the times, and with the loose notions concerning sovereignty and allegiance which then prevailed, could easily imagine that Parliament, unless resisted, would establish a despotic government in America."—Professor H. L. Osgood, *England and the Colonies* (*Pol. Sci. Quarterly, Sept.*, 1887).

A. D. 1651-1672.—The Navigation Acts and the colonies.—Spirit and objects of the English restrictive commercial system.— To the Act of Navigation, passed in 1651 (see NAVIGATION LAWS) is due a change in the relations of the colonies to the mother-country. "Henceforth they were regarded mainly as feeders to its carrying-trade, as consumers of its manufactures, as factories for the distribution of its capital, and, in a word, as mere commercial appendages of what was now the great commercial power. Dominion became subordinate to trade. . . . Beginning . . . with the re-enactment of the Navigation Act after the Restoration, we find that the new system which is to regulate colonial trade and define the relations of the colonies to the parent, is contained in three Acts of Parliament. First, in the re-enactment itself of the Act of Naviga-

tion in 1660; secondly, in an act, passed in 1663, entitled 'an Act for the encouragement of trade'; and, thirdly, in an act, passed in 1672, and entitled 'an Act for the encouragement of the Greenland and Eastland fisheries, and for the better securing the plantation trade.'. . . The three acts which created the system, were all passed in the reign of Charles II.; the others followed rapidly, and in great numbers, for a century, until the failure of the attempt to transform this system of trade into one of trade and revenue, by means of what is known as the Stamp Act. St. John's Navigation Act was re-enacted in 1660, under Charles II., as the first-fruits of the Restoration. This act forbade importation into or exportation out of the colonies, save what came and went in English ships, and its object was, to shut the doors of the colonies against foreign trade. In 1663 another step was taken, and an act was passed with the object, openly avowed in its fifth section, of keeping the colonies in 'a firmer dependence' upon England, and of making that kingdom the staple, or place of distribution, not only of colonial produce, 'but also of the commodities of other countries and places, for the supplying of them.' To effect this, the Act of 1663 went beyond that of 1660, and exacted, that no European products or manufactures should be imported into any colony, except what had been actually laden and shipped in an English port, and carried 'directly thence' to the importing colony. This act forced the colonists to get such supplies as they could not themselves furnish in England only, and thus not only could none but mariners of whom three fourths were English transport merchandise to and from the colonies, but the colonists themselves were not suffered to go anywhere but to England for that which they could not get at home. . . . This position of factor between the colonies and foreign markets was a lucrative one. But the spirit of trade is such, that it regards much as only a stepping-stone to more, and the next enactment concerning colonial trade, or that of 1672, betrays this characteristic. The existing factorage was maintained only between the colonial and foreign trade; it had no place in intercolonial traffic. . . . As this intercolonial trade developed, it attracted the observation of the English merchants, who at last demanded the control of it. In compliance with this demand, an act was passed in 1672, subjecting any enumerated commodity to a duty specified in the statute — and thus was destroyed the freedom, and, to a great extent, the incentive of intercolonial traffic. This act was well entitled 'an Act for the encouragement of the Greenland and Eastland fisheries, and for the better securing of the plantation trade.' History is silent respecting the fisheries, but it has been very outspoken concerning its effect on the plantations. The effect was this: if Rhode Island wished to be supplied by Massachusetts with one of the enumerated commodities, and Massachusetts desired to furnish Rhode Island with that commodity, the delivery of the goods could not be made by the producer to the consumer, but the article would have to be sent to England first, and landed there, and then be sent back from England to Rhode Island before the consumer could touch it. A line drawn from Boston, in Massachusetts, to Bristol, in England, and thence back to Newport, in Rhode Island, will show the course which such article must take, if sold by Massachusetts to Rhode Island, before the demands of English commerce were satisfied; it will in all probability likewise show the least angle with the longest sides ever subtended on the chart of trade. Should, however, the parties to the transaction desire to avoid the risk and delay incident to this phenomenal voyage, they could do so by paying the certain rates and duties prescribed by this statute."— E. G. Scott, *The Development of Const. Liberty in the English Colonies of Am., ch.* 8 (*with corrections by the author*).—"Unfortunately there does not exist any history of the commerce of the American colonies, from the Commonwealth to 1774, as affected by navigation laws, acts of trade, and revenue measures. No one who has read the 29 acts which comprise this legislation will recommend their perusal to another; for, apart from their volume, the construction of these acts is difficult,— difficult even to trained lawyers like John Adams, whose business it was to advise clients in respect to them. Nor have special students, like Bancroft, stated their effect with exact precision."— M. Chamberlain, *The Revolution Impending: Critical Essay* (*Narrative and Critical Hist. of Am., v.* 6), *p.* 64.

A. D. 1690.—The First American Congress. —King William's War.—"After the accession [in England, A. D. 1689] of William and Mary, hostilities were declared between France and England, which extended to America; and thus began the first inter-colonial war [commonly known in American history as King William's War]. The French soon planned an invasion of Boston and New York. . . . On the 8th of February, 1690, a war-party, who had come stealthily from Canada, entered the open gates of the town of Schenectady, when it was snowing, and broke the stillness of midnight with the terrible yell and whoop of the savages. Men, women, and children, for two hours, were mercilessly butchered. Their dwellings were burned. The whole town was sacked. . . . The intelligence flew through the colonies. . . . Schenectady was the Fort Sumter of that day. The event had a political effect. It shamed the factions in New York at least into a truce. It roused a spirit of patriotism. The governor of Massachusetts urged, in letters to other colonies, the necessity for immediate action to provide for the common defence. . . . The General Court [of Massachusetts], in view of organizing a joint effort of the colonies, proposed to hold a congress. The call for a meeting is dated the 19th of March, 1690. It relates, that their majesties' subjects had been invaded by the French and Indians; that many of the colonists had been barbarously murdered, and were in danger of greater mischiefs; and it proposed, as a measure of prevention, that the neighboring colonies, and Virginia, Maryland, and the parts adjacent, should be invited to meet at New York, and conclude on suitable methods for assisting each other for the safety of the whole land. The governor of New York was desired to transmit this invitation to the southern colonies. Such was the first call for a general

congress in America. It is free from narrowness. It is liberal in its spirit, simple in its terms, and comprehensive in its object. . . . The call elicited from several colonies interesting replies. Governor Hinckley, of Plymouth, entered with zeal into the measure, and, though the General Court was not in session, appointed a commissioner. The Quaker-governor of Rhode Island, Henry Bull, replied in an excellent spirit. . . . Though the time was too short to convene the assembly for the appointment of commissioners, he promised the aid of that colony to the utmost of its ability to resist the French and Indians. The head of the convention of Maryland wrote, that it was the design of the assembly to send arms and men to aid in the general defence. . . . President Bacon, of Virginia, replied, that the proposition would require the action of the assembly, and that nothing would be done until the arrival of the daily expected governor. The replies to the invitation were cordial. The commissioners of four colonies [Massachusetts, Plymouth, Connecticut, and New York] met at New York. . . . The deliberations led to a unanimous result. On the 1st of May, an agreement was signed by the delegates, in behalf of the five colonies [including Maryland under its promise], to raise a force of 855 men for the strengthening of Albany, and, 'by the help of Almighty God, subduing the French and Indian enemies.' It was agreed, that the lieutenant-governor of New York should name the commander of this force; that it should not be employed on any other service without the consent of the five colonies; and that the officers should be required to preserve among their men good order, punish vice, keep the Sabbath, and maintain the worship of God. No proposition appears to have been entertained for a permanent organization. . . . Efforts were made to obtain additional aid from New Jersey, Pennsylvania, and Rhode Island. . . . I need only state, as the result of this congress, that it was resolved to attempt the reduction of Canada by two lines of attack, — one to conquer Acadia, and then to move on Quebec; and the other, by the route of Lake Champlain, to assault Montreal. The New England forces under Sir William Phips, assigned to the first route, captured Acadia and Port Royal, and sailed for Quebec, in the expectation of being aided by the other forces who marched by the Champlain route. But they, under Fitz-John Winthrop, with the title of major, were not successful. Leisler [see NEW YORK: A. D. 1689-1691], with characteristic rashness, accused the commander of treachery; while the officers charged the commissary, Jacob Milborne, of New York, with inefficiency in procuring supplies. The failure of Winthrop occasioned the retreat of Phips."—R. Frothingham, *The Rise of the Republic of the U. S., ch.* 3.

A. D. 1696-1697.—The Board of Trade for the Supervision of the Colonies.—Plans of Colonial Union by Penn and others.—"The king attempted a more efficient method of administering the colonies; and, in May 1696, a Board of Commissioners for Trade and Plantations, consisting of the chancellor, the president of the privy council, the keeper of the privy seal, the two secretaries of state, and eight special commissioners, was called into being. To William Blathwayte, who had drafted the new charter of Massachusetts, John Locke, and the rest of the commission, instructions were given by the crown 'to inquire into the means of making the colonies most useful and beneficial to England; into the staples and manufactures which may be encouraged there, and the means of diverting them from trades which may prove prejudicial to England; to examine into and weigh the acts of the assemblies; to set down the usefulness or mischief of them to the crown, the kingdom, or the plantations themselves; to require an account of all the moneys given for public uses by the assemblies of the plantations, and how the same are employed.' The administration of the several provinces had their unity in the person of the king, whose duties with regard to them were transacted through one of the secretaries of state; but the Board of Trade was the organ of inquiries and the centre of colonial information. Every law of a provincial legislature, except in some of the charter governments, if it escaped the veto of the royal governor, might be arrested by the unfavorable opinion of the law officer of the crown, or by the adverse report of the Board of Trade. Its rejection could come only from the king in council. . . . The Board of Trade was hardly constituted before it was summoned to plan unity in the military efforts of the provinces; and Locke with his associates despaired, on beholding them 'crumbled into little governments, disunited in interests, in an ill posture and much worse disposition to afford assistance to each other for the future.' The Board, in 1697, 'after considering with their utmost care,' could only recommend the appointment of 'a captain-general of all the forces and all the militia of all the provinces on the continent of North America, with power to levy and command them for their defence, under such limitations and instructions as to his majesty should seem best.' . . . With excellent sagacity — for true humanity perfects the judgment — William Penn matured a plan of a permanent union, by a national representation of the American States. On the 8th day of February 1697, he delivered his project for an annual 'congress,' as he termed it, of two delegates from each province. . . . But the ministry adopted neither the military dictatorship of Locke and his associates, nor the peaceful congress of William Penn."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *pt.* 3, *ch.* 4 (*v.* 2).—The following is the Plan of Union drafted by Penn: "A Briefe and Plaine Scheam how the English Colonists in the North parts of America, viz.: Boston, Connecticut, Road Island, New York, New Jerseys, Pensilvania, Maryland, Virginia, and Carolina may be made more usefull to the Crowne, and one another's peace and safty with an universall concurrence. 1st. That the severall Colonies before mentioned do meet once a year, and oftener if need be, during the war, and at least once in two years in times of peace by their stated and appointed Deputies, to debate and resolve of such measures as are most adviseable for their better understanding, and the public tranquility and safety. 2d. That in order to it two persons well qualified for sence, sobriety and substance be appointed by each Province, as their Representatives or Deputies, which in the

whole make the Congress to consist of twenty persons. 3d. That the King's Commissioner for that purpose specially appointed shall have the chaire and preside in the said Congresse. 4th. That they shall meet as near as conveniently may be to the most centrall Colony for use of the Deputies. 5th. Since that may in all probability, be New York both because it is near the Center of the Colonies and for that it is a Frontier and in the King's nomination, the Govr. of that Colony may therefore also be the King's High Commissioner during the Session after the manner of Scotland. 6th. That their business shall be to hear and adjust all matters of Complaint or difference between Province and Province. As, 1st, where persons quit their own Province and goe to another, that they may avoid their just debts, tho they be able to pay them, 2nd, where offenders fly Justice, or Justice cannot well be had upon such offenders in the Provinces that entertaine them, 3dly, to prevent or cure injuries in point of Commerce, 4th, to consider of ways and means to support the union and safety of these Provinces against the public enemies. In which Congresse the Quotas of men and charges will be much easier, and more equally sett, then it is possible for any establishment made here to do; for the Provinces, knowing their own condition and one another's, can debate that matter with more freedome and satisfaction and better adjust and ballance their affairs in all respects for their common safty. 7ly. That in times of war the King's High Commissioner shall be generall or chief Commander of the severall Quotas upon service against a common enemy as he shall be advised, for the good and benefit of the whole."—H. W. Preston, *Documents illustrative of Am. Hist., p.* 146.

A. D. 1696-1749.—Growing despotism of the English mercantile policy.—Systematic suppression of colonial manufactures.—"By the erection, in 1696, of a new Standing Council, or Board of Trade, under the denomination of 'The Lords Commissioners for Trade and Plantations,' the interests of British commerce and the affairs of Colonial trade and government were confided to that body, which thenceforward became the repository of all official intelligence upon those subjects, and the medium of communication with the several governors and assemblies of the Colonies. Yearly reports of the state of the Provinces were required from the governors, in answer to queries addressed to them by the Board. An Act of Parliament of the same year still further restricted commercial intercourse, by limiting trade between England and her Colonies to English, Irish and Colonial built vessels, and by prohibiting Colonial produce from going to the ports of Ireland or Scotland. . . . The feeble attempts of the Colonists to make a portion of their own clothing from their abundant materials had not been unnoticed in England. Three years after—the Board of Trade having received complaints from English merchants and manufacturers, that the wool and woolen manufactures of Ireland and the North American plantations began to be exported to foreign markets formerly supplied by England—an Act passed the British Parliament, . . . dictated by that sleepless vigilance which guarded the staple manufacture of England. It prohibited the exportation of any wool or woolen manufacture from Ireland, except to certain ports in England; but, by way of compensation, virtually surrendered to Ireland the linen manufacture, then little regarded in comparison with the woolen interests. In reference to the Colonies, it was enacted that 'After the first day of December, 1699, no wool, woolfels, yarn, cloth, or woolen manufactures of the English plantations in America shall be shipped in any of the said English plantations, or otherwise loaden, in order to be transported thence to any place whatsoever, under the penalty of forfeiting ship and cargo, and £500 for each offence.'. . . A letter from New England to the Board of Trade [in 1715] . . . reiterates the necessity of employing the New England people in producing naval stores, to turn them from manufactures. . . . The discouragement of American manufactures, from this time, became the settled and avowed policy of the government, and, three years later, the Bill prohibiting the erection of forges and iron mills was introduced, and declared that the erecting of Manufactories in the Colonies 'tends to lessen their dependence upon Great Britain.' . . . The company of Feltmakers, in London, petitioned Parliament, in Feb., 1731, to prohibit the exportation of hats from the American Colonies, representing that foreign markets were almost altogether supplied from thence, and not a few sent to Great Britain. The petition was referred to a special committee, who reported that, in New York and New England, beaver hats were manufactured to the number, it was estimated, of 10,000 yearly. . . . The exports were to the Southern plantations, the West Indies, and Ireland. In consequence of this evidence, and that furnished by the Board of Trade in the same session, an act was passed (5 George II. c. 22) that 'no hats or felts, dyed or undyed, finished or unfinished, shall be put on board any vessel in any place within any of the British plantations; nor be laden upon any horse or other carriage to the intent to be exported from thence to any other plantation, or to any other place whatever, upon forfeiture thereof, and the offender shall likewise pay £500 for every such offence.'. . . This severe and stringent law continued in force in the Colonies until the Revolution. It aimed at the prostration of one of the oldest and, on account of the abundance and cheapness of beavers and other furs, one of the most profitable branches of industry."—J. L. Bishop, *Hist. of Am. Manufactures, v.* 1, *ch.* 14.—In 1749 an act of Parliament was passed "to encourage the importation of pig and bar iron from his majesty's colonies in America, and to prevent the erection of any mill or other engine for slitting or rolling of iron, or any plateing forge to work with a tilt hammer, or any furnace for making steel in any of the said colonies." "Pig iron was allowed to be imported free to all parts of the kingdom, so as to secure cheap bar iron. But bar iron could not be imported at any port but London, and carried no further than ten miles from that city. This clause was intended to aid the owners of woods. In order to protect the nail trade, all slitting-mills in the colonies were ordered to be destroyed."—J. B. Pearse, *Concise Hist. of the Iron Manufacture of the Am. Colonies, p.* 121.

A. D. 1748-1754.—First collisions with the French in the Ohio Valley.—"As the year 1750 approached, there came upon the colonies two changes, destined to lead to a new political life. In the first place, the colonies at last began to overrun the mountain barrier which had hemmed them in on the west, and thus to invite another and more desperate struggle with the French. The first settlement made west of the mountains was on a branch of the Kanawha (1748); in the same season several adventurous Virginians hunted and made land-claims in Kentucky and Tennessee. Before the close of the following year (1749) there had been formed the Ohio Company, composed of wealthy Virginians, among whom were two brothers of Washington. King George granted them 500,000 acres, on which they were to plant 100 families and build and maintain a fort. The first attempt to explore the region of the Ohio brought the English and the French traders into conflict; and troops were not long in following, on both sides [see OHIO VALLEY: A. D. 1748–1754]. At the same time the home government was awaking to the fact that the colonies were not under strict control. In 1750 the Administration began to consider means of stopping unlawful trade."—R. G. Thwaites, *The Colonies*, 1492-1750 (*Epochs of Am. Hist.*), *ch.* 14, *sect.* 130.

A. D. 1750-1753.—The eve of the great French war.—Attitude of the colonies.—"The quarrel in which the French and English now engaged was exclusively a colonial one. The possession and defence of the Americans had already cost, over and over again, a larger sum than the whole produce of their trade would have produced. The English had the mortification of observing that the colonists claimed all the security of Englishmen against attack, and repudiated their obligation to take a share of the burdens which their defence occasioned. Were they attacked by the French,—they were Englishmen, and had a right to the ægis which that name throws over all subjects of the crown; were they called upon for a subscription in aid of the war,—they were men who would not submit to be taxed without their own consent; were they taken at their word, and requested through their own assemblies to tax themselves,—they sometimes refused, and sometimes doled out a minute supply, taking care to mix up with their money bill some infringement on the royal prerogative, which rendered it impossible, except under severe exigency of the public service, for the governor to accept the terms offered. . . . The action of the colonies at this crisis was in accordance with their invariable policy. As soon as they perceived that the French meditated a war of aggression in America, a chorus of complaint and apprehension came at once from the colonists. Shirley, Governor of Massachusetts, and Clinton, Governor of New York, had convened an assembly at Albany during the last year of the last war, to concert measures for uniting all the colonies for common defence; Massachusetts and the other New England States were, of course, anxious that the union should be carried out. They were the barrier between the Canadas and the southern colonies, and if any attack was made they must bear the brunt of it. . . . The Congress of Albany, and especially the Legislature of Massachusetts, advocated the erection of a line of detached forts which might be so arranged as to overawe the French frontier, and defend the New England colonies from attack. . . . It was all in vain; every colony, with the exception of Massachusetts, Connecticut, and South Carolina, refused to contribute one farthing towards the expense. . . . Even in 1753, when the French were actually on the Ohio, and Washington had brought back certain intelligence of their intentions and views, the Virginians refused supplies to Dinwiddie because they declared themselves 'easy on account of the French.' When at last the French had actually established themselves in fortified posts at Niagara, at Le Bœuf, and at Venango, when Contrecœur had driven a colonial officer out of a post which he held on the forks of the Monongahela, when Fort du Quesne had arisen on the ruins of an English stockade, they could no longer close their eyes to the danger which was actually within the boundaries of their State. They granted £10,000 of their currency; but Dinwiddie wrote home that the bill was so clogged with encroachments on the prerogative, that he would not have given his assent had not the public service rendered the supply imperatively necessary."—Viscount Bury, *Exodus of the Western Nations, v.* 2, *ch.* 7.—"The attitude of these various colonies towards each other is hardly conceivable to an American of the present time. They had no political tie except a common allegiance to the British Crown. Communication between them was difficult and slow, by rough roads traced often through primeval forests. Between some of them there was less of sympathy than of jealousy kindled by conflicting interests or perpetual disputes concerning boundaries. The patriotism of the colonist was bounded by the lines of his government, except in the compact and kindred colonies of New England, which were socially united, though politically distinct. The country of the New Yorker was New York, and the country of the Virginian was Virginia. The New England colonies had once confederated; but, kindred as they were, they had long ago dropped apart. . . . Nor was it this segregation only that unfitted them for war. They were all subject to popular legislatures, through whom alone money and men could be raised; and these elective bodies were sometimes factious and selfish, and not always either far-sighted or reasonable. Moreover, they were in a state of ceaseless friction with their governors, who represented the king, or, what was worse, the feudal proprietary. These disputes, though varying in intensity, were found everywhere except in the two small colonies which chose their own governors; and they were premonitions of the movement towards independence which ended in the war of Revolution. The occasion of difference mattered little. Active or latent, the quarrel was always present. . . . Divided in government; divided in origin, feelings, and principles; jealous of each other, jealous of the Crown; the people at war with the executive, and, by the fermentation of

internal politics, blinded to an outward danger that seemed remote and vague,—such were the conditions under which the British colonies drifted into a war that was to decide the fate of the continent."—F. Parkman, *Montcalm and Wolfe, ch.* 1 (*v.* 1).

A. D. 1754.—The Congress at Albany and its Plans of Union.—Franklin's account.—"In 1754, war with France being again apprehended, a congress of commissioners from the different colonies was, by an order of the Lords of Trade, to be assembled at Albany, there to confer with the chiefs of the Six Nations concerning the means of defending both their country and ours. Governor Hamilton [of Pennsylvania], having receiv'd this order, acquainted the House with it, requesting they would furnish proper presents for the Indians, to be given on this occasion; and naming the speaker (Mr. Norris) and myself to join Mr. Thomas Penn and Mr. Secretary Peters as commissioners to act for Pennsylvania. (The House approv'd the nomination, and provided the goods for the present, and tho' they did not much like treating out of the provinces;) and we met the other commissioners at Albany about the middle of June. In our way thither, I projected and drew a plan for the union of all the colonies under one government, so far as might be necessary for defense, and other important general purposes. As we pass'd thro' New York, I had there shown my project to Mr. James Alexander and Mr. Kennedy, two gentlemen of great knowledge in public affairs, and, being fortified by their approbation, I ventur'd to lay it before the Congress. It then appeared that several of the commissioners had form'd plans of the same kind. A previous question was first taken, whether a union should be established, which pass'd in the affirmative unanimously. A committee was then appointed, one member from each colony, to consider the several plans and report. Mine happen'd to be preferr'd, and, with a few amendments, was accordingly reported. . . . The debates upon it in Congress went on daily, hand in hand with the Indian business. Many objections and difficulties were started, but at length they were all overcome, and the plan was unanimously agreed to, and copies ordered to be transmitted to the Board of Trade and to the assemblies of the several provinces. Its fate was singular: the assemblies did not adopt it, as they all thought there was too much 'prerogative' in it, and in England it was judg'd to have too much of the 'democratic.' The Board of Trade therefore did not approve of it, nor recommend it for the approbation of his majesty; but another scheme was form'd, supposed to answer the same purpose better, whereby the governors of the provinces, with some members of their respective councils, were to meet and order the raising of troops, building of forts, etc., and to draw on the treasury of Great Britain for the expense, which was afterwards to be refunded by an act of Parliament laying a tax on America. . . . The different and contrary reasons of dislike to my plan makes me suspect that it was really the true medium; and I am still of opinion it would have been happy for both sides the water if it had been adopted. The colonies, so united, would have been sufficiently strong to have defended themselves; there would then have been no need of troops from England; of course, the subsequent pretence for taxing America, and the bloody contest it occasioned, would have been avoided."—B. Franklin, *Autobiography* (*ed. by John Bigelow*), *v.* 1, *pp.* 308–310.—"When the members assembled at the Court House in Albany on the 19th of June, it was found that Pennsylvania was not alone in appointing a distinguished citizen to represent her. On the roll of the congress were the names of Lieutenant-governor De Lancey, of New York, who presided; and from the same province William Smith, the historian, and the future Sir William Johnson, not yet made a baronet. From the proprietary provinces of Pennsylvania and Maryland were the well known officials, John Penn, grandson of the founder; Richard Peters; and Benjamin Tasker. From the province of New Hampshire were her future governor, Meshech Weare, and Theodore Atkinson; and from the province of Massachusetts Bay, the late Lieutenant-governor, Thomas Hutchinson, Colonel John Chandler, of Worcester, and Oliver Partridge, a man of commanding influence in western Massachusetts. Lastly, the two colonies which had so tenaciously preserved their charter governments through the vicissitudes of more than a century,—Connecticut and Rhode Island,—had acceded to the repeated solicitations of the home government, and with unfeigned reluctance, we may be sure, had sent as representatives men of such wide experience in their colonial concerns as Roger Wolcott, Jr., and Stephen Hopkins. 'America,' says Mr. Bancroft, 'had never seen an assembly so venerable for the states that were represented, or for the great and able men who composed it.' They were detained in this hospitable old Dutch town for more than three weeks. . . . Franklin's plan . . . was not approved by a single one of the colonial assemblies before which it was brought; and . . . no action was ever taken on it in England. Yet there is no contribution to constructive statesmanship preceding the year 1776, which had a profounder effect on the subsequent growth and development of the idea of American nationality. Even in the amended form in which it was 'approved' by the congress, it was, says a recent writer, 'in advance of the Articles [of Confederation] in its national spirit, and served as the prototype of the constitution itself.'"—W. E. Foster, *Stephen Hopkins: a Rhode Island Statesman, ch.* 6 (*pt.* 1).

The Plan of Union, as adopted by the Congress at Albany, was accompanied by a "Representation of the Present State of the Colonies." The following is the full text of the Representation, followed by that of the Plan of Union: "That His Majesty's Title to the Northern Continent of America, appears to be founded on the Discovery thereof first made, and the Possession thereof first taken in 1497, under a Commission from Henry the VIIth, of England, to Sebastian Cabot. That the French have possessed themselves of several Parts of this Continent, which by Treaties, have been ceded and confirmed to them: That the Rights of the English to the whole Sea Coast, from Georgia, on the South, to the River St. Lawrence, on the North, excepting the Island of Cape-Breton, in the Bay of St. Lawrence, remains plain and indisputable. That all the Lands or Countries Westward from the Atlantic Ocean to the South Sea, between 48 and 34 Degrees of North Latitude, were expressly

included in the Grant of King James the First, to divers of his Subjects, so long since, as the Year 1606, and afterwards confirmed in 1620; and under this Grant, the Colony of Virginia claims an Extent as far West as to the South Sea; and the antient Colonies of the Massachusetts-Bay and Connecticut, were by their respective Charters, made to extend to the said South Sea; so that not only the Right to the Sea Coast, but to all the Inland Countries, from Sea to Sea, have at all Times been asserted by the Crown of England. That the Province of Nova Scotia or Accadia, hath known and determinate Bounds, by the original Grant from King James the First; and that there is abundant Evidence of the same, [and of the Knowledge] which the French had of these Bounds, while they were in Possession of it; and that these Bounds being thus known, the said Province by the Treaty of Utrecht, according to its antient Limits, was ceded to Great-Britain, and remained in Possession thereof, until the Treaty of Aix la Chapelle, by which it was confirmed; but by said Treaty it is stipulated, That the Bounds of the said Province shall be determined by Commissioners, &c. That by the Treaty of Utrecht, the Country of the Five Cantons of the Iroquoise, is expressly acknowledged to be under the Dominion of the Crown of Great-Britain. That the Lake Champlain, formerly called Lake Iroquoise, and the Country Southward of it, as far as the Dutch or English Settlements, the Lake Ontario, Erie, and all the Countries adjacent, have by all antient Authors, French and English, been allowed to belong to the Five Cantons or Nations; and the whole of those Countries, long before the said Treaty of Utrecht, were by the said Nations, put under the Protection of the Crown of Great-Britain. That by the Treaty of Utrecht, there is a Reserve to the French, a Liberty of frequenting the Countries of the Five Nations, and other Indians in Friendship with Great-Britain, for the Sake of Commerce; as there is also to the English, a Liberty of frequenting the Countries of those in Friendship with France, for the same Purpose. That after the Treaty of Utrecht, the French built several Fortresses in the Country of the Five Nations, and a very strong one at a Place called Crown-Point, to the South of the Lake Champlain. That the French Court have evidently, since the Treaty of Aix la Chapelle, made this Northern Continent more than ever, the Object of its Attention. That the French have most unjustly taken Possession of a Part of the Province of Nova-Scotia; and in the River St. John's, and other Parts of said Province, they have built strong Fortresses; and from this River they will have, during the Winter and Spring Season, a much easier Communication between France and Canada, than they have heretofore had, and will be furnished with a Harbour more commodiously situated for the Annoying the British Colonies by Privateers and Men of War, than Louisbourg itself. That they have taken Possession of, and begun a Settlement at the Head of the River Kennebeck, within the Bounds of the Province of Main, the most convenient Situation for affording Support, and a safe Retreat, to the Eastern Indians, in any of their Attempts upon the Governments of New-England. That it appears by the Information of the Natives, the French have been making Preparations for another Settlement, at a Place called Cohass, on Connecticut River, near the Head thereof, where 'tis but about ten Miles distant from a Branch of Merrimack River; and from whence, there is a very near and easy Communication with the Abnekais Indians, who are settled on the River St. Francois, about forty Miles from the River St. Lawrence; and it is certain, the Inhabitants of New-Hampshire, in which Province this Cohass is supposed to lie, have been interrupted and impeded by the French Indians, from making any Settlement there. That since the Treaty of Aix la Chapelle, the French have increased the Number of their Forts in the Country of the great Lakes, and on the Rivers which run into the Missisippi, and are securing a Communication between the two Colonies of Louisiana and Canada, and at the same Time, putting themselves into a Capacity of annoying the Southern British Colonies, and preventing any further Settlements of His Majesty's Dominions. That they have been gradually increasing their Troops in America, transporting them in their Ships of War, which return to France with a bare Complement of Men, leaving the rest in their Colonies; and by this Means, they are less observed by the Powers of Europe, than they would be, if Transports as usual heretofore, were provided for this Purpose. That they have taken Prisoners diverse of His Majesty's Subjects, trading in the Country of the Iroquoise, and other inland Parts, and plundered such Prisoners of several Thousand Pounds Sterling; and they are continually exciting the Indians to destroy or make Prisoners the Inhabitants of the Frontiers of the British Colonies; which Prisoners are carried to Canada, and a Price equal to what Slaves are sold in the Plantations, is demanded for their Redemption and Release. That they are continually drawing off the Indians from the British Interest, and have lately perswaded one Half of the Onondago Tribe, with many from the other Nations along with them, to remove to a Place called Oswegachie, on the River Cadaracqui, where they have built them a Church and Fort; and many of the Senecas, the most numerous Nation, appear to be wavering, and rather inclined to the French. And it is a melancholy Consideration, that not more than 150 Men of all the several Nations, have attended this Treaty, altho' they had Notice, that all the Governments would be here by their Commissioners, and that a large Present would be given. That it is the evident Design of the French to surround the British Colonies, to fortify themselves on the Back thereof, to take and keep Possession of the Heads of all the important Rivers, to draw over the Indians to their Interest, and with the Help of such Indians, added to such Forces as are already arrived, and may be hereafter sent from Europe, to be in a Capacity of making a general Attack upon the several Governments; and if at the same Time, a strong Naval Force be sent from France, there is the utmost Danger, that the whole Continent will be subjected to that Crown: And that the Danger of such a Naval Force is not meerly imaginary, may be argued from past Experience. For had it not been by the most extraordinary Interposition of Heaven, every Sea Port Town on the Continent, in the Year 1746, might have been ravaged and destroyed, by the Squadron under the Command of the Duke D'Anville, notwithstanding the then declining State of the

French, and the very flourishing State of the British Navy, and the further Advantage accruing to the English, from the Possession of Cape-Breton. That the French find by Experience, they are able to make greater and more secure Advantages upon their Neighbours, in Peace than in War. What they unjustly possessed themselves of, after the Peace of Utrecht, they now pretend they have a Right to hold, by Virtue of the Treaty of Aix la Chapelle, until the true Boundary between the English and French be settled by Commissioners; but their Conquests made during War, they have been obliged to restore. That the French Affairs relative to this Continent, are under one Direction, and constantly regarded by the Crown and Ministry, who are not insensible how great a Stride they would make towards an Universal Monarchy, if the British Colonies were added to their Dominions, and consequently the whole Trade of North-America engrossed by them. That the said Colonies being in a divided, disunited State, there has never been any joint Exertion of their Force, or Council, to repel or defeat the Measures of the French; and particular Colonies are unable and unwilling to maintain the Cause of the whole. That there has been a very great Neglect of the Affairs of the Iroquoise, as they are commonly called, the Indians of the Six Nations, and their Friendship and Alliance has been improved to private Purposes, for the Sake of the Trade with them, and the Purchase or Acquisition of their Lands, more than the Public Services. That they are supplyed with Rum by the Traders, in vast and almost incredible Quantities; the Laws of the Colonies now in Force, being insufficient to restrain the Supply. And the Indians of every Nation, are frequently drunk, and abused in their Trade, and their Affections thereby alienated from the English; they often wound and murder one another in their Liquor, and to avoid Revenge, fly to the French; and perhaps more have been lost by these Means than by the French Artifice. That Purchases of Land from the Indians by private Persons, for small trifling Considerations, have been the Cause of great Uneasiness and Discontents; and if the Indians are not in fact imposed on and injured, yet they are apt to think they have been; and indeed, they appear not fit to be entrusted at Large, with the Sale of their own Lands: And the Laws of some of the Colonies, which make such Sales void, unless the Allowance of the Government be first obtained, seem to be well founded. That the Granting or Patenting vast Tracts of Land to private Persons or Companies, without Conditions of speedy Settlements, has tended to prevent the Strengthening the Frontiers of the particular Colony where such Tracts lie, and been Prejudicial to the rest. That it seems absolutely necessary, that speedy and effectual Measures be taken, to secure the Colonies from the Slavery they are threatened with: that any farther Advances of the French should be prevented; and the Encroachments already made, removed. That the Indians in Alliance or Friendship with the English, be constantly regarded under some wise Direction or Superintendancy. That Endeavours be used for the Recovery of those Indians who are lately gone over to the French, and for securing those that remain. That some discreet Person or Persons be appointed to reside constantly among each Nation of Indians; such Person to have no Concern in Trade, and duly to communicate all Advices to the Superintendants. That the Trade with the said Indians be well regulated, and made subservient to the Public Interest, more than to private Gain. That there be Forts built for the Security of each Nation, and the better carrying on the Trade with them. That warlike Vessels be provided, sufficient to maintain His Majesty's Right to a free Navigation on the several Lakes. That all future Purchases of Lands from the Indians be void, unless made by the Government where such Lands lie, and from the Indians in a Body, in their public Councils. That the Patentees or Possessors of large unsettled Territories, be enjoined to cause them to be settled in a reasonable Time, on Pain of Forfeiture. That the Complaints of the Indians, relative to any Grants or Possessions of their Lands, fraudulently obtained, be inquired into, and all Injuries redressed. That the Bounds of those Colonies which extend to the South Seas, be contracted and limited by the Alleghenny or Apalachian Mountains; and that Measures be taken, for settling from time to time, Colonies of His Majesty's Protestant Subjects, Westward of said Mountains, in convenient Cantons, to be assigned for that Purpose. And finally, that there be an Union of His Majesty's several Governments on the Continent, that so their Councils, Treasure, and Strength, may be imployed in due Proportion, against their common Enemy."

The Plan of Union, adopted on the 10th of July, was as follows: "Plan of a proposed Union of the several Colonies of Massachusetts-Bay, New-Hampshire, Connecticut, Rhode-Island, New-York, New-Jersey, Pennsylvania, Maryland, Virginia, North-Carolina, and South Carolina, for their mutual Defence and Security, and for the Extending the British Settlements in North-America. That humble Application be made for an Act of the Parliament of Great-Britain, by Virtue of which One General Government may be formed in America, including all the said Colonies; within and under which Government, each Colony may retain its present Constitution, except in the Particulars wherein a Change may be directed by the said Act, as hereafter follows. That the said General Government be administered by a President General, to be appointed and supported by the Crown; and a Grand Council, to be chosen by the Representatives of the People of the several Colonies, met in their respective Assemblies. That within Months after the Passing of such Act, the House of Representatives in the several Assemblies, that happen to be sitting within that Time, or that shall be especially for that Purpose convened, may and shall chuse Members for the Grand Council, in the following Proportions; that is to say: Massachusetts-Bay, 7; New-Hampshire, 2; Connecticut, 5; Rhode-Island, 2; New-York, 4; New-Jersey, 3; Pennsylvania, 6; Maryland, 4; Virginia, 7, North-Carolina, 4; South Carolina, 4: = 48. Who shall meet for the first Time at the City of Philadelphia in Pennsylvania, being called by the President General, as soon as conveniently may be, after his Appointment. That there shall be a new Election of Members for the Grand Council every three Years; and on the Death or Resignation of any Member, his Place shall be supplied by a new Choice, at the next

Sitting of the Assembly of the Colony he represented. That after the first three Years, when the Proportion of Money arising out of each Colony to the General Treasury, can be known, the Number of Members to be chosen for each Colony, shall from time to time, in all ensuing Elections, be regulated by that Proportion (yet so as that the Number to be chosen by any one Province, be not more than seven, nor less than two). That the Grand Council shall meet once in every Year, and oftener if Occasion require, at such Time and Place as they shall adjourn to at the last preceding Meeting, or as they shall be called to meet at by the President General on any Emergency; he having first obtained in writing, the Consent of seven of the Members to such Call, and sent due and timely Notice to the whole. That the Grand Council have Power to chuse their Speaker, and shall neither be dissolved, prorogued, nor continue sitting longer than six Weeks at one Time, without their own Consent, or the special Command of the Crown. That the Members of the Grand Council shall be allowed for their Service, Ten Shillings Sterling per Diem, during their Session and Journey to and from the Place of Meeting, twenty Miles to be reckoned a Day's Journey. That the Assent of the President General be requisite to all Acts of the Grand Council; and that it be his Office and Duty to cause them to be carried into Execution. That the President General, with the Advice of the Grand Council, hold or direct all Indian Treaties, in which the general Interest or Welfare of the Colonies may be concerned; and to make Peace or declare War with Indian Nations. That they make such Laws as they judge necessary for regulating all Indian Trade. That they make all Purchases from Indians for the Crown, of the Lands now not within the Bounds of particular Colonies, or that shall not be within their Bounds, when some of them are reduced to more convenient Dimensions. That they make new Settlements on such Purchases, by granting Lands in the King's Name, reserving a Quit-Rent to the Crown for the Use of the General Treasury. That they make Laws for regulating and governing such new Settlements, 'till the Crown shall think fit to form them into particular Governments. That they may raise and pay Soldiers, and build Forts for the Defence of any of the Colonies, and equip Vessels of Force to guard the Coast, and protect the Trade on the Ocean, Lakes, or great Rivers; but they shall not impress Men in any Colony, without the Consent of its Legislature. That for those Purposes, they have Power to make Laws, and lay and levy such general Duties, Imposts, or Taxes, as to themselves appear most equal and just, considering the Ability and other Circumstances of the Inhabitants in the several Colonies, and such as may be collected with the least Inconvenience to the People; rather discouraging Luxury, than loading Industry with unnecessary Burthens. That they may appoint a general Treasurer and a particular Treasurer in each Government, when necessary; and from time to time, may order the Sums in the Treasuries of each Government, into the General Treasury, or draw on them for special Payments, as they find most convenient; yet no Money to issue, but by joint Orders of the President General and Grand Council, except where Sums have been appropriated to particular Purposes, and the President General is previously impowered by an Act, to draw for such Sums. That the general Accounts shall be yearly settled, and reported to the several Assemblies. That a Quorum of the Grand Council, impowered to act with the President General, do consist of Twenty-five Members; among whom there shall be one or more from a Majority of the Colonies. That the Laws made by them for the Purposes aforesaid, shall not be repugnant, but as near as may be agreeable, to the Laws of England, and shall be transmitted to the King in Council, for Approbation, as soon as may be, after their passing; and if not disapproved within three Years after Presentation, to remain in Force. That in Case of the Death of the President General, the Speaker of the Grand Council for the Time being, shall succeed, and be vested with the same Power and Authorities, and continue 'till the King's Pleasure be known. That all Military Commission Officers, whether for Land or Sea Service, to act under this General Constitution, be nominated by the President General, but the Approbation of the Grand Council is to be obtained, before they receive their Commissions. And all Civil Officers are to be nominated by the Grand Council, and to receive the President General's Approbation, before they officiate. But in Case of Vacancy, by Death or Removal of any Officer, Civil or Military, under this Constitution, the Governor of the Provinces in which such Vacancy happens, may appoint, 'till the Pleasure of the President General and Grand Council can be known. That the particular Military as well as Civil Establishments in each Colony, remain in their present State, this General Constitution notwithstanding; and that on sudden Emergencies, any Colony may defend itself, and lay the Accounts of Expence thence arisen, before the President General and Grand Council, who may allow and order Payment of the same, as far as they judge such Accounts just and reasonable."

A. D. 1755.—Demand of the royal governors in America for taxation of the colonies by act of Parliament.—At the congress of American governors which General Braddock convened at Alexandria, in April, 1755, on his first arrival in America as commander-in-chief of the British forces, "Braddock directed their attention, first of all, to the subject of a colonial revenue, on which his instructions commanded him to insist, and his anger kindled 'that no such fund was already established.' The governors present, recapitulating their strifes with their assemblies, made answer: 'Such a fund can never be established in the colonies without the aid of parliament. Having found it impracticable to obtain in their respective governments the proportion expected by his majesty toward defraying the expense of his service in North America, they are unanimously of opinion that

it should be proposed to his majesty's ministers to find out some method of compelling them to do it, and of assessing the several governments in proportion to their respective abilities.' This imposing document Braddock sent forthwith to the ministry, himself urging the necessity of laying some tax throughout his majesty's dominions in North America. . . . I have had in my hands vast masses of correspondence, including letters from servants of the crown in every royal colony in America; from civilians, as well as from Braddock and Dunbar and Gage; from Delancey and Sharpe, as well as from Dinwiddie and Shirley; and all were of the same tenor. The British ministry heard one general clamor from men in office for taxation by act of parliament. . . . In England, the government was more and more inclined to enforce the permanent authority of Great Britain."—G. Bancroft, *Hist. of the U. S. (Author's last revision), v. 2, pp.* 416–417.

A. D. 1755-1760.—The French and Indian War, known in Europe as the Seven Years War: The English conquest of Canada.—See CANADA: A. D. 1750–1753, to 1760; NOVA SCOTIA: A. D. 1749–1755; 1755; OHIO (VALLEY): A. D. 1748–1754, to 1755; CAPE BRETON ISLAND: A. D. 1758–1760; also, for an account of the accompanying Cherokee War, SOUTH CAROLINA: A. D. 1759–1761.

A. D. 1760-1775.—Crown, Parliament and Colonies.—The English theory and the American theory of their relations.—"The people of every colony were subject to two jurisdictions, one local and one general, that must be adjusted to each other. To effect such adjustment caused no little friction; and the Colonies and the Mother Country got on peaceably as long as they did, only because neither one pushed its theory of colonial relations to an extreme, each yielding something to the other and thus effecting a compromise. The Colonies held that the dominion which the Cabots discovered in America belonged to the King, rather than to the Kingdom, of England. Englishmen adventuring into this dominion to plant colonies were entitled to all the privileges of free-born Englishmen at home; trial by jury, habeas corpus, and exemption from taxes that their own representatives had not voted. The British Empire was not one dominion, but several dominions. Every one of these dominions had, or should have, its own legislature to enact laws for its government. The Colonies were not one dominion, but 13 dominions; and in every one the legislature was as supreme as Parliament was in England. Parliament, therefore, had nothing more to do with Massachusetts or Virginia than the legislatures of those colonies had to do with England. The King, who alone had a voice in the matter, had, in their charters, guaranteed to the Colonies the common law so far as this was applicable to their condition, and he was now powerless to withdraw what he had thus conceded. Such, in outline, was the American theory of colonial relations. Still, no one pretended that this theory had ever been fully carried out in practice. It must also be said that it did not appear fully formed at once, but grew up gradually. The British theory was that Englishmen continued Englishmen when they emigrated to the American dominions of the King; that the power of Parliament, to which they were subject in the old home, followed them to the new one; and that Parliament could yield them more or fewer powers of self-government for a time, and then withdraw them. It was also claimed that the Colonies were already represented in the House of Commons; since the several members of that body did not represent particular districts or constituencies, but the whole British Empire. Besides, it was asserted that the Colonies themselves had repeatedly acknowledged the authority of Parliament by submitting to its legislation. Still no one pretended that this theory had ever been fully carried out."—B. A. Hinsdale, *The American Gov't, sect.* 92–93.

A. D. 1761.—Enforcement of revenue laws in Massachusetts.—The Writs of Assistance and Otis' speech.—"Immediately after the conquest of Canada was completed, rumors were widely circulated . . . that the charters would be taken away, and the colonies reduced to royal governments. The officers of the customs began at once to enforce with strictness all the acts of parliament regulating the trade of the colonies, several of which had been suspended, or become obsolete, and thus had never been executed at all. The good will of the colonists or their legislatures, was no longer wanted in the prosecution of the war; and the commissioners of the customs were permitted and directed to enforce the obnoxious acts. Governor Bernard [of Massachusetts], who was always a supporter of the royal prerogative, entered fully into these views, and shewed by his opinion, his appointments and his confidential advisers, that his object would be, to extend the power of the government to any limits, which the ministry might authorize. The first demonstration of the new course intended to be pursued, was the arrival of an order in Council to carry into effect the Acts of trade, and to apply to the supreme judicature of the Province [Massachusetts], for Writs of Assistance, to be granted to the officers of the customs. In a case of this importance there can be no doubt, that Mr. Paxton, who was at the head of the customs in Boston, consulted with the Government and all the crown officers, as to the best course to be taken. The result was, that he directed his deputy at Salem, Mr. Cockle, in November, 1760, to petition the Superior Court, then sitting in that town, for 'writs of assistance.' Stephen Sewall who was the Chief Justice, expressed great doubt of the legality of such a writ, and of the authority of the Court to grant it. None of the other judges said a word in favour of it; but as the application was on the part of the Crown, it could not be dismissed without a hearing, which after consultation was fixed for the next term of the Court, to be held in February, 1761, at Boston, when the question was ordered to be argued. In the interval, Chief Justice Sewall died, and Lieutenant Governor Hutchinson was made his successor, thereby uniting in his person, the office of Lieutenant Governor with the emoluments of the commander of the castle, a member of the Council, Judge of Probate and Chief Justice of the Supreme Court! . . . The mercantile part of the community was in a state of great anxiety as to the result of this question. The officers of the Customs called upon Otis for his official assistance, as Advocate General, to argue

their cause. But, as he believed these writs to be illegal and tyrannical, he refused. He would not prostitute his office to the support of an oppressive act; and with true delicacy and dignity, being unwilling to retain a station, in which he might be expected or called upon to argue in support of such odious measures, he resigned it though the situation was very lucrative, and if filled by an incumbent with a compliant spirit, led to the highest favours of government. The merchants of Salem and Boston, applied to Mr. Pratt to undertake their cause, who was also solicited to engage on the other side; but he declined taking any part, being about to leave Boston for New York, of which province he had been appointed Chief Justice. They also applied to Otis and Thacher, who engaged to make their defence, and probably both of them without fees, though very great ones were offered. The language of Otis was, 'in such a cause, I despise all fees.' . . . The trial took place in the Council Chamber of the Old Town House, in Boston. . . . The judges were five in number, including Lieutenant Governor Hutchinson, who presided as Chief Justice. The room was filled with all the officers of government, and the principal citizens, to hear the arguments in a cause that inspired the deepest solicitude. The case was opened by Mr. Gridley, who argued it with much learning, ingenuity, and dignity, urging every point and authority, that could be found after the most diligent search, in favour of the Custom house petition; making all his reasoning depend on this consideration — 'if the parliament of Great Britain is the sovereign legislator of the British Empire.' He was followed by Mr. Thacher on the opposite side, whose reasoning was ingenious and able, delivered in a tone of great mildness and moderation. 'But,' in the language of President Adams, 'Otis was a flame of fire; with a promptitude of classical allusions, a depth of research, a rapid summary of historical events and dates, a profusion of legal authorities, a prophetic glance of his eyes into futurity, and a rapid torrent of impetuous eloquence, he hurried away all before him. American Independence was then and there born. The seeds of patriots and heroes, to defend the 'Non sine Diis animosus infans'; to defend the vigorous youth, were then and there sown. Every man of an immense crouded audience appeared to me to go away as I did, ready to take arms against Writs of Assistance. Then and there, was the first scene of the first act of opposition, to the arbitrary claims of Great Britain. Then and there, the child Independence was born. In fifteen years, i. e. in 1776, he grew up to manhood and declared himself free.' 'There were no stenographers in those days,' to give a complete report of this momentous harangue. How gladly would be exchanged for it, a few hundred verbose speeches on some of the miserable, transient topics of the day, that are circulated in worthless profusion. Yet on this occasion, 'the seeds were sown,' and though some of them doubtless fell by the wayside or on stony places, others fell on good ground, and sprang up and increased and brought forth in due season, thirty, sixty and an hundred fold. . . . After the close of his argument, the Court adjourned for consideration, and at the close of the term, Chief Justice Hutchinson pronounced the opinion: 'The Court has considered the subject of writs of assistance, and can see no foundation for such a writ; but as the practice in England is not known, it has been thought best to continue the question to the next term, that in the meantime opportunity may be given to know the result.' No cause in the annals of colonial jurisprudence had hitherto excited more public interest; and none had given rise to such powerful argument. . . . An epoch in public affairs may be dated from this trial. Political parties became more distinctly formed, and their several adherents were more marked and decided. The nature of ultrà-marine jurisdiction began to be closely examined; the question respecting raising a revenue fully discussed. The right of the British parliament to impose taxes was openly denied. 'Taxation without representation is tyranny,' was the maxim, that was the guide and watch word of all the friends of liberty. The crown officers and their followers adopted openly the pretensions of the British ministry and parliament, and considering their power to be irresistible, appealed to the selfishness of those who might be expectants of patronage, and to the fears of all quiet and timid minds, to adopt a blind submission, as the only safe or reasonable alternative. Otis took the side of his country, and as has been shewn, under circumstances that made his decision irrevocable. He was transferred at once from the ranks of private life, not merely to take the side, but to be the guide and leader of his country, in opposition to the designs of the British ministry. 'Although' says President Adams, 'Mr. Otis had never before interfered in public affairs, his exertions on this single occasion secured him a commanding popularity with the friends of their country, and the terror and vengeance of her enemies; neither of which ever deserted him.' His popularity was instantaneous, and universal; and the public were impatient for the approaching election, when they could make him a representative of Boston."—W. Tudor, *Life of James Otis, ch.* 5-7. —See, also, Massachusetts: A. D. 1761.

A. D. 1763. — General effects, economically and politically, of the English trade regulations. — "Economically the general results of the trade regulations were important. Robert Giffen has repeatedly pointed out how difficult it is, even with modern comparatively accurate methods, to obtain reliable results from the use of export and import statistics. This difficulty is immeasurably enhanced when we have to rely on the meagre figures of a century and a half ago. For we neither know how these statistics were taken, nor at all how accurate they are; while their inadequacy becomes clearly evident when we consider the large amount of smuggling carried on both in England and the colonies. One general proposition, however, can be formulated from the examination of these statistics, and that is the balance of trade between England and the colonies was unfavorable to the latter. And this was an inherent consequence of the mercantile system, by which England regu-

lated these commercial relations. The colonies were unable to pay England for her manufactures entirely in raw materials, and the residue was paid in coin obtained from the favorable trade with Spain, Portugal, and the West Indies. All metal had to be sent to England; it was, as De Foe says, 'snatched up for returns to England in specie.' An important consequence followed from this continuous drain of specie. The colonies could with difficulty retain coin, and hence were forced either to fall back on barter, or to issue paper money. . . . While, on the one hand, the acts of trade and navigation are partially responsible for many sad passages in the fiscal history of the colonies, on the other hand they conduced to the development of a most important colonial industry. This industry was ship-building, for which the colonies were especially adapted on account of the cheapness of lumber. In developing this natural fitness, the protection afforded to English and colonial shipping by the Navigation Acts was an important factor. As a rule England did not discriminate against colonial and in favor of English ships, although the colonies frequently attempted by legislation to secure advantages for their own shipping. As a result of this policy ship building and the carrying trade increased rapidly, especially in the New England colonies. . . . So important did this industry become that in 1724 the ship carpenters of the Thames complained to the King, 'that their trade was hurt and their workmen emigrated since so many vessels were built in New England.' Massachusetts built ships not only for England, but also for European countries, and for the West Indies. . . . Politically the commercial regulations were not so important. Up to 1763 only slight political importance attaches to the system, for only in a negative way did it affect the political ideas of the colonists. The colonies were peopled by men of varied race and religion, who had little common consciousness of rights and wrongs and few common political ideals. The centrifugal forces among them were strong. Among centripetal forces, such as a common sovereign and a common system of private law, must be reckoned the fact that their commerce was regulated by a system which, as a rule, was uniform for all the colonies. When the acts of trade worked to their advantage, the colonists reaped common benefits; when they inflicted hardships, the colonists made common complaint. Moreover, the fact that England was unable to enforce certain of her acts, especially the Molasses Act, caused contempt for parliamentary authority. The continued and, by the very nature of things, the necessary violation of this law lead to a questioning of its sanction, while the open favoritism shown in it towards the West India colonies naturally aroused disaffection in those of the continent. The colonial system, as it was administered before 1763, contributed but slightly in bringing about the revolution of 1776. As Mr. Ramsay has said, 'if no other grievances had been superadded to what existed in 1763, they would have been soon forgotten, for their pressure was neither great, nor universal. It was only when the fundamental basis of the acts was changed from one of commercial monopoly to one of revenue, that the acts became of vital political importance."—G. L. Beer, *The Commercial Policy of England toward the Am. Colonies* (*Columbia College Studies in History, etc., v.* 3, *no.* 2), *ch.* 7, *sect.* 2.

A. D. 1763-1764.—Pontiac's War. See PONTIAC'S WAR.

A. D. 1763-1764.—Determination in England to tax the colonies.—The Sugar (or Molasses) Act.—"It did not take four years after the peace of 1763 to show how rapidly the new situation of affairs was bearing fruit in America. . . . The overthrow of their ancient enemy [the French in Canada], while further increasing the self-confidence of the Americans, at the same time removed the principal check which had hitherto kept their differences with the British government from coming to an open rupture. Formerly the dread of French attack had tended to make the Americans complaisant toward the king's ministers, while at the same time it made the king's ministers unwilling to lose the good will of the Americans. Now that the check was removed, the continuance or revival of the old disputes at once foreboded trouble; and the old occasions for dispute were far from having ceased. On the contrary the war itself had given them fresh vitality. If money had been needed before, it was still more needed now. The war had entailed a heavy burden of expense upon the British government as well as upon the colonies. The national debt of Great Britain was much increased, and there were many who thought that, since the Americans shared in the benefits of the war, they ought also to share in the burden which it left behind it. People in England who used this argument did not realize that the Americans had really contributed as much as could reasonably be expected to the support of the war, and that it had left behind it debts to be paid in America as well as in England. But there was another argument which made it seem reasonable to many Englishmen that the colonists should be taxed. It seemed right that a small military force should be kept up in America, for defence of the frontiers against the Indians, even if there were no other enemies to be dreaded. The events of Pontiac's war now showed that there was clearly need of such a force; and the experience of the royal governors for half a century had shown that it was very difficult to get the colonial legislatures to vote money for any such purpose. Hence there grew up in England a feeling that taxes ought to be raised in America as a contribution to the war debt and to the military defence of the colonies; and in order that such taxes should be fairly distributed and promptly collected, it was felt that the whole business ought to be placed under the direct supervision and control of parliament. . . . It was in 1763 that George Grenville became prime minister, a man of whom Macaulay says that he knew of 'no national interests except those which are expressed by pounds, shillings, and pence.' Grenville proceeded to introduce into Parliament two measures which had consequences of which he little dreamed. The first of these measures was the Molasses Act [often called the Sugar Act], the second was the Stamp Act. Properly speaking, the Molasses Act was an old law which Grenville now made up his mind to revive and enforce. The commercial wealth of the New England colonies depended largely upon their trade with the fish which their fishermen caught along the coast and as far out as the banks of Newfoundland. The finest fish could be sold in

Europe, but the poorer sort found their chief market in the French West Indies. The French government, in order to ensure a market for the molasses raised in these islands, would not allow the planters to give anything else in exchange for fish. Great quantities of molasses were therefore carried to New England, and what was not needed there for domestic use was distilled into rum, part of which was consumed at home, and the rest carried chiefly to Africa wherewith to buy slaves to be sold to the southern colonies. All this trade required many ships, and thus kept up a lively demand for New England lumber, besides finding employment for thousands of sailors and shipwrights. Now in 1733 the British government took it into its head to 'protect' its sugar planters in the English West Indies by compelling the New England merchants to buy all their molasses from them; and with this end in view it forthwith laid upon all sugar and molasses imported into North America from the French islands a duty so heavy that, if it had been enforced, it would have stopped all such importation. . . . It proved to be impossible to enforce the act without causing more disturbance than the government felt prepared to encounter. Now in 1764 Grenville announced that the act was to be enforced, and of course the machinery of writs of assistance was to be employed for that purpose. Henceforth all molasses from the French islands must either pay the prohibitory duty or be seized without ceremony. Loud and fierce was the indignation of New England over this revival of the Molasses Act. Even without the Stamp Act, it might very likely have led that part of the country to make armed resistance, but in such case it is not so sure that the southern and middle colonies would have come to the aid of New England. But in the Stamp Act, Grenville provided the colonies with an issue which concerned one as much as another."—J. Fiske, *The War of Independence, ch.* 4.

Also in: J. G. Palfrey, *Hist. of New Eng., bk.* 6, *ch.* 2-3 (*v.* 5).—W. B. Weeden, *Economic and Social Hist. of New Eng., ch.* 19 (*v.* 2).

A. D. 1764.—The climax of the mercantile colonial policy of England, and its consequences.—"Historians, in treating of the American rebellion, have confined their arguments too exclusively to the question of internal taxation, and the right or policy of exercising this prerogative. The true source of the rebellion lay deeper, in our traditional colonial policy. Just as the Spaniards had been excited to the discovery of America by the hope of obtaining gold and silver, the English merchants utilized the discovery by the same fallacious method, and with the same fallacious aspirations. . . . A hundred years ago the commercial classes believed that the prime object of their pursuits was to get as much gold and silver into England as they could. They sought, therefore, to make their country, as nearly as they might, a solitary centre of the exportation of non-metallic commodities, that so she might be also the great reservoir into which the precious metals would flow in a return stream. On this base their colonial policy was erected. . . . So long as the colonies remained in their infancy the mercantile policy was less prejudicial to their interests. The monopoly of their commerce, the limitation of their markets, the discouragement of their manufactures, in some cases amounting to absolute prohibition, were all less fatal in a country where labour was dear, than they would be in a state where population was more fully developed and land had become scarcer. . . . A contraband trade sprung up between them and the colonies of Spain. Our settlers imported goods from England, and re-exported them to the Spanish colonies, in return for bullion and other commodities. The result of this was that the Spanish colonists had access to useful commodities from which they would otherwise have been debarred, that the American colonists could without distress remit the specie which was required by the nature of their dealings with England, and that a large market was opened for English products. This widely beneficial trade was incontinently suppressed in 1764, by one of those efforts of short-sighted rigour which might be expected from any government where George Grenville's influence was prominent. All smuggling was to be put down, and as this trade was contraband, it must be put down like the rest. The Government probably acted as they did in answer to the prayers of the mercantile classes, who could not see that they were cutting off the streams that fed their own prosperity. They only saw that a colonial trade had sprung up, and their jealousy blinded them to the benefits that accrued to themselves as a consequence of it. Their folly found them out. The suppression of the colonial trade was entrusted to the commanders of men-of-war. . . . We may be sure that the original grievance of the colonists was not softened by the manners of the officers who had to put the law into execution. The result of the whole transaction was the birth of a very strong sense in the minds of the colonists that the mother country looked upon them as a sponge to be squeezed. This conviction took more than a passing hold upon them. It was speedily inflamed into inextinguishable heat, first by the news that they were to be taxed without their own consent, and next by the tyrannical and atrocious measures by which it was proposed to crush their resistance. The rebellion may be characterised as having first originated in the blind greediness of the English merchants, and as having then been precipitated by the arbitrary ideas of the patricians, in the first instance, and afterwards of the King and the least educated of the common people. If the severe pressure of the mercantile policy, unflinchingly carried out, had not first filled the colonists with resentment and robbed them of their prosperity, the imperial claim to impose taxes would probably have been submitted to without much ado. And if the suppression of their trade in 1764 had not been instantly followed by Grenville's plan for extorting revenue from them, they would probably in time have been reconciled to the blow which had been dealt to their commerce. It was the conjunction of two highly oppressive pieces of policy which taught them that they would certainly lose more by tame compliance than they could possibly lose by an active resistance."—J. Morley, *Edmund Burke, ch.* 4.

Also in: W. Massey, *Hist. of England, Reign of George III., v.* 1, *ch.* 5.

A. D. 1764-1767.—Patriotic self-denials.—"Upon the news of the intention to lay [the Stamp Tax] . . . on the colonies, many people,

the last year, had associated, and engaged to forbear the importation, or consumption, of English goods; and particularly to break off from the custom of wearing black clothes, or other mourning [it being generally of British manufacture—Foot-note], upon the death of relations. This agreement was then signed by some of the council, and representatives, and by great numbers of people in the town of Boston, and the disuse of mourning soon became general. This was intended to alarm the manufacturers in England. And now [in 1765], an agreement was made, and signed by a great proportion of the inhabitants of Boston, to eat no lamb during the year. This was in order to increase the growth, and, of course, the manufacture of wool in the province. Neither of these measures much served the purpose for which they were professedly intended, but they served to unite the people in an unfavourable opinion of parliament."—T. Hutchinson, *Hist. of the Province of Mass. Bay*, 1749–1774, *pp.* 116–117.—The movement thus started in Boston before the passage of the Stamp Act spread rapidly through the other provinces after the Act had been passed, and continued to be for several years a very serious expression of colonial patriotism and opposition to the oppressive policy of the mother country. See below: A. D. 1765.

A. D. 1765.—The Stamp Act.—"The scheme of the imposition by Parliament of a tax on the American colonists to be collected by stamps was not a new one. Nearly forty years before this time, 'Sir William Keith, the late Governor of Pennsylvania, presented an elaborate disquisition to the King . . . proposing the extension of the stamp duties to the Colonies by Act of Parliament.' It had been one of the projects of the factious Dunbar, during his short career of turbulence and intrigue in New Hampshire. Governor Sharpe of Maryland and Governor Dinwiddie of Virginia had recommended a resort to it at the time of the abortive movement for a union of the Colonies. Its renewal at this time has been said to have been especially due to Charles Jenkinson, then only private secretary to Lord Bute, but who rose afterwards to be Earl of Liverpool. The project, as now resolved upon, was pursued with inconsiderate obstinacy, though it encountered a spirited debate when it was brought into the House of Commons [February, 1765]. . . . The bill was pending in the House between three and four weeks, at the end of which time it was passed, the largest number of votes which had been given against it in any stage of its progress not having amounted to fifty. It was concurred in by the House of Lords, where it appears to have met no resistance, and in due course [March 22] received the royal assent. No apprehension of consequences counselled a pause. The Stamp Act — as it has ever since been called by eminence — provided . . . for the payment, by British subjects in America to the English Exchequer, of specified sums, greater or less, in consideration of obtaining validity for each of the common transactions of business."—J. G. Palfrey, *Hist. of New England, bk.* 6, *ch.* 3 (*v.* 5).

The following is the text of the Stamp Act:

Whereas, by an act made in the last session of parliament, several duties were granted, continued, and appropriated, towards defraying the expenses of defending, protecting, and securing the British colonies and plantations in America: and whereas, it is first necessary, that provision be made for raising a further revenue within your majesty's dominions in America, towards defraying the said expenses; we, your majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, have therefore resolved, to give and grant unto your majesty the several rites and duties hereinafter mentioned; and do most humbly beseech your majesty that it may be enacted, And be it enacted, by the king's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons in this present parliament assembled, and by the authority of the same, That from and after the first day of November, one thousand seven hundred and sixty five, there shall be raised, levied, collected and paid, unto his majesty, his heirs and successors, throughout the colonies and plantations in America, which now are, or hereafter may be, under the dominion of his majesty, his heirs and successors,

1. For every skin of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any declaration, plea, replication, rejoinder, demurrer, or other pleading, or any copy thereof, in any court of law within the British colonies and plantations in America, a stamp duty of three pence.

2. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any special bail, and appearance upon such bail in any such court, a stamp duty of two shillings.

3. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which may be engrossed, written or printed, any petition, bill, or answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any court of chancery or equity, within the said colonies and plantations, a stamp duty of one shilling and six pence.

4. For every skin or piece of vellum, or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any copy of any petition, bill, answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any such court, a stamp duty of three pence.

5. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any court of probate, court of the ordinary, or other court exercising ecclesiastical jurisdiction within the said colonies and plantations, a stamp duty of one shilling.

6. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any copy of any will, (other than the probate thereof,) monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any such court, a stamp duty of six pence.

7. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any donation, presentation, collation or institution, of or to any benefice, or any writ or instrument for the like purpose, or any register, entry, testimonial or certificate of any degree taken in any university, academy, college, or seminary of learning,

within the said colonies and plantations, a stamp duty of two pounds.

8. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory, or other pleading, in any admiralty court within the said colonies and plantations, a stamp duty of one shilling.

9. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any copy of any such monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory or other pleading, shall be engrossed, written or printed, a stamp duty of six pence.

10. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any appeal, writ of error, writ of dower, 'ad quod damnum,' certiorari, statute merchant, statute staple, attestation, or certificate, by any officer, or exemplification of any record or proceeding, in any court whatsoever within the said colonies and plantations, (except appeals, writs of error, certiorari, attestations, certificates, and exemplifications, for, or relating to the removal of any proceedings from before a single justice of the peace,) a stamp duty of ten shillings.

11. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any writ of covenant for levying fines, writ of entry for suffering a common recovery, or attachment issuing out of, or returnable into any court within the said colonies and plantations, a stamp duty of five shillings.

12. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any judgment, decree, or sentence, or dismission, or any record of nisi prius or postea, in any court within the said colonies or plantations, a stamp duty of four shillings.

13. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any affidavit, common bail, or appearance, interrogatory, deposition, rule, order or warrant of any court, or any 'dedimus potestatem,' capias, subpæna, summons, compulsory citation, commission, recognisance, or any other writ, process, or mandate, issuing out of, or returnable into, any court, or any office belonging thereto, or any other proceeding therein whatsoever, or any copy thereof, or of any record not herein before charged, within the said colonies and plantations, (except warrants relating to criminal matters, and proceedings thereon, or relation thereto,) a stamp duty of one shilling.

14. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any note or bill of lading, which shall be signed for any kind of goods, wares, or merchandize, to be exported from, or any docket or clearance granted within the said colonies and plantations, a stamp duty of four pence.

15. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, letters of mart or commission for private ships of war, within the said colonies and plantations, a stamp duty of twenty shillings.

16. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any grant, appointment, or admission of or to any public beneficial office or employment, for the space of one year, or any lesser time, of or above twenty pounds per annum, sterling money, in salary, fees, and perquisites, within the said colonies and plantations, (except commissions and appointments of officers of the army, navy, ordnance, or militia, of judges, and of justices of the peace,) a stamp duty of ten shillings.

17. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any grant of any liberty, privilege, or franchise, under the seal or sign manual, of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, or any exemplification of the same, shall be engrossed, written, or printed, within the said colonies and plantations, a stamp duty of six pounds.

18. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of spirituous liquors, to be granted to any person who shall take out the same, within the said colonies and plantations, a stamp duty of twenty shillings.

19. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall not take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of four pounds.

20. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of three pounds.

21. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any probate of wills, letters of administration, or of guardianship for any estate above the value of twenty pounds sterling money, within the British colonies [and] plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, a stamp duty of five shillings.

22. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such probate, letters of administration or of guardianship, within all other parts of the British dominions in America, a stamp duty of ten shillings.

23. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any bond for securing the payment of any sum of money, not exceeding the sum of ten pounds sterling money, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, a stamp duty of six pence.

24. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall

be engrossed, written or printed, any bond for securing the payment of any sum of money above ten pounds, and not exceeding twenty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling.

25. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any bond for securing the payment of any sum of money above twenty pounds, and not exceeding forty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling and six pence.

26. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any order or warrant for surveying or setting out any quantity of land, not exceeding one hundred acres, issued by any governor, proprietor, or any public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, within the British colonies and plantations in America, a stamp duty of six pence.

27. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or setting out any quantity of land above one hundred and not exceeding two hundred acres, within the said colonies and plantations, a stamp duty of one shilling.

28. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or setting out any quantity of land above two hundred and not exceeding three hundred and twenty acres, and in proportion for every such order or warrant for surveying or setting out every other three hundred and twenty acres, within the said colonies and plantations, a stamp duty of one shilling and six pence.

29. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any original grant or deed, mesne conveyance, or other instrument whatever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands (except leases for any term not exceeding the term of twenty-one years) a stamp duty of one shilling and six pence.

30. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within such colonies, plantations and islands, a stamp duty of two shillings.

31. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred, and not exceeding three hundred and twenty acres, shall be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying or assigning every other three hundred and twenty acres, within such colonies, plantations and islands, a stamp duty of two shillings and six pence.

32. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within all other parts of the British dominions in America, a stamp duty of three shillings.

33. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within the same parts of the said dominions, a stamp duty of four shillings.

34. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred and not exceeding three hundred and twenty acres, shall be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying, or assigning every other three hundred and twenty acres, within the same parts of the said dominions, a stamp duty of five shillings.

35. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any grant, appointment, or admission, of or to any beneficial office or employment, not hereinbefore charged, above the value of twenty pounds per annum sterling money, in salary, fees, or perquisites, or any exemplification of the same, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, (except commissions of officers of the army, navy, ordnance, or militia, and of justices of the peace,) a stamp duty of four pounds.

36. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any such grant, appointment, or admission, of or to any such public beneficial office or employment, or any exemplification of the same, within all other parts of the British dominions in America, a stamp duty of six pounds.

37. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any indenture, lease, conveyance, contract, stipulation, bill of sale, charter party, protest, articles of apprenticeship or covenant, (except for the hire of servants not apprentices, and also except such other matters as hereinbefore charged,) within the British colonies and plantations in America, a stamp duty of two shillings and six pence.

38. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any

warrant or order for auditing any public accounts, beneficial warrant, order, grant, or certificate, under any public seal, or under the seal or sign manual of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, not herein before charged, or any passport or letpass, surrender of office, or policy of assurance, shall be engrossed, written, or printed, within the said colonies and plantations, (except warrants or orders for the service of the army, navy, ordnance, or militia, and grants of offices under twenty pounds per annum, in salary, fees, and perquisite,) a stamp duty of five shillings.

39. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any notarial act, bond, deed, letter of attorney, procuration, mortgage, release, or other obligatory instrument, not herein before charged, within the said colonies and plantations, a stamp duty of two shillings and three pence.

40. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever, herein before charged, within the said colonies and plantations, a stamp duty of three pence.

41. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever not herein before charged, within the said colonies and plantations, a stamp duty of two shillings.

42. And for and upon every pack of playing cards, and all dice, which shall be sold or used within the said colonies and plantations, the several stamp duties following : (that is to say,)

43. For every pack of such cards, one shilling.

44. And for every pair of such dice, ten shillings.

45. And for and upon every paper called a pamphlet, and upon every newspaper, containing public news, or occurrences, which shall be printed, dispersed, and made public, within any of the said colonies and plantations, and for and upon such advertisements as are hereinafter mentioned, the respective duties following; (that is to say,)

46. For every such pamphlet and paper, contained in a half sheet, or any lesser piece of paper, which shall be so printed, a stamp duty of one half penny for every printed copy thereof.

47. For every such pamphlet and paper, (being larger than half a sheet, and not exceeding one whole sheet,) which shall be so printed, a stamp duty of one penny for every printed copy thereof.

48. For every pamphlet and paper, being larger than one whole sheet, and not exceeding six sheets in octavo, or in a lesser page, or not exceeding twelve sheets in quarto, or twenty sheets in folio, which shall be so printed, a duty after the rate of one shilling for every sheet of any kind of paper which shall be contained in one printed copy thereof.

49. For every advertisement to be contained in any gazette, newspaper, or other paper, or any pamphlet which shall be so printed, a duty of two shillings.

50. For every almanac or calendar, for any one particular year, or for any time less than a year, which shall be written or printed on one side only of any one sheet, skin, or piece of paper, parchment, or vellum, within the said colonies and plantations, a stamp duty of two pence.

51. For every other almanac, or calendar, for any one particular year, which shall be written or printed within the said colonies and plantations, a stamp duty of four pence.

52. And for every almanac or calendar, written or printed in the said colonies and plantations, to serve for several years, duties to the same amount respectively shall be paid for every such year.

53. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any instrument, proceeding, or other matter or thing aforesaid, shall be engrossed, written, or printed, within the said colonies and plantations, in any other than the English language, a stamp duty of double the amount of the respective duties before charged thereon.

54. And there shall be also paid, in the said colonies and plantations, a duty of six pence for every twenty shillings, in any sum not exceeding fifty pounds sterling money, which shall be given, paid, contracted, or agreed for, with or in relation to any clerk or apprentice, which shall be put or placed to or with any master or mistress, to learn any profession, trade, or employment. 2. And also a duty of one shilling for every twenty shillings, in any sum exceeding fifty pounds, which shall be given, paid, contracted, or agreed for, with, or in relation to, any such clerk or apprentice.

55. Finally, the produce of all the aforementioned duties shall be paid into his majesty's treasury; and there held in reserve, to be used, from time to time, by the parliament, for the purpose of defraying the expenses necessary for the defense, protection, and security of the said colonies and plantations.

A. D. 1765.—News of the Stamp Act in the Colonies.—Colonel Barré's speech and the Sons of Liberty.—Patrick Henry's speech in the Virginia Assembly.—Formal protests and informal mob-doings in Philadelphia, New York and Boston.—In the course of the debate in the British House of Commons, on the Stamp Act, February 6, 1765, Charles Townshend, after discussing the advantages which the American colonies had derived from the late war, asked the question: "And now will these American children, planted by our care, nourished up to strength and opulence by our indulgence, and protected by our arms, grudge to contribute their mite to relieve us from the heavy burden under which we lie?" This called to his feet Colonel Isaac Barré who had served in America with Wolfe, and who had a knowledge of the country and people which most members of Parliament lacked. "They planted by your care!" exclaimed Barré. "No: your oppressions planted them in America. They fled from your tyranny to a then uncultivated, unhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable; and, among others, to the cruelties of a savage foe, the most subtle, and, I will take upon me to say, the most formidable of any people upon the face of God's earth; and yet, actuated by principles

of true English liberty, they met all hardships with pleasure, compared with those they suffered in their own country from the hands of those who should have been their friends. They nourished up by your indulgence! They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them in one department and another, who were, perhaps, the deputies of deputies to some members of this house, sent to spy out their liberties, to misrepresent their actions, and to prey upon them; men whose behavior on many occasions has caused the blood of those sons of Liberty to recoil within them; men promoted to the highest seats of justice, some who, to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of justice in their own. They protected by your arms! They have nobly taken up arms in your defence; have exerted a valor amidst their constant and laborious industry, for the defence of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your emolument. And believe me — remember I this day told you so — the same spirit of freedom which actuated that people at first will accompany them still. But prudence forbids me to explain myself further. God knows I do not at this time speak from motives of party heat; what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the respectable body of this house may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the king has; but a people jealous of their liberties, and who will vindicate them, if ever they should be violated. But the subject is too delicate; I will say no more." Notes of Colonel Barré's speech were taken by a Mr. Ingersoll, one of the agents for Connecticut, who sat in the gallery. He sent home a report of it, which was published in the newspapers at New London, and soon the name of the "Sons of Liberty," which the eloquent defender of the resisting colonists had given to them, was on every lip.— G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *v.* 3, *ch.* 8.— "Meantime [in 1765], 'The Sons of Liberty'— a term that grew into use soon after the publication of Barré's speech — were entering into associations to resist, by all lawful means, the execution of the Stamp Act. They were long kept secret, which occasioned loyalists to say that there was a private union among a certain sect of republican principles from one end of the continent to the other. As they increased in numbers, they grew in boldness and publicity, announcing in the newspapers their committees of correspondence, and interchanging solemn pledges of support."— R. Frothingham, *The Rise of the Republic of the U. S.*, *p.* 183.—"The Stamp Act was passed March 22, 1765. A copy of it was printed in the 'Pennsylvania Gazette' on April 18th, but this must necessarily have been in advance of news of its passage. The people of Philadelphia began at once to show their determination to make it [the Stamp Act] a nullity so far as revenue was concerned. An enforced frugality was the first step. . . . In the 'Pennsylvania Gazette' of April 18th there was an article against expensive and ostentatious funerals, the writer saying that often £70 or £100 were squandered on such occasions. August 15th, when Alderman William Plumsted was buried at St. Peter's Church, the funeral, by his own wish, was conducted in the plainest way, no pall, no mourning worn by relatives. In March, the Hibernia Fire Company resolved, 'from motives of economy, and to reduce the present high price of mutton and encourage the breweries of Pennsylvania, not to purchase any lamb this season, nor to drink any foreign beer.' Other fire companies and many citizens copied this example. . . . On October 25th the merchants and traders of Philadelphia subscribed to a non-importation agreement, such as were then being signed all over the country. In this article the subscribers agreed that, in consequence of the late acts of Parliament and the injurious regulations accompanying them, and of the Stamp Act, etc., in justice to themselves and in hopes of benefit from their example (1) to countermand all orders for English goods until the Stamp Act should be repealed; (2) a few necessary articles, or shipped under peculiar circumstances, are excepted; (3) no goods received for sale on commission to be disposed of until the Stamp Act should be repealed; and this agreement to be binding on each and all, as a pledge of word of honor."— J. T. Scharf and T. Westcott, *Hist. of Philadelphia*, *ch.* 16 (*v.* 1).— The first stern note of defiance came from Virginia. Patrick Henry had lately been elected to the colonial assembly. Having waited in vain for the older leaders of the house to move in the matter of expressing the feeling of the colony on the subject, on the 29th of May, when the session was within three days of its expected close, "Mr. Henry introduced his celebrated resolutions on the stamp act. I will not withhold from the reader a note of this transaction from the pen of Mr. Henry himself. It is a curiosity, and highly worthy of preservation. After his death, there was found among his papers one sealed, and thus endorsed: 'Enclosed are the resolutions of the Virginia assembly in 1765, concerning the stamp act. Let my executors open this paper.' Within was found the following copy of the resolutions, in Mr. Henry's handwriting: —'Resolved, That the first adventurers and settlers of this, his majesty's colony and dominion, brought with them, and transmitted to their posterity, and all other his majesty's subjects, since inhabiting in this, his majesty's said colony, all the privileges, franchises, and immunities, that have at any time been held, enjoyed, and possessed by the people of Great Britain. Resolved, That by two royal charters, granted by King James I., the colonists, aforesaid, are declared entitled to all the privileges, liberties, and immunities of denizens and natural-born subjects, to all intents and purposes, as if they had been abiding and born within the realm of England. Resolved, That the taxation of the people by themselves, or by persons chosen by themselves to represent them, who can only know what taxes the people are able to bear, and the easiest mode of raising them, and are equally affected by such taxes themselves, is the distinguishing characteristic of British freedom, and without which the ancient constitution cannot subsist. Resolved, That his majesty's liege people of this most ancient colony, have uninterruptedly enjoyed the right of being thus governed by their own assembly, in the

article of their taxes and internal police, and that the same hath never been forfeited, or any other way given up, but hath been constantly recognised by the king and people of Great Britain. Resolved, therefore, That the general assembly of this colony have the sole right and power to lay taxes and impositions upon the inhabitants of this colony; and that every attempt to vest such power in any person or persons whatsoever, other than the general assembly aforesaid, has a manifest tendency to destroy British as well as American freedom.' On the back of the paper containing these resolutions, is the following endorsement, which is also in the handwriting of Mr. Henry himself:—'The within resolutions passed the house of burgesses in May, 1765. They formed the first opposition to the stamp act, and the scheme of taxing America by the British parliament. All the colonies, either through fear, or want of opportunity to form an opposition, or from influence of some kind or other, had remained silent. I had been for the first time elected a burgess, a few days before, was young, inexperienced, unacquainted with the forms of the house, and the members that composed it. Finding the men of weight averse to opposition, and the commencement of the tax at hand, and that no person was likely to step forth, I determined to venture, and alone, unadvised, and unassisted, on a blank leaf of an old law-book wrote the within. Upon offering them to the house, violent debates ensued. Many threats were uttered, and much abuse cast on me, by the party for submission. After a long and warm contest, the resolutions passed by a very small majority, perhaps of one or two only. The alarm spread throughout America with astonishing quickness, and the ministerial party were overwhelmed. The great point of resistance to British taxation was universally established in the colonies. This brought on the war, which finally separated the two countries, and gave independence to ours. Whether this will prove a blessing or a curse will depend upon the use our people make of the blessings which a gracious God hath bestowed on us. If they are wise, they will be great and happy. If they are of a contrary character, they will be miserable. Righteousness alone can exalt them as a nation. Reader! whoever thou art, remember this; and in thy sphere, practise virtue thyself, and encourage it in others.—P. Henry.' Such is the short, plain, and modest account which Mr. Henry has left of this transaction. . . . It is not wonderful that even the friends of colonial rights who knew the feeble and defenceless situation of this country should be startled at a step so bold and daring. That effect was produced; and the resolutions were resisted, not only by the aristocracy of the house, but by many of those who were afterward distinguished among the brightest champions of American liberty. The following is Mr. Jefferson's account of this transaction: 'Mr. Henry moved and Mr. Johnston seconded these resolutions successively. They were opposed by Messrs. Randolph, Bland, Pendleton, Wythe, and all the old members, whose influence in the house had, till then, been unbroken. They did it, not from any question of our rights, but on the ground that the same sentiments had been, at their preceding session, expressed in a more conciliatory form, to which the answers were not yet received. But torrents of sublime eloquence from Henry, backed by the solid reasoning of Johnston, prevailed. The last, however, and strongest resolution was carried but by a single vote. The debate on it was most bloody. I was then but a student, and stood at the door of communication between the house and the lobby (for as yet there was no gallery) during the whole debate and vote; and I well remember that, after the numbers on the division were told and declared from the chair, Peyton Randolph (the attorney-general) came out at the door where I was standing, and said, as he entered the lobby: "By God, I would have given 500 guineas for a single vote": for one would have divided the house, and Robinson was in the chair, who he knew would have negatived the resolution. Mr. Henry left town that evening; and the next morning, before the meeting of the house, Col. Peter Randolph, then of the council, came to the hall of burgesses, and sat at the clerk's table till the house-bell rang, thumbing over the volumes of journals, to find a precedent for expunging a vote of the house. . . . Some of the timid members, who had voted for the strongest resolution, had become alarmed; and as soon as the house met, a motion was made and carried to expunge it from the journals.'. . . The manuscript journal of the day is not to be found; whether it was suppressed, or casually lost, must remain a matter of uncertainty; it disappeared, however, shortly after the session. . . . In the interesting fact of the erasure of the fifth resolution, Mr. Jefferson is supported by the distinct recollection of Mr. Paul Carrington, late a judge of the court of appeals of Virginia, and the only surviving member, it is believed, of the house of burgesses of 1765. The statement is also confirmed, if indeed further confirmation were necessary, by the circumstance that instead of the five resolutions, so solemnly recorded by Mr. Henry, as having passed the house, the journal of the day exhibits only . . . four. . . . 'By these resolutions,' says Mr. Jefferson, 'and his manner of supporting them, Mr. Henry took the lead out of the hands of those who had, theretofore, guided the proceedings of the house; that is to say, of Pendleton, Wythe, Bland, Randolph.' It was, indeed, the measure which raised him to the zenith of his glory. He had never before had a subject which entirely matched his genius, and was capable of drawing out all the powers of his mind. . . . It was in the midst of this magnificent debate, while he was descanting on the tyranny of the obnoxious act, that he exclaimed in a voice of thunder, and with the look of a god: 'Cesar had his Brutus — Charles the First, his Cromwell — and George the Third — ('Treason!' cried the speaker —'Treason, treason!' echoed from every part of the house. It was one of those trying moments which is decisive of character. Henry faltered not for an instant; but rising to a loftier attitude, and fixing on the speaker an eye of the most determined fire, he finished his sentence with the firmest emphasis) — may profit by their example. If this be treason, make the most of it.' This was the only expression of defiance which escaped him during the debate. He was, throughout life, one of the most perfectly and uniformly decorous speakers that ever took the floor of the house. . . . From the period of which we have been speaking, Mr. Henry became the idol of the

people of Virginia; nor was his name confined to his native state. His light and heat were seen and felt throughout the continent; and he was every where regarded as the great champion of colonial liberty."— W. Wirt, *Sketches of the Life and Character of Patrick Henry, sect.* 2.— "The publication of Mr. Henry's resolutions against the Stamp Act created a widespread and intense excitement. They were hailed as the action of the oldest, and hitherto the most loyal of the colonies; and as raising a standard of resistance to the detested Act. Mr. Otis pronounced them treasonable, and this was the verdict of the Government party. But, treasonable or not, they struck a chord which vibrated throughout America. Hutchinson declared that, 'nothing extravagant appeared in the papers till an account was received of the Virginia resolves.' Soon the bold exclamation of Mr. Henry in moving them was published, and he was hailed as the leader raised up by Providence for the occasion. The 'Boston Gazette' declared: 'The people of Virginia have spoken very sensibly, and the frozen politicians of a more northern government say they have spoken treason.' But the people were no longer to be held down by 'the frozen politicians,' north or south. They commenced to form secret societies pledged to the resistance of the Act by all lawful means, which we called 'The Sons of Liberty.'"— W. W. Henry, *Patrick Henry: Life, Correspondence and Speeches, v.* 1, *pp.* 93–94.— At New York, "in May articles began to appear in the papers congratulating the public on the patriotic and frugal spirit that was beginning to reign in the Province of New York. The principal gentlemen of the city clad themselves in country manufactures or 'turned clothes.' Weyman printed in large type in his paper, the N. Y. Gazette, the patriotic motto 'It is better to wear a homespun coat than lose our liberty.' Spinning was daily in vogue; materials being more wanting than industrial hands; a need the farmers were endeavoring to remedy by sewing more flax seed and keeping more sheep, and finally we notice the odd statement 'that little lamb came to market as no true lovers of their country or whose sympathetic breasts feel for its distresses will buy it, and that sassafras, balm and sage were greatly in use instead of tea and allowed to be more wholesome.' Funerals and mourning, which were then expensive luxuries, were modified and their extravagance curtailed. The Society for promoting Arts and Manufactures resolved to establish a bleaching field and to erect a flax spinning school where the poor children of the city should be taught the art. They also ordered large numbers of spinning wheels to be made and loaned to all who would use them. In September we find it announced that women's shoes were made, cheaper and better than the renowned Hoses,' by Wells, Lasher, Bolton, and Davis, and that there was a good assortment on hand; that boots and men's shoes were made, in every quarter of the city, better than the English made for foreign sale; wove thread stockings in sundry places; the making of linen, woolen, and cotton stuffs was fast increasing; gloves, hats, carriages, harness and cabinet work were plenty. The people were now self dependent; cards now appeared recommending that no true friend of his country should buy or import English goods, and the dry goods men were warned that their importations would lie on hand to their cost and ruin. There being now a sufficiency of home made goods it was proposed on the 19th October to establish a market for all kinds of Home Manufactures; and a market was opened under the Exchange in Broad Street on the 23d. From the shortness of the notice the design was not sufficiently known in the country and there was neither plenty nor variety; but numbers of buyers appeared and everything went off readily at good prices. The gentlemen merchants of the city, as they were styled, were not behind any class in patriotism or sacrifice. A meeting was called for Monday 28th October at Jones' house in the Fields, 'The Freemasons Arms,' but the attendance, owing to the short notice, not being sufficient to enter upon business, they were again summoned on the 30th October to meet the next day at four o'clock at Mr. Burns' long room at the City Arms to fall upon such methods as they shall then think most advisable for their reciprocal interest. On the 31st there was a general meeting of the principal merchants at this tavern, which was known under the various names of the City Arms, the Province Arms, the New York Arms, and stood on the upper corner of Broadway and Stone, now Thames street, on the site later occupied by the City Hotel. Resolutions were adopted and subscribed by upwards of two hundred of the principal merchants; 1st, to accompany all orders to Great Britain for goods or merchandize of any nature kind or quality whatever with instructions that they be not shipped unless the Stamp Act be repealed; 2nd, to countermand all outstanding orders unless on the conditions mentioned in the foregoing resoluton; 3rd, not to vend any goods sent on commission, shipped after the 1st January succeeding, unless upon the same condition. In consequence of these resolutions the retailers of goods subscribed a paper obliging themselves not to buy any goods, wares or merchandize after the 1st January unless the Stamp Act were repealed. This was the first of the famous Non Importation Agreement, the great commercial measure of offense and defense against Great Britain. It punished friends and foes alike and plunged a large portion of the English people into the deepest distress; at the same time it taught the Colonies the value and extent of their own resources."—J. A. Stevens, *The Stamp Act in New York* (*Magazine of Am. Hist., June*, 1877).—The Stamp Act was reprinted in New York "with a death's-head upon it in place of the royal arms, and it was hawked about the streets under the title of 'The Folly of England and the Ruin of America.' In Boston, the church-bells were tolled, and the flags on the shipping put at half-mast. But formal defiance came first from Virginia." Patrick Henry had just been elected to the colonial assembly. "In a committee of the whole house, he drew up a series of resolutions, declaring that the colonists were entitled to all the liberties and privileges of natural-born subjects, and that 'the taxation of the people by themselves, or by persons chosen by themselves to represent them, . . . is the distinguishing characteristic of British freedom, without which the ancient constitution cannot exist.' It was further declared that any attempt to vest the power of taxation in any other body than the colonial assembly was a

menace to British no less than to American freedom; that the people of Virginia were not bound to obey any law enacted in disregard of these fundamental principles; and that any one who should maintain the contrary should be regarded as a public enemy. It was in the lively debate which ensued upon these resolutions, that Henry uttered those memorable words commending the example of Tarquin and Cæsar and Charles I. to the attention of George III. Before the vote had been taken upon all the resolutions, Governor Fauquier dissolved the assembly; but the resolutions were printed in the newspapers, and hailed with approval all over the country. Meanwhile, the Massachusetts legislature, at the suggestion of Otis, had issued a circular letter to all the colonies, calling for a general congress, in order to concert measures of resistance to the Stamp Act. The first cordial response came from South Carolina, at the instance of Christopher Gadsden, a wealthy merchant of Charleston and a scholar learned in Oriental languages, a man of rare sagacity and most liberal spirit. . . . The first announcement of the Stamp Act had called into existence a group of secret societies of workingmen known as 'Sons of Liberty,' in allusion to a famous phrase in one of Colonel Barré's speeches. These societies were solemnly pledged to resist the execution of the obnoxious law. On the 14th of August, the quiet town of Boston witnessed some extraordinary proceedings [see LIBERTY TREE]. . . . Twelve days after, a mob sacked the splendid house of Chief Justice Hutchinson, threw his plate into the street, and destroyed the valuable library which he had been thirty years in collecting, and which contained many manuscripts, the loss of which was quite irreparable. As usual with mobs, the vengeance fell in the wrong place, for Hutchinson had done his best to prevent the passage of the Stamp Act. In most of the colonies, the stamp officers were compelled to resign their posts. Boxes of stamps arriving by ship were burned or thrown into the sea. . . . In New York, the presence of the troops for a moment encouraged the lieutenant-governor, Colden, to take a bold stand in behalf of the law. He talked of firing upon the people, but was warned that if he did so he would be speedily hanged on a lamp-post, like Captain Porteous of Edinburgh. A torchlight procession, carrying images of Colden and of the devil, broke into the governor's coach-house, and, seizing his best chariot, paraded it about town with the images upon it, and finally burned up chariot and images on the Bowling Green, in full sight of Colden and the garrison, who looked on from the Battery, speechless with rage, but afraid to interfere. Gage did not dare to have the troops used, for fear of bringing on a civil war; and the next day the discomfited Colden was obliged to surrender all the stamps to the common council of New York, by whom they were at once locked up in the City Hall. Nothing more was needed to prove the impossibility of carrying the Stamp Act into effect."—J. Fiske, *The American Revolution, v.* 1, *ch.* 1.—In Connecticut the stamp agent, Mr. Ingersoll, was compelled by a body of armed citizens to resign—see CONNECTICUT: A. D. 1765.

A. D. 1765.—The Stamp Act Congress.—The delegates chosen, on the invitation of Massachusetts, to attend a congress for consultation on the circumstances of the colonies, met, October 7, 1765, in the City Hall at New York. "In no place were the Sons of Liberty more determined, or were their opponents more influential. It was the headquarters of the British force in America, the commander of which, General Gage, wielded the powers of a viceroy. A fort within the city was heavily mounted with cannon. Ships of war were moored near the wharves. The executive, Lieutenant-governor Colden, was resolved to execute the law. When the Massachusetts delegates called on him, he remarked that the proposed congress would be unconstitutional, and unprecedented, and he should give it no countenance. The congress consisted of twenty-eight delegates from nine of the colonies; four, though sympathizing with the movement, not choosing representatives. Here several of the patriots, who had discussed the American question in their localities, met for the first time. James Otis stood in this body the foremost speaker. His pen, with the pens of the brothers Robert and Phillip Livingston, of New York, were summoned to service in a wider field. John Dickinson, of Pennsylvania, was soon to be known through the colonies by 'The Farmer's Letters.' Thomas McKean and Cæsar Rodney were pillars of the cause in Delaware. Edward Tilghman was an honored name in Maryland. South Carolina, in addition to the intrepid Gadsden, had, in Thomas Lynch and John Rutledge, two patriots who appear prominently in the subsequent career of that colony. Thus this body was graced by large ability, genius, learning, and common sense. It was calm in its deliberations, seeming unmoved by the whirl of the political waters. The congress organized by the choice, by one vote, of Timothy Ruggles, a Tory,—as the chairman,—and John Cotton, clerk. The second day of its session, it took into consideration the rights, privileges, and grievances of 'the British American colonists.' After eleven days' debate, it agreed—each colony having one vote—upon a declaration of rights and grievances and ordered it to be inserted in the journal. [The following is the 'Declaration': 'The members of this congress, sincerely devoted, with the warmest sentiments of affection and duty, to his majesty's person and government, inviolably attached to the present happy establishment of the protestant succession, and with minds deeply impressed by a sense of the present and impending misfortunes of the British colonies on this continent; having considered, as maturely as time will permit, the circumstances of the said colonies, esteem it our indispensable duty to make the following declarations of our humble opinion, respecting the most essential rights and liberties of the colonists, and of the grievances under which they labor by reason of several late acts of parliament. 1. That his majesty's subjects in these colonies owe the same allegiance to the crown of Great Britain that is owing from his subjects born within the realm, and all due

subordination to that august body the parliament of Great Britain. 2. That his majesty's liege subjects in these colonies are entitled to all the inherent rights and liberties of his natural born subjects within the kingdom of Great Britain. 3. That it is inseparably essential to the freedom of a people, and the undoubted right of Englishmen, that no taxes be imposed on them, but with their own consent, given personally, or by their representatives. 4. That the people of these colonies are not, and from their local circumstances cannot be, represented in the house of commons of Great Britain. 5. That the only representatives of these colonies are persons chosen therein by themselves, and that no taxes ever have been or can be constitutionally imposed upon them, but by their respective legislatures. 6. That all supplies to the crown being free gifts from the people, it is unreasonable and inconsistent with the principles and spirit of the British constitution for the people of Great Britain to grant to his majesty the property of the colonists. 7. That trial by jury is the inherent and invaluable right of every British subject in these colonies. 8. That the late act of parliament entitled 'an act for granting and applying certain stamp duties, and other duties, in the British colonies and plantations in America,' &c., by imposing taxes on the inhabitants of these colonies; and the said act, and several other acts, by extending the jurisdiction of the court of admiralty beyond its ancient limits, have a manifest tendency to subvert the rights and liberties of the colonists. 9. That the duties imposed by several late acts of parliament, from the peculiar circumstances of these colonies, will be extremely burdensome and grievous; and from the scarcity of specie, the payment of them absolutely impracticable. 10. That as the profits of the trade of these colonies ultimately center in Great Britain, to pay for the manufactures which they are obliged to take from thence, they eventually contribute very largely to all supplies granted to the crown. 11. That the restrictions imposed by several late acts of parliament on the trade of these colonies, will render them unable to purchase the manufactures of Great Britain. 12. That the increase, prosperity, and happiness of these colonies depend on the full and free enjoyment of their rights and liberties, and an intercourse with Great Britain mutually affectionate and advantageous. 13. That it is the right of the British subjects in these colonies to petition the king, or either house of parliament. 14. That it is the indispensable duty of these colonies, to the best of sovereigns, to the mother country, and to themselves, to endeavor, by a loyal and dutiful address to his majesty, and humble application to both houses of parliament, to procure the repeal of the act for granting and applying certain stamp duties, of all clauses of any other acts of parliament whereby the jurisdiction of the admiralty is extended as aforesaid, and of the other late acts for the restriction of American commerce.'] . . . The delegates present from only six of the colonies — except Ruggles and Ogden — signed the petition; those from New York, Connecticut, and South Carolina not being authorized to sign. On the 25th of October, the congress adjourned. Special measures were taken to transmit the proceedings to the unrepresented colonies. The several assemblies, on meeting, heartily approved of the course of their delegates who concurred in the action of congress; but Ruggles, of Massachusetts, was reprimanded by the speaker, in the name of the House, and Ogden, of New Jersey, was hung in effigy by the people. The action of the assemblies was announced in the press. Meanwhile the Sons of Liberty, through their committees of correspondence, urged a continental Union; pledged a mutual support in case of danger; in some instances stated the numbers of armed men that might be relied on; and thus evinced a common determination to resist the execution of the Stamp Act."—R. Frothingham, *Rise of the Republic of the U. S., ch.* 5.

A. D. 1765-1768.—Treaties with the Indians at German Flats and Fort Stanwix.—Cession of Iroquois claims to western Pennsylvania, West Virginia and Kentucky.—The drawing of the Indian boundary line.—"After the success of Bradstreet and Bouquet [see PONTIAC'S WAR], there was no difficulty in concluding a treaty with all the Western Indians; and late in April, 1765, Sir William Johnson, at the German Flats, held a conference with the various nations, and settled a definite peace. At this meeting two propositions were made; the one to fix some boundary line, west of which the Europeans should not go; and the savages named, as this line, the Ohio or Alleghany and Susquehannah; but no definite agreement was made, Johnson not being empowered to act. The other proposal was, that the Indians should grant to the traders, who had suffered in 1763, a tract of land in compensation for the injuries then done them, and to this the red men agreed. . . . During the very year that succeeded the treaty of German Flats, settlers crossed the mountains and took possession of lands in western Virginia and along the Monongahela. The Indians, having received no pay for these lands, murmured, and once more a border war was feared. . . . And not only were frontier men thus passing the line tacitly agreed on, but Sir William himself was even then meditating a step which would have produced, had it been taken, a general Indian war again. This was the purchase and settlement of an immense tract south of the Ohio River, where an independent colony was to be formed. How early this plan was conceived we do not learn, but, from Franklin's letters, we find that it was in contemplation in the spring of 1766. At that time Franklin was in London, and was written to by his son, Governor Franklin of New Jersey, with regard to the proposed colony. The plan seems to have been to buy of the Six Nations the lands south of the Ohio, a purchase which it was not doubted Sir William might make, and then to procure from the King a grant of as much territory as the Company which it was intended to form would require. Governor Franklin, accordingly, forwarded to his father an application for a grant, together with a letter from Sir William, recommending the plan to the ministry; all of which was duly communicated to the proper department. But at that time there were various interests bearing upon this plan of Franklin. The old Ohio Company [see OHIO (VALLEY): A. D. 1748–1754] was still suing, through its agent, Colonel George Mercer, for a perfection of the original grant. . . . General

Lyman, from Connecticut we believe, was soliciting a new grant similar to that now asked by Franklin; and the ministers themselves were divided as to the policy and propriety of establishing any settlements so far in the interior,—Shelburne being in favor of the new colony, Hillsborough opposed to it. The Company was organized, however, and the nominally leading man therein being Mr. Thomas Walpole, a London banker of eminence, it was known as the Walpole Company. . . . Before any conclusion was come to, it was necessary to arrange definitely that boundary line which had been vaguely talked of in 1765, and with respect to which Sir William Johnson had written to the ministry, who had mislaid his letters and given him no instructions. The necessity of arranging this boundary was also kept in mind by the continued and growing irritation of the Indians, who found themselves invaded from every side. . . . Franklin, the father, all this time, was urging the same necessity upon the ministers in England; and about Christmas of 1767, Sir William's letters on the subject having been found, orders were sent him to complete the proposed purchase from the Six Nations, and settle all differences. But the project for a colony was for the time dropped, a new administration coming in which was not that way disposed. Sir William Johnson having received, early in the spring, the orders from England relative to a new treaty with the Indians, at once took steps to secure a full attendance. Notice was given to the various colonial governments, to the Six Nations, the Delawares, and the Shawanese, and a Congress was appointed to meet at Fort Stanwix during the following October. It met upon the 24th of that month, and was attended by representatives from New Jersey, Virginia, and Pennsylvania; by Sir William and his deputies; by the agents of those traders who had suffered in the war of 1763; and by deputies from all of the Six Nations, the Delawares, and the Shawanese. The first point to be settled was the boundary line which was to determine the Indian lands of the West from that time forward; and this line the Indians, upon the 1st of November, stated should begin on the Ohio at the mouth of the Cherokee (or Tennessee) river; thence go up the Ohio and Alleghany to Kittaning; thence across to the Susquehannah, &c.; whereby the whole country south of the Ohio and Alleghany, to which the Six Nations had any claim, was transferred to the British. One deed, for a part of this land, was made on the 3d of November to William Trent, attorney for twenty-two traders, whose goods had been destroyed by the Indians in 1763. The tract conveyed by this was between the Kenhawa and Monongahela, and was by the traders named 'Indiana.' Two days afterward, a deed for the remaining western lands was made to the King, and the price agreed on paid down. These deeds were made upon the express agreement, that no claim should ever be based upon previous treaties, those of Lancaster, Logstown, &c.; and they were signed by the chiefs of the Six Nations, for themselves, their allies and dependents, the Shawanese, Delawares, Mingoes of Ohio, and others; but the Shawanese and Delaware deputies present did not sign them. Such was the treaty of Stanwix, whereon rests the title by purchase to Kentucky, western Virginia, and Pennsylvania. It was a better foundation, perhaps, than that given by previous treaties, but was essentially worthless; for the lands conveyed were not occupied or hunted on by those conveying them. In truth, we cannot doubt that this immense grant was obtained by the influence of Sir William Johnson, in order that the new colony, of which he was to be governor, might be founded there. . . . The white man could now quiet his conscience when driving the native from his forest home, and feel sure that an army would back his pretensions. . . . Meantime more than one bold man had ventured for a little while into the beautiful valleys of Kentucky, and, on the 1st of May, 1769, there was one going forth from his 'peaceable habitation on the Yadkin river in North Carolina,' whose name has since gone far and wide over this little planet of ours, he having become the type of his class. This was Daniel Boone. He crossed the mountains, and spent that summer and the next winter in the West. But, while he was rejoicing in the abundance of buffalo, deer, and turkeys among the cane-brakes, longer heads were meditating still that new colony, the plan of which had been lying in silence for two years and more. The Board of Trade was again called on to report upon the application, and Lord Hillsborough, the President, reported against it. This called out Franklin's celebrated 'Ohio Settlement,' a paper written with so much ability, that the King's Council put by the official report, and granted the petition, a step which mortified the noble lord so much that he resigned his official station. The petition now needed only the royal sanction, which was not given until August 14th, 1772; but in 1770, the Ohio Company was merged in Walpole's, and, the claims of the soldiers of 1756 being acknowledged both by the new Company and by government, all claims were quieted. Nothing was ever done, however, under the grant to Walpole, the Revolution soon coming upon America. After the Revolution, Mr. Walpole and his associates petitioned Congress respecting their lands, called by them 'Vandalia,' but could get no help from that body. What was finally done by Virginia with the claims of this and other companies, we do not find written, but presume their lands were all looked on as forfeited."—J. H. Perkins, *English Discoveries in the Ohio Valley* (*North Am. Rev., July*, 1839).

A. D. 1766.—Examination of Dr. Franklin before Parliament.—On the 28th of January, 1766, while the bill for the repeal of the Stamp Act was pending in Parliament, Dr. Franklin was examined before the House of Commons, in Committee. The questions and answers of this very interesting examination, as reported in the Parliamentary History, were as follows :

Q. What is your name, and place of abode ?—A. Franklin, of Philadelphia.

Do the Americans pay any considerable taxes among themselves ?—Certainly many, and very heavy taxes.

What are the present taxes in Pennsylvania, laid by the laws of the colony ?—There are taxes on all estates real and personal, a poll-tax, a tax on all offices, professions, trades, and businesses, according to their profits ; an excise on all wine, rum, and other spirit ; and a duty of ten

pounds per head on all negroes imported, with some other duties.

For what purposes are those taxes laid?—For the support of the civil and military establishments of the country, and to discharge the heavy debt contracted in the last war.

How long are those taxes to continue?—Those for discharging the debt are to continue till 1772, and longer, if the debt should not be then all discharged. The others must always continue.

Was it not expected that the debt would have been sooner discharged?—It was, when the peace was made with France and Spain; but a fresh war breaking out with the Indians, a fresh load of debt was incurred, and the taxes, of course, continued longer by a new law.

Are not all the people very able to pay those taxes?—No. The frontier counties, all along the continent, having been frequently ravaged by the enemy, and greatly impoverished, are able to pay very little tax. And therefore, in consideration of their distresses, our late tax laws do expressly favour those counties, excusing the sufferers; and I suppose the same is done in other governments.

Are not you concerned in the management of the post office in America?—Yes; I am deputy post-master general of North America.

Don't you think the distribution of stamps, by post, to all the inhabitants, very practicable, if there was no opposition?—The posts only go along the sea coasts; they do not, except in a few instances, go back into the country; and if they did, sending for stamps by post would occasion an expence of postage, amounting, in many cases, to much more than that of the stamps themselves.

Are you acquainted with Newfoundland?—I never was there.

Do you know whether there are any post-roads on that island?—I have heard that there are no roads at all; but that the communication between one settlement and another is by sea only.

Can you disperse the stamps by post in Canada?—There is only a post between Montreal and Quebec. The inhabitants live so scattered and remote from each other, in that vast country, that posts cannot be supported among them, and therefore they cannot get stamps per post. The English colonies too, along the frontiers, are very thinly settled.

From the thinness of the back settlements, would not the Stamp Act be extremely inconvenient to the inhabitants if executed?—To be sure it would; as many of the inhabitants could not get stamps when they had occasion for them, without taking long journeys, and spending, perhaps, three or four pounds, that the crown might get sixpence.

Are not the colonies, from their circumstances, very able to pay the stamp duty?—In my opinion, there is not gold and silver enough in the colonies to pay the stamp duty for one year.

Don't you know that the money arising from the stamps was all to be laid out in America?—I know it is appropriated by the act to the American service; but it will be spent in the conquered colonies, where the soldiers are, not in the colonies that pay it.

Is there not a balance of trade due from the colonies where the troops are posted, that will bring back the money to the old colonies?—I think not. I believe very little would come back. I know of no trade likely to bring it back. I think it would come from the colonies where it was spent directly to England; for I have always observed, that in every colony the more plenty of means of remittance to England, the more goods are sent for, and the more trade with England carried on.

What number of white inhabitants do you think there are in Pennsylvania?—I suppose there may be about 160,000.

What number of them are Quakers?—Perhaps a third.

What number of Germans?—Perhaps another third; but I cannot speak with certainty.

Have any number of the Germans seen service, as soldiers, in Europe?—Yes, many of them, both in Europe and America.

Are they as much dissatisfied with the stamp duty as the English?—Yes, and more; and with reason, as their stamps are, in many cases, to be double.

How many white men do you suppose there are in North America?—About 300,000, from 16 to 60 years of age.

What may be the amount of one year's imports into Pennsylvania from Britain?—I have been informed that our merchants compute the imports from Britain to be above 500,000*l.*

What may be the amount of the produce of your province exported to Britain?—It must be small, as we produce little that is wanted in Britain. I suppose it cannot exceed 40,000*l.*

How then do you pay the balance?—The balance is paid by our produce carried to the West Indies, and sold in our own islands, or to the French, Spaniards, Danes, and Dutch; by the same carried to other colonies in North America, as to New England, Nova Scotia, Newfoundland, Carolina, and Georgia; by the same carried to different parts of Europe, as Spain, Portugal and Italy. In all which places we receive either money, bills of exchange, or commodities that suit for remittance to Britain; which, together with all the profits on the industry of our merchants and mariners, arising in those circuitous voyages, and the freights made by their ships, centre finally in Britain to discharge the balance, and pay for British manufactures continually used in the province, or sold to foreigners by our traders.

Have you heard of any difficulties lately laid on the Spanish trade?—Yes, I have heard that it has been greatly obstructed by some new regulations, and by the English men of war and cutters stationed all along the coast in America.

Do you think it right, that America should be protected by this country, and pay no part of the expence?—That is not the case. The colonies raised, clothed and paid, during the last war, nearly 25,000 men, and spent many millions.

Were you not reimbursed by parliament?—We were only reimbursed what, in your opinion, we had advanced beyond our proportion, or beyond what might reasonably be expected from us; and it was a very small part of what we spent. Pennsylvania, in particular, disbursed about 500,000*l.*, and the reimbursements, in the whole, did not exceed 60,000*l.*

You have said that you pay heavy taxes in Pennsylvania; what do they amount to in the pound?—The tax on all estates, real and personal, is eighteen pence in the pound, fully rated; and the tax on the profits of trades and

professions, with other taxes, do, I suppose, make full half a crown in the pound.

Do you know any thing of the rate of exchange in Pennsylvania, and whether it has fallen lately?—It is commonly from 170 to 175. I have heard that it has fallen lately from 175 to 162 and a half, owing, I suppose, to their lessening their orders for goods; and when their debts to this country are paid, I think the exchange will probably be at par.

Do not you think the people of America would submit to pay the stamp duty, if it was moderated?—No, never, unless compelled by force of arms.

Are not the taxes in Pennsylvania laid on unequally, in order to burden the English trade, particularly the tax on professions and business?—It is not more burdensome in proportion than the tax on lands. It is intended, and supposed to take an equal proportion of profits.

How is the assembly composed? Of what kinds of people are the members, landholders or traders?—It is composed of landholders, merchants, and artificers.

Are not the majority landholders?—I believe they are.

Do not they, as much as possible, shift the tax off from the land, to ease that, and lay the burthen heavier on trade?—I have never understood it so. I never heard such a thing suggested. And indeed an attempt of that kind could answer no purpose. The merchant or trader is always skilled in figures, and ready with his pen and ink. If unequal burdens are laid on his trade, he puts an additional price on his goods; and the consumers, who are chiefly landholders, finally pay the greatest part, if not the whole.

What was the temper of America towards Great Britain before the year 1763?—The best in the world. They submitted willingly to the government of the crown, and paid, in all their courts, obedience to acts of parliament. Numerous as the people are in the several old provinces, they cost you nothing in forts, citadels, garrisons or armies, to keep them in subjection. They were governed by this country at the expence only of a little pen, ink, and paper. They were led by a thread. They had not only a respect, but an affection for Great Britain, for its laws, its customs and manners, and even a fondness for its fashions, that greatly increased the commerce. Natives of Britain were always treated with particular regard; to be an Old-England man was, of itself, a character of some respect, and gave a kind of rank among us.

And what is their temper now?—O, very much altered.

Did you ever hear the authority of parliament to make laws for America questioned till lately?—The authority of parliament was allowed to be valid in all laws, except such as should lay internal taxes. It was never disputed in laying duties to regulate commerce.

In what proportion hath population increased in America?—I think the inhabitants of all the provinces together, taken at a medium, double in about 25 years. But their demand for British manufactures increases much faster, as the consumption is not merely in proportion to their numbers, but grows with the growing abilities of the same numbers to pay for them. In 1723, the whole importation from Britain to Pennsylvania, was but about 15,000*l.* sterling; it is now near half a million.

In what light did the people of America use to consider the parliament of Great Britain?—They considered the parliament as the great bulwark and security of their liberties and privileges, and always spoke of it with the utmost respect and veneration. Arbitrary ministers, they thought, might possibly, at times, attempt to oppress them; but they relied on it, that the parliament, on application, would always give redress. They remembered, with gratitude, a strong instance of this, when a bill was brought into parliament, with a clause to make royal instructions laws in the colonies, which the House of Commons would not pass, and it was thrown out.

And have they not still the same respect for parliament?—No; it is greatly lessened.

To what causes is that owing?—To a concurrence of causes; the restraints lately laid on their trade, by which the bringing of foreign gold and silver into the colonies was prevented; the prohibition of making paper money among themselves; and then demand a new and heavy tax by stamps; taking away at the same time, trials by juries, and refusing to receive and hear their humble petitions.

Don't you think they would submit to the Stamp Act, if it was modified, the obnoxious parts taken out, and the duty reduced to some particulars, of small moment?—No; they will never submit to it.

What do you think is the reason that the people of America increase faster than in England?—Because they marry younger, and more generally.

Why so?—Because any young couple that are industrious, may easily obtain land of their own, on which they can raise a family.

Are not the lower rank of people more at their ease in America than in England?—They may be so, if tney are sober and diligent, as they are better paid for their labour.

What is your opinion of a future tax, imposed on the same principle with that of the Stamp Act, how would the Americans receive it?—Just as they do this. They would not pay it.

Have not you heard of the resolution of this House, and of the House of Lords, asserting the right of parliament relating to America, including a power to tax the people there?—Yes, I have heard of such resolutions.

What will be the opinion of the Americans on those resolutions?—They will think them unconstitutional and unjust.

Was it an opinion in America before 1763, that the parliament had no right to lay taxes and duties there?—I never heard any objection to the right of laying duties to regulate commerce; but a right to lay internal taxes was never supposed to be in parliament, as we are not represented there.

On what do you found your opinion, that the people in America made any such distinction?—I know that whenever the subject has occurred in conversation where I have been present, it has appeared to be the opinion of every one, that we could not be taxed in a parliament where we were not represented. But the payment of duties laid by act of parliament, as regulations of commerce, was never disputed.

But can you name any act of assembly, or public act of any of your governments, that made such distinction?—I do not know that

there was any; I think there was never an occasion to make any such act, till now that you have attempted to tax us; that has occasioned resolutions of assembly, declaring the distinction, in which I think every assembly on the continent, and every member in every assembly, have been unanimous.

What then could occasion conversations on that subject before that time?—There was, in 1754, a proposition made (I think it came from hence) that in case of a war, which was then apprehended, the governors of the colonies should meet, and order the levying of troops, building of forts, and taking every other necessary measure for the general defence; and should draw on the treasury here, for the sums expended, which were afterwards to be raised in the colonies by a general tax, to be laid on them by act of parliament. This occasioned a good deal of conversation on the subject, and the general opinion was, that the parliament neither would, nor could lay any tax on us, till we were duly represented in parliament, because it was not just, nor agreeable to the nature of an English constitution.

Don't you know there was a time in New York, when it was under consideration to make an application to parliament, to lay taxes on that colony, upon a deficiency arising from the assembly's refusing or neglecting to raise the necessary supplies for the support of the civil government?—I never heard of it.

There was such an application under consideration in New York; and do you apprehend they could suppose the right of parliament to lay a tax in America was only local, and confined to the case of a deficiency in a particular colony, by a refusal of its assembly to raise the necessary supplies?—They could not suppose such a case, as that the assembly would not raise the necessary supplies to support its own government. An assembly that would refuse it, must want common sense, which cannot be supposed. I think there was never any such case at New York, and that it must be a misrepresentation, or the fact must be misunderstood. I know there have been some attempts, by ministerial instructions from hence, to oblige the assemblies to settle permanent salaries on governors, which they wisely refused to do; but I believe no assembly of New York, or any other colony, ever refused duly to support government, by proper allowances, from time to time, to public officers.

But in case a governor, acting by instruction, should call on an assembly to raise the necessary supplies, and the assembly should refuse to do it, do you not think it would then be for the good of the people of the colony, as well as necessary to government, that the parliament should tax them?—I do not think it would be necessary. If an assembly could possibly be so absurd as to refuse raising the supplies requisite for the maintenance of government among them, they could not long remain in such a situation; the disorders and confusion occasioned by it, must soon bring them to reason.

If it should not, ought not the right to be in Great Britain of applying a remedy?—A right only to be used in such a case, I should have no objection to, supposing it to be used merely for the good of the people of the colony.

But who is to judge of that, Britain or the colony?—Those that feel can best judge.

You say the colonies have always submitted to external taxes, and object to the right of parliament only in laying internal taxes; now can you shew that there is any kind of difference between the two taxes to the colony on which they may be laid?—I think the difference is very great. An external tax is a duty laid on commodities imported; that duty is added to the first cost, and other charges on the commodity, and when it is offered to sale, makes a part of the price. If the people do not like it at that price, they refuse it; they are not obliged to pay it. But an internal tax is forced from the people without their consent, if not laid by their own representatives. The Stamp Act says, we shall have no commerce, make no exchange of property with each other, neither purchase nor grant, nor recover debts; we shall neither marry nor make our wills, unless we pay such sums, and thus it is intended to extort our money from us, or ruin us by the consequences of refusing to pay it.

But supposing the internal tax or duty to be laid on the necessaries of life imported into your colony, will not that be the same thing in its effects as an internal tax?—I do not know a single article imported into the northern colonies, but what they can either do without or make themselves.

Don't you think cloth from England absolutely necessary to them?—No, by no means absolutely necessary; with industry and good management, they may very well supply themselves with all they want.

Will it not take a long time to establish that manufacture among them; and must they not in the mean while suffer greatly?—I think not. They have made a surprising progress already. And I am of opinion, that before their old clothes are worn out, they will have new ones of their own making.

Can they possibly find wool enough in North America?—They have taken steps to increase the wool. They entered into general combination to eat no more lamb, and very few lambs were killed last year. This course persisted in, will soon make a prodigious difference in the quantity of wool. And the establishing of great manufactories, like those in the clothing towns here, is not necessary, as it is where the business is to be carried on for the purposes of trade. The people will all spin and work for themselves, in their own houses.

Can there be wool and manufacture enough in one or two years?—In three years, I think, there may.

Does not the severity of the winter, in the northern colonies, occasion the wool to be of bad quality?—No, the wool is very fine and good.

In the more southern colonies, as in Virginia, don't you know that the wool is coarse, and only a kind of hair?—I don't know it. I never heard it. Yet I have been sometimes in Virginia. I cannot say I ever took particular notice of the wool there, but I believe it is good, though I cannot speak positively of it; but Virginia, and the colonies south of it, have less occasion for wool; their winters are short, and not very severe, and they can very well clothe themselves with linen and cotton of their own raising for the rest of the year.

Are not the people in the more northern colonies obliged to fodder their sheep all the winter?

—In some of the most northern colonies they may be obliged to do it some part of the winter.

Considering the resolutions of parliament as to the right, do you think, if the Stamp Act is repealed, that the North Americans will be satisfied?—I believe they will.

Why do you think so?—I think the resolutions of right will give them very little concern, if they are never attempted to be carried into practice. The colonies will probably consider themselves in the same situation, in that respect, with Ireland; they know you claim the same right with regard to Ireland, but you never exercise it. And they may believe you never will exercise it in the colonies, any more than in Ireland, unless on some very extraordinary occasion.

But who are to be the judges of that extraordinary occasion? Is not the parliament?—Though the parliament may judge of the occasion, the people will think it can never exercise such right, till representatives from the colonies are admitted into parliament, and that whenever the occasion arises, representatives will be ordered.

Did you never hear that Maryland, during the last war, had refused to furnish a quota towards the common defence?—Maryland has been much misrepresented in that matter. Maryland, to my knowledge, never refused to contribute, or grant aids to the crown. The assemblies every year, during the war, voted considerable sums, and formed bills to raise them. The bills were, according to the constitution of that province, sent up to the council, or upper house, for concurrence, that they might be presented to the governor, in order to be enacted into laws. Unhappy disputes between the two houses, arising from the defects of that constitution principally, rendered all the bills but one or two abortive. The proprietary's council rejected them. It is true, Maryland did not contribute its proportion, but it was, in my opinion, the fault of the government, not of the people.

Was it not talked of in the other provinces as a proper measure to apply to parliament to compel them?—I have heard such discourse: but as it was well known that the people were not to blame, no such application was ever made, or any step taken towards it.

Was it not proposed at a public meeting?—Not that I know of.

Do you remember the abolishing of the paper currency in New England, by act of assembly?—I do remember its being abolished in the Massachusett's Bay.

Was not lieutenant governor Hutchinson principally concerned in that transaction?—I have heard so.

Was it not at that time a very unpopular law?—I believe it might, though I can say little about it, as I lived at a distance from that province.

Was not the scarcity of gold and silver an argument used against abolishing the paper?—I suppose it was.

What is the present opinion there of that law? Is it as unpopular as it was at first?—I think it is not.

Have not instructions from hence been sometimes sent over to governors, highly oppressive and unpolitical?—Yes.

Have not some governors dispensed with them for that reason?—Yes, I have heard so.

Did the Americans ever dispute the controuling power of parliament to regulate the commerce?—No.

Can any thing less than a military force carry the Stamp Act into execution?—I do not see how a military force can be applied to that purpose.

Why may it not?—Suppose a military force sent into America, they will find nobody in arms; what are they then to do? They cannot force a man to take stamps who chuses to do without them. They will not find a rebellion; they may indeed make one.

If the act is not repealed, what do you think will be the consequences?—A total loss of the respect and affection the people of America bear to this country, and of all the commerce that depends on that respect and affection.

How can the commerce be affected?—You will find, that if the act is not repealed, they will take very little of your manufactures in a short time.

Is it in their power to do without them?—I think they may very well do without them.

Is it their interest not to take them?—The goods they take from Britain are either necessaries, mere conveniencies, or superfluities. The first, as cloth, &c. with a little industry they can make at home: the second they can do without, till they are able to provide them among themselves; and the last, which are much the greatest part, they will strike off immediately. They are mere articles of fashion, purchased and consumed, because the fashion in a respected country, but will now be detested and rejected. The people have already struck off, by general agreement, the use of all goods fashionable in mournings, and many thousand pounds worth are sent back as unsaleable.

Is it their interest to make cloth at home?—I think they may at present get it cheaper from Britain, I mean of the same fineness and neatness of workmanship; but when one considers other circumstances, the restraints on their trade, and the difficulty of making remittances, it is their interest to make every thing.

Suppose an act of internal regulations connected with the tax, how would they receive it?—I think it would be objected to.

Then no regulation with a tax would be submitted to?—Their opinion is, that when aids to the crown are wanted, they are to be asked of the several assemblies according to the old established usage, who will, as they have always done, grant them freely. And that their money ought not to be given away, without their consent, by persons at a distance, unacquainted with their circumstances and abilities. The granting aids to the crown, is the only means they have of recommending themselves to their sovereign, and they think it extremely hard and unjust, that a body of men, in which they have no representatives, should make a merit to itself of giving and granting what is not its own, but theirs, and deprives them of a right they esteem of the utmost value and importance, as it is the security of all their other rights.

But is not the post office, which they have long received, a tax as well as a regulation?—No; the money paid for the postage of a letter is not of the nature of a tax; it is merely a quantum meruit for a service done; no person is compellable to pay the money, if he does not chuse

to receive the service. A man may still, as before the act, send his letter by a servant, a special messenger, or a friend, if he thinks it cheaper and safer.

But do they not consider the regulations of the post-office, by the act of last year, as a tax?—By the regulations of last year the rate of postage was generally abated near thirty per cent. through all America; they certainly cannot consider such abatement as a tax.

If an excise was laid by parliament, which they might likewise avoid paying, by not consuming the articles excised, would they then not object to it?—They would certainly object to it, as an excise is unconnected with any service done, and is merely an aid which they think ought to be asked of them, and granted by them if they are to pay it, and can be granted for them, by no others whatsoever, whom they have not impowered for that purpose.

You say they do not object to the right of parliament, in laying duties on goods to be paid on their importation; now, is there any kind of difference between a duty on the importation of goods and an excise on their consumption?—Yes; a very material one; an excise, for the reasons I have just mentioned, they think you can have no right to lay within their country. But the sea is yours; you maintain, by your fleets, the safety of navigation in it, and keep it clear of pirates; you may have therefore a natural and equitable right to some toll or duty on merchandizes carried through that part of your dominions, towards defraying the expence you are at in ships to maintain the safety of that carriage.

Does this reasoning hold in the case of a duty laid on the produce of their lands exported? And would they not then object to such a duty?—If it tended to make the produce so much dearer abroad as to lessen the demand for it, to be sure they would object to such a duty; not to your right of laying it, but they would complain of it as a burden, and petition you to lighten it.

Is not the duty paid on the tobacco exported a duty of that kind?—That, I think, is only on tobacco carried coastwise from one colony to another, and appropriated as a fund for supporting the college at Williamsburgh, in Virginia.

Have not the assemblies in the West Indies the same natural rights with those in North America?—Undoubtedly.

And is there not a tax laid there on their sugars exported?—I am not much acquainted with the West Indies, but the duty of four and a half per cent., on sugars exported, was, I believe, granted by their own assemblies.

How much is the poll tax in your province laid on unmarried men?—It is, I think, fifteen shillings, to be paid by every single freeman, upwards of twenty one years old.

What is the annual amount of all the taxes in Pennsylvania?—I suppose about 20,000*l.* sterling.

Supposing the Stamp Act continued, and enforced, do you imagine that ill humour will induce the Americans to give as much for worse manufactures of their own and use them, preferably to better of ours?—Yes, I think so. People will pay as freely to gratify one passion as another, their resentment as their pride.

Would the people at Boston discontinue their trade?—The merchants are a very small number compared with the body of the people, and must discontinue their trade, if nobody will buy their goods.

What are the body of the people in the colonies?—They are farmers, husbandmen or planters.

Would they suffer the produce of their lands to rot?—No; but they would not raise so much. They would manufacture more, and plough less.

Would they live without the administration of justice in civil matters, and suffer all the inconveniencies of such a situation for any considerable time, rather than take the stamps, supposing the stamps were protected by a sufficient force, where every one might have them?—I think the supposition impracticable, that the stamps should be so protected as that every one might have them. The Act requires sub-distributors to be appointed in every county town, district, and village, and they would be necessary. But the principal distributors, who were to have had a considerable profit on the whole, have not thought it worth while to continue in the office, and I think it impossible to find sub-distributors fit to be trusted, who, for the trifling profit that must come to their share, would incur the odium, and run the hazard that would attend it; and if they could be found, I think it impracticable to protect the stamps in so many distant and remote places.

But in places where they could be protected, would not the people use them rather than remain in such a situation, unable to obtain any right, or recover, by law, any debt?—It is hard to say what they would do. I can only judge what other people will think, and how they will act, by what I feel within myself. I have a great many debts due to me in America, and I had rather they should remain unrecoverable by any law than submit to the Stamp Act. They will be debts of honour. It is my opinion the people will either continue in that situation, or find some way to extricate themselves, perhaps by generally agreeing to proceed in the courts without stamps.

What do you think a sufficient military force to protect the distribution of the stamps in every part of America?—A very great force; I cannot say what, if the disposition of America is for a general resistance.

What is the number of men in America able to bear arms, or of disciplined militia?—There are, I suppose, at least —— [Question objected to. He withdrew. Called in again.]

Is the American Stamp Act an equal tax on that country?—I think not.

Why so?—The greatest part of the money must arise from lawsuits for the recovery of debts, and be paid by the lower sort of people, who were too poor easily to pay their debts. It is therefore a heavy tax on the poor, and a tax upon them for being poor.

But will not this increase of expence be a means of lessening the number of lawsuits?—I think not; for as the costs all fall upon the debtor, and are to be paid by him, they would be no discouragement to the creditor to bring his action.

Would it not have the effect of excessive usury?—Yes, as an oppression of the debtor.

How many ships are there laden annually in North America with flax seed for Ireland?—I cannot speak to the number of ships, but I know

that in 1752, 10,000 hogsheads of flax seed, each containing seven bushels, were exported from Philadelphia to Ireland. I suppose the quantity is greatly increased since that time; and it is understood that the exportation from New York is equal to that from Philadelphia.

What becomes of the flax that grows with that flax seed?—They manufacture some into coarse, and some into a middling kind of linen.

Are there any slitting mills in America?—I think there are three, but I believe only one at present employed. I suppose they will all be set to work, if the interruption of the trade continues.

Are there any fulling mills there?—A great many.

Did you never hear that a great quantity of stockings were contracted for, for the army, during the war, and manufactured in Philadelphia?—I have heard so.

If the Stamp Act should be repealed, would not the Americans think they could oblige the parliament to repeal every external tax law now in force?—It is hard to answer questions what people at such a distance will think.

But what do you imagine they will think were the motives of repealing the Act?—I suppose they will think that it was repealed from a conviction of its inexpediency; and they will rely upon it, that while the same inexpediency subsists, you will never attempt to make such another.

What do you mean by its inexpediency?—I mean its inexpediency on several accounts; the poverty and inability of those who were to pay the tax; the general discontent it has occasioned; and the impracticability of enforcing it.

If the Act should be repealed, and the legislature should shew its resentment to the opposers of the Stamp Act, would the colonies acquiesce in the authority of the legislature? What is your opinion they would do?—I don't doubt at all, that if the legislature repeal the Stamp Act, the colonies will acquiesce in the authority.

But if the legislature should think fit to ascertain its right to lay taxes, by any act laying a small tax, contrary to their opinion, would they submit to pay the tax?—The proceedings of the people in America have been considered too much together. The proceedings of the assemblies have been very different from those of the mobs, and should be distinguished, as having no connection with each other. The assemblies have only peaceably resolved what they take to be their rights; they have not built a fort, raised a man, or provided a grain of ammunition, in order to such opposition. The ringleaders of riot they think ought to be punished; they would punish them themselves, if they could. Every sober, sensible man would wish to see rioters punished, as otherwise peaceable people have no security of person or estate. But as to an internal tax, how small soever, laid by the legislature here on the people there, while they have no representatives in this legislature, I think it will never be submitted to.—They will oppose it to the last.—They do not consider it as at all necessary for you to raise money on them by your taxes, because they are, and always have been, ready to raise money by taxes among themselves, and to grant large sums, equal to their abilities, upon requisition from the crown.—They have not only granted equal to their abilities, but, during all the last war, they granted far beyond their abilities, and beyond their proportion with this country, you yourselves being judges, to the amount of many hundred thousand pounds, and this they did freely and readily, only on a sort of promise from the secretary of state, that it should be recommended to parliament to make them compensation. It was accordingly recommended to parliament, in the most honourable manner, for them. America has been greatly misrepresented and abused here, in papers, and pamphlets, and speeches, as ungrateful, and unreasonable, and unjust, in having put this nation to immense expence for their defence, and refusing to bear any part of that expence. The colonies raised, paid, and clothed, near 25,000 men during the last war, a number equal to those sent from Britain, and far beyond their proportion; they went deeply into debt in doing this, and all their taxes and estates are mortgaged, for many years to come, for discharging that debt. Government here was at that time very sensible of this. The colonies were recommended to parliament. Every year the King sent down to the House a written message to this purpose, That his Majesty, being highly sensible of the zeal and vigour with which his faithful subjects in North America had exerted themselves, in defence of his Majesty's just rights and possessions, recommended it to the House to take the same into consideration, and enable him to give them a proper compensation. You will find those messages on your own journals every year of the war to the very last, and you did accordingly give 200,000*l.* annually to the crown, to be distributed in such compensation to the colonies. This is the strongest of all proofs that the colonies, far from being unwilling to bear a share of the burden, did exceed their proportion; for if they had done less, or had only equalled their proportion, there would have been no room or reason for compensation. Indeed the sums reimbursed them, were by no means adequate to the expence they incurred beyond their proportion; but they never murmured at that; they esteemed their sovereign's approbation of their zeal and fidelity, and the approbation of this House, far beyond any other kind of compensation; therefore there was no occasion for this act, to force money from a willing people; they had not refused giving money for the purposes of the act; no requisition had been made: they were always willing and ready to do what could reasonably be expected from them, and in this light they wish to be considered.

But suppose Great Britain should be engaged in a war in Europe, would North America contribute to the support of it?—I do think they would, as far as their circumstances would permit. They consider themselves as a part of the British empire, and as having one common interest with it; they may be looked on here as foreigners, but they do not consider themselves as such. They are zealous for the honour and prosperity of this nation, and while they are well used, will always be ready to support it, as far as their little power goes. In 1739 they were called upon to assist in the expedition against Carthagena, and they sent 3,000 men to join your army. It is true Carthagena is in America, but as remote from the northern colonies as if it had been in Europe. They make no distinction of wars, as to their duty of assisting in them.

I know the last war is commonly spoke of here as entered into for the defence, or for the sake of the people of America. I think it is quite misunderstood. It began about the limits between Canada and Nova Scotia, about territories to which the crown indeed laid claim, but were not claimed by any British colony; none of the lands had been granted to any colonist; we had therefore no particular concern or interest in that dispute. As to the Ohio, the contest there began about your right of trading in the Indian country, a right you had by the treaty of Utrecht, which the French infringed; they seized the traders and their goods, which were your manufactures; they took a fort which a company of your merchants, and their factors and correspondents, had erected there to secure that trade. Braddock was sent with an army to re-take that fort (which was looked on here as another incroachment on the King's territory) and to protect your trade. It was not till after his defeat that the colonies were attacked. They were before in perfect peace with both French and Indians; the troops were not therefore sent for their defence. The trade with the Indians, though carried on in America, is not an American interest. The people of America are chiefly farmers and planters; scarce any thing that they raise or produce is an article of commerce with the Indians. The Indian trade is a British interest; it is carried on with British manufactures, for the profit of British merchants and manufacturers; therefore the war, as it commenced for the defence of territories of the crown, the property of no American, and for the defence of a trade purely British, was really a British war — and yet the people of America made no scruple of contributing their utmost towards carrying it on, and bringing it to a happy conclusion.

Do you think then that the taking possession of the King's territorial rights, and strengthening the frontiers, is not an American interest? — Not particularly, but conjointly a British and an American interest.

You will not deny that the preceding war, the war with Spain, was entered into for the sake of America; was it not occasioned by captures made in the American seas? — Yes; captures of ships carrying on the British trade there, with British manufactures.

Was not the late war with the Indians, since the peace with France, a war for America only? — Yes: it was more particularly for America than the former, but it was rather a consequence or remains of the former war, the Indians not having been thoroughly pacified, and the Americans bore by much the greatest share of the expence. It was put an end to by the army under general Bouquet; there were not above 300 regulars in that army, and above 1,000 Pennsylvanians.

Is it not necessary to send troops to America, to defend the Americans against the Indians? — No, by no means; it never was necessary. They defended themselves when they were but a handful, and the Indians much more numerous. They continually gained ground, and have driven the Indians over the mountains, without any troops sent to their assistance from this country. And can it be thought necessary now to send troops for their defence from those diminished Indian tribes, when the colonies are become so populous, and so strong? There is not the least occasion for it; they are very able to defend themselves.

Do you say there were no more than 300 regular troops employed in the late Indian war? — Not on the Ohio, or the frontiers of Pennsylvania, which was the chief part of the war that affected the colonies. There were garrisons at Niagara, Fort Detroit, and those remote posts kept for the sake of your trade; I did not reckon them, but I believe that on the whole the number of Americans, or provincial troops, employed in the war, was greater than that of the regulars. I am not certain, but I think so.

Do you think the assemblies have a right to levy money on the subject there, to grant to the crown? — I certainly think so; they have always done it.

Are they acquainted with the Declaration of Rights; and do they know that by that statute, money is not to be raised on the subject but by consent of parliament? — They are very well acquainted with it.

How then can they think they have a right to levy money for the crown, or for any other than local purposes? — They understand that clause to relate to subjects only within the realm; that no money can be levied on them for the crown, but by consent of parliament. The colonies are not supposed to be within the realm; they have assemblies of their own, which are their parliaments, and they are, in that respect, in the same situation with Ireland. When money is to be raised for the crown upon the subject in Ireland, or in the colonies, the consent is given in the parliament of Ireland, or in the assemblies of the colonies. They think the parliament of Great Britain cannot properly give that consent till it has representatives from America; for the Petition of Right expressly says, it is to be by common consent in parliament, and the people of America have no representatives in parliament, to make a part of that common consent.

If the Stamp Act should be repealed, and an act should pass, ordering the assemblies of the colonies to indemnify the sufferers by the riots, would they obey it? — That is a question I cannot answer.

Suppose the King should require the colonies to grant a revenue, and the parliament should be against their doing it, do they think they can grant a revenue to the King, without the consent of the parliament of Great Britain? — That is a deep question. As to my own opinion I should think myself at liberty to do it, and should do it, if I liked the occasion.

When money has been raised in the colonies, upon requisitions, has it not been granted to the King? — Yes, always; but the requisitions have generally been for some service expressed, as to raise, clothe, and pay troops, and not for money only.

If the act should pass, requiring the American Assemblies to make compensation to the sufferers, and they should disobey it, and then the parliament should, by another act, lay an internal tax, would they then obey it? — The people will pay no internal tax: and I think an act to oblige the assemblies to make compensation is unnecessary, for I am of opinion, that as soon as the present heats are abated, they will take the matter into consideration, and if it is right to be done, they will do it of themselves.

Do not letters often come into the post offices in America, directed into some inland town where no post goes? — Yes.

Can any private person take up those letters, and carry them as directed? — Yes; any friend of the person may do it, paying the postage that has accrued.

But must not he pay an additional postage for the distance to such an inland town? — No.

Can the post-master answer delivering the letter, without being paid such additional postage? — Certainly he can demand nothing, where he does no service.

Suppose a person, being far from home, finds a letter in a post office directed to him, and he lives in a place to which the post generally goes, and the letter is directed to that place, will the post-master deliver him the letter, without his paying the postage received at the place to which the letter is directed? — Yes; the office cannot demand postage for a letter that it does not carry, or farther than it does carry it.

Are not ferrymen in America obliged, by act of parliament, to carry over the posts without pay? — Yes.

Is not this a tax on the ferrymen? — They do not consider it as such, as they have an advantage from persons travelling with the post.

If the Stamp Act should be repealed, and the crown should make a requisition to the colonies for a sum of money, would they grant it? — I believe they would.

Why do you think so? — I can speak for the colony I live in; I had it in instruction from the assembly to assure the ministry, that as they always had done, so they should always think it their duty to grant such aids to the crown as were suitable to their circumstances and abilities, whenever called upon for the purpose, in the usual constitutional manner; and I had the honour of communicating this instruction to that hon. gentleman then minister.

Would they do this for a British concern; as suppose a war in some part of Europe, that did not affect them? — Yes, for any thing that concerned the general interest. They consider themselves as a part of the whole.

What is the usual constitutional manner of calling on the colonies for aids? — A letter from the secretary of state.

Is this all you mean, a letter from the secretary of state? — I mean the usual way of requisition, in a circular letter from the secretary of state, by his Majesty's command, reciting the occasion, and recommending it to the colonies to grant such aids as became their loyalty, and were suitable to their abilities.

Did the secretary of state ever write for money for the crown? — The requisitions have been to raise, clothe, and pay men, which cannot be done without money.

Would they grant money alone, if called on? — In my opinion they would, money as well as men, when they have money, or can procure it.

If the parliament should repeal the Stamp Act, will the assembly of Pennsylvania rescind their resolutions? — I think not.

Before there was any thought of the Stamp Act, did they wish for a representation in parliament? — No.

Don't you know that there is, in the Pennsylvania charter, an express reservation of the right of parliament to lay taxes there? — I know there is a clause in the charter, by which the King grants that he will levy no taxes on the inhabitants, unless it be with the consent of the assembly, or by an act of parliament.

How then could the assembly of Pennsylvania assert, that laying a tax on them by the Stamp Act was an infringement of their rights? — They understand it thus: by the same charter, and otherwise, they are entitled to all the privileges and liberties of Englishmen; they find in the Great Charters, and the Petition and Declaration of Rights, that one of the privileges of English subjects is, that they are not to be taxed but by their common consent; they have therefore relied upon it, from the first settlement of the province, that the parliament never would, nor could, by colour of that clause in the charter, assume a right of taxing them, till it had qualified itself to exercise such right, by admitting representatives from the people to be taxed, who ought to make a part of that common consent.

Are there any words in the charter that justify that construction? — The common rights of Englishmen, as declared by Magna Charta, and the Petition of Right, all justify it.

Does the distinction between internal and external taxes exist in the words of the charter? — No, I believe not.

Then may they not, by the same interpretation, object to the parliament's right of external taxation? — They never have hitherto. Many arguments have been lately used here to shew them that there is no difference, and that if you have no right to tax them internally, you have none to tax them externally, or make any other law to bind them. At present they do not reason so, but in time they may possibly be convinced by these arguments.

Do not the resolutions of the Pennsylvania assemblies say, all taxes? — If they do, they mean only internal taxes; the same words have not always the same meaning here and in the colonies. By taxes they mean internal taxes; by duties they mean customs; these are the ideas of the language.

Have you not seen the resolutions of the Massachusett's Bay assembly? — I have.

Do they not say, that neither external nor internal taxes can be laid on them by parliament? — I don't know that they do; I believe not.

If the same tax should say neither tax nor imposition could be laid, does not that province hold the power of parliament can lay neither? — I suppose that by the word imposition, they do not intend to express duties to be laid on goods imported, as regulations of commerce.

What can the colonies mean then by imposition as distinct from taxes? — They may mean many things, as impressing of men, or of carriages, quartering troops on private houses, and the like; there may be great impositions that are not properly taxes.

Is not the post-office rate an internal tax laid by act of parliament? — I have answered that.

Are all parts of the colonies equally able to pay taxes? — No, certainly; the frontier parts, which have been ravaged by the enemy, are greatly disabled by that means, and therefore, in such cases, are usually favoured in our tax laws.

Can we, at this distance, be competent judges of what favours are necessary? — The parlia-

ment have supposed it, by claiming a right to make tax laws for America; I think it impossible.

Would the repeal of the Stamp Act be any discouragement of your manufactures? Will the people that have begun to manufacture decline it?—Yes, I think they will; especially if, at the same time, the trade is opened again, so that remittances can be easily made. I have known several instances that make it probable. In the war before last, tobacco being low, and making little remittance, the people of Virginia went generally into family manufactures. Afterwards, when tobacco bore a better price, they returned to the use of British manufactures. So fulling mills were very much disused in the last war in Pennsylvania, because bills were then plenty, and remittances could easily be made to Britain for English cloth and other goods.

If the Stamp Act should be repealed, would it induce the assemblies of America to acknowledge the right of parliament to tax them, and would they erase their resolutions?—No, never.

Is there no means of obliging them to erase those resolutions?—None, that I know of; they will never do it, unless compelled by force of arms.

Is there a power on earth that can force them to erase them?—No power, how great soever, can force men to change their opinions.

Do they consider the post office as a tax, or as a regulation?—Not as a tax, but as a regulation and conveniency; every assembly encouraged it, and supported it in its infancy, by grants of money, which they would not otherwise have done; and the people have always paid the postage.

When did you receive the instructions you mentioned?—I brought them with me, when I came to England, about 15 months since.

When did you communicate that instruction to the minister?—Soon after my arrival, while the stamping of America was under consideration, and before the Bill was brought in.

Would it be most for the interest of Great Britain, to employ the hands of Virginia in tobacco, or in manufactures?—In tobacco, to be sure.

What used to be the pride of the Americans?—To indulge in the fashions and manufactures of Great Britain.

What is now their pride?—To wear their old clothes over again, till they can make new ones.—— Withdrew.—*Parliamentary History of England, v.* 16, *pp.* 138–160.—"Mr. Sparks very justly says that there was no event in Franklin's life more creditable to his talents and character, or which gave him so much celebrity, as this examination before the House of Commons. His further statement, however, that Franklin's answers were given without premeditation and without knowing beforehand the nature or form of the question that was to be put, is a little too sweeping. In a memorandum which Franklin gave to a friend who wished to know by whom the several questions were put, he admitted that many were put by friends to draw out in answer the substance of what he had before said upon the subject."—J. Bigelow, *Life of Benjamin Franklin, v.* 1, *p.* 507, *foot-note.*

A. D. 1766.—The repeal of the Stamp Act and passage of the Declaratory Act.—Speech of Pitt.—"The Grenville Ministry had fallen in July [1765], and had been succeeded by that of Rockingham; and Conway, who had been one of the few opponents of the Stamp Act, was now Secretary of State for the Colonies. . . . The Stamp Act had contributed nothing to the downfall of Grenville; it attracted so little attention that it was only in the last days of 1765 or the first days of 1766 that the new ministers learnt the views of Pitt upon the subject; it was probably a complete surprise to them to learn that it had brought the colonies to the verge of rebellion, and in the first months of their power they appear to have been quite uncertain what policy they would pursue. . . . Parliament met on December 17, 1765, and the attitude of the different parties was speedily disclosed. A powerful Opposition, led by Grenville and Bedford, strenuously urged that no relaxation or indulgence should be granted to the colonists. . . . Pitt, on the other hand, rose from his sick-bed, and in speeches of extraordinary eloquence, and which produced an amazing effect on both sides of the Atlantic, he justified the resistance of the colonists."—W. E. H. Lecky, *Hist. of England in the 18th Century, ch.* 12 (*v.* 3).—The following is the main part of the speech delivered by Pitt (not yet made Lord Chatham) on the 14th of January, 1766, as imperfectly reported: "It is my opinion, that this kingdom has no right to lay a tax upon the colonies. At the same time, I assert the authority of this kingdom over the colonies to be sovereign and supreme, in every circumstance of government and legislation whatsoever. They are the subjects of this kingdom; equally entitled with yourselves to all the natural rights of mankind and the peculiar privileges of Englishmen; equally bound by its laws, and equally participating in the constitution of this free country. The Americans are the sons, not the bastards of England! Taxation is no part of the governing or legislative power. The taxes are a voluntary gift and grant of the Commons alone. In legislation the three estates of the realm are alike concerned; but the concurrence of the peers and the Crown to a tax is only necessary to clothe it with the form of a law. The gift and grant is of the Commons alone. . . . When . . . in this House, we give and grant, we give and grant what is our own. But in an American tax, what do we do? 'We, your Majesty's Commons for Great Britain, give and grant to your Majesty'—what? Our own property! No! 'We give and grant to your Majesty' the property of your Majesty's Commons of America! It is an absurdity in terms. . . . There is an idea in some that the colonies are virtually represented in the House. I would fain know by whom an American is represented here. Is he represented by any knight of the shire, in any county in this kingdom? Would to God that respectable representation was augmented to a greater number! Or will you tell him that he is represented by any representative of a borough? a borough which, perhaps, its own representatives never saw! This is what is called the rotten part of the Constitution. It cannot continue a century. If it does not drop, it must be amputated. The idea of a virtual representation of America in this House is the most contemptible idea that ever entered into the head of a man. It does not deserve a serious refutation. The Commons of America represented in their several assemblies have ever been in the possession of this, their

constitutional right, of giving and granting their own money. They would have been slaves if they had not enjoyed it! At the same time, this kingdom, as the supreme governing and legislative power, has always bound the colonies by her laws, by her regulations, and restrictions in trade, in navigation, in manufactures, in every thing, except that of taking their money out of their pockets without their consent. Here I would draw the line. . . . Gentlemen, sir, have been charged with giving birth to sedition in America. They have spoken their sentiments with freedom against this unhappy act, and that freedom has become their crime. Sorry I am to hear the liberty of speech in this House imputed as a crime. But the imputation shall not discourage me. It is a liberty I mean to exercise. No gentleman ought to be afraid to exercise it. It is a liberty by which the gentleman who calumniates it might have profited. He ought to have desisted from his project. The gentleman tells us America is obstinate; America almost in open rebellion. I rejoice that America has resisted. Three millions of people, so dead to all the feelings of liberty as voluntarily to submit to be slaves, would have been fit instruments to make slaves of the rest. . . . Since the accession of King William, many ministers, some of great, others of more moderate abilities, have taken the lead of government. . . . None of these thought or even dreamed, of robbing the colonies of their constitutional rights. That was reserved to mark the era of the late administration. Not that there were wanting some, when I had the honor to serve his Majesty, to propose to me to burn my fingers with an American stamp act. With the enemy at their back, with our bayonets at their breasts, in the day of their distress, perhaps the Americans would have submitted to the imposition; but it would have been taking an ungenerous, an unjust advantage. The gentleman boasts of his bounties to America! Are not these bounties intended finally for the benefit of this kingdom? If they are not, he has misapplied the national treasures! I am no courtier of America. I stand up for this kingdom. I maintain that the Parliament has a right to bind, to restrain America. Our legislative power over the colonies is sovereign and supreme. I would advise every gentleman to sell his lands, if he can, and embark for that country. When two countries are connected together like England and her colonies, without being incorporated, the one must necessarily govern. The greater must rule the less. But she must so rule it as not to contradict the fundamental principles that are common to both. . . . The gentleman asks, When were the colonies emancipated? I desire to know, when were they made slaves? But I dwell not upon words. When I had the honor of serving his Majesty, I availed myself of the means of information which I derived from my office. I speak, therefore, from knowledge. My materials were good. I was at pains to collect, to digest, to consider them; and I will be bold to affirm, that the profits to Great Britain from the trade of the colonies through all its branches, is two millions a year. This is the fund that carried you triumphantly through the last war. The estates that were rented at two thousand pounds a year, three-score years ago, are at three thousand at present. Those estates sold then from fifteen to eighteen years purchase; the same may now be sold for thirty. You owe this to America. This is the price America pays you for her protection. And shall a miserable financier come with a boast, that he can bring 'a pepper-corn' into the exchequer by the loss of millions to the nation? I dare not say how much higher these profits may be augmented. . . . I am convinced on other grounds that the commercial system of America may be altered to advantage. You have prohibited where you ought to have encouraged. You have encouraged where you ought to have prohibited. Improper restraints have been laid on the continent in favor of the islands. You have but two nations to trade with in America. Would you had twenty! Let acts of Parliament in consequence of treaties remain; but let not an English minister become a custom-house officer for Spain, or for any foreign power. Much is wrong! Much may be amended for the general good of the whole! . . . A great deal has been said without doors of the power, of the strength of America. It is a topic that ought to be cautiously meddled with. In a good cause, on a sound bottom, the force of this country can crush America to atoms. I know the valor of your troops. I know the skill of your officers. There is not a company of foot that has served in America, out of which you may not pick a man of sufficient knowledge and experience to make a governor of a colony there. But on this ground, on the Stamp Act, which so many here will think a crying injustice, I am one who will lift up my hands against it. In such a cause your success would be hazardous. America, if she fell, would fall like the strong man; she would embrace the pillars of the State, and pull down the Constitution along with her. Is this your boasted peace—not to sheathe the sword in its scabbard, but to sheathe it in the bowels of your countrymen? . . . The Americans have not acted in all things with prudence and temper: they have been wronged: they have been driven to madness by injustice. Will you punish them for the madness you have occasioned? Rather let prudence and temper come first from this side. I will undertake for America that she will follow the example. . . . Upon the whole I will beg leave to tell the House what is my opinion. It is that the Stamp Act be repealed absolutely, totally and immediately. That the reason for the repeal be assigned, viz., because it was founded on an erroneous principle. At the same time, let the sovereign authority of this country over the colonies be asserted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever; that we may bind their trade, confine their manufactures, and exercise every power whatsoever except that of taking their money out of their pockets without their consent."—*Representative British Orations, pp.* 98–119.—The views of Pitt "were defended in the strongest terms by Lord Camden, who pledged his great legal reputation to the doctrine that taxation is not included under the general right of legislation, and that taxation and representation are morally inseparable. . . . The task of the ministers in dealing with this question was extremely difficult. The great majority of them desired ardently the repeal of the Stamp Act; but the wishes of the King, the abstention of Pitt, and the divided condition of parties had compelled Rockingham to include in his Government Charles Townshend, Barrington,

and Northington, who were all strong advocates of the taxation of America. . . . In addition to all these difficulties the ministers had to deal with the exasperation which was produced in Parliament by the continual outrages and insults to which all who represented the English Government in America were exposed. Their policy consisted of two parts. They asserted in the strongest and most unrestricted form the sovereignty of the British Legislature, first of all by resolutions and then by a Declaratory Act affirming the right of Parliament to make laws binding the British colonies 'in all cases whatsoever,' and condemning as unlawful the votes of the colonial Assemblies which had denied to Parliament the right of taxing them. Side by side with this measure they brought in a bill repealing the Stamp Act. . . . The great and manifest desire of the commercial classes throughout England had much weight; the repeal was carried [March, 1766] through the House of Commons, brought up by no less than 200 members to the Lords, and finally carried amid the strongest expressions of public joy. Burke described it as 'an event that caused more universal joy throughout the British dominions than perhaps any other that can be remembered.'"—W. E. H. Lecky, *Hist. of Eng. in the 18th Century, ch.* 12 (*v.* 3).

A. D. 1766-1767.—The Townshend measures.—"The liberal Rockingham administration, after a few months of power, disappeared [July, 1766], having signalized itself as regarded America by the repeal of the Stamp Act, and by the Declaratory Act. Of the new ministry the leading spirit was Charles Townshend, a brilliant statesman, but unscrupulous and unwise. His inclinations were arbitrary; he regretted the repeal of the Stamp Act, as did also the king and Parliament in general, who felt themselves to have been humiliated. Pitt, indeed, now Earl of Chatham, was a member of the government; but, oppressed by illness, he could exercise no restraint upon his colleague, and the other members were either in sympathy with Townshend's views, or unable to oppose him. Townshend's three measures affecting America, introduced on the 13th of May, 1767, were: a suspension of the functions of the legislature of New York for contumacy in the treatment of the royal troops; the establishment of commissioners of the customs, appointed with large powers to superintend laws relating to trade; and lastly an impost duty upon glass, red and white lead, painters' colors, paper, and tea [see England: A. D. 1765–1768]. This was an 'external' duty to which the colonists had heretofore expressed a willingness to submit; but the grounds of the dispute were shifting. Townshend had declared that he held in contempt the distinction sought to be drawn between external and internal taxes, but that he would so far humor the colonists in their quibble as to make his tax of that kind of which the right was admitted. A revenue of £40,000 a year was expected from the tax, which was to be applied to the support of a 'civil list,' namely, the paying the salaries of the new commissioners of customs, and of the judges and governors, who were to be relieved wholly or in part from their dependence upon the annual grants of the Assemblies; then, if a surplus remained, it was to go to the payment of troops for protecting the colonies. To make more efficient, moreover, the enforcement of the revenue laws, the writs of assistance, the denunciation of which by James Otis had formed so memorable a crisis, were formally legalized. The popular discontent, appeased by the repeal of the Stamp Act, was at once awake again, and henceforth in the denial of the right of Parliament to tax, we hear no more of acquiescence in commercial restrictions and in the general legislative authority of Parliament. . . . The plan for resistance adopted by the cooler heads was that of Samuel Adams, namely, the non-importation and the non-consumption of British products. From Boston out, through an impulse proceeding from him, town-meetings were everywhere held to encourage the manufactures of the Province and reduce the use of superfluities, long lists of which were enumerated. Committees were appointed everywhere to procure subscriptions to agreements looking to the furtherance of home industries and the disuse of foreign products. . . . Before the full effects of the new legislation could be seen, Townshend suddenly died; but in the new ministry that was presently formed Lord North came to the front, and adopted the policy of his predecessor, receiving in this course the firm support of the king, whose activity and interest were so great in public affairs that he 'became his own minister.'"—J. K. Hosmer, *Samuel Adams, ch.* 7.

A. D. 1767-1768.—The Farmer's Letters of John Dickinson. — The Circular Letter of Massachusetts, and the "Unrescinding Ninety-two."—"The English ministry was probably misled by the strong emphasis which had been laid here during the controversies concerning the Stamp Act upon the alleged distinction between external and internal taxation. We had refused to submit to the latter, but admitted that the former might be binding upon the whole empire as a commercial regulation. In form the duties levied on paints, glass, tea, etc., were undoubtedly such a regulation, but it was at once contended here that, in point of fact and of principle, this was as much an exercise of the alleged right of Parliamentary taxation for the purpose of raising a revenue for imperial purposes as the Stamp Act itself. Although it was passed by the opponents of the Stamp Act, and by the Rockingham ministry, who professed to be our friends, the act met at once with opposition here. Late in October, 1767, it was denounced by a public meeting in Boston, which suggested a non-importation agreement as the best means of rendering its operations ineffective. These agreements were favorite expedients for manifesting political discontent in those days, but, as they were voluntary, their obligation sat somewhat loosely upon those who signed them. The truth is, that those who were most decided in opposition to the course of the ministry were somewhat puzzled as to the plan they should adopt to exhibit the earnestness of their discontent. . . . While the leaders of the opposition throughout the country were doubtful and hesitating, there appeared in the Pennsylvania Chronicle for the 2d of December, 1767, the first of a series of letters on the political situation,

afterwards known as the 'Farmer's Letters.' . . . The letters, fourteen in number, followed one another in quick succession, and they were read by men of all classes and opinions throughout the continent as no other work of a political kind had been hitherto read in America. It was, of course, soon known that John Dickinson was their author, and people remembered that he was the person who had formulated what was a genuine Bill of Rights in the Stamp Act Congress. The more these letters were read, the more convinced people became that in the comprehensive survey they took of our political relations with the mother-country, especially as these were affected by the last obnoxious act of Parliament, and in the plans which were proposed to remedy the evil, Mr. Dickinson had struck the true key-note of the opposition to the ministerial measures. He appeared at this crisis, as he did in the Stamp Act Congress, as the leader and guide in the controversy. From this time until the Declaration of Independence the Pennsylvania idea, which was embodied by Mr. Dickinson in these Farmer's Letters, 'controlled the destinies of the country;' and Mr. Bancroft only does justice to Mr. Dickinson's position when he recognizes fully his commanding influence during that period. We may say with pardonable pride (and it is one of those truths which many of our historians have managed in various ways to relegate to obscurity), that, as the leading spirit in the Stamp Act Congress, Dickinson gave form and color to the agitation in this country which brought about the repeal of that act, and that the arguments by which the claim of the ministry to tax us for revenue by such an act of Parliament as that levying duties on glass, paints, etc. was answered in the 'Farmer's Letters' first convinced the whole body of our countrymen, groping blindly for a cure for their grievances, that there was a legal remedy, and then forced the ministry to consent in a measure to the demand for a repeal of some of its most obnoxious provisions. It is worth remarking that when the ministry yielded at all it yielded to argument, and not to the boastful threats which were so common. The 'Farmer's Letters' gave courage and force to those who in February denounced the law in Pennsylvania; they formed the mainspring of the movement which resulted in the circular letter sent by the legislature of Massachusetts on the 17th of that month to the Assemblies of the other Colonies; in short, they had the rare good fortune not only of convincing those who suffered that the remedy was in their own hands, but also of pursuading those who had the power to abandon, or at least to modify their arbitrary measures. . . . Mr. Dickinson begins these grave essays with an air of simplicity as charming as it is calculated to attract the attention of the reader. 'I am a farmer,' he says, 'settled, after a variety of fortunes, near the banks of the river Delaware, in the Province of Pennsylvania. I received a liberal education, and have been engaged in the busy scenes of life, but am now convinced that a man may be as happy without bustle as with it. Being generally master of my time, I spend a good deal of it in my library, which I think the most valuable part of my small estate. I have acquired, I believe, a greater knowledge of history and of the laws and constitution of my country than is generally attained by men of my class,' etc. He then explains the nature of the controversy with the mother-country, making it so clear that the points in dispute are comprehensible by a child. . . . As to our method of asserting our rights, he says, with an elevation of sentiment which reminds one of Edmund Burke more than of any other political writer, 'The cause of liberty is a cause of too much dignity to be sullied by turbulence and tumult. It ought to be maintained in a manner suitable to her nature. Those who engage in it should breathe a sedate yet fervent spirit, animating them to actions of prudence, justice, modesty, bravery, humanity, and magnanimity.' He shrinks, evidently with terror, from speaking of what may be the consequences of the persistent refusal of England to change her oppressive measures. . . . After showing in the most striking manner the nature of our wrongs, the letters turn gladly to the remedy that lies open to us. That remedy is based upon a cultivation of the spirit of conciliation on both sides, and Mr. Dickinson urges again and again upon his English readers the folly of their policy, by showing them the value of the American Colonies to them, and especially how the trade and wealth of the English merchants are bound up in the adoption of a liberal policy towards us. This is one of the most interesting and important topics discussed in these letters, and the subject is treated with elaborate skill, leading to convincing conclusions drawn from our history. It must not be forgotten that prior to the Revolution an impression widely prevailed among the most thoughtful of our own people, as well as among our friends in England, that if the English people could be made to understand the frightful losses they would suffer in case of a war in which we should be fighting for our independence, or even during a short interruption of the trade between the two countries, they would force the government to yield rather than run the risk of the consequences. . . . Even Dr. Franklin in London, who had had so many proofs of the indifference and contempt with which the representations of the Colonies in England were regarded . . . thought the appeal of the Farmer to Englishmen so irresistible that, although no friend of Dickinson's, he arranged that these letters should be reprinted in London."— C. J. Stillé, *The Life and Times of John Dickinson, ch.* 4.— In February, 1768, "the Legislature of Massachusetts sent a Circular Letter [ascribed to Samuel Adams] to the Assemblies of the other colonies, in which was set forth the necessity of all acting together harmoniously, and of freely communicating the mind of each to the others. The course Massachusetts had pursued was described, with the contents of the petition and letters which had been written, and with the hope expressed that she would have their cordial co-operation in resistance to the ministerial measures. The notion that political independence was aimed at was strenuously denied, and the trust was entertained that what had been done would meet the approval of their 'common head and father,' and that the liberties of the colonies would be confirmed. This letter elicited response from some, others returned none officially, but all who answered replied favorably. It gave, however, the greatest offence to the ministry, and particularly to Lord Hillsborough, the Secretary of State for the Colonies. It seems that he read it entirely

by the light which a letter from Governor Bernard to Lord Barrington had shed upon it. This epistle declared the real motive of the colonies to be a determination to be independent. Hillsborough, filled with this idea, communicated it to the other members of the cabinet, and thus the Circular Letter was laid before them, prejudged. It was determined that it merited consideration, but that the only notice to be given it should be one of censure, and, on the spur of the moment, they resolved upon two things: to require the Massachusetts Assembly to rescind the Letter, and to require the other legislatures before whom it had been laid to reject it. This was done, and the consequences were, that the General Court, or Legislature, of Massachusetts voted, by ninety-two to seventeen, that they would do nothing of the kind, and that the other legislatures gave the outcast a hearty welcome. As for the people, they showed their approval of their representatives by toasting, from one end of the country to the other, 'The unrescinding Ninety-two,' with whom was coupled the number Forty-five, or that of the famous 'North Briton'; while the Bostonians added fuel to the flame by a riot on the score of the sloop Liberty, in which they attacked the houses of the Commissioners of the Customs, and made a bonfire of the Collector's boat. Shortly afterward, (but not by reason of the riot), four ships of war anchored in Boston harbor, and two regiments of soldiers were quartered on the town."—E. G. Scott, *The Development of Const. Liberty, ch.* 10 (*with corrections by the author*).

A. D. 1769.—Massachusetts threatened, and Virginia roused to her support.—"The proceedings in Massachusetts attracted in England the greatest attention, elicited the severest comment, and, because a military force had been ordered to Boston to support the stand of the administration, created the greatest solicitude. . . . The king, on opening parliament, characterized the action of Boston as a subversion of the Constitution and evincing a disposition to throw off dependence on Great Britain. The indictment against the colonies was presented in sixty papers laid before parliament. Both Houses declared that the proceedings of the Massachusetts assembly in opposition to the revenue acts were unconstitutional, and derogatory to the rights of the crown and the parliament; that the Circular Letter tended to create unlawful combinations; that the call of a convention by the selectmen of Boston was proof of a design of setting up an independent authority; and both Houses proposed to transport the originators of the obnoxious proceedings to England for trial and condign punishment, under the cover of an obsolete act of Henry VIII. . . . The administration determined to make an example of Massachusetts, as the ring-leading province in political mischief, by transporting its popular leaders to England to be tried for their lives in the king's bench. Such was the purport of an elaborate despatch which Lord Hillsborough sent to Governor Bernard, directing an inquiry to be instituted into the conduct of any persons who had committed any overt act of resistance to the laws. . . . Thus a great issue was created that affected all the colonies. . . . There was no adequate step taken to meet the threatened aggression until the House of Burgesses of Virginia convened in May."—R. Frothingham, *The Rise of the Republic of the U. S., ch.* 6.—"On the day of the prorogation of parliament [May 9, 1769] the legislature of Virginia assembled at Williamsburg. Great men were there; some who were among the greatest—Washington, Patrick Henry, and, for the first time, Jefferson. Botetourt [the governor], who opened the session in state, was in perfect harmony with the council, received from the house of burgesses a most dutiful address, and entertained fifty-two guests at his table on the first day, and as many more on the second. . . . But the assembly did not forget its duty, and devised a measure which became the example for the continent. It claimed the sole right of imposing taxes on the inhabitants of Virginia. With equal unanimity, it asserted the lawfulness and expediency of a concert of the colonies in defence of the violated rights of America. It laid bare the flagrant tyranny of applying to America the obsolete statute of Henry VIII.; and it warned the king of 'the dangers that would ensue' if any person in any part of America should be seized and carried beyond sea for trial. It consummated its work by communicating its resolutions to every legislature in America, and asking their concurrence. The resolves were concise, simple, and effective; so calm in manner and so perfect in substance that time finds no omission to regret, no improvement to suggest. The menace of arresting patriots lost its terrors; and Virginia's declaration and action consolidated union. . . . The next morning, the assembly had just time to adopt an address to the king, when the governor summoned them, and said: 'I have heard of your resolves, and augur ill of their effects; you have made it my duty to dissolve you, and you are dissolved accordingly.' Upon this, the burgesses met together as patriots and friends, with their speaker as moderator. They adopted the resolves which Washington had brought with him from Mount Vernon, and which formed a well-digested, stringent, and practicable scheme of non-importation, until all the 'unconstitutional' revenue acts should be repealed. . . . The voice of the Old Dominion roused the merchants of Pennsylvania to approve what had been done. The assembly of Delaware adopted the Virginia resolves word for word; and every colony south of Virginia followed the example."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *pp.* 347-348.

Also in: W. Irving, *Life of Washington, v.* 1, *ch.* 29.

A. D. 1770.—Repeal of the Townshend duties except on Tea.—On the 5th of March, 1770—the same day on which the tragical encounter of the king's troops with citizens of Boston occurred—Lord North introduced a motion in Parliament for the partial repeal of Townshend's revenue act; "not on the petitions of America, because they were marked by a denial of the right, but on one from merchants and traders of London. 'The subject,' said he, 'is of the highest importance. The combinations and associations of the Americans for the tem-

porary interruption of trade have already been called unwarrantable in an address of this house; I will call them insolent and illegal. The duties upon paper, glass, and painters' colors bear upon the manufacturers of this country, and ought to be taken off. It was my intention to have extended the proposal to the removal of the other duties; but the Americans have not deserved indulgence. The preamble to the act and the duty on tea must be retained, as a mark of the supremacy of parliament and the efficient declaration of its right to govern the colonies.' . . . Thomas Pownall moved the repeal of the duty on tea. The house of commons, like Lord North in his heart, was disposed to do the work of conciliation thoroughly. . . . Had the king's friends remained neutral, the duty on tea would have been repealed; with all their exertions, in a full house, the majority for retaining it was but 62. Lord North seemed hardly satisfied with his success; and reserved to himself liberty to accede to the repeal, on some agreement with the East India Company. The decision came from the king."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *v.* 3, *pp.* 381–382.

A. D. 1772.—The burning of the Gaspé.—"One of the first overt acts of resistance that took place in this celebrated struggle [in the war of independence] occurred in 1772, in the waters of Rhode Island. A vessel of war had been stationed on the coast to enforce the laws, and a small schooner, with a light armament and twenty-seven men, called the Gaspé, was employed as a tender, to run into the shallow waters of that coast. On the 17th of June, 1772, a Providence packet, that plied between New York and Rhode Island, named the Hannah, and commanded by a Captain Linzee, hove in sight of the man-of-war, on her passage up the bay. The Hannah was ordered to heave-to, in order to be examined; but her master refused to comply; and being favoured by a fresh southerly breeze, that was fast sweeping him out of gunshot, the Gaspé was signalled to follow. The chase continued for five-and-twenty miles, under a press of sail, when the Hannah coming up with a bar, with which her master was familiar, and drawing less water than the schooner, Captain Linzee led the latter on a shoal, where she struck. The tide falling, the Gaspé . . . was not in a condition to be removed for several hours. The news of the chase was circulated on the arrival of the Hannah at Providence. A strong feeling was excited among the population, and towards evening the town drummer appeared in the streets, assembling the people in the ordinary manner. As soon as a crowd was collected, the drummer led his followers in front of a shed that stood near one of the stores, when a man disguised as an Indian suddenly appeared on the roof, and proclaimed a secret expedition for that night, inviting all of 'stout hearts' to assemble on the wharf, precisely at nine, disguised like himself. At the appointed hour, most of the men in the place collected at the spot designated, when sixty-four were selected for the bold undertaking that was in view. This party embarked in eight of the launches of the different vessels lying at the wharves, and taking with them a quantity of paving stones, they pulled down the river in a body. . . . On nearing the Gaspé, about two in the morning, the boats were hailed by a sentinel on deck. This man was driven below by a volley of the stones. The commander of the Gaspé now appeared, and ordering the boats off, he fired a pistol at them. This discharge was returned from a musket, and the officer was shot through the thigh. By this time, the crew of the Gaspé had assembled, and the party from Providence boarded. The conflict was short, the schooner's people being soon knocked down and secured. All on board were put into the boats, and the Gaspé was set on fire. Towards morning she blew up."—J. F. Cooper, *Naval Hist. of the U. S.*, *v.* 1, *ch.* 3.

A. D. 1772-1773.—The instituting of the Committees of Correspondence.—The Tea Ships and "the Boston Tea-Party."—"The surest way to renew and cement the union [of the colonies] was to show that the ministry had not relaxed in its determination to enforce the principal of the Townshend acts. This was made clear in August, 1772, when it was ordered that in Massachusetts the judges should henceforth be paid by the crown. Popular excitement rose to fever heat, and the judges were threatened with impeachment should they dare accept a penny from the royal treasury. The turmoil was increased next year by the discovery in London of the package of letters which were made to support the unjust charge against Hutchinson and some of his friends that they had instigated and aided the most extreme measures of the ministry. In the autumn of 1772 Hutchinson refused to call an extra session of the assembly to consider what should be done about the judges. Samuel Adams then devised a scheme by which the towns of Massachusetts could consult with each other and agree upon some common course of action in case of emergencies. For this purpose each town was to appoint a standing committee, and as a great part of their work was necessarily done by letter they were called 'committees of correspondence.' This was the step that fairly organized the Revolution."—J. Fiske, *The War of Independence*, *ch.* 5.—"The town records of Boston [November 2, 1772] say:—'It was then moved by Mr. Samuel Adams that a Committee of Correspondence be appointed, to consist of twenty-one persons, to state the rights of the colonists and of this Province in particular as men and Christians and as subjects; and to communicate and publish the same to the several towns and to the world as the sense of this town, with the infringements and violations thereof that have been or from time to time may be made.' The motion occasioned some debate and seems to have been carried late at night; the vote in its favor, at last, was nearly unanimous. The colleagues of Adams, who had left him almost alone thus far, now declined to become members of the committee, regarding the scheme as useless or trifling. The committee was at last constituted without them; it was made up of men of little prominence but of

thorough respectability. James Otis, in another interval of sanity, was made chairman, a position purely honorary, the town in this way showing its respect for the leader whose misfortunes they so sincerely mourned. The Committee of Correspondence held its first meeting in the representatives' chamber at the town-house, November 3, 1772, where at the outset each member pledged himself to observe secrecy as to their transactions, except those which, as a committee, they should think it proper to divulge. According to the motion by which the committee was constituted, three duties were to be performed: 1st, the preparation of a statement of the rights of the colonists, as men, as Christians, and as subjects; 2d, a declaration of the infringement and violation of those rights; 3d, a letter to be sent to the several towns of the Province and to the world, giving the sense of the town. The drafting of the first was assigned to Samuel Adams, of the second to Joseph Warren, of the third to Benjamin Church. In a few days tidings came from the important towns of Marblehead, Roxbury, Cambridge, and Plymouth, indicating that the example of Boston was making impression and was likely to be followed. On November 20, at a town-meeting in Faneuil Hall, the different papers were presented: Otis sat as moderator, appearing for the last time in a sphere where his career had been so magnificent. The report was in three divisions, according to the motion. . . . In the last days of 1772, the document, having been printed, was transmitted to those for whom it had been intended, producing at once an immense effect. The towns almost unanimously appointed similar committees; from every quarter came replies in which the sentiments of Samuel Adams were echoed. In the library of Bancroft is a volume of manuscripts, worn and stained by time, which have an interest scarcely inferior to that possessed by the Declaration of Independence itself, as the fading page hangs against its pillar in the library of the State Department at Washington. They are the original replies sent by the Massachusetts towns to Samuel Adams's committee sitting in Faneuil Hall, during those first months of 1773. One may well read them with bated breath, for it is the touch of the elbow as the stout little democracies dress up into line, just before they plunge into actual fight at Concord and Bunker Hill. There is sometimes a noble scorn of the restraints of orthography, as of the despotism of Great Britain, in the work of the old town clerks, for they generally were secretaries of the committees; and once in a while a touch of Dogberry's quaintness, as the punctilious officials, though not always 'putting God first,' yet take pains that there shall be no mistake as to their piety by making every letter in the name of the Deity a rounded capital. Yet the documents ought to inspire the deepest reverence. They constitute the highest mark the town-meeting has ever touched. Never before and never since have Anglo-Saxon men, in lawful folk-mote assembled, given utterance to thoughts and feelings so fine in themselves and so pregnant with great events. To each letter stand affixed the names of the committee in autograph. This awkward scrawl was made by the rough fist of a Cape Ann fisherman, on shore for the day to do at town-meeting the duty his fellows had laid upon him; the hand that wrote this other was cramped from the scythe-handle, as its possessor mowed an intervale on the Connecticut; this blotted signature, where smutted fingers have left a black stain, was written by a blacksmith of Middlesex, turning aside a moment from forging a barrel that was to do duty at Lexington. They were men of the plainest; but as the documents containing statements of the most generous principles and the most courageous determination, were read in the town-houses, the committees who produced them, and the constituents for whom the committees stood, were lifted above the ordinary level. Their horizon expanded to the broadest; they had in view not simply themselves, but the welfare of the continent; not solely their own generation, but remote posterity. It was Samuel Adams's own plan, the consequences of which no one foresaw, neither friend nor foe. Even Hutchinson, who was scarcely less keen than Samuel Adams himself, was completely at fault. 'Such a foolish scheme,' he called it, 'that the faction must necessarily make themselves ridiculous.' But in January the eyes of men were opening. One of the ablest of the Tories, Daniel Leonard, wrote:—'This is the foulest, subtlest, and most venomous serpent ever issued from the egg of sedition. I saw the small seed when it was implanted; it was a grain of mustard. I have watched the plant until it has become a great tree.' It was the transformation into a strong cord of what had been a rope of sand."—J. K. Hosmer, *Samuel Adams, ch.* 13.—"In the spring of 1773, Virginia carried this work of organization a long step further, when Dabney Carr suggested and carried a motion calling for committees of correspondence between the several colonies. From this point it was a comparatively short step to a permanent Continental Congress. It happened that these preparations were made just in time to meet the final act of aggression which brought on the Revolutionary War. The Americans had thus far successfully resisted the Townshend acts and secured the repeal of all the duties except on tea. As for tea they had plenty, but not from England; they smuggled it from Holland in spite of custom-houses and search-warrants. Clearly unless the Americans could be made to buy tea from England and pay the duty on it, the king must own himself defeated. Since it appeared that they could not be forced into doing this, it remained to be seen if they could be tricked into doing it. A truly ingenious scheme was devised. Tea sent by the East India Company to America had formerly paid a duty in some British port on the way. This duty was now taken off, so that the price of the tea for America might be lowered. The company's tea thus became so cheap that the American merchant could buy a pound of it and pay the threepence duty beside for less than it cost him to smuggle a pound of tea from Holland. It was supposed that the Americans would of course buy the tea which they could get most cheaply, and would thus be beguiled into submission to that principle of taxation which they had hitherto resisted. Ships laden with tea were accordingly sent in the autumn of 1773 to Boston, New York, Philadelphia, and Charleston; and consignees were appointed to receive the tea in each of these towns. Under the guise of a commercial operation, this was purely a political trick. It was an insulting

challenge to the American people, and merited the reception which they gave it. They would have shown themselves unworthy of their rich political heritage had they given it any other. In New York, Philadelphia, and Charleston mass-meetings of the people voted that the consignees should be ordered to resign their offices, and they did so. At Philadelphia the tea-ship was met and sent back to England before it had come within the jurisdiction of the custom-house. At Charleston the tea was landed, and as there was no one to receive it or pay the duty, it was thrown into a damp cellar and left there to spoil. In Boston things took a different turn."—J. Fiske, *The War of Independence, ch.* 5. "Acting upon the precedent of the time of the Stamp Act, when Oliver, the stamp commissioner, had resigned his commission under the Liberty Tree, a placard was posted everywhere on the 3d of November, inviting the people of Boston and the neighboring towns to be present at Liberty Tree that day at noon, to witness the resignation of the consignees of the tea, and hear them swear to re-ship to London what teas should arrive. The placard closed,—'Show me the man that dares take this town.' At the time appointed, representatives Adams, Hancock, and Phillips, the selectmen and town clerk, with about five hundred more, were present at the Liberty Tree. But no consignees arrived, whereupon Molineux and Warren headed a party who waited upon them. The consignees, Clarke, a rich merchant, and his sons, Benjamin Faneuil, Winslow, and the two sons of Hutchinson, Thomas and Elisha, sat together in the counting-house of Clarke in King Street. Admittance was refused the committee, and a conversation took place through a window, during which the tone of the consignees was defiant. There was some talk of violence, and when an attempt was made to exclude the committee and the crowd attending them from the building, into the first story of which they had penetrated, the doors were taken off their hinges and threats uttered. Molineux, generally impetuous enough, but now influenced probably by cooler heads, dissuaded the others from violence. . . . A town-meeting on November 5, in which an effort of the Tories to make head against the popular feeling came to naught, showed how overwhelming was the determination to oppose the introduction of the tea. . . . When news arrived on the 17th that three tea-ships were on the way to Boston, for a second time a town-meeting demanded through a committee, of which Samuel Adams was a member, the resignation of the consignees. They evaded the demand; the town-meeting voted their answer not satisfactory, and at once adjourned without debate or comment. The silence was mysterious; what was impending none could tell. . . . On the 28th, the first of the tea-ships, the Dartmouth, Captain Hall, sailed into the harbor. Sunday though it was, the Committee of Correspondence met, obtained from Benjamin Rotch, the Quaker owner of the Dartmouth, a promise not to enter the vessel until Tuesday, and made preparations for a mass-meeting at Faneuil Hall for Monday forenoon, to which Samuel Adams was authorized to invite the surrounding towns. A stirring placard the next morning brought the townsmen and their neighbors to the place. After the organization, Samuel Adams, arising among the thousands, moved that: 'As the town have determined at a late meeting legally assembled that they will to the utmost of their power prevent the landing of the tea, the question be now put,—whether this body are absolutely determined that the tea now arrived in Captain Hall shall be returned to the place from whence it came.' There was not a dissenting voice. . . . In the afternoon, the meeting having resolved that the tea should go back in the same ship in which it had come, Rotch, the owner of the Dartmouth, protested, but was sternly forbidden, at his peril, to enter the tea. Captain Hall also was forbidden to enter any portion of it. 'Adams was never in greater glory,' says Hutchinson. The next morning, November 30, the people again assembling, the consignees made it known that it was out of their power to send the tea back; but they promised that they would store it until word should come from their 'constituents' as to its disposal. . . . The Dartmouth each night was watched by a strong guard; armed patrols, too, were established, and six couriers held themselves ready, if there should be need to alarm the country. . . . During the first week in December arrived the Eleanor and the Beaver, also tea-ships, which were moored near the Dartmouth, and subjected to the same oversight. The 'True Sons of Liberty' posted about the town the most spirited placards. . . . The days flew by. At length came the end of the time of probation. If the cargo of the Dartmouth had not been 'entered' within that period, the ship according to the revenue laws, must be confiscated. Rotch, the Quaker owner, had signified his willingness to send the ship back to England with the cargo on board, if he could procure a clearance. The customs officials stood on technicalities; under the circumstances a clearance could not be granted. The grim British admiral ordered the Active and the Kingfisher from his fleet to train their broadsides on the channels, and sink whatever craft should try to go to sea without the proper papers. The governor alone had power to override these obstacles. It was competent for him to grant a permit which the revenue men and the admiral must respect. If he refused to do this, then on the next day the legal course was for the revenue officers to seize the Dartmouth and land the tea under the guns of the fleet. It was the 16th of December. A crowd of seven thousand filled the Old South and the streets adjoining. Nothing like it had ever been known. Town-meeting had followed town-meeting until the excitement was at fever heat. The indefatigable Committee of Correspondence had, as it were, scattered fire throughout the whole country. . . . Poor Quaker Rotch . . . felt himself, probably, the most persecuted of men, when the monster meeting forced him in the December weather to make his way out to Milton Hill to seek the permit from Hutchinson. . . . Meantime darkness had fallen upon the short winter day. The crowd still waited in the gloom of the church, dimly lighted here and there by candles. Rotch reappeared just after six, and informed the meeting that the governor refused to grant the permit until the vessels were properly qualified. As soon as the report had been made, Samuel Adams arose, for it was he who had been moderator, and exclaimed: 'This meeting can do nothing more to save the country.' It was evidently a concerted

signal, for instantly . . . the famous war-whoop was heard, and the two or three score of 'Mohawks' rushed by the doors, and with the crowd behind them hurried in the brightening moonlight to Griffin's wharf, where lay the ships. The tea could not go back to England; it must not be landed. The cold waters of the harbor were all that remained for it. Three hundred and forty-two chests were cast overboard. Nothing else was harmed, neither person nor property. All was so quiet that those at a distance even could hear in the calm air the ripping open of the thin chests as the tea was emptied. The 'Mohawks' found helpers, so that in all perhaps one hundred and fifty were actively concerned. Not far off in the harbor lay the ships of the fleet, and the Castle with the 'Sam Adams Regiments.' But no one interfered."—J. K. Hosmer, *Samuel Adams, ch.* 16.

A. D. 1774 (March—April).—The Boston Port Bill.—The Massachusetts Act and the Quebec Act.—"The spoken defiance of the other colonies had been quite as efficient as the combination of threats and force to which Boston was compelled to resort, but Lord North launched the first retaliatory and punitive measure against that city. . . . The first of Lord North's bills was the Boston Port Act, which closed the harbor until indemnity for the tea there destroyed should be paid and the king be satisfied that thereafter the city would obey the laws. The demand for indemnity was fair but the indefinite claim of obedience was not only infamous in itself but, as Burke said, punished the innocent with the guilty. . . . North's second bill was a virtual abrogation of the Massachusetts charter. The council of twenty-eight had been hitherto elected every year in joint session of the assembly. The king might now appoint the whole body to any number, from twelve to thirty-six, and remove them at pleasure. The men so appointed were designated mandamus councillors. Thereafter town-meetings could be held only by permission of the governor and for the sole purpose of electing officers [General Gage was made governor under this act, and four regiments were placed in Boston for his support]. Sheriffs were to return all juries, and were to be named by the governor and hold office during his pleasure. The third bill was really a device of the king's, and it is said that the ministry was confused and shamefaced in presenting it. It ordained that magistrates, revenue officers, or other officials indicted in Massachusetts for capital offences were to be tried either in Nova Scotia or Great Britain. Another measure made legal the billeting of troops, against which Boston had hitherto striven with success, and a fifth, known as the Quebec Act, though depriving that province of the right of habeas corpus, restored the French customary law ('coutume de Paris'), established Roman Catholicism as the state religion, and by extending its boundaries to the Ohio and Mississippi, shut off the Northern English Colonies from westward extension. This was intended as an arbitrary settlement of a vexed question. The Puritans, however, . . . exclaimed that the next step would be the establishment among them of English episcopacy."—W. M. A. D. 1774 (May—June).—Effects of the Boston Port Bill.—The call for a Continental Congress.—"The Boston Port Bill was received in America with honors not accorded even to the Stamp Act. It was cried through the streets as 'A barbarous, cruel, bloody, and inhuman murder,' and was burnt by the common hangman on a scaffold forty-five feet high. The people of Boston gathered together in town-meeting at Faneuil Hall, and expresses were sent off with an appeal to all Americans throughout America. The responses from the neighborhood came like snow-flakes. Marblehead offered the use of its wharves to the Boston merchants; Salem averred that it would be lost to all feelings of humanity were it to raise its fortunes on the ruins of its neighbor. Newburyport voted to break off trade with Great Britain, and to lay up its ships. Connecticut, as her wont is, when moved by any vital occurrence, betook herself to prayer and humiliation, first, however, ordering an inventory to be taken of her cannon and military stores. Virginia, likewise, resolved to invoke the divine interposition, but, before another resolution which called for a Congress could be introduced, her House was precipitately dissolved; whereupon the resolution was brought up and passed at a meeting called in 'the Apollo,' where it was further declared that an attack on one colony was an attack upon all. Two days later the Massachusetts letter itself was received, upon which the Virginians called a convention. From all parts contributions in money poured into Boston, and resolutions were everywhere passed, declaring that no obedience was due the late acts of Parliament; that the right of imperial taxation did not exist; that those who had accepted office under pay of the king had violated their public duty; that the Quebec act establishing Roman Catholicism in Canada was hostile to the Protestant religion, and that the inhabitants of the colonies should use their utmost diligence to acquaint themselves with the art of war, and for that purpose should turn out under arms at least once a week. In the fulness of time, a cordon of ships was drawn around Boston, and six regiments and a train of artillery were encamped on the Common — the only spot in the thirteen colonies where the government could enforce an order. The conflict between constitutional liberty and absolutism had now reached that dangerous point where physical force became one of its elements. . . . The situation was at once recognized throughout the colonies, and the knowledge that in union there is strength, manifested itself in one general impulse toward a Colonial Congress. Committees of Correspondence were organized in every county, and throngs attended the public meetings. 'One great, wise, and

noble spirit; one masterly soul animating one vigorous body,' was the way John Adams described this impulse. The Canadas alone remained inanimate. . . . But not so those to whom constitutional liberty was as the breath of life. On the 17th of June (1774) the Massachusetts Assembly, which had been removed by a royal order to Salem, answered Virginia by resolving on a call for a Continental Congress at Philadelphia. The governor, hearing of what was going on, sent the secretary of the colony to dissolve the Assembly, but, finding the doors shut upon him, he had to content himself with reading the message to the crowd outside. The House went on with its work, while, at the same time, a great meeting, with John Adams in the chair, was being held at Boston in Faneuil Hall. Twelve colonies agreed to send delegates to a Continental Congress to be held at Philadelphia in September."—E. G. Scott, *The Development of Const. Liberty in the Eng. Colonies of Am. ch.* 11 (*with corrections by the author*).

A. D. 1774 (May—July).—Governor Hutchinson's departure for England.—His conversation with King George.—In May, 1774, Governor Hutchinson, of Massachusetts, who had applied some months before for leave of absence to visit England, was relieved by General Gage and took his departure. General Gage was temporarily commissioned to be "Captain General and Governor-in-Chief" of the Province of Massachusetts, and "Vice-Admiral of the same," combining the civil and military powers in himself. It was then supposed that Hutchinson's absence would be brief; but, to his endless grief, he never saw the country again. Soon after his arrival in England he had an interview with the king, which is reported at length in his Diary. The conversation is one of great historical interest, exhibiting King George's knowledge and ideas of American affairs, and representing the opinions of a high-minded American loyalist. It is reprinted here exactly as given in Governor Hutchinson's Diary, published by his great-grandson in 1883:

"July 1st.—Received a card from Lord Dartmouth desiring to see me at his house before one o'clock. I went soon after 12, and after near an hour's conversation, his Lordship proposed introducing me immediately to the King. I was not dressed as expecting to go to Court, but his Lordship observing that the King would not be at St. James's again until Wednesday [this was Friday], I thought it best to go; but waited so long for his Lordship to dress, that the Levée was over; but his Lordship going in to the King, I was admitted, contrary, as L^d^ Pomfret observed to me, to custom, to kiss His Majesty's hand in his closet: after which, as near as I can recollect, the following conversation passed.

K.—How do you do M^r^ H. after y voyage?

H.—Much reduced Sir by sea-sickness; and unfit upon that account, as well as my New England dress, to appear before your Majesty.

Lord D. observed—M^r^ H. apologised to me for his dress, but I thought it very well, as he is just come ashoar; to which the K. assented.

K.—How did you leave your Government, and how did the people receive the news of the late measures in Parliament?

H.—When I left Boston we had no news of any Act of Parliament, except the one for shutting up the port, which was extremely alarming to the people.

(Lord D. said, Mr. H. came from Boston the day that Act was to take place, the first of June. I hear the people of Virginia have refused to comply with the request to shut up their ports, from the people of Boston, and M^r^ H. seems to be of opinion that no colony will comply with that request.)

K.—Do you believe, M^r^ H., that the account from Virginia is true?

H.—I have no other reason to doubt it, except that the authority for it seems to be only a newspaper; and it is very common for articles to be inserted in newspapers without any foundation. I have no doubt that when the people of Rhode Island received the like request, they gave this answer—that if Boston would stop all the vessels they then had in port, which they were hurrying away before the Act commenced, the people of R. Island would then consider of the proposal.

The King smiled.

Lord D.—M^r^ H., may it please y^r^ Majesty, has shewn me a newspaper with an address from a great number of Merchants, another from the Episcopal Clergy, another from the Lawyers, all expressing their sense of his conduct in the most favourable terms. Lord Dartmouth thereupon took the paper out of his pocket and shewed it.

K.—I do not see how it could be otherwise. I am sure his conduct has been universally approved of here by people of all parties.

H.—I am very happy in your Majesty's favourable opinion of my administration.

K.—I am intirely satisfied with it. I am well acquainted with the difficulties you have encountered, and with the abuse & injury offered you. Nothing could be more cruel than the treatment you met with in betraying your private letters.

The K., turning to Lord D.—My Lord, I remember nothing in them to which the least exception could be taken.

Lord D.—That appears, Sir, from the report of the Committee of Council, and from your Majesty's orders thereon.

H.—The correspondence, Sir, was not of my seeking. It was a meer matter of friendly amusement, chiefly a narrative of occurences, in relating of which I avoided personalities as much as I could, and endeavoured to treat persons, when they could not be avoided, with tenderness, as much as if my letters were intended to be exposed; whereas I had no reason to suppose they ever would be exposed.

K.—Could you ever find M^r^ H. how those letters came to New England?

H.—Doctor F., may it please your Majesty, has made a publick declaration that he sent them, and the Speaker has acknowledged to me that he rec^d^ them: I do not remember that he said directly from Doctor F., but it was understood between us that they came from him. I had heard before that they came either direct from him, or that he had sent them through another channel, and that they were to be communicated to six persons only, and then to be returned without suffering any copies to be taken. I sent for the Speaker and let him know

what I had heard, which came from one of the six to a friend, and so to me. The Speaker said they were sent to him, and that he was at first restrained from shewing them to any more than six persons.

K.— Did he tell you who were the persons?

H.— Yes, sir. There was Mr Bowdoin, Mr Pitts, Doctor Winthrop, Dr Chauncy, Dr Cooper, and himself. They are not all the same which had been mentioned before. The two Mr. Adamses had been named to me in the room of Mr Pitts and Dr Winthrop.

K.— Mr B. I have heard of.

Lord D.— I think he is father-in-law to Mr T. [Temple].

K.— Who is Mr Pitts?

H.— He is one of the Council — married Mr B.'s sister.

K.— I have heard of Dr Ch. and Dr Cooper, but who is Doctor Winthrop?

H.— He is not a Doctor of Divinity, Sir, but of Law; a Professor of Mathematicks and Natural Philosophy at the College, and last year was chose of the Council.

K.— I have heard of one Mr Adams, but who is the other?

H.— He is a Lawyer, Sir.

K.— Brother to the other?

H.— No, Sir, a relation. He has been of the House, but is not now. He was elected by the two Houses to be of the Council, but negatived. The speaker further acquainted me that, after the first letter, he received another, allowing him to shew the Letters to the Committee of Correspondence; and afterwards a third, which allowed him to shew them to such persons as he could confide in, but always enjoined to send them back without taking copies. I asked him how he could be guilty of such a breach of trust as to suffer them to be made publick? He excused it by saying that he was against their being brought before the House, but was overruled; and when they had been read there, the people abroad compelled their publication, or would not be satisfied without it. Much more passed with which I will not trouble your Majesty; but after the use had been made of the Letters, which is so well known, they were all returned.

K., turning to L^d^ D.— This is strange:— where is Doctor F., my lord?

Lord D.— I believe, Sir, he is in Town. He was going to America, but I fancy he is not gone.

K.— I heard he was going to Switzerland, or to some part of the Continent.

L^d^ D.— I think, Sir, there has been such a report.

K.— In such abuse, Mr H., as you met with, I suppose there must have been personal malvolence as well as party rage?

H.— It has been my good fortune, Sir, to escape any charge against me in my private character. The attacks have been upon my publick conduct, and for such things as my duty to your Majesty required me to do, and which you have been pleased to approve of. I don't know that any of my enemies have complained of a personal injury.

K.— I see they threatened to pitch and feather you.

H.— Tarr & feather, may it please your Majesty; but I don't remember that ever I was threatened with it.

Lord D.— Oh! yes, when Malcolm was tarred and feathered [Almanac for 1770, May, MS. Note], the committee for tarring and feathering blamed the people for doing it, that being a punishment res^d^ for a higher person, and we suppose you was intended.

H.— I remember something of that sort, which was only to make diversion, there being no such committee, or none known by that name.

K.— What guard had you, Mr H.?

H.— I depended, Sir, on the protection of Heaven. I had no other guard. I was not conscious of having done anything of which they could justly complain, or make a pretence for offering violence to my person. I was not sure, but I hoped they only meant to intimidate. By discovering that I was afraid, I should encourage them to go on. By taking measures for my security I should expose myself to calumny, and being censured as designing to render them odious for what they never intended to do. I was, therefore, obliged to appear to disregard all the menaces in the newspapers, and also private intimations from my friends who frequently advised me to take care of myself.

K.— I think you generally live in the country, Mr H.; what distance are you from town?

H.— I have lived in the country, Sir, in the summer for 20 years; but, except the winter after my house was pulled down, I have never lived in the country in winter until the last. My house is 7 or 8 miles from the Town, a pleasant situation, and most gentlemen from abroad say it has the finest prospect from it they ever saw, except where great improvements have been made by art, to help the natural view. The longest way the road is generally equal to the turnpike roads here; the other way rather rough.

K.— Pray, what does Hancock do now? How will the late affair affect him?

H.— I don't know to what particular affair your Majesty refers.

K.— Oh, a late affair in the city, his bills being refused. (Turning to Lord D.) Who is that in the city, my Lord?

Lord D. not recollecting—

H.— I have heard, Sir, that Mr Haley, a merchant in the city, is Mr Hancock's principal correspondent.

K.— Ay, that's the name.

H.— I heard, may it please your Majesty, before I came from N. England, that some small sums were returned, but none of consequence.

K.— Oh, no, I mean within this month, large sums.

Lord D.— I have heard such rumours, but don't know the certainty.

H.— Mr Hancock, Sir, had a very large fortune left him by his uncle, and I believe his political engagements have taken off his attention from his private affairs. He was sensible not long ago of the damage it was to him, and told me he was determined to quit all publick business, but soon altered his mind.

K.— Then there's Mr Cushing: I remember his name a long time: is not he a great man of the party?

H.— He has been many years Speaker, but a Speaker, Sir, is not always the person of the greatest influence. A Mr Adams is rather considered as the opposer of Government, and a sort of Wilkes in New England.

K.— What gave him his importance?

H.— A great pretended zeal for liberty, and a most inflexible natural temper. He was the first that publickly asserted the Independency of the colonies upon the Kingdom, or the supreme Authority of it.

K.— I have heard, Mr H., that your ministers preach that, for the sake of promoting liberty or the publick good, any immorality or less evil may be tolerated?

H.— I don't know, Sir, that such doctrine has ever been preached from the pulpit; but I have no doubt that it has been publickly asserted by some of the heads of the party who call themselves sober men, that the good of the publick is above all other considerations, and that truth may be dispensed with, and immorality is excusable, when this great good can be obtained by such means.

K.— That's a strange doctrine, indeed. Pray, Mr H., what is your opinion of the effect from the new regulation of the Council? Will it be agreeable to the people, and will the new appointed Councillors take the trust upon them?

H.— I have not, may it please yr Majesty, been able to inform myself who they are. I came to Town late last evening, and have seen nobody. I think much will depend upon the choice that has been made.

K.— Enquiry was made and pains taken that the most suitable persons should be appointed.

H.— The body of the people are Dissenters from the Church of England; what are called Congregationalists. If the Council shall have been generally selected from the Episcopalians, it will make the change more disagreeable.

K.— Why are they not Presbyterians?

H.— There are very few Churches which call themselves Presbyterians, and form themselves voluntarily into a Presbytery without any aid from the civil government, which the Presbyterian Church of Scotland enjoys.

Lord D.— The Dissenters in England at this day are scarce any of them Presbyterians, but like those in New England, Congregationalists, or rather Independents.

K.— Pray, what were your Ancestors, Mr H.?

H.— In general, Sir, Dissenters.

K.— Where do you attend?

H.— With both, Sir. Sometimes at your Majesty's chapel, but more generally at a Congregational church, which has a very worthy minister, a friend to Government, who constantly prays for your Majesty, and all in authority under you.

K.— What is his name?

H.— Doctor Pemberton.

K.— I have heard of Doctor Pemberton that he is a very good man. Who is minister at the chapel?

H.— The Rector is Dr. Caner, a very worthy man also, who frequently inculcates upon his hearers due subjection to Government, and condemns the riotous violent opposition to it; and besides the prayers in the Liturgy, generally in a short prayer before sermon, expressly prays for your Majesty, and for the chief Ruler in the Province.

K.— Why do not the Episcopal ministers in general do the same?

H.— In general, Sir, they use no other prayer before sermon than a short collect out of the Liturgy.

K.— No — (turning to Lord D.) It is not so here, my Lord?

Lord D.— I believe it is, Sir. In your Majesty's Chapel they always use such a prayer. It is a form adapted.

K.— I think you must be mistaken.

Lord D.— No, Sir. This prayer used to be printed formerly, but of late it has not been printed with the service. In general the ministers use a collect, as Mr Hutchinson says; sometimes the collect in the Communion service — 'Prevent us, O Lord,' &c., but I think oftener the collect for the second Sunday in Advent.

H.— My education, Sir, was with the Dissenters. I conceive there is no material difference between reading a prayer out of a book, and saying it 'memoriter,' without book.

Lord D.— I think, Sir, it is not very material. The prayers of the Dissenters are in substance very much the same with those in the service of the church.

K.— I see no material difference, if the prayers be equally good, but will not that depend upon the minister? But, pray, Mr H., why do your ministers generally join with the people in their opposition to Government?

H.— They are, Sir, dependent upon the people. They are elected by the people, and when they are dissatisfied with them, they seldom leave till they get rid of them.

K.— That must be very dangerous. If the people oblige them to concur with them in their erroneous principles on Government, they may do it in religion also, and this must have a most fatal tendency.

H.— There is one check, Sir, upon the people. Unless a minister be dismissed by a council of Churches, the Province law makes provision for the recovery of the salary; but we have no instance where a minister, for any length of time, has brought suits for the recovery of his salary, after the people refuse to hear him. They generally weary him, and sooner or later they get clear of him.

Lord D.— That's a considerable tye, however.

K.— Pray, Mr H., does population greatly increase in your Province?

H.— Very rapidly, Sir. I used to think that Doctor F., who has taken such pains in his calculations, carried it too far when he supposed the inhabitants of America, from their natural increase, doubled their number in 25 years; but I rather think now that he did not; and I believe it will appear from the last return I made to the Secretary of State, that the Massachusets has increased in that proportion. And the increase is supposed, including the importation of foreigners, to be, upon the whole, greater in most of the Southern Colonies than in the Massachusets. We import no settlers from Europe, so as to make any sensible increase.

K.— Why do not foreigners come to yr Province as well as to the Southern Governments?

H.— I take it, Sir, that our long cold winters discourage them. Before they can bring the land to such a state as to be able in summer to provide for their support in winter, what little substance they can bring with them is expended, and many of them have greatly suffered. The Southern colonies are more temperate.

K.— What is the reason you raise no wheat in your Province?

H.— In most places, especially near the sea, it blasts.

K.— To what cause is that owing ?

H.— It has been observed that when the grain is so forward as to be out of the milk the beginning of July, it seldom blasts; and that about the 8th or 10th of that month the weather becomes exceeding hot, and what are called the honey dews of the night are fixed upon the grains by the scalding sun in a hot morning, and if the grain be then in the milk it shrivels up, and the straw becomes rusty and black. This is a pretty general opinion of the cause.

K.— To what produce is your climate best adapted ?

H.— To grazing, Sir; your Majesty has not a finer Colony for grass in all your dominions: and nothing is more profitable in America that pasture, because labour is very dear.

K.— Then you import all your bread corn from the other Colonies ?

H.— No, Sir, scarce any, except for the use of the maritime towns. In the country towns the people raise grain enough for their own expending, and sometimes for exportation. They live upon coarse bread made of rye and corn mixed, and by long use they learn to prefer this to flour or wheat bread.

K.— What corn ?

H.— Indian corn, or, as it is called in Authors, Maize.

K.— Ay, I know it. Does that make good bread ?

H.— Not by itself, Sir; the bread will soon be dry and husky; but the Rye keeps it moist, and some of our country people prefer a bushel of Rye to a bushel of Wheat, if the price should be the same.

K.— That's very strange.

Lord D.— In many parts of Scotland, Sir, Rye is much esteemed as making good and wholesome bread.

The King enquired very particularly into many other parts of the produce of the country, and the natural history of it, to which I gave the best answers I was capable of.

K.— New York, I think, comes the next to Boston in their opposition to Government ?

H.— Does your Majesty think nearer than Pensilvania ?

K.— Why, I can't say that they do of late.

K.— Rhode Island, Mr H., is a strange form of Government.

H.— They approach, Sir, the nearest to a Democracy of any of your Colonies. Once a year all power returns to the people, and all their Officers are new elected. By this means the Governor has no judgment of his own, and must comply with every popular prejudice.

K.— Who is their Governor now ?

H.— His name, Sir, is Wanton, a Gentleman who I have reason to think wishes to see Government maintained as much as any they could find in the Colonies.

K.— How is it with Connecticut ? are they much better ?

H.— The constitutions, Sir, are much the same; but Connecticut are a more cautious people; strive to make as little noise as may be, and have in general retained a good share of that virtue which is peculiarly necessary in such a form of Government.

More was said upon the state of these and some of the other Colonies. There being something of a pause about this time, I turned to Lord Dartmouth and asked — Does your Lordship remember when you had the first account of the Lieutenant Governor's death, and whether it was before the Letters which I wrote by Governor Tryon ?

Lord D.— Oh, yes, I had a letter from you several weeks before that, giving an account of it.

H.— There was a vessel sailed for Lisbon the day after he died, and I gave a letter to the master in charge, to put it on board the first Vessel for London, but was doubtful of the conveyance.

K.— We never could find out which way that letter came. Is the present L. Governor a relation to the late Mr Oliver ?

H.— No, Sir, not of the same family. I have no connection with him, nor did I ever let him know that I had mentioned him as one of the persons I thought might be proper for a L Governor.

K.— The Chief Justice, I think, is brother to the late L' Governor ?

H.— Yes, Sir.

K.— We had thought of him, but as he was not one of those you had named, the present Gentleman, upon enquiry, appeared under all circumstances the most proper.

H.— I had some particular inducement not to mention the Chief Justice. He is related to me, and his appointment would have increased the envy against both of us.

K.— How is he related to you ?

H.— One of his sons, Sir, married one of my daughters. I was, besides, uncertain whether the salary would be continued; and if it should be, his salary as Chief Justice exceeded it, except in case of my absence, and then the expense of living, and the additional trouble from his post, I considered as more than an equivalent. I considered further, that the controversy in which he had been engaged as Chief Justice would render the administration peculiarly difficult just at that time; and I supposed it would immediately devolve upon him by my absence, having then no expectation of being superseded. I never took more pains to divest myself of all personal views than in mentioning proper persons for this place. I should have been more anxious, if I had not thought it not improbable that some person might be appointed, and sent from England.

K.— What number of Indians had you in your Government ?

H.— They are almost extinct. Perhaps there are 50 or 60 families at most upon the Eastern Frontier, where there is a small fort maintained; tho' I conceive the inhabitants would not be in the least danger. It looks, Sir, as if in a few years the Indians would be extinct in all parts of the Continent.

K.— To what is that owing ?

H.— I have thought, Sir, in part to their being dispirited at their low despicable condition among the Europeans, who have taken possession of their country, and treat them as an inferior race of beings; but more to the immoderate use of spirituous liquors. There are near 100 families, perhaps more, of Indians who are domiciliated, and live, some in other towns, but most of them

at a place called Mashpee, where they have a church, and a Missionary to preach to them, and also an Indian Minister who has been ordained, and preaches sometimes in their own language.

K.— What, an Episcopal Minister?

H.— No, Sir, of the Congregational persuasion or form of worship.

The King was particular in many other enquiries relative to my Administration, to the state of the Province, and the other Colonies. I have minuted what remained the clearest upon my mind, and as near the order in which they passed as I am able. He asked also what part of my family I brought with me, and what I left behind, and at length advised me to keep house a few days for the recovery of my health. I then withdrew. I was near two hours in the K. closet. Lord D. feared I was tired so long standing. I observed that so gracious a reception made me insensible of it."— *Diary and Letters of Thos. Hutchinson, ch.* 5.

A. D. 1774 (September).—The meeting of the First Continental Congress.—"On the 5th day of September most of the delegates elected to the congress were in Philadelphia. They were invited by the speaker of the Pennsylvania assembly to hold their sessions in the State House, but decided to meet in the hall owned by the carpenters,—a fine brick building, having commodious rooms for the use of the committees, and an excellent library in the chambers. It is still in good preservation. At ten o'clock in the morning the delegates met at the City Tavern, walked to Carpenters' Hall, and began the sessions of the Continental Congress. This assembly, when all the members had taken their seats, consisted of 55 delegates, chosen by 12 colonies. They represented a population of 2,200,000, paying a revenue of £80,000 sterling. Georgia, which did not elect delegates, gave a promise to concur with her 'sister colonies' in the effort to maintain their right to the British Constitution. . . . In general, the delegates elect were men of uncommon ability, who had taken a prominent part in the political action of their several localities. . . . New England presented, in John Sullivan, vigor; in Roger Sherman, sterling sense and integrity; in Thomas Cushing, commercial knowledge; in John Adams, large capacity for public affairs; in Samuel Adams, a great character, with influence and power to organize. The Middle colonies presented, in Philip Livingston, the merchant prince of enterprise and liberality; in John Jay, rare public virtue, juridical learning, and classic taste; in William Livingston, progressive ideas tempered by conservatism; in John Dickinson, 'The Immortal Farmer,' erudition and literary ability; in Cæsar Rodney and Thomas McKean, working power; in James Duane, timid Whiggism, halting, but keeping true to the cause; in Joseph Galloway, downright Toryism, seeking control, and at length going to the enemy. The Southern colonies presented, in Thomas Johnson, the grasp of a statesman; in Samuel Chase, activity and boldness; in the Rutledges, wealth and accomplishment; in Christopher Gadsden, the genuine American; and in the Virginia delegation, an illustrious group,—in Richard Bland, wisdom; in Edmund Pendleton, practical talent; in Peyton Randolph, experience in legislation; in Richard Henry Lee, statesmanship in union with high culture; in Patrick Henry, genius and eloquence; in Washington, justice and patriotism. 'If,' said Patrick Henry, 'you speak of solid information and sound judgment, Washington unquestionably is the greatest man of them all.' . . . The congress was organized by the choice of Peyton Randolph of Virginia for President, and Charles Thomson of Philadelphia, not a member, for Secretary. . . . A discussion . . . arose on the rules to be observed in determining questions, . . . which was renewed the next day, when it was agreed that each colony should have one vote."— R. Frothingham, *The Rise of the Republic of the U. S., ch.* 9.

A. D. 1774 (September—October). — The action of the Congress.—"The Congress first resolved 'to state the rights of the colonies in general, the several instances in which those rights were violated or infringed, and the means most proper for a restoration of them.' Next, 'to examine and report the several statutes which affect the trade and manufactures of the colonies,' not earlier than the last nine years. While these subjects were under consideration, resolutions of Boston and its neighbors [Middlesex and Suffolk counties] were laid before them, stating their wrongs and merely defensive measures to which they would adhere, 'as long as such conduct may be vindicated by reason and the principles of self-preservation, but no longer.'. . . Congress unanimously approved and recommended 'a perseverance in this firm and temperate conduct,' trusting a change in the councils of the British nation. The merchants were urged not to order goods, and to suspend those ordered; and it was resolved, that after the first of next December there should be no importation of British goods, and no consumption of, or traffic in them. A loyal petition to the king was ordered, assuring him that by abolishing the system of laws and regulations of which the colonies complained, enumerating them, the jealousies they had caused would be removed, and harmony restored. 'We ask but for peace, liberty and safety. We wish not a diminution of the prerogative, nor do we solicit the grant of any new right in our favor. Your royal authority over us, and our connection with Great Britain, we shall always carefully and zealously endeavor to support and maintain.' General Gage was entreated to discontinue the erection of the fortifications on Boston Neck, and to prevent all injuries on the part of the troops; and Massachusetts was asked 'temporarily to submit to a suspension of the administration of justice where it could not be procured in a legal and peaceable manner.' Persons accepting office under the recent act, changing the form of her government, were denounced, 'as the wicked tools of that despotism which is preparing to destroy those rights which God, nature, and compact have given to America.' A memorial was next ordered to the inhabitants of the British colonies there represented, exposing their common wrongs and urging a united 'commercial opposition,' warning them to extend their views 'to mournful events,' to be 'in all respects prepared for every contingency, and to implore the favor of Almighty God.' An appeal was made to the

enlightened sympathies of the British people. . . . Finally, an address was made to the inhabitants of the Province of Quebec, inviting their co-operation. In the meantime, the form of a non-exportation, non-consumption association was adopted, and signed by each of the delegates. . . . A declaration of the rights and injuries of the colonies was made, in which the most difficult question was disposed of. The right to participate in the legislative council of their common country, was declared to be the foundation of English liberty and of all free government. . . . Of all these proceedings the language was that of peace, except where other language was demanded. For they approved the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament, and declared, 'If these acts shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition,' and 'that seizing or attempting to seize any person in America, in order to transport such person beyond the sea for trial of offences committed within the body of a county in America, being against law, will justify, and ought to meet with, resistance and reprisal.' These were the essential resolutions. They bound the colonies to a common resistance to acts of force against all, or any one of them. They also declared their opinion of the necessity that another Congress should be held in the ensuing month of May, unless the redress of grievances which they had desired was obtained before that time, and that all the colonies in North America choose deputies, as soon as possible, to attend such Congress. On the twenty-sixth of October, after a secret session of fifty-one days, this body adjourned. The recommendations of this Congress were received with marked respect among the patriots of the colonies."—J. C. Hamilton, *Hist. of the U. S. as traced in the writings of Alex. Hamilton, ch.* 3 (*v.* 1).—"Trained in all the theories of the mercantile system, America had been taught to believe (1) that two countries could continue to trade, though one of necessity did so at a loss; (2) that in the trade between England and the colonies, the former both through natural advantages and through law was the party to which the profit accrued; (3) that England was 'a shop-keeping nation,' whose very existence depended on her trade and manufactures. A suspension of trade between England and America therefore would mean misery, if not ruin, to the mother country, while the colonies would 'both save and gain.' With measures of non-importation, non-exportation and non-consumption, accordingly, did this otherwise powerless body hope to coerce the English people and government. Though founded on an economic fallacy, this method of action was certain to have a great effect in England. Twice already had it been employed on a limited scale — against the Stamp Act and against the revenue acts, — and each time with sufficient success to warrant the belief that its wider application would result in victory. Now the agents of the colonies in London were writing home: 'If you have virtue enough to resolve to stop, and to execute the resolution of stopping, your exports and imports for one year, this country must do you justice.' . . . In both England and America the temporary destruction of British trade was viewed not merely as an effective weapon, but as the only peaceful one which the colonies possessed. A failure to unite in a non-importation agreement against England would, according to a prominent English politician, leave nothing for the colonies 'but to decide between ruin and submission.' The question for the Congress was not, therefore, a choice of remedies, but merely whether, and to how great an extent, the delegates could be brought to agree to the only one within their reach. For even while accepting the system as effective against Great Britain, the delegates and their constituents had so far progressed as to realize that it bore with uneven force on the different colonies. The southern colonies were really no more diversified in their industries than the West India islands. South Carolina grew rice and indigo; North Carolina depended largely on tar, pitch and turpentine; Virginia raised tobacco. Unless these products could be exported to Europe, those colonies might suffer for the necessaries of life. . . . The first consideration of the subject in the Congress revealed serious difficulties. The Virginia delegation, 'to avoid the heavy injury that would arise,' were prevented by their instructions from agreeing to an immediate cessation of trade relations. Imports would cease on November 1, 1774, but exports must continue till August 10, 1775. It was in vain they were told 'that a non-exportation at a future day cannot avail,' and that at the Virginia date non-exportation would not operate before the fall of 1776. The Virginians had determined to cure and sell their tobacco crop of 1774 before 'consideration of interest and of equality of sacrifice should be laid aside.' So vital, however, did most of the delegates consider the immediate enforcement, that it was proposed to act without Virginia; for Boston and New England, it was said, would need active support before that date. This proposition was defeated by the refusal of the delegates of North Carolina and Maryland to join unless Virginia should also make the sacrifice. With sorry grace the Congress had to accept the dictation of Virginia. But the trouble did not end here. Virginia's selfish interest having been triumphant, the South Carolina delegation sought for an equal advantage, and demanded that the two great products of that colony should be especially reserved from the non-exportation clause. . . . Rather than yield, the Congress preferred a cessation of business for several days, in order 'to give our [South Carolina] deputies time to recollect themselves.' But when the Association was ready for signing, the South Carolina delegates, with but one exception, seceded from the Congress, and their assent was only secured eventually through a compromise, by virtue of which rice alone was excluded from the agreement, while indigo was brought under its terms. Such were the secret deliberations of the Congress, in endeavoring to unite the colonies in the use of their only weapon. The first public results appeared in the form of a unanimous resolution, passed and published on September 22, requesting 'the merchants and others in the several colonies not to send to Great Britain any orders for goods,' and to delay or suspend orders already sent. Five days later it was unanimously resolved that after December 1, 1774, 'there should be no importation into British America from Great Britain or Ireland, or from any other place,' of any goods, wares or

merchandise exported from Great Britain or Ireland. Three days later, with no assertion of unanimity, a resolution was announced to the effect 'that from and after the 10th day of September, 1775, the exportation of all merchandise and every commodity whatsoever to Great Britain, Ireland and the West Indies ought to cease, unless the grievances of America are redressed before that time,' and a committee was appointed to draft a plan for carrying into effect these resolves. On October 12 this committee brought in a report, which, after consideration and amendment, was on the 18th of October agreed to and ordered signed. On October 20 it was signed and ordered to be printed. Possessed of no real power, the Congress relied on the people to enforce this agreement. It was recommended that in every county, city and town a committee be chosen 'whose business it shall be attentively to observe the conduct of all persons touching this Association.' With hardly an exception, this recommendation was adopted. . . . As America had refused to trade with Great Britain and her colonies, the government replied by acts prohibiting any such trade. The policy of 'exhausting its opponent by injuring itself' was at last to have a fair trial, but through British, not American action. The colonies were by law interdicted from all commerce, trade and fishing. But before the legislation went into effect blood had been shed at Lexington. The contest could no longer be fought with acts of Parliament and resolves of Congress; 'blows must decide.' The Association was distinctively a peace weapon. Had the Congress really expected war, no action could have been more foolish. A garrison soon to be beleaguered virtually shut its ports to supplies. No better proof is needed of how little the delegates wished or worked for separation." —P. L. Ford, *The Association of the First Congress* (*Pol. Sci. Quarterly, Dec.*, 1891.)—"It is only after a careful study of the proceedings of this Congress, and the subsequent history of some of its members, that we come at its real character. It was a Peace Congress. Some of the colonies had been compromised by their attitude in respect to the East India Company's teas; and the extreme measures of the British government in closing the port of Boston, and altering the charter of the contumacious people of Massachusetts, excited the apprehension of other colonies as to the ulterior purposes of the ministry. While it was the patriotic desire of the Congress to express their sympathies and to stand by the people of Boston in the hour of their sufferings, it was hoped and expected that some conciliatory course would be followed which would allow the ministry and the Massachusetts people to extricate themselves from their difficulties without recourse to war. John Adams had no faith in the efficacy of the petition to the king, nor in the addresses to the people of Great Britain and the Canadas. Matters had gone so far in New England that they would be satisfied with no terms short of the withdrawal of the royal troops, the re-opening of the port of Boston, and the total repeal of all measures designed to reduce them to obedience. At the same time, not only the British ministry, but the British people also, were demanding the complete submission of the Bostonians, or the infliction of condign punishment. So far as Massachusetts was concerned, the war was inevitable. John Adams saw it to be so, and prepared himself for it. He endeavored to prepare the Congress for it, and not without valuable results. The great work effected by this Congress was the bringing the colonies on to common ground by a declaration of their rights. Opinions were divided. A compromise ensued, and the famous fourth article was the result. It was drawn by John Adams, and carried mainly by his influence, and reads as follows: — 'That the foundation of English liberty, and of all free government, is a right in the people to participate in their legislative council; and as the English colonists are not represented, and from their local and other circumstances cannot be properly represented in the British Parliament, they are entitled to a free and exclusive power of legislation in their several provincial legislatures, where their rights of representation can alone be preserved, in all cases of taxation and internal polity, subject only to the negative of their sovereign, in such manner as has been heretofore used and accustomed. But from the necessity of the case, and a regard to the mutual interest of both countries, we cheerfully consent to the operation of such acts of the British Parliament as are bona fide restrained to the regulation of our external commerce, for the purpose of securing the commercial advantages of the whole empire to the mother country; and the commercial benefits of its respective members; excluding every idea of taxation, internal or external, for raising a revenue on the subjects in America, without their consent.' This was not precisely what John Adams wanted, but it was much. When this declaration went forth, the cause of Massachusetts, in whatever it might eventuate, was the cause of the colonies. It was nationalized. This was John Adams's greatest feat of statesmanship. On it the success of the impending war, and the Declaration of Independence rested."—M. Chamberlain, *John Adams, the Statesman of the Am. Rev., pp.* 78–80.—"How far the authority of this first congress extended, according to the instructions of the delegates, it is impossible to determine with certainty at this distance of time. But it is probable that the original intention was that it should consult as to the ways and means best calculated to remove the grievances and to guaranty the rights and liberties of the colonies, and should propose to the latter a series of resolutions, furthering these objects. But the force of circumstances at the time compelled it to act and order immediately, and the people, by a consistent following of its orders, approved this transcending of their written instructions. The congress was therefore not only a revolutionary body from its origin, but its acts assumed a thoroughly revolutionary character. The people, also, by recognizing its authority, placed themselves on a revolutionary footing, and did so not as belonging to the several colonies, but as a moral person; for to the extent that congress assumed power to itself and made bold to adopt measures national in their nature, to that extent the colonists declared themselves henceforth to constitute one people, inasmuch as the measures taken by congress could be translated from words into deeds only with the consent of the people. This state of affairs essentially continued up to March 1, 1781. Until that time, that is, until the adoption of the articles of confederation by all the states, congress continued a revolutionary

body, which was recognized by all the colonies as 'de jure' and 'de facto' the national government, and which as such came in contact with foreign powers and entered into engagements, the binding force of which on the whole people has never been called in question. The individual colonies, on the other hand, considered themselves, up to the time of the Declaration of Independence, as legally dependent upon England and did not take a single step which could have placed them before the mother country or the world in the light of 'de facto' sovereign states. They remained colonies until the 'representatives of the United States' 'in the name of the good people of these colonies' solemnly declared 'these united colonies' to be 'free and independent states.' The transformation of the colonies into 'states' was, therefore, not the result of the independent action of the individual colonies. It was accomplished through the 'representatives of the United States'; that is, through the revolutionary congress, in the name of the whole people. Each individual colony became a state only in so far as it belonged to the United States and in so far as its population constituted a part of the people."—H. von Holst, *Const. and Pol. Hist. of the U. S., v.* 1, *ch.* 1.

A. D. 1774-1775.—Provincial Congress of Massachusetts and Committee of Safety.—Military preparations.—"Governor Gage issued writs, dated September 1, convening the General Court at Salem on the 5th of October, but dissolved it by a proclamation dated September 28, 1774. The members elected to it, pursuant to the course agreed upon, resolved themselves into a Provincial Congress. This body, on the 26th of October, adopted a plan for organizing the militia, maintaining it, and calling it out when circumstances should render it necessary. It provided that one quarter of the number enrolled should be held in readiness to muster at the shortest notice, who were called by the popular name of minute-men. An executive authority—the Committee of Safety—was created, clothed with large discretionary powers; and another called the Committee of Supplies. On the 27th Jedediah Preble, (who did not accept,) Artemas Ward, and Seth Pomeroy, were chosen general officers; and on the 28th, Henry Gardner was chosen treasurer of the colony, under the title of Receiver-General. Among the energetic acts of this memorable Congress, was one authorizing the collection of military stores. It dissolved December 10. The committee of safety, as early as November, authorized the purchase of materials for an army, and ordered them to be deposited at Concord and Worcester. These proceedings were denounced by General Gage, in a proclamation dated November 10, as treasonable, and a compliance with them was forbidden. In a short time the king's speech and the action of Parliament were received, which manifested a firm determination to produce submission to the late acts, and to maintain 'the supreme authority' of Great Britain over the colonies. General Gage regarded this intelligence as having 'cast a damp upon the faction,' and as having produced a happy effect upon the royalist cause. However, a second Provincial Congress (February 1 to 16, 1775) renewed the measures of its predecessor; and gave definiteness to the duties of the committee of safety, by 'empowering and directing' them (on the 9th of February) to assemble the militia whenever it was required to resist the execution of the two acts, for altering the government and the administration of justice. At the same time it appointed two additional generals, John Thomas, and William Heath, and made it the duty of the five general officers to take charge of the militia when called out by the committee of safety, and to 'effectually oppose and resist such attempt or attempts as shall be made for carrying into execution by force' the two acts. . . . The conviction was fast becoming general that force only could decide the contest. Stimulated and sustained by such a public opinion, the committees of safety and supplies were diligent, through the gloomy months of winter, in collecting and storing at Concord and Worcester materials for the maintenance of an army."—R. Frothingham, Jr., *History of the Siege of Boston, ch.* 1.—The following citizens composed the Committee of Public Safety, viz., "John Hancock, Joseph Warren, Benjamin Church, Richard Devens, Benjamin White, Joseph Palmer, Abraham Watson, Azor Orne, John Pigeon, William Heath, and Thomas Gardner. The following 'Committee of Supplies' was announced, viz., Elbridge Gerry, David Cheever, Benjamin Lincoln, Moses Gill, and Benjamin Hall. . . . By the first day of January, 1775, the garrison of Boston had been increased to thirty-five hundred men, and mounted three hundred and seventy men as a daily guard-detail, besides a field officers' guard of one hundred and fifty men on Boston Neck. Three brigades were organized and were officered, respectively by Generals Lord Percy, Pigott and Jones. In November of 1774, General Gage had advised the British government, that he, 'was confident, that to begin with an army twenty thousand strong, would in the end save Great Britain blood and treasure.' Meanwhile, the militia drilled openly, rapidly completed company organizations, and made many sacrifices to procure arms, powder and other materials of war. The Home government, in view of the serious aspect of affairs, ordered Generals Howe, Clinton, and Burgoyne to join General Gage, and announced that 'ample reinforcements would be sent out, and the most speedy and effectual measures would be taken to put down the rebellion,' then pronounced to already exist. On the eighth of April, the Provincial Congress resolved to take effectual measures to raise an army, and requested the coöperation of Rhode Island, New Hampshire and Connecticut. On the thirteenth, it voted to raise six companies of artillery, to pay them and keep them at drill. On the fourteenth it advised citizens to leave Boston and to remove to the country. On the fifteenth, it solemnly appointed a day for 'Public Fasting and Prayer,' and adjourned to the tenth day of May. The Committee of Public Safety at once undertook the task of securing powder, cannon and small arms. A practical embargo was laid upon all trade with Boston. The garrison could obtain supplies only with great difficulty, and, as stated by Gordon, 'nothing was wanting but a spark, to set the whole continent in a flame.'"—H. B. Carrington, *Battles of the American Revolution, ch.* 2.

Also in: J. Fiske, *The Am. Rev., ch.* 3 (*v.* 1).

A. D. 1775 (January—March).—Vain efforts toward pacific statesmanship in the British Parliament, by Chatham, Burke, and others.—A newly elected British Parliament "met on November 30, 1774; but no serious measure relating to America was taken till January 1775, when the House reassembled after the Christmas vacation. The Ministers had a large majority, and even apart from party interest the genuine feeling of both Houses ran strongly against the Americans. Yet at no previous period were they more powerfully defended. I have already noticed that Chatham, having returned to active politics after his long illness in 1774, had completely identified himself with the American cause, and had advocated with all his eloquence measures of conciliation. He . . . moved an address to the King praying that he would as soon as possible, 'in order to open the way towards a happy settlement of the dangerous troubles in America,' withdraw the British troops stationed in Boston. In the course of his speech he represented the question of American taxation as the root-cause of the whole division, and maintained that the only real basis of conciliation was to be found in a distinct recognition of the principle that 'taxation is theirs, and commercial regulation ours;' that England has a supreme right of regulating the commerce and navigation of America, and that the Americans have an inalienable right to their own property. He fully justified their resistance, predicted that all attempts to coerce them would fail, and eulogised the Congress at Philadelphia as worthy of the greatest periods of antiquity. Only eighteen peers voted for the address, while sixty-eight opposed it. On February 1 he reappeared with an elaborate Bill for settling the troubles in America. It asserted in strong terms the right of Parliament to bind the colonies in all matters of imperial concern, and especially in all matters of commerce and navigation. It pronounced the new colonial doctrine that the Crown had no right to send British soldiers to the colonies without the assent of the Provincial Assemblies, dangerous and unconstitutional in the highest degree, but at the same time it recognised the sole right of the colonists to tax themselves, guaranteed the inviolability of their charters, and made the tenure of their judges the same as in England. It proposed to make the Congress which had met at Philadelphia an official and permanent body, and asked it to make a free grant for imperial purposes. England, in return, was to reduce the Admiralty Courts to their ancient limits, and to suspend for the present the different Acts complained of by the colonists. The Bill was not even admitted to a second reading. Several other propositions tending towards conciliation were made in this session. On March 22, 1775, Burke, in one of his greatest speeches, moved a series of resolutions recommending a repeal of the recent Acts complained of in America, reforming the Admiralty Court and the position of the judges, and leaving American taxation to the American Assemblies, without touching upon any question of abstract right. A few days later, Hartley moved a resolution calling upon the Government to make requisitions to the colonial Assemblies to provide of their own authority for their own defence; and Lord Camden in the House of Lords and Sir G. Savile in the House of Commons endeavoured to obtain a repeal of the Quebec Act. All these attempts, however, were defeated by enormous majorities. The petition of Congress to the King was referred to Parliament, which refused to receive it, and Franklin, after vain efforts to effect a reconciliation, returned from England to America."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century, ch.* 12 (*v.* 3).

The following are the more important passages of the speech of Burke, on moving the resolutions which he introduced in the House of Commons, March 22, 1775:

"The proposition is peace. Not peace through the medium of war; not peace to be hunted through the labyrinth of intricate and endless negotiations; not peace to arise out of universal discord, fomented from principle, in all parts of the empire; not peace to depend on the juridical determination of perplexing questions, or the precise marking the shadowy boundaries of a complex government. It is simple peace, sought in its natural course and in its ordinary haunts. It is peace sought in the spirit of peace, and laid in principles purely pacific. I propose, by removing the ground of the difference, and by restoring the former unsuspecting confidence of the colonies in the mother country, to give permanent satisfaction to your people,—and (far from a scheme of ruling by discord) to reconcile them to each other in the same act and by the bond of the very same interest which reconciles them to British government. My idea is nothing more. Refined policy ever has been the parent of confusion,—and ever will be so, as long as the world endures. Plain good intention, which is as easily discovered at the first view as fraud is surely detected at last, is, let me say, of no mean force in the government of mankind. Genuine simplicity of heart is an healing and cementing principle. . . . The capital leading questions on which you must this day decide are these two: First, whether you ought to concede; and secondly, what your concession ought to be. On the first of these questions we have gained . . . some ground. But I am sensible that a good deal more is still to be done. Indeed, Sir, to enable us to determine both on the one and the other of these great questions with a firm and precise judgment, I think it may be necessary to consider distinctly the true nature and the peculiar circumstances of the object which we have before us: because, after all our struggle, whether we will or not, we must govern America according to that nature and to those circumstances, and not according to our own imaginations, not according to abstract ideas of right, by no means according to mere general theories of government, the resort to which appears to me, in our present situation, no better than arrant trifling. . . . The first thing that we have to consider with regard to the nature of the object is the number of people in the colonies. I have taken for some years a good deal of pains on that point. I can by no calculation justify myself in placing the number below two millions of inhabitants of our own European blood and color,—besides at least 500,000 others, who form no inconsiderable part of the strength and opulence of the whole. This, Sir, is, I believe, about the true number. There is no occasion to exaggerate, where plain truth is of so much weight and importance. But whether I put the present numbers too high or too low is a matter of little

moment. Such is the strength with which population shoots in that part of the world, that, state the numbers as high as we will, whilst the dispute continues, the exaggeration ends. Whilst we are discussing any given magnitude, they are grown to it. Whilst we spend our time in deliberating on the mode of governing two millions, we shall find we have millions more to manage. Your children do not grow faster from infancy to manhood than they spread from families to communities, and from villages to nations. . . . But the population of this country, the great and growing population, though a very important consideration, will lose much of its weight, if not combined with other circumstances. The commerce of your colonies is out of all proportion beyond the numbers of the people. . . . The trade with America alone is now within less than £500,000 of being equal to what this great commercial nation, England, carried on at the beginning of this century with the whole world! . . . But, it will be said, is not this American trade an unnatural protuberance, that has drawn the juices from the rest of the body? The reverse. It is the very food that has nourished every other part into its present magnitude. Our general trade has been greatly augmented, and augmented more or less in almost every part to which it ever extended, but with this material difference: that of the six millions which in the beginning of the century constituted the whole mass of our export commerce the colony trade was but one twelfth part; it is now (as a part of sixteen millions) considerably more than a third of the whole. . . . I choose, Sir, to enter into these minute and particular details; because generalities, which in all other cases are apt to heighten and raise the subject, have here a tendency to sink it. When we speak of the commerce of our colonies, fiction lags after truth, invention is unfruitful, and imagination cold and barren. . . . I pass . . . to the colonies in another point of view,—their agriculture. This they have prosecuted with such a spirit, that, besides feeding plentifully their own growing multitude, their annual export of grain, comprehending rice, has some years ago exceeded a million in value. Of their last harvest, I am persuaded, they will export much more. At the beginning of the century some of these colonies imported corn from the mother country. For some time past the Old World has been fed from the New. The scarcity which you have felt would have been a desolating famine, if this child of your old age, with a true filial piety, with a Roman charity, had not put the full breast of its youthful exuberance to the mouth of its exhausted parent. As to the wealth which the colonies have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought those acquisitions of value, for they seemed even to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised your esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the people of New England have of late carried on the whale-fishery. Whilst we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits, whilst we are looking for them beneath the arctic circle, we hear that they have pierced into the opposite region of polar cold, that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and romantic an object for the grasp of national ambition, is but a stage and resting-place in the progress of their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both the poles. . . . I am sensible, Sir, that all which I have asserted in my detail is admitted in the gross, but that quite a different conclusion is drawn from it. America, gentlemen say, is a noble object,—it is an object well worth fighting for. Certainly it is, if fighting a people be the best way of gaining them. Gentlemen in this respect will be led to their choice of means by their complexions and their habits. Those who understand the military art will of course have some predilection for it. Those who wield the thunder of the state may have more confidence in the efficacy of arms. But I confess, possibly for want of this knowledge, my opinion is much more in favor of prudent management than of force,—considering force not as an odious, but a feeble instrument, for preserving a people so numerous, so active, so growing, so spirited as this, in a profitable and subordinate connection with us. First, Sir, permit me to observe, that the use of force alone is but temporary. It may subdue for a moment; but it does not remove the necessity of subduing again: and a nation is not governed which is perpetually to be conquered. My next objection is its uncertainty. Terror is not always the effect of force, and an armament is not a victory. If you do not succeed, you are without resource: for, conciliation failing, force remains; but, force failing, no further hope of reconciliation is left. Power and authority are sometimes bought by kindness; but they can never be begged as alms by an impoverished and defeated violence. A further objection to force is, that you impair the object by your very endeavors to preserve it. The thing you fought for is not the thing which you recover, but depreciated, sunk, wasted, and consumed in the contest. Nothing less will content me than whole America. I do not choose to consume its strength along with our own; because in all parts it is the British strength that I consume. I do not choose to be caught by a foreign enemy at the end of this exhausting conflict, and still less in the midst of it. I may escape, but I can make no insurance against such an event. Let me add, that I do not choose wholly to break the American spirit; because it is the spirit that has made the country. Lastly, we have no sort of experience in favor of force as an instrument in the rule of our colonies. Their growth and their utility has been owing to methods altogether different. Our ancient indulgence has been said to be pursued to a fault. It may be so; but we know, if feeling is evidence, that our fault was more tolerable than our attempt to mend it, and our sin far more salutary than our penitence. These, Sir, are my reasons for not entertaining that high opinion of untried force by which many gentlemen, for whose sentiments in other particulars I have great respect, seem to be so greatly captivated. But there is still behind a third consideration concerning this object, which serves to determine

my opinion on the sort of policy which ought to be pursued in the management of America, even more than its population and its commerce: I mean its temper and character. In this character of the Americans a love of freedom is the predominating feature which marks and distinguishes the whole. . . . This fierce spirit of liberty is stronger in the English colonies, probably, than in any other people of the earth, and this from a great variety of powerful causes; which, to understand the true temper of their minds, and the direction which this spirit takes, it will not be amiss to lay open somewhat more largely. First, the people of the colonies are descendants of Englishmen. England, Sir, is a nation which still, I hope, respects, and formerly adored, her freedom. The colonists emigrated from you when this part of your character was most predominant; and they took this bias and direction the moment they parted from your hands. They are therefore not only devoted to liberty, but to liberty according to English ideas and on English principles. . . . Your mode of governing them, whether through lenity or indolence, through wisdom or mistake, confirmed them in the imagination, that they, as well as you, had an interest in these common principles. They were further confirmed in this pleasing error by the form of their provincial legislative assemblies. Their governments are popular in an high degree: some are merely popular; in all, the popular representative is the most weighty; and this share of the people in their ordinary government never fails to inspire them with lofty sentiments, and with a strong aversion from whatever tends to deprive them of their chief importance. If anything were wanting to this necessary operation of the form of government, religion would have given it a complete effect. Religion, always a principle of energy, in this new people is no way worn out or impaired; and their mode of professing it is also one main cause of this free spirit. The people are Protestants, and of that kind which is the most adverse to all implicit submission of mind and opinion. . . . All Protestantism, even the most cold and passive, is a sort of dissent. But the religion most prevalent in our northern colonies is a refinement on the principle of resistance: it is the dissidence of dissent, and the protestantism of the Protestant religion. . . . Permit me, Sir, to add another circumstance in our colonies, which contributes no mean part towards the growth and effect of this untractable spirit: I mean their education. In no country, perhaps, in the world is the law so general a study. The profession itself is numerous and powerful, and in most provinces it takes the lead. The greater number of the deputies sent to the Congress were lawyers. But all who read, and most do read, endeavour to obtain some smattering in that science. I have been told by an eminent bookseller, that in no branch of his business, after tracts of popular devotion, were so many books as those on the law exported to the plantations. The colonists have now fallen into the way of printing them for their own use. I hear that they have sold nearly as many of Blackstone's 'Commentaries' in America as in England. General Gage marks out this disposition very particularly in a letter on your table. He states, that all the people in his government are lawyers, or smatterers in law,—and that in Boston they have been enabled, by successful chicane, wholly to evade many parts of one of your capital penal constitutions. . . . The last cause of this disobedient spirit in the colonies is hardly less powerful than the rest, as it is not merely moral, but laid deep in the natural constitution of things. Three thousand miles of ocean lie between you and them. No contrivance can prevent the effect of this distance in weakening government. Seas roll, and months pass, between the order and the execution; and the want of a speedy explanation of a single point is enough to defeat an whole system. . . . Then, Sir, from these six capital sources, of descent, of form of government, of religion in the northern provinces, of manners in the southern, of education, of the remoteness of situation from the first mover of government,—from all these causes a fierce spirit of liberty has grown up. It has grown with the growth of the people in your colonies, and increased with the increase of their wealth: a spirit, that, unhappily meeting with an exercise of power in England, which, however lawful, is not reconcilable to any ideas of liberty, much less with theirs, has kindled this flame that is ready to consume us. . . . The question is not, whether their spirit deserves praise or blame,—what, in the name of God, shall we do with it? You have before you the object, such as it is,—with all its glories, with all its imperfections on its head. You see the magnitude, the importance, the temper, the habits, the disorders. By all these considerations we are strongly urged to determine something concerning it. We are called upon to fix some rule and line for our future conduct, which may give a little stability to our politics, and prevent the return of such unhappy deliberations as the present. . . . It should seem, to my way of conceiving such matters, that there is a very wide difference, in reason and policy, between the mode of proceeding on the irregular conduct of scattered individuals, or even of bands of men, who disturb order within the state, and the civil dissensions which may, from time to time, on great questions, agitate the several communities which compose a great empire. It looks to me to be narrow and pedantic to apply the ordinary ideas of criminal justice to this great public contest. I do not know the method of drawing up an indictment against an whole people. . . . I am not ripe to pass sentence on the gravest public bodies, intrusted with magistracies of great authority and dignity, and charged with the safety of their fellow-citizens, upon the very same title that I am. I really think that for wise men this is not judicious, for sober men not decent, for minds tinctured with humanity not mild and merciful."

In the closing part of his speech, Mr. Burke introduced successively and commented upon the following propositions, or resolutions, which formed in their entirety his plan of conciliation. At the end of his speaking they were rejected by a vote of 270 against 78:

"That the colonies and plantations of Great Britain in North America, consisting of 14 separate governments, and containing two millions and upwards of free inhabitants, have not had the liberty and privilege of electing and sending any knights and burgesses, or others, to represent them in the high court of Parliament.

That the said colonies and plantations have been made liable to, and bounden by, several subsidies, payments, rates, and taxes, given and granted by Parliament, though the said colonies and plantations have not their knights and burgesses in the said high court of Parliament, of their own election, to represent the condition of their country; by lack whereof they have been oftentimes touched and grieved by subsidies, given, granted, and assented to, in the said court, in a manner prejudicial to the common wealth, quietness, rest, and peace of the subjects inhabiting within the same.

That, from the distance of the said colonies, and from other circumstances, no method hath hitherto been devised for procuring a representation in Parliament for the said colonies.

That each of the said colonies hath within itself a body, chosen, in part or in the whole, by the freemen, freeholders, or other free inhabitants thereof, commonly called the General Assembly, or General Court, with powers legally to raise, levy, and assess, according to the several usages of such colonies, duties and taxes towards defraying all sorts of public services.

That the said general assemblies, general courts, or other bodies legally qualified as aforesaid, have at sundry times freely granted several large subsidies and public aids for his Majesty's service, according to their abilities, when required thereto by letter from one of his Majesty's principal Secretaries of State; and that their right to grant the same, and their cheerfulness and sufficiency in the said grants, have been at sundry times acknowledged by Parliament.

That it hath been found by experience, that the manner of granting the said supplies and aids by the said general assemblies hath been more agreeable to the inhabitants of said colonies, and more beneficial and conducive to the public service, than the mode of giving and granting aids and subsidies in Parliament, to be raised and paid in the said colonies.

That it may be proper to repeal an act, made in the 7th year of the reign of his present Majesty, intituled, 'An act for granting certain duties in the British colonies and plantations in America; for allowing a drawback of the duties of customs, upon the exportation from this kingdom, of coffee and cocoa-nuts, of the produce of the said colonies or plantations; for discontinuing the drawbacks payable on China earthen ware exported to America; and for more effectually preventing the clandestine running of goods in the said colonies and plantations.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, 'An act to discontinue, in such manner and for such time as are therein mentioned, the landing and discharging, lading or shipping, of goods, wares, and merchandise, at the town and within the harbor of Boston, in the province of Massachusetts Bay, in North America.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, 'An act for the impartial administration of justice, in the cases of persons questioned for any acts done by them, in the execution of the law, or for the suppression of riots and tumults, in the province of the Massachusetts Bay, in New England.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, 'An act for the better regulating the government of the province of the Massachusetts Bay, in New England.'

That it may be proper to explain and amend an act, made in the 35th year of the reign of King Henry VIII., intituled, 'An act for the trial of treasons committed out of the king's dominions.'

That, from the time when the general assembly, or general court, of any colony or plantation in North America, shall have appointed, by act of assembly duly confirmed, a settled salary to the offices of the chief justice and other judges of the superior courts, it may be proper that the said chief justice and other judges of the superior courts of such colony shall hold his and their office and offices during their good behaviour, and shall not be removed therefrom, but when the said removal shall be adjudged by his Majesty in council, upon a hearing on complaint from the general assembly, or on a complaint from the governor, or the council, or the house of representatives, severally, of the colony in which the said chief justice and other judges have exercised the said offices.

That it may be proper to regulate the courts of admiralty or vice-admiralty, authorized by the 15th chapter of the 4th George III., in such a manner as to make the same more commodious to those who sue or are sued in the said courts; and to provide for the more decent maintenance of the judges of the same."—Edmund Burke, *Works, v.* 2.

Also in: T. MacKnight, *Life and Times of Edmund Burke, ch.* 21 (*v.* 2).—J. Adolphus, *Hist. of England, Reign of Geo. III., ch.* 25 (*v.* 2).

A. D. 1775 (January—April).—Aims at independence disclaimed.—"The denial that independence was the final object, was constant and general. To obtain concessions and to preserve the connection with England was affirmed everywhere; and John Adams, after the peace, went farther than this, for he said:—'There was not a moment during the Revolution, when I would not have given everything I possessed for a restoration to the state of things before the contest began, provided we could have had a sufficient security for its continuance.' If Mr. Adams be regarded as expressing the sentiments of the Whigs, they were willing to remain Colonists, provided they could have had their rights secured to them; while the Tories were contented thus to continue, without such security. Such, as it appears to me, was the only difference between the two parties prior to hostilities. . . . Franklin's testimony, a few days before the affair at Lexington, was, that he had 'more than once travelled almost from one end of the continent to the other, and kept a variety of company, eating, drinking, and conversing with them freely, [and] never had heard from any person, drunk or sober, the least expression of a wish for a separation, or a hint that such a thing would be advantageous to America.' Mr. Jay is quite as explicit. 'During the course of my life,' said he, 'and until the second petition of Congress in 1775, I never did hear an American of any class, or of any description, express a wish for the independence of the Colonies.' 'It has always been, and still is, my opinion and belief, that our country was prompted and impelled to independence by necessity, and not by choice.' Mr. Jefferson affirmed, 'What, east-

ward of New York, might have been the dispositions towards England before the commencement of hostilities, I know not; but before that I never heard a whisper of a disposition to separate from Great Britain; and after that its possibility was contemplated with affliction by all.' Washington, in 1774, fully sustains these declarations, and, in the 'Fairfax County Resolves,' it was complained that 'malevolent falsehoods' were propagated by the ministry to prejudice the mind of the king: 'particularly that there is an intention in the American Colonies to set up for independent States.' Mr. Madison was not in public life until May, 1776, but he says, 'It has always been my impression, that a reëstablishment of the Colonial relations to the parent country, as they were previous to the controversy, was the real object of every class of the people, till the despair of obtaining it,' &c. . . . The only way to dispose of testimony like this, is to impeach the persons who have given it."—L. Sabine, *Biographical Sketches of Loyalists of the Am. Rev., v.* 1, *pp.* 64–66.

A. D. 1775 (January — September).— Revolution in South Carolina. See South Carolina: A. D. 1775.

A. D. 1775 (April). — The Beginning of the War of the American Revolution.—Lexington.—Concord.—"On April 19, 1775, the committees of safety could only count up twelve field-pieces in Massachusetts; and there had been collected in that colony 21,549 fire-arms, 17,441 pounds of powder, 22,191 pounds of ball, 144,699 flints, 10,108 bayonets, 11,979 pouches, 15,000 canteens. There were also 17,000 pounds of salt fish, 35,000 pounds of rice, with large quantities of beef and pork. Viewed as an evidence of the forethought of the colonists, these statistics are remarkable; but there was something heroic and indeed almost pathetic in the project of going to war with the British government on the strength of twelve field-pieces and seventeen thousand pounds of salt fish. Yet when, on the night of the 18th of April, 1775, Paul Revere rode beneath the bright moonlight through Lexington to Concord, with Dawes and Prescott for comrades, he was carrying the signal for the independence of a nation. He had seen across the Charles River the two lights from the church-steeple in Boston which were to show that a British force was going out to seize the patriotic supplies at Concord; he had warned Hancock and Adams at Rev. Jonas Clark's parsonage in Lexington, and had rejected Sergeant Monroe's caution against unnecessary noise, with the rejoinder, 'You'll have noise enough here before long — the regulars are coming out.' As he galloped on his way the regulars were advancing with steady step behind him, soon warned of their own danger by alarm-bells and signal-guns. When Revere was captured by some British officers who happened to be near Concord, Colonel Smith, the commander of the expedition, had already halted, ordered Pitcairn forward, and sent back prudently for reinforcements. It was a night of terror to all the neighboring Middlesex towns, for no one knew what excesses the angry British troops might commit on their return march. The best picture we have of this alarm is in the narrative of a Cambridge woman, Mrs. Hannah Winthrop, describing 'the horrors of that midnight cry,' as she calls it. The women of that town were roused by the beat of drums and ringing of bells; they hastily gathered their children together and fled to the outlying farm-houses; seventy or eighty of them were at Fresh Pond, within hearing of the guns at Menotomy, now Arlington. The next day their husbands bade them flee to Andover, whither the college property had been sent, and thither they went, alternately walking and riding, over fields where the bodies of the slain lay unburied. Before 5 A. M. on April 19, 1775, the British troops had reached Lexington Green, where thirty-eight men, under Captain Parker, stood up before six hundred or eight hundred to be shot at, their captain saying, 'Don't fire unless you are fired on; but if they want a war let it begin here.' It began there; they were fired upon; they fired rather ineffectually in return, while seven were killed and nine wounded. The rest, after retreating, reformed and pursued the British towards Concord, capturing seven stragglers — the first prisoners taken in the war. Then followed the fight at Concord, where four hundred and fifty Americans, instead of thirty-eight, were rallied to meet the British. The fighting took place between two detachments at the North Bridge, where 'once the embattled farmers stood, And fired the shot heard round the world.' There the American captain, Isaac Davis, was killed at the first shot — he who had said, when his company was placed at the head of the little column, 'I haven't a man that is afraid to go.' He fell and Major Buttrick gave the order, 'Fire! for God's sake fire!' in return. The British detachment retreated in disorder, but their main body was too strong to be attacked, so they disabled a few cannon, destroyed some barrels of flour, cut down the liberty-pole, set fire to the court-house and then began their return march. It ended in a flight; they were exposed to a constant guerilla fire; minute-men flocked behind every tree and house; and only the foresight of Colonel Smith in sending for reinforcements had averted a surrender. At 2 P. M., near Lexington, Percy with his troops met the returning fugitives, and formed a hollow square, into which they ran and threw themselves on the ground exhausted. Then Percy in turn fell back. Militia still came pouring in from Dorchester, Milton, Dedham, as well as the nearer towns. A company from Danvers marched sixteen miles in four hours. The Americans lost ninety-three in killed, wounded and missing that day; the British, two hundred and seventy-three. But the important result was that every American colony now recognized that war had begun."—T. W. Higginson, *History of the United States of America, ch.* 10.

A. D. 1775 (April).— The first Provincial Convention in New York. See New York: A. D. 1775 (April).

A. D. 1775 (April—May).—The siege of Boston begun.—"Reinforcements of foreign troops and supplies were constantly arriving in Boston. Howe, Clinton, and Burgoyne came, as generals, on the 25th of May. Bitterness, ridicule, and boasting, with all the irritating taunts of a mer-

cenary soldiery, were freely poured on the patriots and on the 'mixed multitude' which composed the germ of their army yet to be. The British forces had cooped themselves up in Boston, and the provincials determined that they should remain there, with no mode of exit save by the sea. The pear-shaped peninsula, hung to the mainland only by the stem called the 'Neck,' over which the tide-waters sometimes washed, was equally an inconvenient position for crowding regiments in war-like array, and a convenient one for the extemporized army which was about to beleaguer them there. . . . The town of Charlestown, which lay under the enemy's guns, had contained a population of between two and three thousand. The interruption of all the employments of peace, and the proximity of danger, had brought poverty and suffering upon the people. They had been steadily leaving the town, with such of their effects as they could carry with them. It proved to be well for them that they had acted upon the warning. It would seem that there were less than 200 of its inhabitants remaining in it at the time of the battle, when the flames kindled by the enemy and bombs from a battery on Copp's Hill laid it in ashes. On the third day after the affair at Concord, the Provincial Congress again assembled, voted to raise at once 13,000 men, to rally at Cambridge and the neighborhood, and asked aid from the other provinces, to which Connecticut, Rhode Island, and New Hampshire responded. The forts, magazines, and arsenals, such as they then were, were secured for the country. . . . Of the 15,000 men then gathered, by the cry of war, at Cambridge and Roxbury, all virtually, but not by formal investment, under the command of General Ward, nearly 10,000 belonged to Massachusetts, and the remainder to New Hampshire, Rhode Island, and Connecticut. They have been designated since, at various times and by different writers, under the extreme contrast of terms, as an 'organized army,' and a 'mob.' Either of these terms would be equally inappropriate. . . . Our troops were 'minutemen' extemporized into fragmentary companies and skeleton regiments. The officers, chosen on the village-green or in its public-house, paying for the honor by a treat, or perhaps because they kept the premises where the treat could be most conveniently furnished, were not commissioned or ranked as the leaders of an army for campaign service. The yeomen of town and village had not come together at the summons of a commander-in-chief through adjutant, herald, or advertisement. They came unbidden, at an alarm from the bell on their meeting-house, or from a post-rider, or from the telegrams transmitted by tongue and ear. . . . And for the most part they were as free to go away as they had been to come. They were enlisted after a fashion, some prime conditions of which were their own convenience or pleasure. . . . Such of them as came from the seaboard might bring with them old sails for tents, while the midsummer days made it scarcely a hardship to many to have only the heavens for a roof. Generally their towns were expected to keep them supplied with food. . . . The forces then mustered at Cambridge as a central camp, and, stretching from the left at Chelsea almost round to Dorchester on the right, for nearly three quarters of a circle, were indeed not organized, nor yet had they any characteristic of a mere mob. They combined in fact four independent armies, united in resistance to a foreign enemy. . . . Each of the Provinces had raised, commissioned, and assumed the supply of its respective forces, holding them subject to their several orders. After the battle in Charlestown, the Committee of War in Connecticut ordered their generals, Spencer and Putnam, while they were on the territory of this Province, to regard General Ward as the commander-in-chief, and suggested to Rhode Island and New Hampshire to issue the same instructions to their soldiers. . . . General Artemas Ward was a conscientious and judicious patriot. In the French war he had earned some military experience and fame. . . . On October 27, 1774, the Provincial Congress, in which he was a delegate, appointed him a general officer, and on May 19 following, Commander-in-chief. As such he served at Cambridge till the arrival of Washington. On the very day of the battle in Charlestown, when the great chieftain was selected for his high service, Ward was chosen by the Continental Congress as its first major-general. Though he was only in his 48th year when he was burdened with the responsibility of the opening warfare, his body was infirm from disease and exposure. Lieutenant-General Thomas, two years the senior of Ward, was second in command. . . . General Israel Putnam preceded his Connecticut troops in hurrying to the scene of war on the news of the affair at Lexington and Concord. His men soon followed him, with like enthusiasm. The New Hampshire troops, on their arrival at Medford, made choice of Colonel John Stark as their leader. Colonel Nathaniel Greene commanded a regiment from Rhode Island. . . . A few days after the affair at Lexington, when virtually the siege began, General Gage, the British commander, at the solicitation of some of the leading citizens assembled in Faneuil Hall, had, by a mutual understanding, entered into an agreement that such of the inhabitants as wished to depart from the town should be at liberty to do so, if they would leave their arms behind them and covenant not to engage in any hostility against his army. The agreement was availed of by many of the suffering and frightened people. . . . But the original freedom and fulness of this understanding, on the part of General Gage, were soon reduced by a very strict examination of those who sought to go out of the town, and by a rigid search of the effects which they wished to take with them. . . . Several of the inhabitants remained in it from different motives: some as devoted loyalists; some as timid neutrals; some as spies, to watch each hostile movement and to communicate it to their friends outside. . . . After hostilities commenced, General Gage, of course, regarded the citizens as alike prisoners, either in the same sense in which he was himself under restraint, or as abettors of those who were his enemies. . . . The population of the town, independent of the military, was then about 18,000. To all those who were not in sympathy with them the British behaved in an insulting and exasperating manner. . . . To show, as members of the English Church establishment, their contempt of congregational places of worship, they removed the pews and pulpit from the Old South meeting-house, and, covering the floor with earth, they converted it into a riding-school for Burgoyne's squadron of

cavalry. The two eastern galleries were allowed to remain, one for spectators, the other for a liquor-shop, while the fire in the stove was occasionally kindled by books and pamphlets from the library of a former pastor, Dr. Prince, which were in a room in the tower. . . . At the time of the skirmishes at Lexington and Concord there were about 4,000 British troops in Boston and at the Castle. The number was increased to more than 10,000 before the action in Charlestown."—G. E. Ellis, *Hist. of the Battle of Bunker's Hill, pp.* 4–26.

A. D. 1775 (April—June).—The spreading of revolt.—All the colonies in line with New England.—"On the 23d of April, the day after the dissolution of the provincial Congress of New York, the news from Lexington burst upon the city. Though it was Sunday, the inhabitants speedily unloaded two sloops which lay at the wharfs, laden with flour and supplies for the British at Boston, of the value of £80,000. . . . The royal government lay hopelessly prostrate. Isaac Sears concerted with John Lamb to stop all vessels going to Quebec, Newfoundland, Georgia, or Boston, where British authority was still supreme. The people shut up the custom-house, and the merchants whose vessels were cleared out dared not let them sail. In the following days the military stores of the city of New York were secured, and volunteer companies paraded in the streets. . . . On the 1st of May the people, at the usual places of election, chose for the city and county a new general committee of one hundred, who 'resolved in the most explicit manner to stand or fall with the liberty of the continent.' All parts of the colony were summoned to send delegates to a provincial convention, to which the city and county of New York deputed one-and-twenty as their representatives. . . . On the 2d of May the New Jersey committee of correspondence called a provincial congress for the 23d at Trenton. To anticipate its influence, the governor convened the regular assembly eight days earlier at Burlington, and laid before them the project of Lord North [adopted by the British parliament in February, offering to each colony freedom from taxation on its making satisfactory provision for the general defense and for support of government]. The assembly could see in the proposition no avenue to reconciliation, and declared their intention to 'abide by the united voice of the continental congress.' Such, too, was the spirit of Pennsylvania. 'Let us not have it said of Philadelphia that she passed noble resolutions and neglected them,' were the words of Mifflin, youngest of the orators who on the 25th of April addressed the town-meeting called in that city on receiving the news from Lexington. Thousands were present, and agreed 'to associate for the purpose of defending with arms their lives, their property, and liberty.' Thomas Paine from that day 'rejected the sullen Pharaoh of the British throne forever.'. . . In Philadelphia, thirty companies, with 50 to 100 in each, daily practiced the manual exercise of the musket. One of them was raised from the Quakers. . . . The Pennsylvania assembly, which met on the first day of May, rejecting the overtures of the governor, 'could form no prospect of lasting advantages for Pennsylvania but from a communication of rights and property with the other colonies.'. . . On the 5th Franklin arrived, after a voyage over the smoothest seas, and the next morning was unanimously elected a deputy to the congress. . . . In Maryland, at the request of the colonels of militia, Eden, at Annapolis, gave up the arms and ammunition of the province to the freemen of the county. Pleased with his concession, the provincial convention distinguished itself by its moderation; and its delegates to congress determined to labor for a reconciliation. In Virginia [where, in the night of April 20th, Governor Dunmore had carried off the gunpowder stored in the colony's magazine at Williamsburg, and where, as a consequence, the excited people were already in arms, though no further action had yet been taken], on the 2d of May, at the cry from Lexington, the independent company of Hanover and its county committee were called together by Patrick Henry. The soldiers, most of them young men, elected him their chief, and marched for Williamsburg, on the way greatly increasing in numbers. Alarmed by the 'insurrections,' Dunmore convened the council, and in a proclamation of the 3d pretended that he had removed the ammunition, lest it should be seized by slaves. Message after message could not arrest the march or change the purpose of Henry. . . . At sunrise on the 4th the governor's messenger met Henry at New Kent, and, as a compensation for the gunpowder taken out of the magazine, paid him £330, for which he was to account to the convention of Virginia. The sum was found to be more than the value of the powder, and the next Virginia convention directed the excess to be paid back. . . . In twelve or thirteen days the message from Lexington was borne to Newbern, in North Carolina, where it 'wrought a great change.' The governor, in his panic, ordered the cannon in the town to be dismounted; and, after a remonstrance made in the name of the inhabitants by Abner Nash, 'the oracle of their committee and a principal promoter of sedition,' he shipped his wife to New York and fled to Fort Johnston, where a sloop-of-war had its station. In South Carolina, Charles Pinckney, on learning the inflexibility of parliament, using power intrusted to him by the provincial congress, appointed a committee of five to place the colony in a state of defence; on the 21st of April, the very night after their organization, men of Charleston, without disguise, under their direction, seized all the powder in the public magazines, and removed 800 stand of arms and other military stores from the royal arsenal. The tidings from Lexington induced the general committee to hasten the meeting of the provincial congress, whose members, on the 2d of June, Henry Laurens being their president, associated themselves for defence against every foe; 'ready to sacrifice their lives and fortunes to secure her freedom and safety.' They resolved to raise two regiments of infantry and a regiment of rangers. . . . 'The people of Charleston are as mad as they are here in Boston,' was the testimony of Gage. The skirmish at Lexington became known in Savannah on the 10th of May, and added Georgia to the union. At that time she had about 17,000 white inhabitants and 15,000 Africans. Her militia was not

less than 3,000. Her frontier, which extended from Augusta to St. Mary's, was threatened by the Creeks, with 4,000 warriors; the Chickasas, with 450; the Cherokees, with 3,000; the Choctas, with 2,500. But danger could not make her people hesitate. On the night of the 11th, Noble Wimberley Jones, Joseph Habersham, Edward Telfair, and others, broke open the king's magazine in the eastern part of the city, and took from it over 500 pounds of powder. To the Boston wanderers they sent 63 barrels of rice and £122 in specie; and they kept the king's birthday by raising a liberty-pole."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *v.* 4, *ch.* 11.

A. D. 1775 (May).—The surprising of Ticonderoga and Crown Point.—"Early in the year 1775, as soon as it was made manifest by the attitude assumed on the part of the British government against the colonies, and by the conduct of General Gage in Boston, that open hostilities must inevitably commence in a short time, it began to be secretly whispered among the principal politicians in New England that the capture of Ticonderoga was an object demanding the first attention. In the month of March, Samuel Adams and Dr. Joseph Warren, as members of the Committee of Correspondence in Boston, sent an agent privately into Canada, on a political mission, with instructions to ascertain the feelings of the people there in regard to the approaching contest, and to make such reports as his observations should warrant. . . . This agent sent back intelligence from Montreal, and among other things advised, that by all means the garrison of Ticonderoga should be seized as quickly as possible after the breaking out of hostilities, adding that the people of the New Hampshire Grants had already agreed to undertake the task, and that they were the most proper persons to be employed in it. This hint was given three weeks anterior to the battle of Lexington, and how far it influenced future designs may not be known; but it is certain that, eight days after that event, several gentlemen at that time attending the Assembly in Hartford, Connecticut, concerted a plan for surprising Ticonderoga and seizing the cannon in that fortress, for the use of the army then marching from all quarters to the environs of Boston."—J. Sparks, *Life of Ethan Allen* (*Library of Am. Biog., v.* 1), *p.* 270.—The gentlemen above mentioned "borrowed of the Connecticut Treasury some 1,800 dollars, and enlisted Mott and Phelps of Hartford, and Blagden of Salisbury, to beat up recruits. With these they went northward, and at Pittsfield got the co-operation of Captains Easton and Brown. No time was to be lost, and they pushed on with some forty men to find that Vermont giant, Ethan Allen, at Bennington. Allen at once agreed to go; he sought out Seth Warner, and roused the 'Green Mountain Boys,' who were mostly Connecticut and Massachusetts men; so that, in a few days, there gathered at Castleton (7th of May, 1775) two hundred and seventy strong men. Allen was their first leader, Easton second, and Warner third. Their larger body was to cross the Lake in boats from Shoreham, and surprise 'Ty.' Captain Herrick, with thirty men, was to seize the pass of Skenesborough (now Whitehall) at the head of the Lake, and Captain Douglass was to search for and seize all boats and batteaux. While these things were in progress, the ambitious, active, and daring Benedict Arnold heard of this expedition, and at once got leave from the Committee of Safety at Cambridge, to lead it. He rode post-haste through Massachusetts to raise men, and, with a single follower, reached Castleton, and claimed the command. These rough cubs of the forest could not well understand why he should lead them, for had they not Allen, and Warner, and Easton, and Phelps, and Biggelow, and others? But they consented that he should join Allen as an equal; and so forward they went. On the 8th of May Captain Noah Phelps, disguised with rough farmer clothes, and a long beard, blundered into the fort at Ticonderoga, pretending he wanted to be shaved. He found the gates open, and discipline loose; for no telegraph had carried the Lexington news to them, nor had the winds wafted the smell of blood, or the sounds of muskets there. When the darkness was deepest on the night of the 9th, Allen and Arnold, with 83 men, pulled across the Lake, landed near the fort, and then sent back the boats for Warner and his men. They had a boy, Nathan Beman, for a guide, and were full of courage. Allen formed his men, made them a little speech, and all was ready, when the question arose as to who should have the honor of entering the fort first. The dispute was warm between Arnold and Allen, but was finally quieted; and, side by side, at daylight, they rushed through the gate of the fort, defended only by sleeping men. The sentinel snapped his musket, and ran, giving the alarm; the garrison hastily turned out, to find themselves in the face of superior numbers. Allen sought and found the Commander's bed-room, and when Captain Delaplace waked, he saw any thing but an Angel of Mercy with white wings. Delaplace opened the door, with trowsers in hand, and there the great gaunt Ethan stood, with a drawn sword in his hand. 'Surrender!' said Ethan. 'To you?' asked Delaplace. 'Yes, to me, Ethan Allen.' 'By whose authority?' asked Laplace. Ethan was growing impatient, and raising his voice, and waving his sword, he said: 'In the name of the Great Jehovah, and of the Continental Congress, by God!' Delaplace little comprehended the words, but surrendered at once. Thus, on the morning of 10th of May, the strong fortress of Ticonderoga was taken by the border-men, and with it 44 prisoners, 120 iron cannon, with swivels, muskets, balls, and some powder, without the loss of a single man. The surprise was planned and paid for by Connecticut, and was led by Allen, a Connecticut-born man, but was carried out by the 'Green Mountain Boys.' Skenesborough (Whitehall) was surprised and seized, while Major Skene was out shooting. Arnold at once manned a schooner, taken at Skenesborough, and led an attack against an armed sloop at St. John's; he took her and the place, and returned in triumph to meet Allen, who, in batteaux, was coming to sustain him. Warner led a party against Crown Point, and took it, with its hundred cannon, and small garrison of 12 men.

News of these things was carried to the Continental Congress, reassembled at Philadelphia, which caused almost as much surprise there, as Allen's demand did to Captain Delaplace, and more exultation. They requested the Committees of Safety of New York and Albany, to have an inventory made of the stores, so that they might be returned 'when the restoration of harmony between Great Britain and the Colonies' should render it safe."—C. A. D. 1775 (May—August).—The Second Continental Congress and its work.—Its powers, theoretical and actual.—Its opportunity.—Its influence.—The New England Army adopted as the "Continental Army," and Washington made Commander-in-chief.—"The second General Congress assembled at Philadelphia on the 10th of May. Peyton Randolph was again elected as president; but being obliged to return, and occupy his place as speaker of the Virginia Assembly, John Hancock, of Massachusetts, was elevated to the chair. . . . Many of those most active in vindicating colonial rights, and Washington among the number, still indulged the hope of an eventual reconciliation, while few entertained, or, at least, avowed the idea of complete independence. A second 'humble and dutiful' petition to the king was moved, but met with strong opposition. John Adams condemned it as an imbecile measure, calculated to embarrass the proceedings of Congress. He was for prompt and vigorous action. Other members concurred with him. Indeed, the measure itself seemed but a mere form, intended to reconcile the half-scrupulous; for subsequently, when it was carried, Congress, in face of it, went on to assume and exercise the powers of a sovereign authority. A federal union was formed, leaving to each colony the right of regulating its internal affairs according to its own individual constitution, but vesting in Congress the power of making peace or war; of entering into treaties and alliances; of regulating general commerce; in a word, of legislating on all such matters as regarded the security and welfare of the whole community. The executive power was to be vested in a council of twelve, chosen by Congress from among its own members, and to hold office for a limited time. Such colonies as had not sent delegates to Congress might yet become members of the confederacy by agreeing to its conditions. Georgia, which had hitherto hesitated, soon joined the league, which thus extended from Nova Scotia to Florida. Congress lost no time in exercising their federated powers. In virtue of them, they ordered the enlistment of troops, the construction of forts in various parts of the colonies, the provision of armies, ammunition, and military stores; while, to defray the expense of these, and other measures, avowedly of self-defence, they authorized the emission of notes to the amount of $3,000,000, bearing the inscription of 'The United Colonies'; the faith of the confederacy being pledged for their redemption. A retaliating decree was passed, prohibiting all supplies of provisions to the British fisheries; and another, declaring the province of Massachusetts Bay absolved from its compact with the crown, by the violation of its charter; and recommending it to form an internal government for itself. . . . The situation of the New England army, actually besieging Boston, became an early and absorbing consideration. It was without munitions of war, without arms, clothing, or pay; in fact, without legislative countenance or encouragement. Unless sanctioned and assisted by Congress, there was danger of its dissolution. . . . The disposition to uphold the army was general; but the difficult question was, who should be commander-in-chief? . . . The opinion evidently inclined in favor of Washington; yet it was promoted by no clique of partisans or admirers. More than one of the Virginia delegates, says Adams, were cool on the subject of this appointment. . . . Adams, in his diary, claims the credit of bringing the members of Congress to a decision. . . . On the 15th of June, the army was regularly adopted by Congress, and the pay of the commander-in-chief fixed at $500 a month. Many still clung to the idea, that in all these proceedings they were merely opposing the measures of the ministry, and not the authority of the crown, and thus the army before Boston was designated as the Continental Army, in contradistinction to that under General Gage, which was called the Ministerial Army. In this stage of the business, Mr. Johnson, of Maryland, rose, and nominated Washington for the station of commander-in-chief. The election was by ballot, and was unanimous. It was formally announced to him by the president, on the following day, when he had taken his seat in Congress. Rising in his place, he briefly expressed his high and grateful sense of the honor conferred on him, and his sincere devotion to the cause. 'But,' added he, 'lest some unlucky event should happen unfavorable to my reputation, I beg it may be remembered by every gentleman in the room, that I this day declare, with the utmost sincerity, I do not think myself equal to the command I am honored with. As to pay, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit on it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire.'" Four major-generals,—Artemas Ward, Charles Lee, Philip Schuyler and Israel Putnam,— and eight brigadier-generals — Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Greene — were appointed. "At Washington's express request, his old friend, Major Horatio Gates, then absent at his estate in Virginia, was appointed adjutant-general, with the rank of brigadier."—W. Irving, *Life of Washington, v.* 1, *ch.* 39.—"The Congress of 1775 was not content with mere expression of opinions. It took a large view of its powers. It realized that its efficiency depended wholly upon the acceptance of its acts by the principals of the different delegations; but, following its judgment as to what the patriotism of the colonies would approve and sustain, it initiated action of various kinds, which, from the beginning, assumed the certainty of adoption by the colo-

nies, and derived all its energy from the probability of such ratification. The Congress doubtless exceeded the letter of the instructions received by a portion of its members; but this was not from any misconception of those instructions. . . . In pointing out to the colonies the direction which their preparations for resistance ought to take, the Congress no more acted upon an imagined authority to command the colonies than does the lookout at the bow of the ship, when he reports the direction of danger to the officer of the deck. The Congress unquestionably enjoyed a prestige at this juncture which it subsequently lost. The people, and even the provincial conventions, occasionally addressed it in a tone which indicated that they unconsciously attributed to it power which it plainly did not possess."—A. W. Small, *The Beginnings of Am. Nationality* (*Johns Hopkins Univ. Studies, 8th series*, 1–2) *p.* 73.—"With the energy and recklessness of a French revolutionary body it might have blotted out the distinctions between colonies, and established a centralized government, to be modified in time by circumstances. In fact, it took no such direction. It began its course by recommendations to the new colonial governments; it relied on them for executive acts; and, as soon as the new colonies were fairly under way, they seized on the power of naming and recalling the delegates to the Congress. From that time the decadence of the Congress was rapid; the national idea became dimmer; and the assertions of complete sovereignty by the political units became more pronounced."—A. Johnston, *The United States: its History and Constitution, sect.* 63–66 (*ch.* 3).

A. D. 1775 (June).—The Battle of Bunker Hill.—"British reinforcements, under three generals, Howe, Clinton, and Burgoyne, arrived at Boston soon after the fight at Lexington. Gage had now about 10,000 men. These occupied the town of Boston, which lay on a peninsula covering the middle of the harbor. Around them, on the hills of the mainland, there were about twice their number of undisciplined and poorly-armed Americans, without cannon and almost without food. Just north of Boston, another peninsula ran out into the harbor. On it there were several hills, and the Americans determined to seize and fortify one of them, called Bunker Hill. About 1,000 men, under Colonel Prescott, were sent into the peninsula for this on a suitable night. For some reason, they passed beyond Bunker Hill, and seized Breed's Hill, much closer to Boston. Breed's Hill is now usually called Bunker Hill, and the Bunker Hill monument is erected upon it. The American fortification was continued silently and swiftly through the night. In the morning of June 17, 1775, the British in Boston woke to see a long line of intrenchments running across the hill above them, and an American working-party busily strengthening it. For a time, the British frigates in the harbor kept up a slow and distant fire, to which the working-party paid no attention; but at noon the work was stopped, for the British troops were coming across the harbor in boats. Three thousand well armed, uniformed, and drilled soldiers, who had never known defeat in equal fight, landed near Charlestown, under General Howe. Here they formed at the water-side, and in a long, steady line began to move upward to scatter the 1,500 farmers who were watching them from the top of the hill. From the roofs of the houses in Boston, the rest of the British army and the townspeople were watching, anxious to see 'whether the Yankees would fight.' Most of the watchers expected to see the untrained soldiers in the fort fire a few hasty shots at a safe distance, and run. The fort held a threatening silence until the attacking column was within 150 feet. Then, at the word, came a sheet of fire from the marksmen within; and, when the smoke lifted, part of the British line was lying dead or wounded, and the rest were retreating hastily down the hill. The British were not cowards: the officers re-formed the line at the bottom of the hill, and, after setting fire to Charlestown, again advanced to the attack. Again there was a steady silence in the fort, a close and deadly fire, and the British line was driven down the hill again. The British then moved up the hill for the third time. The powder in the fort was now gone, and the garrison fought for a few minutes with gunstocks and stones against the British bayonets. But such a struggle was hopeless, and the British gained the fort. They were too tired to pursue the garrison, who escaped to the mainland."—A. Johnston, *Hist. of the U. S. for schools, sect.* 195–197.—"As soon as Prescott saw the defence was hopeless, he ordered a retreat, and friend and foe mingled together as they surged out of the sally-port amid the clouds of dust which the trampling raised, for a scorching sun had baked the new-turned soil. It was now, while the confused mass of beings rocked along down the rear slope of the hill, that Warren [who had joined the defending force that morning as a volunteer] fell, shot through the head. No one among the Americans knew certainly that he was dead, as they left him. . . . Prescott did not conceal his indignation at not having been better supported, when he made his report at Ward's headquarters. He knew he had fought well; but neither he nor his contemporaries understood at the time how a physical defeat might be a moral victory. Not knowing this, there was little else than mortification over the result,—indeed, on both sides. . . . The general opinion seems to be that the Americans had about 1,500 men engaged at one time, and that from 3,000 to 4,000 at different times took some part in it. The British had probably about the same numbers in all, but were in excess of the Americans at all times while engaged. The conflict with small arms lasted about ninety minutes."—J. Winsor, *The Conflict Precipitated* (*Narrative and Critical Hist. of Am., v.* 6, *ch.* 2).—"How can we exaggerate the relative importance of this day's action? Did it not, in fact, not only open, but make the contest, dividing into two parties not only those determined for the ministry or for enfranchisement, but also all timid, hesitating, reluctant neutrals? It was impossible after this to avoid taking a side. It rendered all reconciliation impossible, till it

should offer itself in the shape of independence. It echoed the gathering cry that brought together our people from their farms and workshops, to learn the terrible art which grows more merciful only as it is more ferociously, that is, skilfully, pursued. The day needs no rhetoric to magnify it in our revolutionary annals. When its sun went down, the provincials had parted with all fear, hesitation, and reluctance. . They found that it was easy to fight. . . . General Gage's account of the battle, acknowledging the loss of 226 killed and 828 wounded, was received in London, July 25th. While the ministry received with dismay this official intelligence, and kept it back from publication, many private letters accompanying it in its transit anticipated with exaggerations its humiliating details."— G. A. D. 1775 (August — December). — Unsuccessful expedition to Canada.—"The exploits of Allen and Arnold at Ticonderoga . . . had invited further conquests; but the Continental Congress hesitated to take any steps which might seem to carry war across the line till the Canadians had the opportunity of casting in their lot with their neighbors. On the 1st of June, 1775, Congress had distinctly avowed this purpose of restraint; and they well needed to be cautious, for the Canadian French had not forgotten the bitter aspersions on their religion which Congress had, with little compunction, launched upon its professors, under the irritation of the Quebec Act. Still their rulers were aliens, and the traditional hatred of centuries between races is not easily kept in abeyance. Ethan Allen was more eager to avail himself of this than Congress was to have him; but the march of events converted the legislators, and the opportunity which Allen grieved to see lost was not so easily regained when Congress at last authorized the northern invasion. Arnold and Allen had each aimed to secure the command of such an expedition, the one by appealing to the Continental Congress, the other by representations to that of New York. Allen had also gone in person to Philadelphia, and he and his Green Mountain Boys were not without influence upon Congress, in their quaint and somewhat rough ways, as their exuberant patriotism later made the New York authorities forget their riotous opposition to the policy which that province had been endeavoring to enforce in the New Hampshire Grants. Connecticut had already sent forward troops to Ticonderoga to hold that post till Congress should decide upon some definite action; and at the end of June, 1775, orders reached Schuyler which he might readily interpret as authorizing him, if the Canadians did not object, to advance upon Canada. He soon started to assume command, but speedily found matters unpromising. The Johnsons were arming the Indians up the Mohawk and beyond in a way that boded no good, and they had entered into compacts with the British commanders in Canada. Arnold had been at Ticonderoga, and had quarrelled with Hinman, the commander of the Connecticut troops. Schuyler heard much of the Green Mountain Boys, but he only knew them as the lawless people of the Grants, and soon learned that Allen and Warner had themselves set to quarrelling. . . . In August the news from Canada began to be alarming. Richard Montgomery, an Irish officer who had some years before left the army to settle on the Hudson and marry, was now one of the new brigadiers. He urged Schuyler to advance and anticipate the movement now said to be intended by Carleton, the English general commanding in Canada. At this juncture Schuyler got word from Washington that a coöperating expedition would be dispatched by way of the Kennebec, which, if everything went well, might unite with Schuyler's before Quebec."—J. Winsor, *The Conflict Precipitated* (*Narr. and Crit. Hist. of Am., v.* 6).—The two movements were made, from Ticonderoga and from the Kennebec, with results which will be found related under Canada: A. D. 1775–1776. "No expedition during the American Revolution had less elements of permanent value than those which were undertaken against Canada during the year 1775. Great results were anticipated, but none were realized. The obstacles were too substantial, and failure was inevitable. Wonderful endurance and great physical courage were manifested, and these were accompanied by a prodigious amount of faith, but there was neither ability nor opportunity for works commensurate with the faith. Certain Acts of Parliament, known as the Canadian Acts, were as offensive to Canadians as other legislation was to Americans; but the former were not pressed to the extremity of armed resistance. The people themselves having no harmony of religious or political views, were equally divided in language and race. Neither did the Canadians invite the aid of the colonies. The hypothesis that Canada would blend her destiny with that of New England, and would unite in resistance to the crown, certainly involved some identity of interest as well as of action. But the characters of the two people were too unlike to be unified by simple opposition to English legislation, and Canadians had no antecedents such as would prompt a hearty sympathy with New England and its controlling moral sentiment. Neither was there such a neighborly relation as admitted of prompt and adequate aid from one to the other, in emergencies calling for a combined effort. As a base of operations for a British army moving upon the colonies, Canada had the single advantage of being less distant from England than an Atlantic base, and many supplies could be procured without the expense and delay of their transportation across the Atlantic; but between Canada and the American colonies there was an actual wilderness. Hence a British offensive movement from Canada involved constant waste of men and materials, a deep line through an uninhabited or hostile region, and such a constant backing, as was both inconsistent with the resources of the base, and with a corresponding support of armies resting upon the sea coast. The British government was not ready for operations so extensive and so exhaustive of men and treasure; neither

did it realize the necessity for that expenditure. There were two alternatives, one illustrated by General Carleton's plan, viz., to hold the forts of Lake Champlain, as advanced, defensive positions; and the other, that of Burgoyne, to strike through the country and depend upon support from the opposite base. The true defense of the colonies from such expeditions depended upon the prompt seizure and occupation of the frontier posts. An American advance upon Canada was not only through a country strategically bad, but the diversion of forces for that purpose endangered the general issue, and entrusted its interests to the guardianship of an army already insufficient to meet the pressing demands of the crisis. The occupation of New York in 1775, by an adequate British force, would have infinitely outweighed all possible benefit from the complete conquest of Canada. At the very time when Washington could hardly hold the British garrison of Boston in check,—when he had an average of but nine rounds of ammunition per man, he was required to spare companies, ammunition, and supplies for a venture, profitless at best,—with the certainty that reinforcements could not be supplied as fast as the enemy could draw veteran regiments from Great Britain and Ireland, to defend or recover Canadian soil. In giving a rapid outline of this first attempt of the colonies to enlarge the theatre of active operations, it should be noticed that the initiative had been taken before General Washington had been elected commander-in-chief, and that Congress itself precipitated the final movement."—H. B. Carrington, *Battles of the Am. Rev., ch.* 19.

A. D. 1775 (September).—Flight of Governor Tryon from New York. See New York: A. D. 1775 (April—September).

A. D. 1775-1776.—Washington in command at Cambridge.—The British forced out of Boston.—Washington "arrived in Cambridge, Massachusetts, on the 2d of July [1775], and on the following day presented himself at the head of the army. His head-quarters remained at Cambridge, till the evacuation of Boston by the royal forces on the 17th of March, 1776. The position of affairs was one of vast responsibility and peril. The country at large was highly excited, and expected that a bold stroke would be struck and decisive successes obtained. But the army was without organization and discipline; the troops unused to obey, the officers for the most part unaccustomed, some of them incompetent, to command. A few of them only had had a limited experience in the Seven Years' War. Most of the men had rushed to the field on the first alarm of hostilities, without any enlistment; and when they were enlisted, it was only till the end of the year. There was no military chest; scarce anything that could be called a commissariat. The artillery consisted of a few old field-pieces of various sizes, served with a very few exceptions by persons wholly untrained in gunnery. There was no siege train, and an almost total want of every description of ordnance stores. Barrels of sand, represented as powder, were from time to time brought into the camp, to prevent the American army itself from being aware of its deficiency in that respect. In the autumn of 1775, an alarm of small-pox was brought from Boston, and the troops were subjected to inoculation. There was no efficient power, either in the Provincial Assembly or the Congress at Philadelphia, by which these wants could be supplied and these evils remedied. Such were the circumstances under which General Washington took the field, at the head of a force greatly superior in numbers to the royal army, but in all other respects a very unequal match. Meantime the British were undisputed masters of the approaches to Boston by water. Washington's letters disclose extreme impatience under the inaction to which he was condemned; but the gravest difficulties attended the expulsion of the royal forces from Boston. It could only be effected by the bombardment and assault of that place; an attempt which must in any event have been destructive to the large non-combatant population, that had been unable to remove into the country, and which would have been of doubtful success, for the want of a siege train, and with troops wholly unused to such an undertaking. Having in the course of the year received some captured ordnance from Canada [from Fort Ticonderoga], and a supply of ammunition taken by privateers at sea, Washington was strongly disposed to assault the town, as soon as the freezing of the bay on the western side of the peninsula would allow the troops to pass on the ice. The winter, however, remained open longer than usual, and a council of war dissuaded this attempt. He then determined to occupy Nook's Hill (an eminence at the extremity of Dorchester 'Neck,' as it was called, separated from Boston by a narrow arm of the harbor), and Dorchester Heights, which commanded Nook's Hill and the town itself. In this way the royal forces would be compelled to take the risk of a general action, for the purpose of dislodging the Americans, or else to evacuate the town. The requisite preparations having been made with secrecy, energy, and despatch, the heights were covered with breastworks on the night of the 4th of March, 1776, as 'by enchantment.' A partial movement, undertaken by the royal army to dislodge the Americans, was frustrated by stress of weather; and on the 17th of March, in virtue of an agreement to that effect with the municipal government, the town and harbor of Boston were evacuated by the British army and navy without firing a gun. Thus, without a battle and without the destruction of a building in Boston, the first year of the war was brought to a successful and an auspicious close."—E. Everett, *Life of Washington, ch.* 5.

A. D. 1775-1776.—The beginning of the American Navy, and the early fitting out of Privateers.—"Before the end of 1775 the Continental Congress ordered that five ships of 32 guns should be built, five of 28, and three of 24. This order was carried out, and these vessels are the proper beginning of the navy of the United States. Almost every one of them, before the war was over, had been captured, or burned to avoid capture. But the names of the little fleet

will always be of interest to Americans, and some of those names have always been preserved on the calendar of the navy. They are the 'Washington,' 'Raleigh,' 'Hancock,' 'Randolph,' 'Warren,' 'Virginia,' 'Trumbull,' 'Effingham,' 'Congress,' 'Providence,' 'Boston,' 'Delaware,' 'Montgomery.' The State of Rhode Island, at the very outbreak of hostilities, commissioned Abraham Whipple, who went with his little vessel as far as Bermuda, and, from his experience in naval warfare earned in the French War, he was recognized as commodore of the little fleet of American cruisers. . . . Meanwhile, every maritime State issued commissions to privateers, and established admiralty or prize courts, with power to condemn prizes when brought in. Legitimate commerce had been largely checked, and . . . the seamen of the country, who had formerly been employed in the fisheries, or in our large foreign trade with the West India Islands and with Europe, gladly volunteered in the private service. Till the end of the war the seamen preferred the privateer service to that of the government. . . . The larger maritime States had in commission one or more vessels from the beginning, but they found the same difficulty which the Congress found in enlisting seamen, when any bold privateer captain came into rivalry with them. . . . As early as the 22d of December, in 1775, Congress had appointed Esek Hopkins, of Rhode Island, commander-in-chief of its navy, and had named four captains besides, with several lieutenants, the first of whom was John Paul Jones. . . . On the 10th of October [1776] a resolution of Congress fixed the rank of captains in the navy, . . . Paul Jones eighteenth on a list of twenty-four. Jones was not pleased that his rank was not higher, but eventually his achievements were such that his reputation probably now stands higher as a successful officer than that of any of the number."—E. E. Hale, *Naval Hist. of the Am. Rev.* (*Narrative and Critical Hist. of Am. v.* 6, *ch.* 7).

A. D. 1776 (January—June).—King George's war measures and Paine's "Common Sense."—The setting of the tide of opinion toward national independence.—"Disastrous news arrived from England before the close of the winter of 1775–6. The King had opened Parliament with a speech in which he had denounced the Colonists as rebels, seeking, with deceitful pretences, to establish an independent empire; and his Majesty recommended decisive, coercive measures against them. . . . The answer to the Royal Address (adopted by a vote of seventy-six to thirty-three in the Lords, and two hundred and seventy-eight to one hundred and eight in the Commons) gave assurances of the firm support of Parliament to the proposed measures. The very moderately conciliatory propositions made by the Duke of Richmond, Mr. Burke, and the Duke of Grafton, were summarily voted down, and not far from the middle of December the atrocious 'Prohibitory Act,' as it was generally designated, passed. It was, in effect, a declaration of war, and a war unrestrained by the customs, and unmitigated by the decencies of civilization. It authorized the confiscation of American vessels and cargoes, and those of all nations found trading in American ports. It authorized British commanders to impress American crews into the British Navy, and to place them on the same footing with voluntarily enlisted seamen; that is, to give them a choice between parricide and being hung at a yard-arm! Finally, it referred all future negotiations to two Commissioners, to be sent out along with a conquering armament, who were allowed to grant pardons to individuals and Colonies, on submission, thus leaving no future alternative opposed to the latter but the sword, and indicating that henceforth all appeals to King or Parliament were cut off. . . . Concurrently with these legislative steps, the practical ones for carrying on the war, with a large army, were entered upon. Finding it difficult or impossible to obtain the necessary recruits at home, and that the existing English and Irish regiments embarked with such reluctance that it was necessary to keep a guard upon the transports 'to keep them from deserting by wholesale,' the Ministry successively applied to Russia, the States-General, and finally, several of the German States for mercenaries. . . . The infamy of filling up the British armament was reserved for the Princes of three or four petty German States. . . . As the news of these events successively reached the American Congress and people, in the winter and spring of 1775–6, the contest took a new coloring. Not only the bold, but the moderate began now to see the real alternative before them. And at a critical moment the remedy, and the path to it, were pointed out by a master hand. 'Common Sense' was published by Thomas Paine, and a more effective popular appeal never went to the bosoms of a nation. Its tone, its manner, its biblical illusions, its avoidance of all openly impassioned appeals to feeling, and its unanswerable common sense were exquisitely adapted to the great audience to which it was addressed; and calm investigation will satisfy the historical student that its effect in preparing the popular mind for the Declaration of Independence, exceeded that of any other paper, speech, or document made to favor it, and it would scarcely be exaggeration to add, than all other such means put together. John Adams, with a childish petulance, and with a rancor so vehement that it appears ridiculous, spares no occasion to underrate Paine's services, and to assault his opinions and character. . . . His transparent motive seems to be to decry the author of a paper which had too much the credit of preparing the public mind for the Declaration of Independence, a credit which Mr. Adams was more than anxious to monopolize. Let us be just. Paine's services in paving the way to the Declaration are not to be mentioned on the same page with John Adams's. Moreover, Independence would have been declared, and, perhaps, nearly as early, had Paine never written. But he did, at a propitious moment, and with consummate adaptation, write a paper which went like the arrow which pierces the centre of the target. Its effect was instantaneous and tremendous. . . . The work ran through innumerable editions in America and France. The world rung with it. . . . It admits of no doubt that pretty early in 1776, all the true Whigs in Congress, moderates as well as ultras, became satis-

fied of the necessity and expediency of separation, and that henceforth it was only a question of time with them. Enactments placing the struggle on the footing of open war, instead of mere insurrection — issuing letters of marque and reprisal against the enemies of our commerce — advising the local authorities to disarm the disaffected — opening the ports of the country to all nations but Great Britain — directing negotiations for foreign alliances to be undertaken — were successively made. Finally, on the 10th of May, a resolution, prepared by John Adams and R. H. Lee, passed the House, advising all the Colonies to form governments for themselves; and in this, unlike preceding instances of giving advice on the same subject, no limitation of the duration of the governments to be formed 'to the continuance of the present dispute' was inserted. This, with a befitting preamble, written by John Adams, was adopted on the 15th, . . . and was, obviously, a long and bold stride in the direction of independence, and must have been understood by all as its signal and precursor. . . . Congress cheered on those whom peculiar circumstances had rendered more backward, and it tarried for them a little by the way; on the other hand, it prudently waited for the prompting of the more forward. Thus it avoided the appearance of dominating over public opinion — thus it 'kept front and rear together.' Early in April (12th), North Carolina 'empowered' her delegates 'to concur with the delegates of other Colonies in declaring independency.' At its 'May session' (the day of the month not appearing in the record under our eye), the General Assembly of Rhode Island abolished its act of allegiance, and directed all commissions and legal processes henceforth to issue in the name and under the authority of the 'Governor and Company.' The Connecticut General Assembly, which met on the 9th of May, before its adjournment (date not before us), repealed its act against high treason, and made the same order with Rhode Island in regard to legal processes. On the 15th of May, Virginia took a still more decisive step, by instructing its delegates in Congress to move for a Declaration of Independence. . . . The Virginia delegates in Congress made choice of Richard H. Lee to move the resolutions contained in their instructions of May 15th; and he did so on Friday, the 7th day of June, John Adams seconding them. Their consideration was postponed until the next day, when they were referred to a committee of the whole, and debated throughout Saturday and the succeeding Monday. On the latter day (10th) Congress resolved: 'That the consideration of the first resolution be postponed to Monday, the first day of July next; and in the meanwhile, that no time be lost, in case the Congress agree thereto, that a committee be appointed to prepare a declaration to the effect of the said first resolution, which is in these words: That these Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British Crown; and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved.'"— H. S. Randall, *Life of Jefferson, v.* 1, *ch.* 4.

A. D. 1776 (January—June).—Engagement of hireling Hessians to reinforce the British arms.—"The [British] Cabinet had entertained some hopes of Russian auxiliaries [application for 20,000 of whom had been made to the Empress Catherine, who refused them with hardly concealed scorn], but the negotiation for that object could not be matured. Early in the year treaties were signed with the Landgrave of Hesse for taking into British pay 12,000 of his men; with the Duke of Brunswick and other petty potentates of Germany for 5,000 more. These little princes, seeing the need of England, which did not choose to lean, as she might and should have done, on her own right arm, insisted on obtaining, and did obtain, most usurious terms. Under the name of levy-money, there was to be paid to them the price of 30 crowns for every foot-soldier. Under the name of subsidy, each of their Serene Highnesses was moreover to be indulged with a yearly sum, irrespective of the pay and subsistence of the troops; and on the plea that in this case no certain number of years was stipulated as the term of service, the Landgrave of Hesse claimed and was promised a double subsidy, namely 450,000 crowns a year. The men were to enter into pay before they began to march! The subsidies were to be continued for one full year at least after the war was over and the troops had returned to their respective homes. Never yet, in short, was the blood of brave men sold on harder terms. The disgrace of this transaction to the German Princes who engaged in it requires little comment. . . . The ablest by far of the German Princes at that time, Frederick of Prussia, was not in general a man of compassionate feelings. He had no especial love or care for the North American cause. . . . Yet even Frederick expressed in strong terms his contempt for the scandalous man-traffic of his neighbours. It is said that whenever any of the newly hired Brunswickers or Hessians had to pass through any portion of his territory he claimed to levy on them the usual toll as for so many head of cattle, since he said they had been sold as such! Nor can the British ministry in this transaction be considered free from blame. . . . Certain it is that among the various causes which at this period wrought upon our trans-Atlantic brethren to renounce their connection with us, there was none more cogent in their minds than the news that German mercenaries had been hired and were coming to fight against them."— Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713–1783, *ch.* 53 (*v.*6).—"The first German troops to start for America were the Brunswickers. These marched from Brunswick on February 22d, 1776, 2,282 strong, and were embarked at Stade, near the mouth of the Elbe. The second division of Brunswickers embarked at the end of May — about 2,000 men. The first Hessians set out from Cassel early in March, and were shipped at Bremerlehe, near the mouth of the Weser. The second division was embarked in June. Together they numbered between 12,000 and 13,000 men. They were for the most part excellent troops and

well equipped, for the Landgrave's little army was one of the best in Germany. . . . The Prince of Waldeck sent his regiment through Cassel without trouble. The Prince of Hesse-Hanau, the Margrave of Anspach-Bayreuth, and the Prince of Anhalt-Zerbst had a longer road." —E. J. Lowell, *The Hessians in the Revolutionary War, ch.* 5.

A. D. 1776 (June).—The British repulsed at Charleston.—"Early in 1776 the task was assigned to Clinton, who had in January departed from Boston, . . . to force and hold the Southern colonies to their allegiance [see North Carolina: A. D. 1775–1776], and Cornwallis, with troops, was sent over under convoy of Sir Peter Parker's fleet, to give Clinton the army he needed. The fleet did not reach North Carolina till May. In March, [Charles] Lee, while in New York, had wished to be ordered to the command in Canada, as 'he was the only general officer on the continent who could speak and think in French.' He was disappointed, and ordered farther south. By May he was in Virginia, ridding the country of Tories, and trying to find out where Parker intended to land. It was expected that Clinton would return north to New York in season to operate with Howe, when he opened the campaign there in the early summer, as that general expected to do, and the interval for a diversion farther south was not long. Lee had now gone as far as Charleston (S. C.), and taken command in that neighborhood, while in charge of the little fort at the entrance of the harbor was William Moultrie, upon whom Lee was inculcating the necessity of a slow and sure fire, in case it should prove that Parker's destination, as it might well be, was to get a foothold in the Southern provinces, and break up the commerce which fed the rebellion through that harbor. The people of Charleston had been for some time engaged on their defences, and 'seem to wish a trial of their mettle,' wrote a looker-on. The fort in question was built of palmetto logs, and was unfinished on the land side. Its defenders had four days' warning, and the neighboring militia were summoned. On the 4th of June the hostile fleet appeared, and having landed troops on an adjacent island, it was not till the 27th that their dispositions were made for an attack. Their ships threw shot at the fort all day, which did very little damage, while the return fire was rendered with a precision surprising in untried artillerists, and seriously damaged the fleet, of which one ship was grounded and abandoned. The expected land attack from Clinton's troops, already ashore on Long Island, was not made. A strong wind had raised the waters of the channel between that island and Sullivan's Island so high that it could not be forded, and suitable boats for the passage were not at hand. A few days later the shattered vessels and the troops left the neighborhood, and Colonel Moultrie had leisure to count the cost of his victory, which was twelve killed and twice as many wounded. The courage of Sergeant Jasper, in replacing on the bastion a flag which had been shot away, became at once a household anecdote."—J. Winsor, *The Conflict Precipitated (Narrative and Critical Hist. of Am. v.* 6, *ch.* 2).

Also in: H. Flanders, *Life of John Rutledge, ch.* 10 (*Lives of the Chief Justices, v.* 1).—C. B. Hartley, *Life of Gen. William Moultrie (Heroes and Patriots of the South), ch.* 2.

A. D. 1776 (June).—Resolutions for Independence.—Making ready for the Declaration.—"Things were now verging on every side to the same point. North Carolina had conferred the necessary powers to vote for independence and foreign alliances as early as the 12th of April. And now came the news from Richard Lee, to Mr. Adams, that on the very day of the passage of the significant preamble in congress, the 15th of May, the convention of Virginia had gone a step further, and had instructed their delegates to propose independence. Authority to assent to its natural consequences, a confederation and foreign alliances, followed as a matter of course. On the other hand, the convention of Massachusetts had referred the subject back to the people, to be considered and acted upon at their primary town meetings, and the responses had been for some time coming in unequivocally enough. So decided was the feeling that Joseph Hawley, impatient of the delay, was stimulating the nowise reluctant Gerry to greater exertions. Perceiving these encouraging indications in opposite quarters, the friends of independence now consulted together, and made up their minds that the moment had come for a final demonstration. Resolutions, embracing the three great points, were carefully matured, which it was arranged that Richard Henry Lee, on behalf of the delegates of Virginia, should present, and John Adams should second, for Massachusetts. The movement took place, accordingly, on the 7th of June. It appears on the journal, recorded with the customary caution, as follows: 'Certain resolutions respecting independency being moved and seconded,—Resolved, that the consideration of them be referred till to-morrow morning; and that the members be enjoined to attend punctually at ten o'clock, in order to take the same into their consideration.' It was well that a measure of so momentous a character should be accompanied with as much of the forms of notice and special assignment as the body could properly give it. The record of what passed at the appointed time has come down to us very barren of details. We only know that the resolutions were referred to the committee of the whole, where they were de-

bated with great spirit during that day, Saturday, and again on Monday, the 10th, by which time it had become quite clear that a majority of the colonies were prepared to adopt the first and leading resolution. This majority was composed of the four New England, and three out of the four southern colonies. But it being deemed unadvisable to place this great act upon so narrow a basis, and a prospect being held out of securing a more general concurrence by delaying the decision, a postponement until the 1st of July was effected by a change of the votes of two colonies. In the mean while, however, as it was thought suitable to accompany the act with an elaborate exposition of the causes which were held to justify it, a committee was ordered to have in charge the preparation of such a paper in season for the adjourned debate. . . . At the same time that Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston, all but the last named being of the movement, were appointed the committee to prepare a declaration, as mentioned, the congress formally voted a second committee, with powers to prepare and digest a form of confederation to be entered into between the colonies; and yet a third, to mature a plan of treaties to be proposed to foreign powers. In this compass were included all the elements of national sovereignty abroad and at home. . . . The bulk of opposition now centred in the five middle colonies, and the pillar upon which it leaned was John Dickinson. But under the combined assaults conducted by the leading colonies of Virginia and Massachusetts, it was plain that victory was become a mere question of time. Jonathan D. Sergeant, who had left congress to hasten a change in the counsels of New Jersey, had been so successful in spiriting up the assembly as to be able to write, on the 15th of June, to Mr. Adams, that the delegates about to be elected would be on the spot by the 1st of July, the day to which the question had been assigned, and that they would 'vote plump.' Equally favorable news soon came from Maryland. . . . Thus were two States secured. But Pennsylvania, Delaware, and New York yet remained to move. In the first of these, recourse was had once more to the so-called committees of conference. . . . And here, on the 23d of June, Dr. Benjamin Rush, then a young man, but acting entirely in sympathy and co-operation with the leaders in congress, moved and carried the appointment of a committee to declare the sense of the conference with respect to an independence of the province on the crown of Great Britain. He and James Smith were then joined with Thomas McKean, the chairman of the conference, in a committee, which was ready the next day with a report affirming the willingness of the deputies of the conference to concur in a vote declaring the United Colonies free and independent States. The report was adopted unanimously, was presented to congress on the 25th, and, doubtless, had its effect in determining those delegates of the colony to absent themselves on the final vote, upon whose resistance its adverse decision depended. As the hesitation of Delaware was chiefly owing to the feeling that pervaded the county of Sussex, Mr. Rodney had repaired thither for the purpose of bringing about a favorable change, in which errand the news came that he was laboring with success. The delegates from New York, no longer interposing any active opposition, yet unwilling to assume a responsibility which their constituents had not authorized, preferred to withdraw from participation in the decision. Such was the state of affairs on the 1st of July, to which day the discussion had been adjourned. There was then little doubt of an affirmative vote on the part of all but four colonies."—J. Q. Adams and C. F. Adams, *Life of John Adams, v.* 1, *pp.* 308–318.

A. D. 1776 (June).—End of proprietary and royal government in Maryland. See MARYLAND: A. D. 1776.

A. D. 1776 (July).—Authorship, adoption and signing of the Declaration of Independence.—"For the last hundred years one of the first facts taught to any child of American birth is, that Jefferson wrote the Declaration of Independence. The original draft in his handwriting was afterward deposited in the State Department. It shows two or three trifling alterations, interlined in the handwritings of Franklin and Adams. Otherwise it came before Congress precisely as Jefferson wrote it. Many years afterward John Adams gave an account of the way in which Jefferson came to be the composer of this momentous document, differing slightly from the story told by Jefferson. But the variance is immaterial. . . . Jefferson's statement seems the better entitled to credit, and what little corroboration is to be obtained for either narrator is wholly in his favor. He says simply that when the Committee came together he was pressed by his colleagues unanimously to undertake the draft; that he did so; that, when he had prepared it, he submitted it to Dr. Franklin and Mr. Adams, separately, requesting their corrections, 'which were two or three only and merely verbal,' 'interlined in their own handwritings'; that the report in this shape was adopted by the committee, and a 'fair copy,' written out by Mr. Jefferson, was then laid before Congress. A somewhat more interesting discussion concerns the question, how Jefferson came to be named first on the committee, to the entire exclusion of Lee, to whom, as mover of the resolution [see, above, (JANUARY—JUNE)], parliamentary etiquette would have assigned the chairmanship. Many explanations have been given, of which some at least appear the outgrowth of personal likings and dislikings. It is certain that Jefferson was not only preëminently fitted for the very difficult task of this peculiar composition, but also that he was a man without an enemy. His abstinence from any active share in debate had saved him from giving irritation; and it is a truth not to be concealed, that there were cabals, bickerings, heart-burnings, perhaps actual enmities among the members of that famous body, which, grandly as it looms up, and rightly too, in the mind's eye, was after all composed of jarring human ingredients. It was well believed that there was a faction opposed to Washington, and it was generally suspected that irascible, vain, and jealous John Adams, then just rising from the ranks of the people, made in this matter common cause with the aristocratic Virginian Lees against their fellow-countrymen. . . . So it is likely enough that a timely illness of Lee's wife was a fortunate excuse for passing him by, and that partly by reason of admitted aptitude, partly because no risk could be run of any interference of personal

feelings in so weighty a matter, Jefferson was placed first on the committee, with the natural result of doing the bulk of its labor. On July 1, pursuant to assignment, Congress, in committee of the whole, resumed consideration of Mr. Lee's resolution, and carried it by the votes of nine colonies. South Carolina and Pennsylvania voted against it. The two delegates from Delaware were divided. Those from New York said that personally they were in favor of it and believed their constituents to be so, but they were hampered by instructions drawn a twelvemonth since and strictly forbidding any action obstructive of reconciliation, which was then still desired. The committee reported, and then Edward Rutledge moved an adjournment to the next day, when his colleagues, though disapproving the resolution, would probably join in it for the sake of unanimity. This motion was carried, and on the day following the South Carolinians were found to be converted; also a third member 'had come post from the Delaware counties' and caused the vote of that colony to be given with the rest; Pennsylvania changed her vote; and a few days later the Convention of New York approved the resolution, 'thus supplying the void occasioned by the withdrawing of her delegates from the vote.' On the same day, July 2, the House took up Mr. Jefferson's draft of the Declaration, and debated it during that and the following day and until a late hour on July 4. Many verbal changes were made, most of which were conducive to closer accuracy of statement, and were improvements. Two or three substantial amendments were made by the omission of passages; notably there was stricken out a passage in which George III. was denounced for encouraging the slave-trade. . . . No interpolation of any consequence was made. Jefferson had ample cause to congratulate himself upon this event of the discussion. . . . He himself spoke not a word in the debate. . . . The burden of argument, from which Jefferson wisely shrank, was gallantly borne by John Adams, whom Jefferson gratefully called 'the colossus of that debate.' Jefferson used afterward to take pleasure in tingeing the real solemnity of the occasion with a coloring of the ludicrous. The debate, he said, seemed as though it might run on interminably, and probably would have done so at a different season of the year. But the weather was oppressively warm, and the room occupied by the deputies was hard by a stable, whence the hungry flies swarmed thick and fierce, alighting on the legs of the delegates and biting hard through their thin silk stockings. Treason was preferable to discomfort, and the members voted for the Declaration and hastened to the table to sign it and escape from the horse-fly. John Hancock, making his great familiar signature, jestingly said that John Bull could read that without spectacles; then, becoming more serious, began to impress on his comrades the necessity of their 'all hanging together in this matter.' 'Yes, indeed,' interrupted Franklin, 'we must all hang together, or assuredly we shall all hang separately.' . . . Amid such trifling, concealing grave thoughts, Jefferson saw his momentous document signed at the close of that summer afternoon."—J. T. Morse, Jr., *Thomas Jefferson, ch.* 3.—"The statements relative to signing the Declaration are conflicting. Jefferson states that it was signed generally on the 4th (Memoirs i, 94), and he in other places reiterates this statement, but this manuscript is not known to be extant. . . . According to the journals, Congress, on the 19th of July, resolved that the 'declaration, passed on the 4th, be fairly engrossed on parchment, with the title and style of "The unanimous Declaration of the Thirteen United States of America," and that the same, when engrossed, be signed by every member of Congress.' On the 2d day of August, the journals say, 'The Declaration being engrossed, and compared at the table, was signed by the members.' . . . This manuscript is preserved in the office of the Secretary of State."—R. Frothingham, *The Rise of the Republic, p.* 545 *and foot-note.*—"Because statesmen like Dickinson and communities like Maryland were slow in believing that the right moment for a declaration of independence had come, the preposterous theory has been suggested that the American Revolution was the work of an unscrupulous and desperate minority, which, through intrigue mingled with violence, succeeded in forcing the reluctant majority to sanction its measures. Such a misconception has its root in an utter failure to comprehend the peculiar character of American political life, like the kindred misconception which ascribes the rebellion of the colonies to a sordid unwillingness to bear their due share of the expenses of the British Empire. It is like the misunderstanding which saw an angry mob in every town-meeting of the people of Boston, and characterized as a 'riot' every deliberate expression of public opinion. No one who is familiar with the essential features of American political life can for a moment suppose that the Declaration of Independence was brought about by any less weighty force than the settled conviction of the people that the priceless treasure of self-government could be preserved by no other means. It was but slowly that this unwelcome conviction grew upon the people; and owing to local differences of circumstances it grew more slowly in some places than in others. Prescient leaders, too, like the Adamses and Franklin and Lee, made up their minds sooner than other people. Even those conservatives who resisted to the last, even such men as John Dickinson and Robert Morris, were fully agreed with their opponents as to the principle at issue between Great Britain and America, and nothing would have satisfied them short of the total abandonment by Great Britain of her pretensions to impose taxes and revoke charters. Upon this fundamental point there was very little difference of opinion in America. As to the related question of independence, the decision, when once reached, was everywhere alike the reasonable result of free and open discussion; and the best possible illustration of this is the fact that not even in the darkest days of the war already begun did any state deliberately propose to reconsider its action in the matter. The hand once put to the plough, there was no turning back."—J. Fiske, *The Am. Revolution, ch.* 4 (*v.* 1).

A. D. 1776 (July).—Text of the Declaration of Independence.—The following is the text of the great manifesto:

"When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the Powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. —Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world. He has refused his Assent to Laws, the most wholesome and necessary for the public good. He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only. He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures. He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people. He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative Powers, incapable of Annihilation have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within. He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new Appropriations of Lands. He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers. He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries. He has erected a multitude of New Offices, and sent hither swarms of Officers to harrass our People, and eat out their substance. He has kept among us, in times of peace, Standing Armies without the Consent of our legislature. He has affected to render the Military independent of and superior to the Civil Power. He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation: For quartering large bodies of armed troops among us: For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States: For cutting off our Trade with all parts of the world: For imposing taxes on us without our Consent: For depriving us in many cases, of the benefits of Trial by Jury: For transporting us beyond Seas to be tried for pretended offences: For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies: For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments: For suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all cases whatsoever. He has abdicated Government here, by declaring us out of his Protection and waging War against us. He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people. He is at this time transporting large armies of foreign mercenaries to compleat the works of death, desolation and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation. He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands. He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes, and conditions. In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free People. Nor have We been wanting in attention to our Brittish brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have

appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends. We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are. and of Right ought to be Free and Independent States; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.—John Hancock. **New Hampshire**—Josiah Bartlett, Wm. A. D. 1776 (July).—Constitutional effect of the Declaration of Independence.—"The Declaration of Independence did not create thirteen sovereign states, but the representatives of the people declared that the former English colonies, under the name which they had assumed of the United States of America, became, from the 4th day of July, 1776, a sovereign state and a member of the family of nations, recognized by the law of nations; and further, that the people would support their representatives with their blood and treasure, in their endeavor to make this declaration a universally recognized fact. Neither congress nor the people relied in this upon any positive right belonging either to the individual colonies or to the colonies as a whole. Rather did the Declaration of Independence and the war destroy all existing political jural relations, and seek their moral justification in the right of revolution inherent in every people in extreme emergencies. . . . Political theories had nothing to do with this development of things. It was the natural result of given circumstances and was an accomplished fact before anyone thought of the legal consequences which might subsequently be deduced from it."—H. von Holst, *Const. and Pol. Hist. of the U. S., v.* 1, *ch.* 1.

A. D. 1776 (July).—Independence declared in New Jersey and Governor Franklin arrested. See NEW JERSEY: A. D. 1774–1776.

A. D. 1776 (August).—The struggle for New York and the Hudson.—Battle of Long Island.—"Washington had been informed, early in January, that General Sir Henry Clinton had sailed from Boston, with a considerable body of troops, on a secret expedition. Apprehending that the city of New York was his destination, he immediately dispatched General Charles Lee to Connecticut to raise troops, and to proceed to that city to watch and oppose Clinton wherever he might attempt to land. Six weeks before the evacuation of Boston [March 17, 1776], Lee had encamped near New York with twelve hundred militia. Already the Sons of Liberty had been busy, and overt acts of rebellion had been committed by them. They had seized the cannons at Fort George, and driven Tryon, the royal governor, on board the Asia, a British armed vessel in the harbor. In March, Clinton arrived at Sandy Hook, just outside New York harbor, and on the same day, the watchful Lee providentially entered the city. The movement, although without a knowledge of Clinton's position, was timely, for it kept him at bay. Foiled in his attempt upon New York, that commander sailed southward. . . . The destination of Howe, when he left Boston, was also unknown to Washington. Supposing he, too, would proceed to New York, he put the main body of his army in motion toward that city, as soon as he had placed Boston in a state of security. He arrived in New York about the middle of April [April 14], and proceeded at once to fortify the town and vicinity, and also the passes of the Hudson Highlands, fifty miles above. In the mean while, General Lee, who had been appointed to command the American forces in the South, had left his troops in the charge of General Lord Stirling [March 7], and was hastening toward the Carolinas to watch the movements of Clinton, arouse the Whigs, and gather an army there. . . . Pursuant to instructions, General Howe proceeded toward New York, to meet General Clinton and Parker's fleet. He left Halifax on the 11th of June, [1776], and arrived at Sandy Hook on the 29th. On the 2d of July he took possession of Staten Island, where he was joined by Sir Henry Clinton [July 11], from the South, and his brother, Admiral Lord Howe [July 12], with a fleet and a large land force, from England. Before the first of August, other vessels arrived with a part of the Hessian troops, and on that day, almost 30,000 soldiers, many of them tried veterans, stood ready to fall upon the republican army of 17,000 men, mostly militia, which lay intrenched in New York and vicinity, less than a dozen miles distant. The grand object in view was the seizure of New York and the country along the Hudson, so as to keep open a communication with Canada, separate the

patriots of New England from those of the other states, and to overrun the most populous portion of the revolted colonies. This was the military plan, arranged by ministers. They had also prepared instructions to their commanding generals, to be pacific, if the Americans appeared disposed to submit. Lord Howe and his brother, the general, were commissioned to 'grant pardon to all who deserved mercy,' and to treat for peace, but only on terms of absolute submission on the part of the colonies, to the will of the King and parliament. After making a foolish display of arrogance and weakness, in addressing General Washington as a private gentleman, and being assured that the Americans had been guilty of no offense requiring a 'pardon' at their hands, they prepared to strike an immediate and effective blow. The British army was accordingly put in motion on the morning of the 22d of August [1776], and during that day, 10,000 effective men, and forty pieces of cannon, were landed on the western end of Long Island, between the present Fort Hamilton and Gravesend village. Already detachments of Americans under General Sullivan, occupied a fortified camp at Brooklyn, opposite New York, and guarded seven passes on a range of hills which extend from the Narrows to the village of Jamaica. When intelligence of the landing of the invading army reached Washington, he sent General Putnam, with large reinforcements, to take the chief command on Long Island; and to prepare to meet the enemy. The American troops on the island now [August 26], numbered about 5,000. The British moved in three divisions. The left, under General Grant, marched along the shore toward Gowanus; the right, under Clinton and Cornwallis, toward the interior of the island; and the center, composed chiefly of Hessians, under De Heister, marched up the Flatbush road, south of the hills. Clinton moved under cover of night, and before dawn on the morning of the 27th, he had gained possession of the Jamaica pass, near the present East New York. At the same time, Grant was pressing forward along the shore of New York Bay, and at day-break, he encountered Lord Stirling, where the monuments of Greenwood cemetery now dot the hills. De Heister advanced from Flatbush at the same hour, and attacked Sullivan, who, having no suspicions of the movements of Clinton, was watching the Flatbush Pass. A bloody conflict ensued, and while it was progressing, Clinton descended from the wooded hills, by the way of Bedford, to gain Sullivan's rear. As soon as the latter perceived his peril, he ordered a retreat to the American lines at Brooklyn. It was too late; Clinton drove him back upon the Hessian bayonets, and after fighting desperately, hand to hand, with the foe in front and rear, and losing a greater portion of his men, Sullivan was compelled to surrender. As usual, misfortunes did not come single. While these disasters were occurring on the left, Cornwallis descended the port-road to Gowanus, and attacked Stirling. They fought desperately, until Stirling was made prisoner. Many of his troops were drowned while endeavoring to escape across the Gowanus Creek, as the tide was rising; and a large number were captured. At noon the victory for the British was complete. About 500 Americans were killed or wounded, and 1,100 were made prisoners. These were soon suffering dreadful horrors in prisons and prison-ships, at New York. The British loss in killed, wounded, and prisoners, was 367. It was with the deepest anguish that Washington had viewed, from New York, the destruction of his troops, yet he dared not weaken his power in the city, by sending reinforcements to aid them. He crossed over on the following morning [August 28], with Mifflin, who had come down from the upper end of York island with a thousand troops, and was gratified to find the enemy encamped in front of Putnam's lines, and delaying an attack, until the British fleet should co-operate with him. This delay allowed Washington time to form and execute a plan for the salvation of the remainder of the army, now too weak to resist an assault with any hope of success. Under cover of a heavy fog, which fell upon the hostile camps at midnight of the 29th, and continued until the morning of the 30th, he silently withdrew them from the camp, and, unperceived by the British, they all crossed over to New York in safety, carrying everything with them but their heavy cannons. . . . Howe, who felt sure of his prey, was greatly mortified, and prepared to make an immediate attack upon New York, before the Americans should become reinforced, or should escape from it."—B. J. Lossing, *Family Hist. of the U. S., period* 5, *ch.* 3.

A. D. 1776 (September).—Quiet death of proprietary government in Pennsylvania and adoption of a State Constitution. See Pennsylvania: A. D. 1776.

A. D. 1776 (September—November).—The struggle for New York and the Hudson.—Successes of the British.—Washington's retreat into New Jersey.—"At daybreak the British awoke, but it was too late. They had fought a successful battle, they had had the American army in their grasp, and now all was over. The victory had melted away, and, as a grand result, they had a few hundred prisoners, a stray boat with three camp-followers, and the deserted works in which they stood. To make such a retreat as this was a feat of arms as great as most victories, and in it we see, perhaps as plainly as anywhere, the nerve and quickness of the man who conducted it. It is true it was the only chance of salvation, but the great man is he who is entirely master of his opportunity, even if he have but one. The outlook, nevertheless, was, as Washington wrote, 'truly distressing.' The troops were dispirited, and the militia began to disappear, as they always did after a defeat. Congress would not permit the destruction of the city; different interests pulled in different directions, conflicting opinions distracted the councils of war, and, with utter inability to predict the enemy's movements, everything led to halfway measures and to intense anxiety, while Lord Howe tried to negotiate with Congress, and the Americans waited for events, Washington, looking beyond the confusion of the moment, saw that he had gained much by delay, and had his own plan well defined. . . . Every one else, however, saw only past defeat and present peril.

The British ships gradually made their way up the river, until it became apparent that they intended to surround and cut off the American army. Washington made preparations to withdraw, but uncertainty of information came near rendering his precautions futile. September 15th the men-of-war opened fire, and troops were landed near Kip's Bay. The militia in the breastworks at that point had been at Brooklyn and gave way at once, communicating their panic to two Connecticut regiments. Washington, galloping down to the scene of battle, came upon the disordered and flying troops. He dashed in among them, conjuring them to stop, but even while he was trying to rally them they broke again on the appearance of some sixty or seventy of the enemy, and ran in all directions. In a tempest of anger Washington drew his pistols, struck the fugitives with his sword, and was only forced from the field by one of his officers seizing the bridle of his horse and dragging him away from the British, now within a hundred yards of the spot. . . . The rout and panic over, Washington quickly turned to deal with the pressing danger. With coolness and quickness he issued his orders, and succeeded in getting his army off, Putnam's division escaping most narrowly. He then took post at King's Bridge, and began to strengthen and fortify his lines. While thus engaged, the enemy advanced, and on the 16th a sharp skirmish was fought, in which the British were repulsed, and great bravery was shown by the Connecticut and Virginia troops, the two commanding officers being killed. This affair, which was the first gleam of success, encouraged the troops, and was turned to the best account by the general. Still a successful skirmish did not touch the essential difficulties of the situation, which then as always came from within, rather than without. To face and check 25,000 well equipped and highly disciplined soldiers, Washington had now some 12,000 men, lacking in everything which goes to make an army, except mere individual courage and a high average of intelligence. Even this meagre force was an inconstant and diminishing quantity, shifting, uncertain, and always threatening dissolution. The task of facing and fighting the enemy was enough for the ablest of men; but Washington was obliged also to combat and overcome the inertness and dulness born of ignorance, and to teach Congress how to govern a nation at war. . . . Meanwhile the days slipped along, and Washington waited on the Harlem Plains, planning descents on Long Island, and determining to make a desperate stand where he was, unless the situation decidedly changed. Then the situation did change, as neither he nor any one else apparently had anticipated. The British warships came up the Hudson past the forts, brushing aside our boasted obstructions, destroying our little fleet, and getting command of the river. Then General Howe landed at Frog's Point, where he was checked for the moment by the good disposition of Heath, under Washington's direction. These two events made it evident that the situation of the American army was full of peril, and that retreat was again necessary. Such certainly was the conclusion of the council of war, on the 16th, acting this time in agreement with their chief. Six days Howe lingered on Frog's Point, bringing up stores or artillery or something, . . . and gave six days to Washington. They were of little value to Howe, but they were of inestimable worth to Washington, who employed them in getting everything in readiness, in holding his council of war, and then on the 17th in moving deliberately off to very strong ground at White Plains. . . . On the 28th, Howe came up to Washington's position, and found the Americans quite equal in numbers, strongly intrenched, and awaiting his attack with confidence. He hesitated, doubted, and finally feeling that he must do something, sent 4,000 men to storm Chatterton Hill, an outlying post, where some 1,400 Americans were stationed. There was a short, sharp action, and then the Americans retreated in good order to the main army, having lost less than half as many men as their opponents. With caution now much enlarged, Howe sent for reinforcements, and waited two days. The third day it rained, and on the fourth Howe found that Washington had withdrawn to a higher and quite impregnable line of hills, where he held all the passes in the rear and awaited a second attack. Howe contemplated the situation for two or three days longer, and then broke camp and withdrew to Dobbs Ferry. Such were the great results of the victory of Long Island, two wasted months, and the American army still untouched. Howe was resolved, however, that his campaign should not be utterly fruitless, and therefore directed his attention to the defences of the Hudson, Fort Lee, and Fort Washington, and here he met with better success. Congress, in its military wisdom, had insisted that these forts must and could be held. . . . An attempt was made to hold both forts, and both were lost, as he [Washington] had foreseen. From Fort Lee the garrison withdrew in safety. Fort Washington was carried by storm, after a severe struggle. Twenty-six hundred men and all the munitions of war fell into the hands of the enemy. It was a serious and most depressing loss, and was felt throughout the continent. Meantime Washington had crossed into the Jerseys, and, after the loss of Fort Lee, began to retreat before the British, who, flushed with victory, now advanced rapidly under Lord Cornwallis."—H. C. Lodge, *George Washington, v.* 1, *ch.* 6.

A. D. 1776-1777. — Washington's retreat through New Jersey and his masterly return movement. — The victories at Trenton and Princeton retrieving the situation.—"On the 17th [of November] Washington ordered Lee [who had lately returned from the south, and who had command of 7,000 men at Northcastle] to come over and join him; but Lee disobeyed, and in spite of repeated orders from Washington he stayed at Northcastle till the 2d of December. General Ward had some time since resigned, so that Lee now ranked next to Washington. A good many people were finding fault with the latter for losing the 3,000 men at Fort Washington, although, as we have seen, that was not his fault but the fault of Congress. Lee now felt that if Washington were ruined, he

would surely become his successor in the command of the army, and so, instead of obeying his orders, he spent his time in writing letters calculated to injure him. Lee's disobedience thus broke the army in two, and did more for the British than they had been able to do for themselves since they started from Staten Island. It was the cause of Washington's flight through New Jersey, ending on the 8th of December, when he put himself behind the Delaware river, with scarcely 3,000 men. Here was another difficulty. The American soldiers were enlisted for short terms, and when they were discouraged, as at present, they were apt to insist upon going home as soon as their time had expired. It was generally believed that Washington's army would thus fall to pieces within a few days. Howe did not think it worth while to be at the trouble of collecting boats wherewith to follow him across the Delaware. Congress fled to Baltimore. People in New Jersey began taking the oath of allegiance to the crown. Howe received the news that he had been knighted for his victory on Long Island, and he returned to New York to celebrate the occasion. While the case looked so desperate for Washington, events at the north had taken a less unfavourable turn. Carleton [who began preparations to invade the province of New York as soon as Arnold retreated from Canada] had embarked on Lake Champlain early in the autumn with his fine army and fleet. Arnold had fitted up a small fleet to oppose his advance, and on the 11th of October there had been a fierce naval battle between the two near Valcour Island, in which Arnold was defeated, while Carleton suffered serious damage. The British general then advanced upon Ticonderoga, but suddenly made up his mind that the season was too late for operations in that latitude. The resistance he had encountered seems to have made him despair of achieving any speedy success in that quarter, and on the 3d of November he started back for Canada. This retreat relieved General Schuyler at Albany of immediate cause for anxiety, and presently he detached seven regiments to go southward to Washington's assistance. On the 2d of December Lee crossed the Hudson with 4,000 men, and proceeded slowly to Morristown. Just what he designed to do was never known, but clearly he had no intention of going beyond the Delaware to assist Washington, whom he believed to be ruined. Perhaps he thought Morristown a desirable position to hold, as it certainly was. Whatever his plans may have been, they were nipped in the bud. For some unknown reason he passed the night of the 12th at an unguarded tavern, about four miles from his army; and there he was captured next morning by a party of British dragoons, who carried him off to their camp at Princeton. The dragoons were very gleeful over this unexpected exploit, but really they could not have done the Americans a greater service than to rid them of such a worthless creature. The capture of Lee came in the nick of time, for it set free his men to go to the aid of Washington. Even after this force and that sent by Schuyler had reached the commander-in-chief, he found he had only 6,000 men fit for duty. With this little force Washington instantly took the offensive. It was the turning-point in his career and in the history of the Revolutionary War. On Christmas, 1776, and the following nine days, all Washington's most brilliant powers were displayed. The British centre, 10,000 strong, lay at Princeton. The principal generals, thinking the serious business of the war ended, had gone to New York. An advanced party of Hessians, 1,000 strong, was posted on the bank of the Delaware at Trenton, and another one lower down, at Burlington. Washington decided to attack both these outposts, and arranged his troops accordingly, but when Christmas night arrived, the river was filled with great blocks of floating ice, and the only division which succeeded in crossing was the one that Washington led in person. It was less than 2,500 in number, but the moment had come when the boldest course was the safest. By daybreak Washington had surprised the Hessians at Trenton and captured them all. The outpost at Burlington, on hearing the news, retreated to Princeton. By the 31st Washington had got all his available force across to Trenton. Some of them were raw recruits just come in to replace others who had just gone home. At this critical moment the army was nearly helpless for want of money, and on New Year's morning Robert Morris was knocking at door after door in Philadelphia, waking up his friends to borrow the $50,000, which he sent off to Trenton before noon. The next day Cornwallis arrived at Princeton, and taking with him all the army, except a rear-guard of 2,000 men left to protect his communications, came on toward Trenton. When he reached that town, late in the afternoon, he found Washington entrenched behind a small creek just south of the town, with his back toward the Delaware river. 'Oho!' said Cornwallis, 'at last we have run down the old fox, and we will bag him in the morning.' He sent back to Princeton, and ordered the rear-guard to come up. He expected next morning to cross the creek above Washington's right, and then press him back against the broad and deep river, and compel him to surrender. Cornwallis was by no means a careless general, but he seems to have gone to bed on that memorable night and slept the sleep of the just. Washington meanwhile was wide awake. He kept his front line noisily at work digging and entrenching, and made a fine show with his camp-fires. Then he marched his army to the right and across the creek, and got around Cornwallis's left wing and into his rear, and so went on gayly toward Princeton. At daybreak he encountered the British rear-guard, fought a sharp battle with it and sent it flying, with the loss of one-fourth of its number. The booming guns aroused Cornwallis too late. To preserve his communications with New York, he was obliged to retreat with all haste upon New Brunswick, while Washington's victorious army pushed on and occupied the strong position at Morristown. There was small hope of dislodging such a general from such a position. But to leave Washington in possession of Morristown was to resign to him the laurels of this half-year's work. For that position guarded the Highlands of the Hudson on the one hand, and the roads to Philadelphia on the other. Except that the British had taken the city of New York — which from the start was almost a foregone conclusion — they were no better off than in July when Lord Howe had landed on Staten Island. In nine days the tables had been completely turned. The attack upon

an outpost had developed into a campaign which quite retrieved the situation. The illtimed interference of Congress, which had begun the series of disasters, was remedied; the treachery of Lee was checkmated; and the cause of American Independence, which on Christmas Eve had seemed hopeless, was now fairly set on its feet. Earlier successes had been local; this was continental. Seldom has so much been done with such slender means."—J. Fiske, *The War of Independence, ch.* 6.—"The effect of these two unexpected strokes at Trenton and Princeton was to baffle Howe, and utterly disconcert his plans. Expecting to march upon Philadelphia at his leisure, he suddenly finds Washington turning about and literally cutting his way through the British posts, back to a point where he threatened Howe's flank and rear. The enemy were at once compelled to retire from all their positions below Brunswick, give up the thought of wintering in Philadelphia, and fall back to the vicinity of New York. When Horace Walpole heard of these movements, he wrote to Sir Horace Mann: 'Washington has shown himself both a Fabius and a Camillus. His march through our lines is allowed to have been a prodigy of generalship. In one word, I look upon a great part of America as lost to this country.' Here the campaign closed. Washington could not be dislodged from his strong mountain position, and Howe was satisfied to rest his troops and postpone further operations until the next season. Meantime the country took heart, Congress voted troops and supplies, and the army was recruited and organized on a better basis. 'The business of war is the result of Experience,' wrote Wolcott from Congress, with faith unshaken during the darkest hours of the campaign; and experience was now put to good profit. The crisis was passed. Events proved decisive. Hardship and anxiety were yet to come during succeeding years of the war; but it was the result of this year's struggle that cleared away misgivings and confirmed the popular faith in final success. England could do no more than she had done to conquer America; while America was now more ready than ever to meet the issue. Independence was established in the present campaign—in the year of its declaration; and more than to any others we owe this political privilege to the men who fought from Long Island to Princeton."—H. P. Johnston, *Campaign of* 1776 (*Memoirs of the Long Island Hist. Soc., v.* 3), *pt.* 1, *ch.* 8.

A. D. 1776-1777.—Prisoners and exchanges.—British treatment of captives.—The Jersey Prison-ship and the Sugar-house prison.—In New York, during the British occupation of the city, "wretched indeed was the condition of the poor refugee, of the sick soldier, and, above all, the patriot prisoner. The newspapers are filled with calls for charitable contributions for women and children perishing with cold and hunger, for disabled soldiers and families without a shelter. . . . But if the favored Tories suffered, what must have been the condition of the patriot prisoners, confined by thousands in bleak barracks, churches, and prison-ships? Let us pass up Broadway, amidst the uncleared ruins, and, turning down Liberty Street, pause before a huge brick building near the Middle Dutch Church. It is five stories high, with broken windows, through which the fierce winds of winter rush unrestrained. Through its imperfect roof and various openings, snow, ice, and water penetrate to every part of the building. Sentries pace round its walls prepared to fire upon any of its maddened inmates who attempt in desperation to escape. Wounded men crawl to the windows begging aid; but the impassive sentinel turns back the gifts of the charitable. No communication with the prisoners can be allowed. The walls within are bare and cheerless, nor do any of the common conveniences of life soften the horrors of those dreary chambers. Yet the old Sugar-House is the most crowded building in New York, and hundreds of prisoners, some chained, others at large, fill its comfortless interior. In the old Sugar-House were confined the prisoners of Long Island, the captives of sudden forays, the patriot citizen, and the heroes of the rebel army. Clothed in rags and scarcely covered from the winter air, crowded in narrow apartments and broken by hunger and disease, the prisoners died by thousands. The sick lay down on beds of snow to perish; the feeble wounded quivered in the February blast. Food of the coarsest kind was served out to them in scanty measure, and devoured with the eagerness of famine. Every night ten or twenty died; every day their corpses were thrown into pits without a single rite of burial. When led out to be exchanged, the glad hope of freedom gave them no joy—they died on the way to their friends, or lingered out a few weeks of miserable decline in the hospitals of the Jerseys. So wretched was their condition that Washington refused to consider them fit subjects for exchange. 'You give us only the dead or dying,' he wrote to Howe, 'for our well-fed and healthy prisoners.' Howe, as if in mockery, replied that they had been kept in 'airy, roomy buildings,' on the same fare as his own soldiers. Washington pointed to the condition in which they reached him—diseased, famished, emaciated, and dying, as they were conducted to his quarters. Across the river, in Wallabout Bay, lay the prison-ship 'Jersey.' She was the hulk of a 64 gun ship, long unseaworthy, her masts and rigging gone, her figurehead broken off, and her whole appearance singularly repulsive. Yet on board of the Jersey were confined 1,200 captured seamen. She was never cleansed, and lay in that condition seven years. No fires warmed her occupants in winter, no screen sheltered them from the August sun; no physician visited the sick, no clergyman consoled the dying there. Poor and scanty food, the want of clothing, cleanliness, and exercise, and raging diseases that never ceased their ravages, made the Jersey a scene of human suffering to which the Black Hole of Calcutta might favorably compare. Benevolent Tories would sometimes convey by stealth food or clothing to her unhappy inmates; but this was little. Toward the close of the war the British, from shame or pity, made some improvement in her condition; but she remained throughout the contest a centre of sickness and death, always decimated by disease and always replenished with new victims. The bones of her dead, estimated at 11,000, lie buried on the

Brooklyn shore. The crowded city itself was never free from contagion. In winter the small-pox made fearful ravages."—E. Lawrence, *New York in the Revolution (Harper's Magazine, July,* 1868).

A. D. 1776-1778.—Attitude and feeling of France.—Her disposition to aid the colonies and the reasons for it.—The American embassy to the French court.—Silas Deane and Beaumarchais.—Franklin at Passy.—"On March 17, 1776, Vergennes presented to his associates in the cabinet—Maurepas, Turgot (controller-general), Sartine (secretary of the navy), and St. Germain (secretary of war)—a paper entitled 'Considerations,' which, after for many years evading the search of historians, . . . was brought to light by De Witt and republished by Doniol. In this important paper Vergennes, after some general reflections on the advantages which the two crowns of France and Spain derived from the continuance of the civil war in America, and, on the other hand, on the inconveniences which might arise from the independence of the Colonies, and the probability that, in case of failure in North America, England would, to recover its credit, turn its arms against the French and Spanish possessions in America, proceeds to consider the course at once to be pursued. He bitterly attacks the English for their habitual breach of good faith, violation of treaties, and disregard of that observance of the sacred laws of morality which distinguish the French, and infers that they will take the first opportunity to declare war against France or invade Mexico. No doubt, if the kings of France and Spain had martial tendencies; if they obeyed the dictates of their own interests, and perhaps the justice of their cause, which was that of humanity, so often outraged by England; if their military resources were in a sufficiently good condition, they would feel that Providence had evidently chosen that very hour for humiliating England and revenging on her the wrongs she had inflicted on those who had the misfortune to be her neighbors and rivals, by rendering the resistance of the Americans as desperate as possible. The exhaustion produced by this internecine war would prostrate both England and her Colonies, and would afford an opportunity to reduce England to the condition of a second-rate power; to tear from her the empire she aimed at establishing in the four quarters of the world with so much pride and injustice, and relieve the universe of a tyranny which desires to swallow up both all the power and all the wealth of the world. But the two crowns not being able to act in this way, they must have recourse to a circumspect policy." Vergennes "draws the following inferences: (1) That they should continue dexterously to keep the English ministry in a state of false security with respect to the intentions of France and Spain. (2) That it would be politic to give the insurgents secret assistance in military stores and money; that the admitted utility would justify this little sacrifice, and no loss of dignity or breach of equity would be involved in it. (3) That it would not be consistent with the king's dignity or interest to make an open contract with the insurgents until their independence was achieved. (4) That in case France and Spain should furnish assistance, they should look for no other return than the success of the political object they had at that moment in view, leaving themselves at liberty to be guided by circumstances as to any future arrangements. (5) That perhaps a too-marked inactivity at the present crisis might be attributed by the English to fear, and might expose France to insults to which it might not be disposed to submit. The English, he adds, respect only those who can make themselves feared. (6) That the result to which all these considerations led was that the two crowns should actively prepare means to resist or punish England, more especially as, of all possible issues, the maintenance of peace with that power was the least probable. . . . It would be a mistake, however, to attribute the French support of America exclusively to a feeling of revenge for the humiliations of the prior war. Other motives came in and exercised a decisive influence. There was a conviction, and a right one, in France that for Britain to hold under control the whole of North America as well as of India would give her a maritime supremacy, as well as a superiority in wealth, which would constitute a standing menace to the rest of the civilized world. There was, again, an enthusiasm among the young nobility and among officers in the army for America, which, even aside from the bitterness towards Britain with which it was mingled, had great effect on people as well as on court; and to this was added the sympathy of doctrinaire political philosophers who then and for some time afterwards had great power in forming French public opinion. By the enthusiasm of the young nobility the queen—brilliant, bold, weary of the traditions of the old court, inconsiderate as to ultimate political results—was affected, and through her her husband was reached. But above this was the sense of right which was uppermost in the breast of the unfortunate sovereign who then, with little political experience but high notions of duty as well as of prerogative, occupied the throne."—F. Wharton, ed., *Revolutionary Diplomatic Corr. of the U. S., Introd., ch.* 4 (*v.* 1).—"From the earliest moment France had been hopefully regarded by the colonists as probably their friend and possibly their ally. To France, therefore, the first American envoy was dispatched with promptitude [receiving his instructions in March and reaching Paris in the following June, 1776] even before there was a declaration of independence or an assumption of nationality. Silas Deane was the man selected. He was the true Yankee jack-at-all-trades; he had been graduated at Yale College, then taught school, then practiced law, then engaged in trade, had been all the while advancing in prosperity and reputation, had been a member of the first and second congresses, had failed of reëlection to the third, and was now without employment. Mr. Parton describes him as 'of somewhat striking manners and good appearance, accustomed to live and entertain in liberal style, and fond of showy equipage and appointment.' Perhaps his simple-minded fellow-countrymen of the provinces fancied that such a man would make an imposing figure at an European court. He developed no other peculiar fitness for his position; he could not even speak French; and it

proved an ill hour for himself in which he received this trying and difficult honor. . . . Deane arrived in France in June, 1776. He had with him a little ready money for his immediate personal expenses, and some letters of introduction from Franklin. It was intended to keep him supplied with money by sending cargoes of tobacco, rice, and indigo consigned to him, the proceeds of which would be at his disposal for the public service. He was instructed to seek an interview with de Vergennes, the French minister for foreign affairs, and to endeavor with all possible prudence and delicacy to find out what signs of promise the disposition of the French government really held for the insurgents. He was also to ask for equipment for 25,000 troops, ammunition, and 200 pieces of field artillery, all to be paid for — when Congress should be able! In France he was to keep his mission cloaked in secure secrecy, appearing simply as a merchant conducting his own affairs. . . . Before the arrival of Deane the interests of the colonies had been already taken in hand and substantially advanced in France by one of the most extraordinary characters in history. Caron de Beaumarchais was a man whom no race save the French could produce, and whose traits, career, and success lie hopelessly beyond the comprehension of the Anglo-Saxon. Bred a watchmaker, he had the skill, when a mere youth, to invent a clever escapement balance for regulating watches; had he been able to insert it into his own brain he might have held more securely his elusive good fortunes. From being an ingenious inventor he became an adventurer general, watchmaker to the king, the king's mistresses, and the king's daughters, the lover, or rather the beloved, of the wife of the controller of the king's kitchen, then himself the controller, thence a courtier, and a favorite of the royal princesses. Through a clever use of his opportunities he was able to do a great favor to a rich banker, who in return gave him chances to amass a fortune, and lent him money to buy a patent of nobility. This connection ended in litigation, which was near ruining him; but he discovered corruption on the part of the judge, and thereupon wrote his Memorials, of which the wit, keenness, and vivacity made him famous. He then rendered a private, personal, and important service to Louis XV., and soon afterwards another to the young Louis XVI. . . . He became frenzied in the American cause. In long and ardent letters he opened upon King Louis and his ministers a rattling fire of arguments sound and unsound, statements true and untrue, inducements reasonable and unreasonable, forecastings probable and improbable, politics wise and unwise, all designed to show that it was the bounden duty of France to adopt the colonial cause."—J. T. Morse, Jr., *Benjamin Franklin, ch.* 9.— Soon after the arrival of Deane in Paris, the American Congress, having determined to declare the independence of the states represented in it, appointed a committee "to prepare the plan of a treaty to be proposed to foreign powers, which, after a long discussion, was at length agreed to, and ministers were appointed to negotiate the treaties proposed. Mr. Franklin, Mr. Deane, and Mr. Jefferson, were elected; but, the last mentioned gentleman having declined accepting the appointment offered him, Mr. Arthur Lee, then in London, was chosen in his place. These transactions were placed on the secret journals, and no member was permitted to give any specific information concerning them, or to state more than, 'that congress had taken such steps as they judged necessary for obtaining foreign alliances.' The secret committee were directed to make an effectual lodgment in France of £10,000 sterling, subject to the order of these commissioners. They assembled in Paris early in the winter, and had an immediate interview with the count De Vergennes. It was perceived that the success of the American cruisers, whose captures had been so considerable as to raise the price of insurance higher than it had been at any time during the war with both France and Spain, had excited a very favourable opinion of the capacities and energies of the nation. They were assured that the ports of France would remain open to their ships, and that the American merchants might freely vend in them every article of commerce, and purchase whatever might be useful for their country. But it was apparent that the minister wished to avoid a rupture with England, and was, therefore, unwilling to receive them openly as the ministers of the United States, or to enter into any formal negotiation with them."—J. Marshall, *Life of Washington, v.* 3, *ch.* 7.—"It is . . . a settled rule of diplomacy that a minister should not be pressed upon a foreign court by which it is understood that he will not be received. To this may be added the rule that applications for loans should, unless as part of a treaty alliance, be made through business channels. In disregard of these rules the majority of Congress, under the influence of Richard H. Lee and Samuel Adams, instituted a series of missions to European courts for the bare purpose of borrowing money, when the courts so addressed not only gave no intimation that they would receive these envoys, but when, from the nature of things, as well as from unofficial intimation, it should have been known that such reception would be refused. With France there was no difficulty, as France had intimated unofficially that such envoys would be received, at least in a private capacity, France being then ready to take the consequence of war with Britain. And this reception was accorded . . . first to Silas Deane, then to Franklin, and then to Arthur Lee. Here Franklin thought Congress should stop, saying that ministers should not be sent to sovereigns without first having some sort of assurance of recognition of the United States as an independent sovereignty, and that a 'virgin' republic, as he called it, should wait till there was some such recognition before thrusting embassies on foreign courts with demands for money. Congress thought differently. Arthur Lee was instructed to go to Madrid with an alternate commission to Berlin; William Lee was sent to Vienna, Dana to St. Petersburg, Adams to The Hague, Izard to Florence, and the instructions in each case were to demand not only recognition, but subsidy. . . . The policy of sending ministers to European courts where such ministers were not received worked injuriously to the United States from the mere fact of their non-reception. Another difficulty arose from the circumstance that several of these ministers took up their residence in Paris, and, without specific authority, considered it their duty to take part in the counsels of the American legation. Thus Ralph Izard,

commissioned to Tuscany, never went there, but remained in Paris, claiming a right to be informed of all the details of the negotiations with France, and occupying no small share of the time and care of Franklin with discussions of this claim, which Franklin could not accede to, but on which Izard continued to insist. When the triple legation of Franklin, Deane, and Arthur Lee (and afterwards Franklin, Arthur Lee, and Adams), was commissioned, it was understood that its members were to divide, so that one (Franklin) should remain in Paris, while the others should take charge of the missions to other capitals. But Arthur Lee, when he found that he could not be received in Madrid, or in Vienna, or in Berlin, made but brief excursions to Spain, to Austria, and to Berlin, reporting himself after each short trip promptly at Paris, there to differ from Franklin not only as to important business details, but as to the whole policy of the mission. When Adams was in Paris, during their joint mission, he concurred with Arthur Lee in what turned out to be the disastrous measure of removing Williams as commercial agent and putting in his place William Lee, with a nephew of William and Arthur Lee as clerk; while on the whole question of sending legations to foreign courts which had not consented to receive them, and in the still more important question of the attitude to be assumed by the commissioners to the French court, Adams agreed with Lee. . . . It is due to Adams to say that he saw the inherent difficulties of permanent missions conducted by three joint commissioners; that he recommended that there should be but one permanent minister to France; and that he recognized Franklin's great influence with the French ministry as a strong reason for his retention though without colleagues. But there can be no doubt that down to the period when Franklin became sole minister, the American cause in Europe was much embarrassed by the fact that he had colleagues associated with him."—F. Wharton, *Introd. to The Revolutionary Diplomatic Correspondence of The U. S., ch.* 1, *sect.* 16–17, *and ch.* 9, *sect.* 106 (*v.* 1).—Before Franklin or Lee reached France, Silas Deane had already entered into negotiations with Beaumarchais and opened a train of dealings which proved unfortunate for both. Leaving aside "all the long controversy about the rights and wrongs of Beaumarchais, which have never been completely and satisfactorily solved, . . . it appears that a large part of the misunderstanding between him and Deane and Arthur Lee is attributable to a change of plan between April and July, 1776. Beaumarchais's scheme of operation, when he saw Lee in London, was to expend money which should, at least in pretence and form, be obtained from the voluntary contributions of wealthy Frenchmen in aid of the American cause; but in July, when he saw Deane, that scheme had been dropped, and the project was that he should appear as a merchant. . . . In May, there was a plan on the part of the French government to employ a real merchant; now the plan was to employ a comedy merchant. This was exactly the rôle which Beaumarchais was qualified to fill, and he proceeded to establish and open a large house, with all the accessories of a house of business, as the same are understood and represented on the stage. At that time it was believed that the colonists had plenty of exportable products which they could and would contribute for the purpose [purchase?] of arms and ammunition. It was thought that their main difficulty would be to find any market in which they could purchase contraband of war. The chief assistance, therefore, which they would need from France would be secret permission to make this exchange in France. Beaumarchais's commercial operations would be real commercial operations, and at worst could only issue in some expenses and losses, on the balance of account, which the French government might have to make good. Beaumarchais approached Deane with all the forms and reality of a commercial proposition, and Deane assured him that he should have some returns in six months, and full pay for everything which he supplied in a year. Two days later they made a contract by which Congress was to pay the current price of the goods in America when they should arrive, or take them at the cost price, with insurance, charges, and commission 'proportioned to the trouble and care, which cannot now be fixed.' . . . August 18, Beaumarchais writes to the Committee of Secret Correspondence that, led by esteem for a people struggling for liberty, he has established an extensive commercial house, solely for the purpose of supplying them with all things useful, even gold for the payment of troops; and that without waiting for their consent he has already procured 200 cannons, 200,000 pounds of powder, 20,000 guns, with balls, lead, clothing, etc. He wants the cargoes consigned to him in return, and promises that he has great power to use any consignments whatsoever; but he wants especially tobacco. He signs this letter Roderique Hortales & Co. . . . A million livres were advanced by Spain to Beaumarchais, August 11, 1776, and the Farmers-general of France advanced a million livres, but took advantage of the distress of the Americans to stipulate that it should be paid for in tobacco at half its then current price. Beaumarchais also advanced money to Deane for his personal expenses; and it has never been doubted that he exerted himself with the utmost energy, if not always with the greatest prudence, to expedite the shipment of the goods. Of the three ships which he despatched at the end of the year, two were captured by the English; but the one which arrived was of the greatest possible value to the cause. . . . When Arthur Lee received his appointment as Commissioner to France and entered upon the discharge of his duties, he found that the promises made to him by Beaumarchais . . . had not been kept. He reported to the Committee of Secret Correspondence that a change in the mode of sending had been settled between Deane and Hortales. . . . Arthur Lee always held the attitude of suspicion that Deane and Beaumarchais were in a conspiracy to levy contributions for themselves on the free gifts of France to the United States. Franklin always affected to ignore the dealings with Beaumarchais, and to treat them as exclusively in the hands of Deane; while Congress always showed themselves very careful not to pay for anything which possibly was intended as a gift. Therefore Deane and Beaumarchais were left for years to claim and protest that there had been genuine mercantile contracts which had not been fulfilled, and they could scarcely obtain atten-

tion. . . . September 8, 1777, Congress voted that Deane had no authority to make contracts with persons to come to America. November 21, they voted to recall him. Undoubtedly the vexation which Deane had caused them by sending over a great number of persons to serve in the army, under contracts which enabled them to demand large pay and high rank, was the chief cause of irritation against him; but Arthur Lee had also been poisoning the mind of his brother, and through him, of the whole Lee-Adams faction in Congress, with suspicions of Deane's honesty. Deane had found himself transferred, within a period of two or three years, from an utterly obscure existence at Wethersfield, Connecticut, to the position of a quasi-ambassador at the court of France. He adopted a large and expensive style of living, and kept open house for the Americans at Paris. It is very reasonable to suppose that this large expenditure on his part was one of the chief grounds of belief that he was making great gain out of his position. . . . The affair of Silas Deane has importance far beyond the merits or the fate of that individual. The quarrel over him and his rights and wrongs, as will presently be seen, entered into the hottest party contests in Congress during the next two or three years, and it comes up again often subsequently. It has even been asserted that the intimacy into which John Adams was thrown with the Lees, in this connection, was what made him President of the United States, by winning him votes from Virginia in 1796. January 1, 1778, Beaumarchais, having heard that money had been given to the Americans through Grand, the banker, writes to Vergennes: 'So I have lost the fruit of the most noble and incredible labour by those very exertions which conduct others to glory.' . . . He is in terror of bankruptcy. Inasmuch as a treaty of alliance between France and the United States was now made, matters had entered upon a new stage. Beaumarchais, with his fictitious firm of Hortales, was no longer necessary or useful. The French government dealt directly with the American envoys in granting supplies and subsidies. April 7, Congress made a contract with Hortales that they should pay, for all the cargoes already shipped and those to be shipped, the first cost, charges, and freight, in France. The contract between Beaumarchais and Deane is recognized. Hortales is to pay bills drawn every two months at double usance for twenty-four million livres annually. This article, however, is subject to ratification by the house in Paris and the American Commissioners at Paris. American produce is to be exported and consigned to this house. Interest is to be paid on all sums due, with a commission of two and a half per cent. From this time Beaumarchais falls out of sight as an agent of aid and supplies to the American cause, and becomes a claimant, who considers that he has been treated with injustice and ingratitude by the United States."—W. G. Sumner, *The Financier and the Finances of the Am. Revolution*, *ch.* 8 (*v.* 1).—"The episode of Beaumarchais . . . was a survival of the secret diplomacy of Louis XV, for a short time exercising an extraordinary influence in the first period of the reign of Louis XVI. Louis XVI, on reaching the throne, found the machinery of secret diplomacy so ingeniously constructed by his predecessor in full operation; and, . . . for one or two delicate inquiries at the outset of the new reign, Beaumarchais, who of all the diplomatists of this peculiar breed was the most adroit and fertile in expedients, was well fitted. Hence came his employment, and from his employment came his suggestions, full of brilliant wit and effective reasoning, as to America. But the antagonism between him and Vergennes was too marked to permit sustained political relationship; and when Franklin entered into diplomatic life in Paris Beaumarchais ceased to take a prominent political position. And even during the period of Beaumarchais' greatest activity it must be remembered that he was not technically Vergennes' subordinate. It was one of the peculiarities of the secret diplomacy of Louis XIV and Louis XV, as depicted by Broglié in his admirable treatise on that topic, that even the existence of the secret agent was not to be supposed to be known to the king's ostensible ministers. This was not the case with Beaumarchais; but at the same time Beaumarchais' political influence ceased . . . when, on the arrival of Franklin, Vergennes, with Franklin's aid, took control of Anglo-American diplomacy."—F. Wharton, *Introd. to The Revolutionary Diplomatic Correspondence of the U. S.*, *ch.* 4, *sect.* 55 (*v.* 1).

A. D. 1776–1779.—The Thirteen Colonies become States.—The framing and adoption of State Constitutions.—"The recommendations to form governments proceeded from the general congress; the work was done by the several states, in the full enjoyment of self-direction. Each of them claimed to be of right a free, sovereign, and independent state; each bound its officers to bear to it true allegiance, and to maintain its freedom and independence. Massachusetts, which was the first state to frame a government independent of the king, deviated as little as possible from the letter of its charter; and, assuming that the place of governor was vacant from the 19th of July 1775, it recognised the council as the legal successor to executive power. On the 1st day of May 1776, in all commissions and legal processes, it substituted the name of its 'government and people' for that of the king. In June 1777, its legislature assumed power to prepare a constitution; but, on a reference to the people, the act was disavowed. In September 1779, a convention, which the people themselves had specially authorized, framed a constitution. It was in a good measure the compilation of John Adams, who was guided by the English constitution, by the bill of rights of Virginia, and by the experience of Massachusetts herself; and this constitution, having been approved by the people, went into effect in 1780. On the 5th of January 1776, New Hampshire shaped its government with the fewest possible changes from its colonial forms, like Massachusetts merging the executive power in the council. Not till June 1783 did its convention agree upon a more perfect instrument, which was

approved by the people, and established on the 31st of the following October. The provisional constitution of South Carolina dates from the 26th of March 1776. In March 1778, a permanent constitution was introduced by an act of the legislature. Rhode Island enjoyed under its charter a form of government so thoroughly republican that the rejection of monarchy, in May 1776, required no change beyond a renunciation of the king's name in the style of its public acts. A disfranchisement of Catholics had stolen into its book of laws; but, so soon as it was noticed, the clause was expunged. In like manner, Connecticut had only to substitute the people of the colony for the name of the king; this was done provisionally on the 14th of June 1776, and made perpetual on the 10th of the following October. Before the end of June of the same year Virginia, sixth in the series, first in the completeness of her work, by a legislative convention without any further consultation of the people, framed and adopted a bill of rights, a declaration of independence, and a constitution. On the second of July 1776, New Jersey perfected its new, self-created charter. Delaware next proclaimed its bill of rights, and, on the 20th of September 1776, the representatives in convention having been chosen by the freemen of the state for that very purpose, finished its constitution. The Pennsylvania convention adopted its constitution on the 28th of September 1776; but the opposition of the Quakers whom it indirectly disfranchised, and of a large body of patriots, delayed its thorough organization for more than five months. The delegates of Maryland, meeting on the 14th of August 1776, framed its constitution with great deliberation; it was established on the 9th of the following November. On the 18th of December 1776, the constitution of North Carolina was ratified in the congress which framed it. On the 5th of February 1777, Georgia perfected its organic law by the unanimous agreement of its convention. Last of the thirteen came New York, whose empowered convention, on the 20th of April 1777, established a constitution that, in humane liberality, excelled them all. The privilege of the suffrage had been far more widely extended in the colonies than in England; by general consent, the extension of the elective franchise was postponed. The age of twenty-one was a qualification universally required. So, too, was residence, except that in Virginia and South Carolina it was enough to own in the district or town a certain freehold or 'lot.' South Carolina required the electors to 'acknowledge the being of a God, and to believe in a future state of rewards and punishments.' White men alone could claim the franchise in Virginia, in South Carolina, and in Georgia; but in South Carolina a benign interpretation of the law classed the free octaroon as a white, even though descended through an unbroken line of mothers from an imported African slave; the other ten states raised no question of color. In Pennsylvania, in New Hampshire, and partially in North Carolina, the right to vote belonged to every resident taxpayer; Georgia extended it to any white inhabitant 'of any mechanic trade'; with this exception, Georgia and all the other colonies required the possession of a freehold, or of property variously valued, in Massachusetts at about $200, in Georgia at £10. Similar conditions had always existed, with the concurrence or by the act of the colonists themselves. Maryland prescribed as its rule that votes should be given by word of mouth; Virginia and New Jersey made no change in their usage; in Rhode Island each freeman was in theory summoned to be present in the general court; he therefore gave his proxy to his representative by writing his own name on the back of his vote; all others adopted the ballot, New York at the end of the war, the other eight without delay."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *v.* 5, *ch.* 9.

A. D. 1777 (January — December). — The campaign on the Delaware. — Lord Howe in possession of Philadelphia. — Battles on the Brandywine and at Germantown.—The winter of Washington's army at Valley Forge.—"Washington remained at Morristown from the 7th of January until the 28th of May, during which time no military movement of importance took place. His men left for their homes as soon as their terms of service expired, and as few militia entered the camp to take their places, at times it seemed as if the army would be so reduced as to be unworthy of the name. It was not until late in the spring that the new levies reached headquarters. On the 28th of May the Americans marched to Middlebrook and took position behind the Raritan. On the 13th of June Howe marched from Brunswick and . . . endeavored to bring on a general engagement, . . . but Washington refused to leave the strong position he occupied, and Howe retired to Amboy. Early in April Howe had settled upon a campaign having for its object the capture of Philadelphia. He determined to embark his troops and transport them to the banks of the Delaware or Chesapeake, and march directly on the city. . . . On the 23d of July, after Howe's troops had been three weeks on the vessels, the fleet sailed, shaping its course southwesterly. . . . Signal fires were lighted along the Jersey coast as it was seen from time to time by those who were watching for it, and messengers carried inland the news of its progress. At last, on the 30th, it was spoken off the capes of Delaware, but Lord Howe deemed it too hazardous to sail up that river, and after consulting with his brother, the general, continued on his course southward. On the 15th of August he entered Chesapeake Bay, and on the 25th the troops were landed at Elk Ferry." Meantime, Washington had been in great uncertainty as to the destination and intentions of his antagonist, but had drawn his army near to Philadelphia. It had just been joined by several distinguished foreign officers, Lafayette, De Kalb and Pulaski in the number. At Philadelphia there was consternation on the approach of the enemy, but "the pacific influence which the presence of a large Quaker population exercised seemed to bear down all military efforts. . . . To impress the lukewarm with the strength of his forces, and to inspire hopes in the breasts of the patriotic,

on the 24th of August Washington marched his army through the streets of Philadelphia. The men were poorly armed and clothed, and to give them some uniformity they wore sprigs of green in their hats." The advance of Howe from Elk Ferry was slow, and it was not until the 11th of September that the Americans encountered him, at Chad's Ford, on the Brandywine, where they had taken position. In the battle which occurred that day the British gained a clear victory, by means of a successful flank movement which Cornwallis executed, crossing the river some miles above, while General Knyphausen made feigned attempts at Chad's Ford. "The American loss was about 1,000, killed, wounded, and prisoners; that of the British, 579. . . . The day after the battle Washington marched from Chester to Philadelphia. He rested his army two days at Germantown, and then re-crossed the Schuylkill; public opinion demanding that another battle should be risked before the city should be given up. On the 16th the two armies met on the high ground south of Chester Valley and prepared for action. The skirmishing had actually begun, when a violent storm stopped the engagement by ruining the ammunition of both armies. Washington withdrew to the hills north of the valley, and, finding it impossible to repair the damage done by the storm, retreated again over the Schuylkill, leaving Wayne behind him to watch the enemy and attack their rear should they attempt to follow." But Wayne was surprised at Paoli, and Washington was deceived by a feigned movement, so that Howe succeeded in entering Philadelphia without another battle, on the 26th, having occupied Germantown the day before. "The main portion of Howe's army remained at Germantown, a village of a single street, two miles in length, and five from the city." Here, on the morning of October 4th, Washington attacked him, and, for a time, with great success; but confusion and misunderstandings on the part of the attacking columns arose, which turned the half-won victory into a defeat. "The Americans lost nearly 1,100 killed, wounded, and prisoners; the British 521. . . . While the Americans were defeated in their object, the moral results of the battle were in their favor. It inspired them with confidence, and showed the world that, though driven from the field of Brandywine, they were still aggressive." The next few weeks were employed by Howe in reducing the forts which commanded the Delaware. Fort Mifflin was taken after a severe siege, and this compelled the abandonment of Fort Mercer, from which the British had been repulsed with heavy loss. Early in December Howe moved upon Washington's lines, at Whitemarsh, intending an attack; but found them so strong that he dared not venture the attempt, and returned to Philadelphia. "As the season was advancing, and the Americans were in no condition to keep the field, it was decided to go into winter-quarters at Valley Forge, on the west side of the Schuylkill, where the Valley Creek empties into the river. The surrounding hills were covered with woods and presented an inhospitable appearance. The choice was severely criticised, and De Kalb described it as a wilderness. But the position was central and easily defended. The army arrived there about the middle of December, and the erection of huts began. They were built of logs, and were 14 by 15 feet each. The windows were covered with oiled paper, and the openings between the logs were closed with clay. The huts were arranged in streets, giving the place the appearance of a city. It was the first of the year, however, before they were occupied, and previous to that the suffering of the army had become great. Although the weather was intensely cold the men were obliged to work at the buildings, with nothing to support life but flour mixed with water, which they baked into cakes at the open fires. . . . The horses died of starvation by hundreds, and the men were obliged to haul their own provisions and firewood. As straw could not be found to protect the men from the cold ground, sickness spread through their quarters with fearful rapidity. 'The unfortunate soldiers,' wrote Lafayette in after-years, 'were in want of everything; they had neither coats, hats, shirts, nor shoes; their feet and their legs froze till they became black, and it was often necessary to amputate them. . . . The army frequently remained whole days without provisions, and the patient endurance of both soldiers and officers was a miracle which each moment served to renew.' . . . While the country around Valley Forge was so impoverished by the military operations of the previous summer as to make it impossible for it to support the army, the sufferings of the latter were chiefly owing to the inefficiency of Congress. That body met at Lancaster after leaving Philadelphia, and at once adjourned to York, where its sessions were continued. But it in no way equalled the congresses which had preceded it. 'The Continental Congress and the currency,' wrote Gouverneur Morris in 1778, 'have greatly depreciated.'"—F. D. Stone, *The Struggle for the Delaware* (*Narrative and Critical Hist. of Am., v.* 6, *ch.* 5).—The sufferings of the army at Valley Forge, and the shameful neglect which it experienced, were indignantly described by Washington, in a letter addressed to the President of Congress, December 23, 1777: "Since the month of July," he wrote, "we have had no assistance from the quartermaster-general, and to want of assistance from this department the commissary-general charges great part of his deficiency. To this I am to add, that, notwithstanding it is a standing order, and often repeated, that the troops shall always have two days' provisions by them, that they might be ready at any sudden call; yet an opportunity has scarcely ever offered, of taking an advantage of the enemy, that has not been either totally obstructed, or greatly impeded on this account. And this, the great and crying evil, is not all. The soap, vinegar, and other articles allowed by Congress, we see none of, nor have we seen them, I believe, since the battle of Brandywine. The first, indeed, we have now little occasion for; few men having more than one shirt, many only the moiety of one, and some none at all. In addition to which, as a proof of the little benefit received from a clothier-general, and as a further proof of the inability of an army, under the circumstances of this, to perform the common duties of soldiers, (besides a number of men confined to hospitals for want of shoes, and others in farmers' houses on the same account,) we have, by a field-return this day made, no less than two thousand eight hundred and ninety-eight

men now in camp unfit for duty, because they are barefoot and otherwise naked. By the same return it appears, that our whole strength in Continental troops, including the eastern brigades, which have joined us since the surrender of General Burgoyne, exclusive of the Maryland troops sent to Wilmington, amounts to more than eight thousand two hundred in camp fit for duty; notwithstanding which; and that since the 4th instant, our numbers fit for duty, from the hardships and exposures they have undergone, particularly on account of blankets (numbers having been obliged, and still are, to sit up all night by fires, instead of taking comfortable rest in a natural and common way), have decreased near two thousand men. We find gentlemen, without knowing whether the army was really going into winter-quarters or not (for I am sure no resolution of mine would warrant the Remonstrance), reprobating the measure as much as if they thought the soldiers were made of stocks or stones, and equally insensible of frost and snow; and moreover, as if they conceived it easily practicable for an inferior army, under the disadvantages I have described ours to be, which are by no means exaggerated, to confine a superior one, in all respects well-appointed and provided for a winter's campaign, within the city of Philadelphia, and to cover from depredation and waste the States of Pennsylvania and Jersey. But what makes this matter still more extraordinary in my eye is, that these very gentlemen, — who were well apprized of the nakedness of the troops from ocular demonstration, who thought their own soldiers worse clad than others, and who advised me near a month ago to postpone the execution of a plan I was about to adopt, in consequence of a resolve of Congress for seizing clothes, under strong assurances that an ample supply would be collected in ten days agreeably to a decree of the State (not one article of which, by the by, is yet come to hand),— should think a winter's campaign, and the covering of these States from the invasion of an enemy, so easy and practicable a business. I can assure those gentlemen, that it is a much easier and less distressing thing to draw remonstrances in a comfortable room by a good fireside, than to occupy a cold, bleak hill, and sleep under frost and snow, without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel superabundantly for them, and, from my soul, I pity those miseries, which it is neither in my power to relieve or prevent. It is for these reasons, therefore, that I have dwelt upon the subject; and it adds not a little to my other difficulties and distress to find, that much more is expected of me than is possible to be performed, and that upon the ground of safety and policy I am obliged to conceal the true state of the army from public view, and thereby expose myself to detraction and calumny."—George Washington, *Writings, ed. by W. C. Ford, v.* 6, *pp.* 259–262. — It was during this trying winter, while the army suffered at Valley Forge, that it was joined by Baron Steuben, an accomplished Prussian officer, trained in the school of Frederick the Great, with a record of distinguished service in the Seven Years War. He came as a volunteer, and was welcomed by Washington, who found in him the organizer, the disciplinarian, the instructor, which the rudely formed American army so greatly needed. The services rendered by Baron Steuben during that first winter of his stay in America were especially valuable, beyond measure. In his own account of the state of things which he found he says: "'My determination must have been very firm that I did not abandon my design when I saw the troops. Matters had to be remedied, but where to commence was the great difficulty. In the first place, I informed myself relative to the military administration. I found that the different branches were divided into departments. There were those of the quarter-master general, war commissary, provisions commissary, commissary of the treasury, or paymaster of forage, etc., etc. But they were all bad copies of a bad original. That is to say, they had imitated the English administration, which is certainly the most imperfect in Europe. The general asked me to give him some statements concerning the arrangements of the departments, and their various branches in the European armies. I gave them to him, and, detailing therein the duties of each department and of its different branches, dilated upon the functions of the quarter-masters (maréchaux généraux de logis) in particular, in which branch I had served myself for a long time in the Seven Years' War. But the English system, bad as it is, had already taken root. Each company and quarter-master had a commission of so much per cent. on all the money he expended. It was natural, therefore, that expense was not spared — that wants were discovered where there were none; and it was also natural that the dearest articles were those that suited the commissioners best. Hence the depreciation of our currency — hence the expense of so many millions. I pointed out to General Washington and several members of Congress the advantages of the contract system. I even drew up a memorandum on the subject, which Colonel Laurens translated into English, showing the way in which things were contracted for in the Prussian and French armies. But whether it was that they thought such a system impracticable in this country, or whether they were unable to check the torrent of expense, things remained as they were. I directed my attention to the condition of the troops, and I found an ample field, where disorder and confusion were supreme. . . . The number of men in a regiment was fixed by Congress, as well as in a company — so many infantry, cavalry, and artillery. But the eternal ebb and flow of men engaged for three, six, and nine months, who went and came every day, rendered it impossible to have either a regiment or a company complete; and the words company, regiment, brigade, and division, were so vague that they did not convey any idea upon which to form a calculation, either of a particular corps or of the army in general. They were so unequal in their number, that it would have been impossible to execute any maneuvers. Sometimes a regiment was stronger than a brigade. I have seen a regiment consisting of thirty men, and a company of one corporal! . . . The soldiers were scattered about in every direction. The army was looked upon as a nursery for servants, and every one deemed it his right to have a valet; several thousand soldiers were employed in this way. We had more commissaries and quarter-masters at that time than all the armies of Europe

together; the most modest had only one servant, but others had two and even three. If the captains and colonels could give no account of their men, they could give still less an account of their arms, accouterments, clothing, ammunition, camp equipage, etc. Nobody kept an account but the commissaries, who furnished all the articles. A company, which consisted, in May, of fifty men, was armed, clothed and equipped in June. It then consisted of thirty men; in July it received thirty recruits, who were to be clothed, armed and equipped; and not only the clothes, but the arms were carried off by those who had completed their time of service. General Knox assured me that, previous to the establishment of my department, there never was a campaign in which the military magazines did not furnish from 5,000 to 8,000 muskets to replace those which were lost in the way I have described above. The loss of bayonets was still greater. The American soldier, never having used this arm, had no faith in it, and never used it but to roast his beefsteak, and indeed often left it at home. This is not astonishing when it is considered that the majority of the States engaged their soldiers for from six to nine months. Each man who went away took his musket with him, and his successor received another from the public store. No captain kept a book. Accounts were never furnished nor required. As our army is, thank God, little subject to desertion, I venture to say that during an entire campaign there have not been twenty muskets lost since my system came into force. . . . The men were literally naked, some of them in the fullest extent of the word. The officers who had coats had them of every color and make. I saw officers, at a grand parade at Valley Forge, mounting guard in a sort of dressing-gown, made of an old blanket or woolen bed-cover. With regard to their military discipline, I may safely say no such thing existed. . . . I commenced operations by drafting 120 men from the line, whom I formed into a guard for the general-in-chief. I made this guard my military school. I drilled them myself twice a day; and to remove that English prejudice which some officers entertained, namely, that to drill a recruit was a sergeant's duty and beneath the station of an officer, I often took the musket myself to show the men the manual exercise which I wished to introduce. All my inspectors were present at each drill. We marched together, wheeled, etc., etc., and in a fortnight my company knew perfectly how to bear arms, had a military air, knew how to march, to form in column, deploy, and execute some little maneuvers with excellent precision. . . . I paraded them in presence of all the officers of the army, and gave them an opportunity of exhibiting all they knew. They formed in column; deployed; attacked with the bayonet; changed front, etc., etc. It afforded a new and agreeable sight for the young officers and soldiers. Having gained my point, I dispersed my apostles, the inspectors, and my new doctrine was eagerly embraced. I lost no time in extending my operations on a large scale. I applied my system to battalions, afterward to brigades, and in less than three weeks I executed maneuvers with an entire division in presence of the commander-in-chief.' . . . The most interesting narrative of the energy employed by Steuben, and the success of his system, is given by his favorite aid-de-camp and intimate friend, William North, who was with him from the beginning. He says in his biographical sketch: 'Certainly it was a brave attempt! Without understanding a word of the English language, to think of bringing men, born free, and joined together to preserve their freedom, into strict subjection; to obey without a word, a look, the mandates of a master! that master once their equal, or possibly beneath them, in whatever might become a man! It was a brave attempt, which nothing but virtue, or high-raised hopes of glory, could have supported. At the first parade, the troops neither understanding the command, nor how to follow in a changement to which they had not been accustomed, even with the instructor at their head, were getting fast into confusion. At this moment, Captain B. Walker, then of the second New York regiment, advanced from his platoon, and offered his assistance to translate the orders and interpret to the troops. "If," said the baron, "I had seen an angel from heaven, I should not have more rejoiced." . . . Walker became from that moment his aid-de-camp, and remained to the end of the baron's life his dear and most worthy friend. From the commencement of instruction, no time, no pains, no fatigue were thought too great, in pursuit of this great object. Through the whole of each campaign, when troops were to maneuver, and that was almost every day, the baron rose at three o'clock; while his servant dressed his hair he smoked a single pipe and drank one cup of coffee, was on horseback at sunrise, and, with or without his suite, galloped to the parade. There was no waiting for a tardy aid-de-camp, and those who followed wished they had not slept. Nor was there need of chiding; when duty was neglected, or military etiquette infringed, the baron's look was quite sufficient.' . . . Steuben enjoyed the confidence of both officers and men, and every thing he proposed was executed with as much precision as if it were an order from the commander-in-chief. Although he was only a volunteer, without any specific rank in the army, he had greater power and authority than any general could boast of."—F. Kapp, *Life of Frederick William von Steuben, ch.* 6.

A. D. 1777 (July).—The coming of Lafayette.—"La Fayette, barely nineteen years old, was in garrison at Metz, when he was invited to a dinner that his commander, the Count de Broglie, gave to the brother of the king of England, the Duke of Gloucester, then on his way through the city. News had just been received of the proclamation of the independence of the United States, and, the conversation having naturally fallen on this subject, La Fayette plied the duke with questions to acquaint himself with the events, entirely new to him, which were happening in America. Before the end of the dinner he had made his decision, and, from that moment, he no longer thought of anything else

except setting out for the new world. He went to Paris and confided his project to his friends, the Count de Ségur and the Viscount de Noailles, who were to accompany him. The Count de Broglie, whom he also informed, tried to turn him from his design. 'I saw your uncle die in Italy,' he said to him, 'and your father at Minden, and I do not wish to contribute to the ruin of your family by allowing you to go.' Nevertheless, he put La Fayette in communication with the former agent of Choiseul in Canada, the Baron de Kalb, who became his friend. De Kalb presented him to Silas Deane, who, considering him too young, wished to dissuade him from his project. But the news of the disasters experienced by the Americans before New York, at White Plains and in New Jersey, confirmed La Fayette in his resolution. He bought and fitted out a vessel at his own expense, and disguised his preparations by making a journey to London. Nevertheless his design was disclosed at Court. His family became angry with him. He was forbidden to go to America, and, to render this order effective, a lettre de cachet was issued against him. Nevertheless he left Paris with an officer named Mauroy, disguised himself as a courier, went on board his ship at Passage in Spain, and set sail April the 26th, 1777. He had several officers on board. La Fayette successfully avoided the English cruisers and the French vessels sent in pursuit of him. Finally, after a hazardous passage of seven weeks, he reached Georgetown, and, furnished with letters of recommendation from Deane, he reported to Congress."—T. Balch, *The French in America during the War of Independence, ch.* 7.—In consideration of the great personal sacrifice he had made in quitting France, and his offer to serve the American cause at his own expense and without pay, Congress, with hesitation, conferred on the young marquis the rank of Major General, but without command. He succeeded, too, in procuring a like commission for Baron de Kalb, who had accompanied him. While Lafayette was still busy with these arrangements, Washington came to Philadelphia, and they met at a dinner party. They seem to have been drawn to one another at the first exchange of words, and a friendship began which lasted through their lives. Lafayette was soon invited to become a member of the military family of the commander-in-chief.—B. Tuckerman, *Life of General Lafayette, ch.* 2.

A. D. 1777 (July—October).—The struggle for the Hudson.—Burgoyne's expedition from Canada.—His surrender at Saratoga.—Early in the summer of 1777 a formidable expedition under General Burgoyne was set in motion from Canada toward Lake Champlain. "It was a part of Burgoyne's plan, not merely to take Ticonderoga, but to advance thence upon Albany, and, with the co-operation of the troops at New York, to get possession also of the posts in the Highlands. The British would then command the Hudson through its whole extent, and New England, the head of the rebellion, would be completely cut off from the middle and southern colonies. Burgoyne started on this expedition with a brilliant army of 8,000 men, partly British and partly Germans, besides a large number of Canadian boatmen, laborers and skirmishers. On the western shore of Lake Champlain, near Crown Point, he met the Six Nations in council, and after a feast and a speech, some 400 of their warriors joined this army. His next step was to issue a proclamation . . . threatening with all the extremities of war all who should presume to resist his arms. Two days after the issue of this proclamation, Burgoyne appeared [July 1] before Ticonderoga." The commander of that important fort, General St. Clair, found defense impracticable and evacuated the place. He was vigorously pursued in his retreat and only escaped with the loss of most of his baggage and stores, besides several hundred men, in killed, wounded, and prisoners. "After a seven days' march, he joined Schuyler at Fort Edward, on the Hudson. Here was assembled the whole force of the northern army, amounting to about 5,000 men; but a considerable part were militia hastily called in; many were without arms; there was a great deficiency of ammunition and provisions; and the whole force was quite disorganized. The region between Skenesborough [now Whitehall, where Burgoyne had halted] and the Hudson was an almost unbroken wilderness. Wood Creek was navigable as far as Fort Anne [which the Americans had fired and abandoned]; from Fort Anne to the Hudson, over an exceedingly rough country, . . . extended a single military road. While Burgoyne halted a few days at Skenesborough to put his forces in order, and to bring up the necessary supplies, Schuyler hastened to destroy the navigation of Wood Creek," and to make the road from Fort Anne as nearly impassable as a wilderness road can be made. "All the stock in the neighborhood was driven off, and the militia of New England was summoned to the rescue. . . . The advance from Skenesborough cost the British infinite labor and fatigue; but . . . [the] impediments were at length overcome; and Burgoyne, with his troops, artillery, and baggage, presently appeared [July 29] on the banks of the Hudson. . . . Fort Edward was untenable. As the British approached, the Americans crossed the river, and retired, first to Saratoga, and then to Stillwater, a short distance above the mouth of the Mohawk. Hardly had Schuyler taken up this position, when news arrived of another disaster and a new danger. While moving up Lake Champlain, Burgoyne had detached Colonel St. Leger, with 200 regulars, Sir John Johnson's Royal Greens, some Canadian Rangers, and a body of Indians under Brant, to harass the New York frontier from the west. St. Leger laid siege to Fort Schuyler, late Fort Stanwix, near the head of the Mohawk, then the extreme western post of the State of New York. General Herkimer raised the militia of Tryon county, and advanced to the relief of this important post, which was held by Gansevoort and Willett, with two New York regiments. About six miles from the fort [near Oriskany, August 6], owing to want of proper precaution, Herkimer fell into an ambush. Mortally wounded, he supported himself against a stump, and encouraged his men to the fight. By the aid of a successful sally by Willett, they succeeded at last in repulsing the assailants, but not without a loss of 400, including many of the leading patriots of that region, who met with no mercy at the hands of the Indians and refugees. Tryon county, which included the whole district

west of Albany, abounded with Tories. It was absolutely necessary to relieve Fort Schuyler." General Arnold was accordingly despatched thither, with three regiments, and on his approach St. Leger, deserted by most of his Indian allies, retreated precipitately, leaving most of his stores and baggage behind. Meantime, Burgoyne was beginning to find his situation serious. To feed and otherwise supply his army was the chief difficulty. He could bring enough of stores to the head of Lake George, by the water carriage which he commanded, from Canada; but to transport them thence to the Hudson, though the distance was only eighteen miles, proved nearly impracticable. "The roads were so bad, and the supply of draft cattle so small, that, after a fortnight's hard labor, the British army had only four days' provision in advance." To improve his supplies, and partly, moreover, in the hope of finding discontent among the settlers of the New Hampshire Grants, Burgoyne sent 800 men, under Colonel Baum, into Vermont. They were defeated [August 16] at Bennington by the New Hampshire and Vermont militia under Colonel John Stark, and again defeated a second time the same day, after reinforcements had been sent to them. "Besides the killed, about 200 in number, the Americans took near 600 prisoners, 1,000 stand of arms, as many swords, and four pieces of artillery. . . . The American loss was only 14 killed and 42 wounded. . . . The victory of Stark had a magical effect in reviving the spirits of the people and the courage of the soldiers."— R. Hildreth, *Hist. of the U. S., ch.* 36 (*v.* 3).—"Burgoyne's position was by this time very dangerous. His Indians were leaving him; many of his best men had been killed or captured; and he was getting short of provisions. The army opposed to him was increasing: Congress was hurrying men up the Hudson; and the country militia were coming in rapidly. Burgoyne, therefore, desperately attempted to force his way through the American army. He crossed the Hudson, and moved slowly down its west bank toward the Mohawk. About the same time, Gates, who had been sent by Congress to take Schuyler's place, felt strong enough to move up the west bank of the Hudson, away from the Mohawk. The two armies met [September 19] at Bemis Heights, between Saratoga Lake and the Hudson. The battle which followed [called by some writers the battle of Free man's Farm] was not decisive: the British held the ground; but the Americans had shown that Burgoyne could not break through."— A. Johnston, *Hist. of the U. S. for Schools, sect.* 222–223.—"Burgoyne now halted again, and strengthened his position by field-works and redoubts; and the Americans also improved their defences. The two armies remained nearly within cannon-shot of each other for a considerable time, during which Burgoyne was anxiously looking for intelligence of the promised expedition from New York, which, according to the original plan, ought by this time to have been approaching Albany from the south. At last, a messenger from Clinton made his way, with great difficulty, to Burgoyne's camp, and brought the information that Clinton was on his way up the Hudson to attack the American forts which barred the passage up that river to Albany. Burgoyne, in reply, on the 30th of September, urged Clinton to attack the forts as speedily as possible, stating that the effect of such an attack, or even the semblance of it, would be to move the American army from its position before his own troops. By another messenger, who reached Clinton on the 5th of October, Burgoyne informed his brother general that he had lost his communications with Canada, but had provisions which would last him till the 20th. Burgoyne described himself as strongly posted, and stated that though the Americans in front of him [at Stillwater] were strongly posted also, he made no doubt of being able to force them, and making his way to Albany; but that he doubted whether he could subsist there, as the country was drained of provisions. He wished Clinton to meet him there, and to keep open a communication with New York. Burgoyne had over-estimated his resources, and in the very beginning of October found difficulty and distress pressing him hard. The Indians and Canadians began to desert him; while, on the other hand, Gates's army was continually reinforced by fresh bodies of the militia. . . . Finding the number and spirit of the enemy to increase daily, and his own stores of provisions to diminish, Burgoyne determined on attacking the Americans in front of him, and by dislodging them from their position, to gain the means of moving upon Albany, or at least of relieving his troops from the straitened position in which they were cooped up. Burgoyne's force was now reduced to less than 6,000 men. The right of his camp was on some high ground a little to the west of the river; thence his entrenchments extended along the lower ground to the bank of the Hudson, the line of their front being nearly at a right angle with the course of the stream. The lines were fortified with redoubts and field-works. . . . The numerical force of the Americans was now greater than the British, even in regular troops, and the numbers of the militia and volunteers which had joined Gates and Arnold were greater still. General Lincoln, with 2,000 New England troops, had reached the American camp on the 29th of September. Gates gave him the command of the right wing, and took in person the command of the left wing, which was composed of two brigades under Generals Poor and Leonard, of Colonel Morgan's rifle corps, and part of the fresh New England Militia. The whole of the American lines had been ably fortified under the direction of the celebrated Polish General, Kosciusko, who was now serving as a volunteer in Gates's army. The right of the American position, that is to say, the part of it nearest to the river, was too strong to be assailed with any prospect of success: and Burgoyne therefore determined to endeavour to force their left. For this purpose he formed a column of 1,500 regular troops, with two twelve-pounders, two howitzers, and six six-pounders. He headed this in person, having Generals Philips, Riedesel, and Fraser under him. The enemy's force immediately in front of his lines was so strong that he dared not weaken the troops who guarded them, by detaching any more to strengthen his column of attack. It was on the 7th of October that Burgoyne led his column forward; and on the preceding day, the 6th, Clinton had successfully executed a brilliant enterprise against the two American forts which barred his progress up the Hudson. He had captured them both,

with severe loss to the American forces opposed to him; he had destroyed the fleet which the Americans had been forming on the Hudson, under the protection of their forts; and the upward river was laid open to his squadron. He had also, with admirable skill and industry, collected in small vessels, such as could float within a few miles of Albany, provisions sufficient to supply Burgoyne's army for six months. He was now only 156 miles distant from Burgoyne; and a detachment of 1,700 men actually advanced within 40 miles of Albany. Unfortunately Burgoyne and Clinton were each ignorant of the other's movements; but if Burgoyne had won his battle on the 7th, he must on advancing have soon learned the tidings of Clinton's success, and Clinton would have heard of his. A junction would soon have been made of the two victorious armies, and the great objects of the campaign might yet have been accomplished. All depended on the fortune of the column with which Burgoyne, on the eventful 7th of October, 1777, advanced against the American position." It failed in the attempt to break the American line. Arnold, who had been deprived of his command by Gates, rushed into the fight at its fiercest stage and assumed a lead, without authority, which contributed greatly to the result. General Fraser, on the British side, was wounded mortally by a sharp-shooter under Morgan's command. Burgoyne's whole force was driven back, with heavy losses in killed and wounded, leaving six cannon behind them, and the Americans, pursuing, carried part of their entrenchments by storm. By this success, the latter "acquired the means of completely turning the right flank of the British, and gaining their rear. To prevent this calamity, Burgoyne effected during the night an entire change of position. With great skill he removed his whole army to some heights near the river, a little northward of the former camp, and he there drew up his men, expecting to be attacked on the following day. But Gates was resolved not to risk the certain triumph which his success had already secured for him. He harassed the English with skirmishes, but attempted no regular attack. Meanwhile he detached bodies of troops on both sides of the Hudson to prevent the British from recrossing that river, and to bar their retreat. When night fell, it became absolutely necessary for Burgoyne to retire again, and, accordingly, the troops were marched through a stormy and rainy night towards Saratoga, abandoning their sick and wounded, and the greater part of their baggage, to the enemy. . . . Burgoyne now took up his last position on the heights near Saratoga; and hemmed in by the enemy, who refused any encounter, and baffled in all his attempts at finding a path of escape, he there lingered until famine compelled him to capitulate. The fortitude of the British army during this melancholy period has been justly eulogised by many native historians, but I prefer quoting the testimony of a foreign writer, as free from all possibility of partiality. Botta says: 'It exceeds the power of words to describe the pitiable condition to which the British army was now reduced. The troops were worn down by a series of toil, privation, sickness, and desperate fighting. They were abandoned by the Indians and Canadians; and the effective force of the whole army was now diminished by repeated and heavy losses, which had principally fallen on the best soldiers and the most distinguished officers, from 10,000 combatants to less than one-half that number. Of this remnant, little more than 3,000 were English. In these circumstances, and thus weakened, they were invested by an army of four times their own number, whose position extended three parts of a circle round them; who refused to fight them, as knowing their weakness, and who, from the nature of the ground, could not be attacked in any part. In this helpless condition, obliged to be constantly under arms, while the enemy's cannon played on every part of their camp, and even the American rifle-balls whistled in many parts of the lines, the troops of Burgoyne retained their customary firmness, and while sinking under a hard necessity, they showed themselves worthy of a better fate. They could not be reproached with an action or a word, which betrayed a want of temper or of fortitude.' At length the 13th of October arrived, and as no prospect of assistance appeared, and the provisions were nearly exhausted, Burgoyne, by the unanimous advice of a council of war, sent a messenger to the American camp to treat of a convention. General Gates in the first instance demanded that the royal army should surrender prisoners of war. He also proposed that the British should ground their arms. Burgoyne replied, 'This article is inadmissible in every extremity; sooner than this army will consent to ground their arms in their encampment, they will rush on the enemy, determined to take no quarter.' After various messages, a convention for the surrender of the army was settled, which provided that 'The troops under General Burgoyne were to march out of their camp with the honours of war, and the artillery of the intrenchments, to the verge of the river, where the arms and artillery were to be left. The arms to be piled by word of command from their own officers. A free passage was to be granted to the army under Lieutenant-General Burgoyne to Great Britain, upon condition of not serving again in North America during the present contest.' The articles of capitulation were settled on the 15th of October; and on that very evening a messenger arrived from Clinton with an account of his successes, and with the tidings that part of his force had penetrated as far as Esopus, within 50 miles of Burgoyne's camp. But it was too late. The public faith was pledged; and the army was, indeed, too debilitated by fatigue and hunger to resist an attack if made; and Gates certainly would have made it, if the convention had been broken off. Accordingly, on the 17th, the convention of Saratoga was carried into effect. By this convention 5,790 men surrendered themselves as prisoners. The sick and wounded left in the camp when the British retreated to Saratoga, together with the numbers of the British, German, and Canadian troops, who were killed, wounded, or taken, and who had deserted in the preceding part of the expedition, were reckoned to be 4,689. The British sick and wounded who had fallen into the hands of the Americans after the battle of the 7th, were treated with exemplary humanity; and when the convention was executed, General Gates showed a noble delicacy of feeling, which deserves the highest degree of honour. Every circumstance was avoided which could give the appearance of triumph. The

American troops remained within their lines until the British had piled their arms; and when this was done, the vanquished officers and soldiers were received with friendly kindness by their victors, and their immediate wants were promptly and liberally supplied. Discussions and disputes afterwards arose as to some of the terms of the convention; and the American Congress refused for a long time to carry into effect the article which provided for the return of Burgoyne's men to Europe; but no blame was imputable to General Gates or his army, who showed themselves to be generous as they had proved themselves to be brave."—Sir E. Creasy, *Fifteen Decisive Battles of the World, ch.* 13.

A. D. 1777-1778.—The British in Philadelphia.—Their gay winter. See Philadelphia: A. D. 1777–1778.

A. D. 1777-1778.—The Conway Cabal.—The capitulation of Burgoyne at Saratoga "was an all-important event in its influence on the progress of the war; but its immediate effect was unpropitious to the reputation of the Commander-in-chief, who was compelled, at the close of the year, to place his army in a state of almost total destitution in winter-quarters at Valley Forge. The brilliant success of General Gates at Saratoga, in contrast with the reverses which had befallen the American Army under the immediate command of Washington, encouraged the operations of a cabal against him, which had been formed by certain disaffected officers of the army, and was countenanced by a party in Congress. The design was, by a succession of measures implying a want of confidence, to drive Washington to retire from the service in disgust; and, when this object was effected, to give the command of the army to General Gates, who lent a willing ear to these discreditable intrigues. A foreign officer in the American Army, of the name of Conway, was the most active promoter of the project, which was discovered by the accidental disclosure of a part of his correspondence with Gates. Washington bore himself on this occasion with his usual dignity, and allowed the parties concerned, in the army and in Congress, to take refuge in explanations, disclaimers, and apologies, by which those who made them gained no credit, and those who accepted them were not deceived. A part of the machinery of this wretched cabal was the publication, in London, and the republication in New York of [a] collection of forged letters . . . bearing the name of Washington, and intended to prove his insincerity in the cause of the Revolution. Nothing perhaps more plainly illustrates his conscious strength of character, than the disdainful silence with which he allowed this miserable fabrication to remain for twenty years without exposure. It was only in the year 1796, and when about to retire from the Presidency, that he filed, in the department of State, a denial of its authenticity."—E. Everett, *Life of Washington, ch.* 6.—In a letter written May 30, 1778, addressed to Landon Carter, from the camp at Valley Forge, Washington alluded to the subject of the cabal as follows: "With great truth I think I can assure you, that the information you received from a gentleman at Sabine Hall, respecting a disposition in the northern officers to see me superseded in my command by General G——s is without the least foundation. I have very sufficient reasons to think, that no officers in the army are more attached to me, than those from the northward, and of those, none more so than the gentlemen, who were under the immediate command of G——s last campaign. That there was a scheme of this sort on foot, last fall, admits of no doubt; but it originated in another quarter; with three men who wanted to aggrandize themselves; but finding no support, on the contrary, that their conduct and views, when seen into, were likely to undergo severe reprehension, they slunk back, disavowed the measure, and professed themselves my warmest admirers. Thus stands the matter at present. Whether any members of Congress were privy to this scheme, and inclined to aid and abet it, I shall not take upon me to say; but am well informed, that no whisper of the kind was ever heard in Congress."—George Washington, *Writings, ed. by W. C. Ford, v.* 7, *p.* 39.

Also in: W. Irving, *Life of Washington, v.* 3, *ch.* 28–30.—J. C. Hamilton, *Hist. of the U. S. in the Writings of Alex. Hamilton, v.* 1, *ch.* 13–14.—J. Sparks, *Life of Gouverneur Morris, v.* 1, *ch.* 10.—W. V. Wells, *Life of Samuel Adams, ch.* 46 (*v.* 2).

A. D. 1777-1781.—Adoption and ratification of the Articles of Confederation.—"On the 11th of June, 1776, the same day on which the committee for preparing the declaration of independence was appointed, congress resolved, that 'a committee be appointed to prepare and digest the form of a confederation to be entered into between these colonies'; and on the next day a committee was accordingly appointed, consisting of a member from each colony. Nearly a year before this period (viz. on the 21st of July, 1775), Dr. Franklin had submitted to congress a sketch of articles of confederation, which does not, however, appear to have been acted on. . . . On the 12th of July, 1776, the committee appointed to prepare articles of confederation presented a draft, which was in the hand-writing of Mr. Dickenson, one of the committee, and a delegate from Pennsylvania. The draft, so reported, was debated from the 22d to the 31st of July, and on several days between the 5th and 20th of August, 1776. On this last day, congress, in committee of the whole, reported a new draft, which was ordered to be printed for the use of the members. The subject seems not again to have been touched until the 8th of April, 1777, and the articles were debated at several times between that time and the 15th of November of the same year. On this last day the articles were reported with sundry amendments, and finally adopted by congress. A committee was then appointed to draft, and they accordingly drafted, a circular letter, requesting the states respectively to authorize their delegates in congress to subscribe the same in behalf of the state. . . . It carried, however, very slowly conviction to the minds of the local legislatures. Many objections were

stated, and many amendments were proposed. All of them, however, were rejected by congress, not probably because they were all deemed inexpedient or improper in themselves; but from the danger of sending the instrument back again to all the states, for reconsideration. Accordingly, on the 26th of June, 1778, a copy, engrossed for ratification, was prepared, and the ratification begun on the 9th day of July following. It was ratified by all the states, except Delaware and Maryland, in 1778; by Delaware in 1779, and by Maryland on the 1st of March, 1781, from which last date its final ratification took effect, and was joyfully announced by congress. In reviewing the objections taken by the various states to the adoption of the confederation in the form in which it was presented to them, . . . that which seemed to be of paramount importance, and which, indeed, protracted the ratification of the confederation to so late a period, was the alarming controversy in respect to the boundaries of some of the states, and the public lands, held by the crown, within these reputed boundaries."— J. Story, *Commentaries on the Const. of the U. S., bk.* 2, *ch.* 2 (*v.* 1).

The following is the text of the Articles of Confederation:

"**Article I.**—The style of this Confederacy shall be, 'The United States of America.' **Art. II.**—Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States in Congress assembled. **Art. III.**— The said States hereby severally enter into a firm league of friendship with each other, for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatever. **Art. IV.**— The better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States; and the people of each State shall have free ingress and egress to and from any other State, and shall enjoy therein all the privileges of trade and commerce subject to the same duties, impositions, and restrictions as the inhabitants thereof respectively; provided that such restrictions shall not extend so far as to prevent the removal of property imported into any State to any other State of which the owner is an inhabitant; provided also, that no imposition, duties, or restriction shall be laid by any State on the property of the United States or either of them. If any person guilty of, or charged with, treason, felony, or other high misdemeanor in any State shall flee from justice and be found in any of the United States, he shall, upon demand of the governor or executive power of the State from which he fled, be delivered up and removed to the State having jurisdiction of his offense. Full faith and credit shall be given in each of these States to the records, acts, and judicial proceedings of the courts and magistrates of every other State. **Art. V.**— For the more convenient management of the general interests of the United States, delegates shall be annually appointed in such manner as the Legislature of each State shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each State to recall its delegates, or any of them, at any time within the year, and to send others in their stead for the remainder of the year. No State shall be represented in Congress by less than two, nor by more than seven members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of holding any office under the United States for which he, or another for his benefit, receives any salary, fees, or emolument of any kind. Each State shall maintain its own delegates in any meeting of the States and while they act as members of the Committee of the States. In determining questions in the United States in Congress assembled, each State shall have one vote. Freedom of speech and debate in Congress shall not be impeached or questioned in any court or place out of Congress; and the members of Congress shall be protected in their persons from arrests and imprisonment during the time of their going to and from, and attendance on, Congress, except for treason, felony, or breach of the peace. **Art. VI.**— No State, without the consent of the United States, in Congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference, agreement, alliance, or treaty with any king, prince, or state; nor shall any person holding any office of profit or trust under the United States, or any of them, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state; nor shall the United States, in Congress assembled, or any of them, grant any title of nobility. No two or more States shall enter into any treaty, confederation, or alliance whatever between them, without the consent of the United States, in Congress assembled, specifying accurately the purposes for which the same is to be entered into, and how long it shall continue. No State shall lay any imposts or duties which may interfere with any stipulations in treaties entered into by the United States, in Congress assembled, with any king, prince, or state, in pursuance of any treaties already proposed by Congress to the courts of France and Spain. No vessel of war shall be kept up in time of peace by any State, except such number only as shall be deemed necessary by the United States, in Congress assembled, for the defense of such State or its trade, nor shall any body of forces be kept up by any State in time of peace, except such number only as, in the judgment of the United States, in Congress assembled, shall be deemed requisite to garrison the forts necessary for the defense of such State; but every State shall always keep up a well-regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use in public stores a due number of field-pieces and tents, and a proper quantity of arms, ammunition, and camp equipage. No State shall engage in any war without the consent of the United States, in Congress assembled, unless such State be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such State, and the danger is so imminent as not to admit of a delay

till the United States, in Congress assembled, can be consulted; nor shall any State grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the United States, in Congress assembled, and then only against the kingdom or state, and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the United States, in Congress assembled, unless such State be infested by pirates, in which case vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the United States, in Congress assembled, shall determine otherwise. **Art. VII.**—When land forces are raised by any State for the common defense, all officers of or under the rank of Colonel shall be appointed by the Legislature of each State respectively by whom such forces shall be raised, or in such manner as such State shall direct, and all vacancies shall be filled up by the State which first made the appointment. **Art. VIII.**—All charges of war, and all other expenses that shall be incurred for the common defense, or general welfare, and allowed by the United States, in Congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several States in proportion to the value of all land within each State, granted to, or surveyed for, any person, as such land and the buildings and improvements thereon shall be estimated, according to such mode as the United States, in Congress assembled, shall, from time to time, direct and appoint. The taxes for paying that proportion shall be laid and levied by the authority and direction of the Legislatures of the several States, within the time agreed upon by the United States, in Congress assembled. **Art. IX.**—The United States, in Congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth Article; of sending and receiving ambassadors; entering into treaties and alliances, provided that no treaty of commerce shall be made, whereby the legislative power of the respective States shall be restrained from imposing such imposts and duties on foreigners as their own people are subjected to, or from prohibiting the exportation or importation of any species of goods or commodities whatever; of establishing rules for deciding, in all cases, what captures on land and water shall be legal, and in what manner prizes taken by land or naval forces in the service of the United States shall be divided or appropriated; of granting letters of marque and reprisal in times of peace; appointing courts for the trial of piracies and felonies committed on the high seas; and establishing courts for receiving and determining finally appeals in all cases of captures; provided that no member of Congress shall be appointed a judge of any of the said courts. The United States, in Congress assembled, shall also be the last resort on appeal in all disputes and differences now subsisting, or that hereafter may arise between two or more States concerning boundary, jurisdiction, or any other cause whatever; which authority shall always be exercised in the manner following: Whenever the legislative or executive authority, or lawful agent of any State in controversy with another, shall present a petition to Congress, stating the matter in question, and praying for a hearing, notice thereof shall be given by order of Congress to the legislative or executive authority of the other State in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint, by joint consent, commissioners or judges to constitute a court for hearing and determining the matter in question; but if they cannot agree, Congress shall name three persons out of each of the United States, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven nor more than nine names, as Congress shall direct, shall, in the presence of Congress, be drawn out by lot; and the persons whose names shall be so drawn, or any five of them, shall be commissioners or judges, to hear and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination; and if either party shall neglect to attend at the day appointed, without showing reasons which Congress shall judge sufficient, or being present, shall refuse to strike, the Congress shall proceed to nominate three persons out of each State, and the secretary of Congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court, to be appointed in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence or judgment, which shall in like manner be final and decisive; the judgment or sentence and other proceedings being in either case transmitted to Congress, and lodged among the acts of Congress for the security of the parties concerned; provided, that every commissioner, before he sits in judgment, shall take an oath, to be administered by one of the judges of the supreme or superior court of the State where the cause shall be tried, 'well and truly to hear and determine the matter in question, according to the best of his judgment, without favor, affection, or hope of reward.' Provided, also, that no State shall be deprived of territory for the benefit of the United States. All controversies concerning the private right of soil claimed under different grants of two or more States, whose jurisdictions, as they may respect such lands, and the States which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall, on the petition of either party to the Congress of the United States, be finally determined, as near as may be, in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different States. The United States, in Congress assembled, shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective States; fixing the standard of weights and measures throughout the United States; regulating the trade and managing all affairs with the Indians, not members of any of the States; provided that the legislative right of any State, within its own limits, be not infringed or violated; establishing and regulating post-offices from one State to another, throughout all the

United States, and exacting such postage on the papers passing through the same as may be requisite to defray the expenses of the said office; appointing all officers of the land forces in the service of the United States, excepting regimental officers; appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the United States; making rules for the government and regulation of the said land and naval forces, and directing their operations. The United States, in Congress assembled, shall have authority to appoint a committee, to sit in the recess of Congress, to be denominated 'A Committee of the States,' and to consist of one delegate from each State, and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the United States under their direction; to appoint one of their number to preside; provided that no person be allowed to serve in the office of president more than one year in any term of three years; to ascertain the necessary sums of money to be raised for the service of the United States, and to appropriate and apply the same for defraying the public expenses; to borrow money or emit bills on the credit of the United States, transmitting every half year to the respective States an account of the sums of money so borrowed or emitted; to build and equip a navy; to agree upon the number of land forces, and to make requisitions from each State for its quota, in proportion to the number of white inhabitants in such State, which requisition shall be binding; and thereupon the Legislature of each State shall appoint the regimental officers, raise the men, and clothe, arm, and equip them in a soldier-like manner, at the expense of the United States; and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled; but if the United States, in Congress assembled, shall, on consideration of circumstances, judge proper that any State should not raise men, or should raise a smaller number than its quota, and that any other State should raise a greater number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed, and equipped in the same manner as the quota of such State, unless the Legislature of such State shall judge that such extra number can not be safely spared out of the same, in which case they shall raise, officer, clothe, arm, and equip as many of such extra number as they judge can be safely spared, and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled. The United States, in Congress assembled, shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expenses necessary for the defense and welfare of the United States, or any of them, nor emit bills, nor borrow money on the credit of the United States, nor appropriate money, nor agree upon the number of vessels of war to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander-in-chief of the army or navy, unless nine States assent to the same, nor shall a question on any other point, except for adjourning from day to day, be determined, unless by the votes of a majority of the United States, in Congress assembled. The Congress of the United States shall have power to adjourn to any time within the year, and to any place within the United States, so that no period of adjournment be for a longer duration than the space of six months, and shall publish the journal of their proceedings monthly, except such parts thereof relating to treaties, alliances, or military operations as in their judgment require secresy; and the yeas and nays of the delegates of each State, on any question, shall be entered on the journal when it is desired by any delegate; and the delegates of a State, or any of them, at his or their request, shall be furnished with a transcript of the said journal except such parts as are above excepted, to lay before the Legislatures of the several States. **Art. X.**—The Committee of the States, or any nine of them, shall be authorized to execute, in the recess of Congress, such of the powers of Congress as the United States, in Congress assembled, by the consent of nine States, shall, from time to time, think expedient to vest them with; provided that no power be delegated to the said Committee, for the exercise of which, by the Articles of Confederation, the voice of nine States in the Congress of the United States assembled is requisite. **Art. XI.**—Canada, acceding to this Confederation, and joining in the measures of the United States, shall be admitted into, and entitled to all the advantages of this Union; but no other colony shall be admitted into the same, unless such admission be agreed to by nine States. **Art. XII.**—All bills of credit emitted, moneys borrowed, and debts contracted by or under the authority of Congress, before the assembling of the United States, in pursuance of the present Confederation, shall be deemed and considered as a charge against the United States, for payment and satisfaction whereof the said United States and the public faith are hereby solemnly pledged. **Art. XIII.**—Every State shall abide by the determinations of the United States, in Congress assembled, on all questions which by this Confederation are submitted to them. And the Articles of this Confederation shall be inviolably observed by every State, and the Union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them, unless such alteration be agreed to in a Congress of the United States, and be afterwards confirmed by the Legislatures of every State. AND WHEREAS it hath pleased the great Governor of the world to incline the hearts of the Legislatures we respectively represent in Congress to approve of, and to authorize us to ratify, the said Articles of Confederation and perpetual Union, know ye, that we, the undersigned delegates, by virtue of the power and authority to us given for that purpose, do, by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said Articles of Confederation and perpetual Union, and all and singular the matters and things therein contained. And we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the United States, in Congress assembled, on all questions which by the said Confederation are submitted to them;

and that the Articles thereof shall be inviolably observed by the States we respectively represent, and that the Union shall be perpetual. In witness whereof we have hereunto set our hands in Congress. Done at Philadelphia in the State of Pennsylvania the ninth day of July in the year of our Lord one thousand seven hundred and seventy-eight, and in the third year of the independence of America."

"Under these Articles of Confederation the treaty of peace with England was concluded and the American nation was governed until the final adoption of the Constitution of the United States. The main defect of the Articles of Confederation was, that although powers sufficiently adequate to create a government were ceded, there was no power to raise revenue, to levy taxes, or to enforce the law, except with the consent of nine States; and although the government had power to contract debts, there were no means by which to discharge them. The government had power to raise armies and navies, but no means wherewith to pay them, unless the means were voted by the States themselves; they could make treaties with foreign powers, but had no means to coerce a State to obey such treaty. In short, it was a government which had the power to make laws, but no power to punish infractions thereof. Washington himself said: 'The Confederation appears to me to be little more than the shadow without the substance, and Congress a nugatory body.' Chief Justice Story, in summing up the leading defects of the Articles of Confederation, says: 'There was an utter want of all coercive authority to carry into effect its own constitutional measures; this of itself was sufficient to destroy its whole efficiency as a superintendent government, if that may be called a government which possessed no one solid attribute of power. In truth, Congress possessed only the power of recommendation. Congress had no power to exact obedience or punish disobedience of its ordinances; they could neither impose fines nor direct imprisonments, nor divest privileges, nor declare forfeitures, nor suspend refractory officers. There was no power to exercise force.'"—S. Sterne, *Constitutional Hist. of the U. S., ch.* 1.—"The individual states had attributed to themselves, in the Articles of Confederation, no powers which could place them in relation to foreign nations in the light of sovereign states. They felt that all such claims would be considered ridiculous, because back of these claims there was no real corresponding power. Congress therefore remained, as heretofore, the sole outward representative of sovereignty. But the power to exercise the prerogatives was taken from it, and this without placing it in any other hands. The changes effected by the Articles of Confederation were rather of a negative than of a positive nature. They did not give the State which was just coming into being a definite form, but they began the work of its dissolution. . . . The practical result . . . was that the United States tended more and more to split up into thirteen independent republics, and . . . virtually ceased to be a member of the family of nations bound together by the 'jus gentium.'"—H. von Holst, *Const. and Pol. Hist. of the U. S., v.* 1, *ch.* 1.

A. D. 1778 (February).—The Treaty with France.—"The account of Burgoyne's surrender, which was brought to France by a swift-sailing ship from Boston, threw Turgot and all Paris into transports of joy. None doubted the ability of the states to maintain their independence. On the 12th of December their commissioners had an interview with Vergennes. 'Nothing,' said he, 'has struck me so much as General Washington's attacking and giving battle to General Howe's army. To bring troops raised within the year to this, promises everything. The court of France, in the treaty which is to be entered into, intend to take no advantage of your present situation. Once made, it should be durable; and therefore it should contain no condition of which the Americans may afterward repent, but such only as will last as long as human institutions shall endure, so that mutual amity may subsist forever. Entering into a treaty will be an avowal of your independence. Spain must be consulted, and Spain will not be satisfied with an undetermined boundary on the west. Some of the states are supposed to run to the South Sea, which might interfere with her claim to California.' It was answered that the last treaty of peace adopted the Mississippi as a boundary. 'And what share do you intend to give us in the fisheries?' asked Vergennes; for in the original draft of a treaty the United States had proposed to take to themselves Cape Breton and the whole of the island of Newfoundland. Explanations were made by the American commissioners that their later instructions removed all chances of disagreement on that subject. . . . The question of a French alliance . . . was discussed by Vergennes with the Marquis d'Ossun, the late French ambassador in Madrid, as the best adviser with regard to Spain, and the plan of action was formed. Then these two met the king at the apartment of Maurepas, where the plan, after debate, was finally settled. Maurepas, at heart opposed to the war, loved ease and popularity too well to escape the sway of external opinion; and Louis XVI. sacrificed his own inclination and his own feeling of justice to policy of state and the opinion of his advisers. So, on the 6th of February, a treaty of amity and commerce and an eventual defensive treaty of alliance were concluded between the king of France and the United States, on principles of equality and reciprocity, and for the most part in conformity to the proposals of congress. In commerce each party was to be placed on the footing of the most favored nation. The king of France promised his good offices with the princes and powers of Barbary. As to the fisheries, each party reserved to itself the exclusive possession of its own. Accepting the French interpretation of the treaties of Utrecht and of Paris, the United States acknowledged the right of French subjects to fish on the banks of Newfoundland, and their exclusive right to half the coast of that island for drying-places. On the question of

ownership in the event of the conquest of Newfoundland the treaty was silent. The American proposal, that free ships give freedom to goods and to persons, except to soldiers in actual service of an enemy, was adopted. Careful lists were made out of contraband merchandises. The absolute and unlimited independence of the United States was described as the essential end of the defensive alliance; and the two parties mutually engaged not to lay down their arms until it should be assured by the treaties terminating the war. Moreover, the United States guaranteed to France the possessions then held by France in America, as well as those which it might acquire by a future treaty of peace; and, in like manner, the king of France guaranteed to the United States their present possessions and acquisitions during the war from the dominions of Great Britain in North America. A separate and secret act reserved to the king of Spain the power of acceding to the treaties. Within forty-two hours of the signature of these treaties of commerce and alliance the British ministry received the news by special messenger from their spy in Paris, but it was not divulged." It was officially communicated to the British government on the 13th of March, when ambassadors were withdrawn on both sides and war soon followed.— G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *v.* 5, *ch.* 17.

A. D. 1778 (June).— Peace-proposals from England.—British evacuation of Philadelphia and march to New York.— Battle of Monmouth.—"On May 11th, Sir Henry Clinton relieved Sir William Howe at Philadelphia, and the latter took his departure in a blaze of mock glory. . . . The new commander was more active than his predecessor, but no cleverer, and no better fitted to cope with Washington. . . . Expecting a movement by the enemy, Washington sent Lafayette forward to watch Philadelphia. Clinton, fresh in office, determined to cut him off, and by a rapid movement nearly succeeded in so doing. Timely information, presence of mind, and quickness, alone enabled the young Frenchman to escape, narrowly but completely. Meantime, a cause for delay, that curse of the British throughout the war, supervened. A peace commission, consisting of the Earl of Carlisle, William Eden, and Governor Johnstone, arrived. They were excellent men, but they came too late. Their propositions three years before would have been well enough, but as it was they were worse than nothing. Coolly received, they held a fruitless interview with a committee of Congress, tried to bribe and intrigue, found that their own army had been already ordered to evacuate Philadelphia [in apprehension of the arrival of the expected French fleet] without their knowledge, and finally gave up their task in angry despair, and returned to England to join in the chorus of fault-finding which was beginning to sound very loud in ministerial ears. Meanwhile, Washington waited and watched, puzzled by the delay, and hoping only to harass Sir Henry with militia on the march to New York. But, as the days slipped by, the Americans grew stronger, while Sir Henry weakened himself by sending 5,000 men to the West Indies, and 3,000 to Florida. When he finally started [evacuating Philadelphia June 17], he had with him less than 10,000 men, while the Americans had 13,000, nearly all continental troops. Under these circumstances, Washington determined to bring on a battle. He was thwarted at the outset by his officers, as was wont to be the case. Lee had returned more whimsical than ever, and at the moment was strongly adverse to an attack. . . . Washington was harassed of course by all this, but he did not stay his purpose, and as soon as he knew that Clinton actually had marched, he broke camp at Valley Forge and started in pursuit. There were more councils of an old-womanish character, but finally Washington took the matter into his own hands, and ordered forth a strong detachment to attack the British rear-guard. They set out on the 25th, and as Lee, to whom the command belonged, did not care to go, Lafayette [see above: A. D. 1777 (July)] was put in charge. As soon as Lafayette had departed, however, Lee changed his mind, and insisted that all the detachments in front, amounting to 6,000 men, formed a division so large that it was unjust not to give him the command. Washington, therefore, sent him forward next day with two additional brigades, and then Lee by seniority took command on the 27th of the entire advance. In the evening of that day, Washington came up, reconnoitred the enemy, and saw that, although their position was a strong one, another day's unmolested march would make it still stronger. He therefore resolved to attack the next morning, and gave Lee then and there explicit orders to that effect. In the early dawn he despatched similar orders, but Lee apparently did nothing except move feebly forward, saying to Lafayette, 'You don't know the British soldiers; we cannot stand against them.' He made a weak attempt to cut off a covering party, marched and countermarched, ordered and countermanded, until Lafayette and Wayne, eager to fight, knew not what to do, and sent hot messages to Washington to come to them. Thus hesitating and confused, Lee permitted Clinton to get his baggage and train to the front, and to mass all his best troops in the rear under Cornwallis, who then advanced against the American lines. Now there were no orders at all, and the troops did not know what to do, or where to go. They stood still, then began to fall back, and then to retreat. A very little more and there would have been a rout. As it was, Washington alone prevented disaster. . . . As the ill tidings grew thicker, Washington spurred sharper and rode faster through the deep sand and under the blazing midsummer sun. At last he met Lee and the main body all in full retreat. He rode straight at Lee, savage with anger, not pleasant to look at, one may guess, and asked fiercely and with a deep oath, tradition says, what it all meant. . . . Lee gathered himself and tried to excuse and palliate what had happened, but although the brief words that followed are variously reported to us across the century, we know that Washington rebuked him in such a way, and with such passion, that all was over between them. Lee . . . went to the rear, thence to a court-martial, thence to dismissal and to a solitary life. . . . Having put Lee aside, Washington rallied the broken troops, brought them into position, turned them back, and held the enemy in check. It was not

an easy feat, but it was done, and when Lee's division again fell back in good order the main army was in position, and the action became general. The British were repulsed, and then Washington, taking the offensive, drove them back until he occupied the battlefield of the morning. Night came upon him still advancing. He halted his army, lay down under a tree, his soldiers lying on their arms about him, and planned a fresh attack, to be made at daylight. But when the dawn came it was seen that the British had crept off, and were far on their road. The heat prevented a rapid pursuit, and Clinton got into New York. Between there and Philadelphia he had lost 2,000 men, Washington said, and modern authorities put it at about 1,500, of whom nearly 500 fell at Monmouth. . . . Monmouth has never been one of the famous battles of the Revolution, and yet there is no other which can compare with it as an illustration of Washington's ability as a soldier. . . . Its importance lies in the evidence which it gives of the way in which Washington, after a series of defeats, during a winter of terrible suffering and privation, had yet developed his ragged volunteers into a well-disciplined and effective army. The battle was a victory, but the existence and the quality of the army that won it were a far greater triumph. The dreary winter at Valley Forge had indeed borne fruit."—H. C. Lodge, *George Washington, v.* 1, *ch.* 7.

A. D. 1778 (June—November).—The war on the border.—Activity of Tories and Indians.—The Massacre at Cherry Valley.—"The Six Nations were stirred to hostility by Sir John Johnson and the Mohawk chief Joseph Brant, with Walter Butler, of infamous name. Their tory partisans were more cruel than the red men. At Cobleskill, Schoharie county, June 1, 1778, Brant won a savage triumph with a mixed force, and burned and plundered the settlement. Springfield was also destroyed, and the assailants retired. A month later the Indians were again at Cobleskill, and, burning where they went, beat off a force that attempted to check them. The valley of the Schohariekill was in the succeeding year subjected to invasions from the Senecas, and suffered severely. About Fort Stanwix the tories and red men were continually hovering, and more than once persons were pounced upon and scalped in sight of the works. In 1778, in the early autumn, German Flats was visited by Brant and his followers, and was entirely destroyed, although all the inhabitants but two were warned in season to escape with their lives. An expedition was sent after the Indians, but failed to bring the warriors to battle, and was rewarded only by laying waste the Indian villages of Unadilla and Oquaga, and capturing a large supply of cattle and provisions. At Cherry Valley a fort had been built, and the village was occupied by a band of colonial troops under Colonel Ichabod Alden. He rested in security, and the settlers were scattered in their habitations, regardless of warnings of approaching foes. Under cover of a severe storm of snow and rain, November 11, Brant and Butler, with 800 Indians and tories, swooped upon the homes, and 43 persons, including women and children, were butchered, 40 taken prisoners, all the buildings were burned, and the domestic animals seized. So brutal was the massacre that Brant charged Butler and the tories with acting against his protests. Brant himself was content, July 19, 1779, with destroying the church, mills, houses, and barns at Minnisink, Orange county, without sacrificing lives, but turned upon a party sent in pursuit, and, after capturing a detachment, butchered the wounded, and slew 45 who tried to escape. Such deeds produced a terror in the colony. No one knew where the red men and tories would strike next. To check and counteract them, excursions were made against the tribes in their homes. One of these was led by Colonels Van Schaick and Willett from Fort Stanwix in April, 1779. Proceeding by Wood Creek and Oneida Lake, they penetrated the villages of the Onondagas, which they destroyed, and seized the provisions and even the weapons of the red men, who fled into the wilderness."—E. H. Roberts, *New York, ch.* 24 (*v.* 2).—The following account of the attack on Cherry Valley is from a pen friendly to Butler and from sources favorable to the Tory side: "After an exhausting march next day through a blinding snow-storm and over ground covered with deep wet snow and mud, Butler halted his men at dark in a pine wood which afforded them some shelter, six miles from Cherry Valley. He assembled the chiefs and proposed that as soon as the moon rose, they should resume their march and surround the house occupied by the officers, while he made a rush upon the fort with the rangers. They readily assented, but before the time appointed arrived it began to rain violently, and they obstinately refused to move until daybreak. It was then arranged that Capt. McDonnel with 50 picked rangers and some Indians should storm the house, while Butler with the remainder assailed the fort. Without tents, blankets or fires, they spent a sleepless night cowering beneath the pines, and were glad to move as soon as day appeared. They had approached unperceived within a mile of the fort by passing through a dense swamp, when the Indians in front fired at two men cutting wood. One fell dead; the other, though bleeding, ran for his life and the entire body of Indians set up a whoop and followed at full speed. Unhappily the rangers had just been halted to fix flints and load their rifles, and the Indians obtained a long start. The Continental officers attempted to escape to the fort but only two or three reached it. The colonel, five other officers and twenty soldiers, were killed on the way and the lieutenant-colonel, three subalterns, and ten privates were taken. The colors of the regiment were abandoned in the house and burnt in it. The garrison of the fort was fully alarmed, and opened a fierce fire of artillery and small arms. The rangers seized and burnt a detached block-house, and fired briskly at the loop-holes in the palisades for ten minutes, when Butler saw with horror and consternation that the Indians had set their officers at defiance, and dispersed in every direction to kill and plunder. Their wretched misconduct forced him to collect all the rangers into a compact body on an eminence near the principal entrance to the fort, to oppose a sally by the garrison, which then undoubtedly outnumbered them considerably. There he was obliged to remain inactive all day under a cease-

less, chilling rain, while blazing houses and shrieks of agony told their pitiful tale in the settlement below. At nightfall he marched a mile down the valley and encamped. He then struggled with indifferent success to rescue the prisoners. Those surrendered were placed next the camp fires and protected by his whole force. Next morning most of the Indians and the feeblest men among the rangers were sent away with a huge drove of captured cattle for the supply of the garrison at Niagara, and McDonnel and Brant, with 60 rangers and 50 Indians, swept the valley from end to end, ruthlessly burning every building and stack in sight, while Butler, with the remainder, again stood guard at the gate of the fort. He hoped that this appalling spectacle would provoke the garrison to sally out and fight, but the lesson of Wyoming had not been lost on them, and they continued to look on from the walls in silent fury. Another great herd of cattle was collected, and Butler leisurely began his retreat, having had only two rangers and three Indians wounded during the expedition. He did not disguise the dark side of the story in his letter to Col. Bolton of the 17th November. 'I have much to lament,' he said, 'that notwithstanding my utmost precautions to save the women and children, I could not prevent some of them falling victims to the fury of the savages. They have carried off many of the inhabitants and killed more, among them Colin Cloyd, a very violent rebel. I could not prevail on the Indians to leave the women and children behind, though the second morning Captain Johnson (to whose knowledge of the Indians and address in managing them I am much indebted) and I got them to permit twelve, who were loyalists, and whom I concealed, with the humane assistance of Mr. Joseph Brant and Captain Jacobs of Ochquaga, to return. The death of the women and children on this occasion may, I believe, be truly ascribed to the rebels having falsely accused the Indians of cruelty at Wyomen. This has much exasperated them, and they are still more incensed at finding that the colonel and those who had then laid down their arms, soon after marching into their country intending to destroy their villages, and they declared that they would be no more accused falsely of fighting the enemy twice, meaning they would in future give no quarter.'"—E. Cruikshank, *The Story of Butler's Rangers, pp.* 55–56.

Also in: W. W. Campbell, *Annals of Tryon County, ch.* 5.—*Centennial Celebrations of New York, pp.* 359–383.—W. L. Stone, *Life of Brant, v.* 1, *ch.* 17.

A. D. 1778 (July).—The war on the border.—Bloody work of the Tories and their Indian allies.—The Massacre at Wyoming.—"In 1778, according to the plan of campaign as given by Guy Johnson in his correspondence, the English forces on the western borders of New York were divided into two bodies: one, consisting of Indians under Brant, to operate in New York, while Deputy Superintendent Butler with the other should penetrate the settled district on the Susquehanna. Brant [Joseph Brant, the Mohawk chief], who, according to Colonel Claus, 'had shown himself to be the most faithful and zealous subject his majesty could have in America,' did his work unsparingly, and ruin marked his track. In the valley of the upper Mohawk and the Schoharie nothing but the garrison-houses escaped, and labor was only possible in the field when muskets were within easy reach. Occasionally blows were struck at the larger settlements. . . . In July, 1778, the threatened attack on Wyoming took place. This region was at that time formally incorporated as the county of Westmoreland of the colony of Connecticut. . . . In the fall of 1776, two companies, on the Continental establishment, had been raised in the valley, in pursuance of a resolution of Congress, and were shortly thereafter ordered to join General Washington. Several stockaded forts had been built during the summer at different points. The withdrawal of so large a proportion of the able-bodied men as had been enlisted in the Continental service threw upon the old men who were left behind the duty of guarding the forts. . . . In March, 1778, another military company was organized, by authority of Congress, to be employed for home defence. In May, attacks were made upon the scouting parties by Indians, who were the forerunners of an invading army. The exposed situation of the settlement, the prosperity of the inhabitants, and the loyalty with which they had responded to the call for troops, demanded consideration from Connecticut, to whose quota the companies had been credited, and from Congress, in whose armies they had been incorporated; but no help came. On June 30th, an armed labor party of eight men, which went out from the upper fort, was attacked by Major Butler, who, with a force estimated by the American commander in his report at 800 men, Tories and Indians in equal numbers, had arrived in the valley. This estimate was not far from correct; but if we may judge from other raiding forces during the war, the proportion of whites is too large, for only a few local Tories had joined Butler. The little forts at the upper end of the valley offered no resistance to the invaders. On July 3d, there were collected at 'Forty Fort,' on the banks of the river, about three miles above Wilkesbarré, 230 Americans, organized in six companies (one of them being the company authorized by Congress for home defence), and commanded by Colonel Zebulon Butler, a resident in the valley and an officer in the Continental army. It was determined, after deliberation, to give battle. In the afternoon of that day, this body of volunteers, their number being swelled to nearly 300 by the addition of old men and boys, marched up the valley. The invaders had set fire to the forts of which they were in possession. This perplexed the Americans, as was intended, and they pressed on towards the spot selected by the English officer for giving battle. This was reached about four in the afternoon, and the attack was at once made by the Americans, who fired rapidly in platoons. The British line wavered, but a flanking fire from a body of Indians concealed in the woods settled the fate of the day against the Americans. They were thrown into confusion. No efforts of their officers could rally them while exposed to a fire which in a short time brought down every captain in the band. The Indians now cut off the retreat of the panic-stricken men, and pressed them towards the river. All who could saved their lives by flight. Of the 300 who went out that morning from Forty Fort, the names are recorded of 162 officers and men killed

in the action or in the massacre which followed. Major Butler, the British officer in command, reported the taking of 'two hundred and twenty-seven scalps' 'and only five prisoners.' Such was the exasperation of the Indians, according to him, that it was with difficulty he saved these few. He gives the English loss at two whites killed and eight Indians wounded. During the night the worst passions of the Indians seem to have been aroused in revenge for Oriskany. Incredible tales are told of the inhumanity of the Tories. These measures of vengeance fell exclusively upon those who participated in the battle, for all women and children were spared. As soon as the extent of the disaster was made known, the inhabitants of the lower part of the valley deserted their homes, and fled in the direction of the nearest settlements. Few stayed behind who had strength and opportunity to escape. In their flight many of the fugitives neglected to provide themselves with provisions, and much suffering and some loss of life ensued. The fugitives from the field of battle took refuge in the forts lower down the valley. The next day, Colonel Zebulon Butler, with the remnants of the company for home defence, consisting of only fourteen men, escaped from the valley. Colonel Denison, in charge of Forty Fort, negotiated with Major Butler the terms of capitulation which were ultimately signed. In these it was agreed that the inhabitants should occupy their farms peaceably, and their lives should be preserved 'intire and unhurt.' With the exception that Butler executed a British deserter whom he found among the prisoners, no lives were taken at that time. Shortly thereafter, the Indians began to plunder, and the English commander, to his chagrin, found himself unable to check them. Miner even goes so far as to say that he promised to pay for the property thus lost. Finding his commands disregarded, Butler mustered his forces and withdrew, without visiting the lower part of the valley. The greater part of the Indians went with him, but enough remained to continue the devastation, while a few murders committed by straggling parties of Indians ended the tragedy. The whole valley was left a scene of desolation."—A. McF. Davis, *The Indians and the Border Warfare of the Rev.* (*Narrative and Critical Hist. of Am., v.* 6, *ch.* 8).—"Rarely, indeed, does it happen that history is more at fault in regard to facts than in the case of Wyoming. The remark may be applied to nearly every writer who has attempted to narrate the events connected with the invasion of Colonel John Butler. Ramsay, and Gordon, and Marshall—nay, the British historians themselves—have written gross exaggerations. Marshall, however, in his revised edition, has made corrections. . . . Other writers, of greater or less note, have gravely recorded the same fictions, adding, it is to be feared, enormities not even conveyed to them by tradition. The grossest of these exaggerations are contained in Thatcher's Military Journal and Drake's Book of the Indians. The account of the marching out of a large body of Americans from one of the forts, to hold a parley, by agreement, and then being drawn into an ambuscade and all put to death, is false; the account of 70 Continental soldiers being butchered, after having surrendered, is also totally untrue. No regular troops surrendered, and all escaped who survived the battle of the 3d. . . . There is still another important correction to be made. . . . This correction regards the name and the just fame of Joseph Brant, whose character has been blackened with all the infamy, both real and imaginary, connected with this bloody expedition. Whether Captain Brant was at any time in company with this expedition is doubtful; but it is certain, in the face of every historical authority, British and American, that, so far from being engaged in the battle, he was many miles distant at the time of its occurrence. . . . It will, moreover, be seen, toward the close of the present work, that after the publication of Campbell's 'Gertrude of Wyoming,' in which poem the Mohawk chieftain was denounced as 'the Monster Brant,' his son repaired to England, and, in a correspondence with the poet, successfully vindicated his father's memory."—W. L. Stone, *Life of Joseph Brant, v.* 1, *p.* 339, *foot-note*, 338 *and foot-note.*—"No lives were taken by the Indians after the surrender; but numbers of women and children perished in the dismal swamp on the Pokono range of mountains, in the flight. . . . The whole number of people killed and missing was about 300. . . . The greatest barbarities of this celebrated massacre were committed by the tories."—The same, *Poetry and Hist. of Wyoming, ch.* 6.

A. D. 1778 (July—November).—The French fleet and army and their undertakings.—Ill fortune and ill-feeling between the new allies.—The failure at Newport.—"The first minister of France to the United States, M. Gérard, came accompanied by a fleet and army, under D'Estaing, (July.) 'Unforeseen and unfavorable circumstances,' as Washington wrote, 'lessened the importance of the French services in a great degree.' In the first place, the arrival was just late enough to miss the opportunity of surprising the British fleet in the Delaware, not to mention the British army on its retreat to New York. In the next place, the French vessels proved to be of too great draught to penetrate the channel and coöperate in an attack upon New York. Thus disappointing and disappointed, D'Estaing engaged in an enterprise against Newport, still in British hands. It proved another failure. But not through the French alone; the American troops that were to enter the island at the north being greatly behindhand. The same day that they took their place, under Sullivan, Greene, and Lafayette, the French left theirs at the lower end of the island, in order to meet the British fleet arriving from New York, (August 10.) A severe storm prevented more than a partial engagement; but D'Estaing returned to Newport only to plead the injuries received in the gale as compelling his retirement to Boston for repairs. The orders of the French government had been peremptory, that in case of any damage to the fleet it should put into port at once. So far was D'Estaing from avoiding action on personal grounds, that when Lafayette hurried to Boston to persuade his countrymen to return, the commander offered to serve as a volunteer until the fleet should be refitted. The Americans, however, talked of desertion and of inefficiency,—so freely, indeed, as to affront their faithful Lafayette. At the

same time, large numbers of them imitated the very course which they censured, by deserting their own army. The remaining forces retreated from their lines to the northern end of the island, and, after an engagement, withdrew to the mainland, (August 30.) It required all the good offices of Lafayette, of Washington, and of Congress, to keep the peace between the Americans and their allies. D'Estaing, soothed by the language of those whom he most respected, was provoked, on the other hand, by the hostility of the masses, both in the army and amongst the people. Collisions between his men and the Bostonians kept up his disgust; and, when his fleet was repaired, he sailed for the West Indies, (November.) . . . On the part of the British, there was nothing attempted that would not have been far better unattempted. Marauding parties from Newport went against New Bedford and Fairhaven. Others from New York went against Little Egg Harbor. Tories and Indians —'a collection of banditti,' as they were rightly styled by Washington, descended from the northern country to wreak massacre at Wyoming and at Cherry Valley. The war seemed to be assuming a new character: it was one of ravages unworthy of any cause, and most unworthy of such a cause as the British professed to be. Affairs were at a low state amongst the Americans."—S. Eliot, *Hist. of the U. S., pt.* 3, *ch.* 5.

Also in: S. G. Arnold, *Hist. of R. I., ch.* 21–22 (*v.* 2).—O. W. B. Peabody, *Life of Gen. John Sullivan* (*Library of Am. Biog., series* 2, *v.* 3).—J. Marshall, *Life of Washington, v.* 3, *ch.* 9.

A. D. 1778 (December).—Anxieties of Washington.—His opinion of Congress.—The serious defects and errors of that body.—"Much of the winter was passed by Washington in Philadelphia, occupied in devising and discussing plans for the campaign of 1779. It was an anxious moment with him. Circumstances which inspired others with confidence, filled him with solicitude. The alliance with France had produced a baneful feeling of security, which, it appeared to him, was paralyzing the energies of the country. England, it was thought, would now be too much occupied in securing her position in Europe, to increase her force or extend her operations in America. Many, therefore, considered the war as virtually at an end; and were unwilling to make the sacrifices, or supply the means necessary for important military undertakings. Dissensions, too, and party feuds were breaking out in Congress, owing to that relaxation of that external pressure of a common and imminent danger, which had heretofore produced a unity of sentiment and action. That august body had, in fact, greatly deteriorated since the commencement of the war. Many of those whose names had been as watchwords at the Declaration of Independence had withdrawn from the national councils; occupied either by their individual affairs, or by the affairs of their individual States. Washington, whose comprehensive patriotism embraced the whole Union, deprecated and deplored the dawning of this sectional spirit."—W. Irving, *Life of Washington, v.* 3, *ch.* 38.—The following, from a letter written by Washington in December, 1778, to Benjamin Harrison, Speaker of the Virginia House of Delegates, intimates the grave anxieties which filled his mind, and the opinion of Congress with which he had returned from a visit to Philadelphia: "It appears as clear to me as ever the Sun did in its meridian brightness, that America never stood in more eminent need of the wise, patriotic, and spirited exertions of her Sons than at this period; and if it is not a sufficient cause for genl. lamentation, my misconception of the matter impresses it too strongly upon me, that the States, separately, are too much engaged in their local concerns, and have too many of their ablest men withdrawn from the general council, for the good of the common weal. . . . As there can be no harm in a pious wish for the good of one's Country, I shall offer it as mine, that each State wd. not only choose, but absolutely compel their ablest men to attend Congress; and that they would instruct them to go into a thorough investigation of the causes, that have produced so many disagreeable effects in the army and Country; in a word, that public abuses should be corrected & an entire reformation worked. Without these, it does not in my Judgment require the spirit of divination to foretell the consequences of the present administration; nor to how little purpose the States individually are framing constitutions, providing laws, and filling offices with the abilities of their ablest men. These, if the great whole is mismanaged, must sink in the general wreck, and will carry with it the remorse of thinking, that we are lost by our own folly and negligence, or the desire perhaps of living in ease and tranquillity during the expected accomplishment of so great a revolution, in the effecting of which the greatest abilities, and the honestest men our (i. e. the American) world affords, ought to be employed. It is much to be feared, my dear Sir, that the States, in their separate capacities, have very inadequate ideas of the present danger. Removed (some of them) far distant from the scene of action, and seeing and hearing such publications only, as flatter their wishes, they conceive that the contest is at an end, and that to regulate the government and police of their own State is all that remains to be done; but it is devoutly to be wished, that a sad reverse of this may not fall upon them like a thunder-clap, that is little expected. I do not mean to designate particular States. I wish to cast no reflections upon any one. The Public believe (and, if they do believe it, the fact might almost as well be so), that the States at this time are badly represented, and that the great and important concerns of the nation are horribly conducted, for want either of abilities or application in the members, or through the discord & party views of some individuals. . . . P. S. Phila: 30th. This letter was to have gone by Post from Middlebrook but missed that conveyance, since which I have come to this place at the request of Congress whence I shall soon return. I have seen nothing since I came here (on the 22d Inst.) to change my opinion of Men or Measrs., but abundant reason to be convinced that our affairs are in a more distressed, ruinous and deplorable condition than they have been in since the commencement of the War.—By a faithful laborer then in the cause—By a man who is daily injuring his private Estate without even the smallest earthly advantage not common to all in case of a favorable Issue to the dispute—By one who wishes the prosperity of America most devoutly and sees or thinks he sees it, on the brink of ruin, you are beseeched most earnestly, my dear Colo.

Harrison, to exert yourself in endeavoring to rescue your Country by (let me add) sending your ablest and best Men to Congress — these characters must not slumber nor sleep at home in such times of pressing danger — they must not content themselves in the enjoyment of places of honor or profit in their own Country while the common interests of America are mouldering and sinking into irretrievable (if a remedy is not soon applied) ruin in which theirs also must ultimately be involved. If I was to be called upon to draw a picture of the times and of Men, from what I have seen, and heard, and in part know, I should in one word say that idleness, dissipation & extravagance seems to have laid fast hold of most of them.— That speculation — peculation — and an insatiable thirst for riches seems to have got the better of every other consideration and almost of every order of Men.— That party disputes and personal quarrels are the great business of the day whilst the momentous concerns of an empire— a great and accumulated debt — ruined finances — depreciated money — and want of credit (which in their consequences is the want of everything) are but secondary considerations and postponed from day to day — from week to week as if our affairs wear the most promising aspect — after drawing this picture, which from my Soul I believe to be a true one, I need not repeat to you that I am alarmed and wish to see my Countrymen roused. —I have no resentments, nor do I mean to point at any particular characters,— this I can declare upon my honor for I have every attention paid me by Congress that I can possibly expect and have reason to think that I stand well in their estimation, but in the present situation of things I cannot help asking — Where is Mason — Wythe —Jefferson—Nicholas—Pendleton—Nelson—and another I could name — and why, if you are sufficiently impressed with your danger do you not (as New Yk. has done in the case of Mr. Jay) send an extra member or two for at least a certain limited time till the great business of the Nation is put upon a more respectable and happy establishment.— Your Money is now sinking 5 pr. ct. a day in this city; and I shall not be surprized if in the course of a few months a total stop is put to the currency of it.—And yet an Assembly — a concert — a Dinner — or supper (that will cost three or four hundred pounds) will not only take Men off from acting in but even from thinking of this business while a great part of the Officers of ye Army from absolute necessity are quitting the service and ye more virtuous few rather than do this are sinking by sure degrees into beggary and want.— I again repeat to you that this is not an exaggerated acct.; that it is an alarming one I do not deny, and confess to you that I feel more real distress on acct. of the prest. appearances of things than I have done at any one time since the commencement of the dispute — but it is time to bid you once more adieu.— Providence has heretofore taken me up when all other means and hope seemed to be departing from me in this."— George Washington, *Writings, ed. by W. C. Ford, v. 7, pp.* 297-303.— "The first Continental Congress enjoyed and deserved in a remarkable degree the respect and confidence of the country. The second Congress was composed of eminent men, and succeeded, for a time, to the honors and reputation of the first. But when it attempted to pass from discussion to organization, and to direct as well as to frame the machinery of administration, its delays and disputes and errors and contradictions and hesitations excited a well-founded distrust of its executive skill. Conscious of this distrust, it became jealous of its authority; and instead of endeavoring to regain, by correcting its errors, the ground which it had lost by committing them, it grew suspicious and exacting in proportion to the decay of its strength. And while this critical change in its relations to the country was taking place, important changes took place also in the materials of which it was composed,— some of its wisest members being removed by death, or imperative calls to other fields of duty, or by failing of re-election at the regular expiration of their terms of office. Among the first elements with which it was brought into collision were the newly organized governments of the States. The question of State rights, that unsolved problem of our history, begins almost with the beginning of the war. How abundant and active the materials of disunion were, and how difficult it was even for leading men to rise above them might be proved by numerous passages in the letters of Washington and Greene, if it were not still more evident from the conduct of the local legislatures. How far this spirit might have been counteracted or controlled if the policy of the Congress had been that policy of prompt decision and energetic action which, commanding respect at all times, commands in times of general danger general and implicit obedience, it is impossible to say. . . . Another element with which it was brought into immediate and constant relations was the army; and, unfortunately for both, these relations, from their very nature, brought into immediate and constant contrast the elements of opposition which they both contained, rather than the elements of harmonious action, which they also contained in an almost equal degree. If the Congress was composed of the representatives of the people, the army was composed in a large proportion of the constituents of the Congress. More than once also, during the course of the war, men who had done good work for their country as soldiers, withdrawing from their original field of action, did equally good service for her as statesmen. And more than once, too, men who had proved themselves wise and eloquent in counsel were found at the head of a regiment, or even in more subordinate positions in the army. . . . The real interest and the real object of the citizen in arms and of the citizen in the toga were still the same. But their point of view was different. The ever-present object of Congress was discussion as a means of organization. The ever-present object of the leaders of the army was decision as a means of action. Congress counted obstacles, weighed difficulties, balanced opposing advantages, eating and sleeping meanwhile and refreshing mind and body as nature bade. But while Congress was deliberating upon the best way of procuring meat, the army was often brought to the verge of starvation for the want of it. While Congress was discussing by a warm fire the most eligible method of providing the army with tents and blankets, half the army was sleeping on the snow without either blanket or tent. While Congress was framing elaborate resolutions, and drawing out and equipping regiments upon paper, officers

in the field were standing disheartened before their thinned and disheartened ranks. . . . Errors of statesmanship, like errors of generalship, would easily have been forgiven and forgotten; for both statesmen and generals had still much to learn. Unfortunately, while the best generals strove earnestly to correct their errors by their experience, Congress, in too many things, clung obstinately to its errors, in spite of the most decisive experience. Those errors were twofold,—errors of policy and errors of principle,—the one tending to undermine the respect which, in the beginning, was felt for their wisdom; the other, to awaken a general distrust of their justice. The first year of the war demonstrated the danger of short enlistments and temporary levies. But more than half the second year was allowed to pass before it was decided to raise an army for the whole duration of the war. The first campaign demonstrated the necessity of providing by regularly organized departments for the food, clothing, and transportation of the army; but it was not till late in the second year that a board of war was organized; and not till later still that the Quartermaster-General and Commissary-General were allowed to devote themselves to their duty in camp, instead of waiting idly for orders at the door of Congress. All experience and the simplest reasoning showed the importance of strengthening the hands of their General by passing promptly all the acts needed for the conduct of an army in the field, or the support and instruction of an army in quarters; but, in spite of all experience and the plainest reason, Congress persisted in its unseasonable delays. . . . The policy of the Congress, in the organization and support of the army, was a policy of tergiversation and delay. No wonder that the army, leaders and all, should early lose their confidence in its wisdom! But the dissatisfaction did not end here. One of the earliest felt of the numerous wants of the army was the want of good officers. . . . To select them in the beginning from the mass of unproved candidates was impossible; but in the course of two campaigns, the characters and pretensions of men were well tried, the chaff thoroughly sifted, and what remained might be confidently accepted as sound. . . . It was evidently the policy of Congress to secure by all proper and reasonable inducements the services of such officers for the war. It was the duty of Congress, in its dealings with them, to remember that in becoming soldiers, and exposing themselves to the dangers and privations of a soldier's life, they adopted, with the ideas of subordination that lie at the basis of military discipline, the ideas of rank and grade which define and circumscribe that subordination. But Congress remembered nothing of this. It required of them the service of officers, but gave them a pay hardly sufficient to enable them to live like private soldiers. It demanded the present sacrifice of cold, hunger, hard service, and exposure to sickness, wounds, and death; and refused the prospective reward of half-pay or pension when sickness or wounds should have incapacitated them for further exertion, or death should have made their wives unprotected widows, and their children helpless orphans. Forgetting that pride is an essential element of the military character, and that self-respect is essential to a healthy and sustaining pride, it trifled with their claims to rank by the accepted rules of service, and claimed and exercised the power of dealing with commissions according to its own good pleasure."—G. W. Greene, *Life of Nathanael Greene, bk. 2, ch. 18 (v. 1).*

A. D. 1778-1779.—Clark's conquest of the Northwest for Virginia, and its annexation to the district of Kentucky.—"Virginia . . . had more western enterprise than any other colony. In 1774 Dunmore's war gave her the 'backlands,' into which her frontiersmen had been for some time pressing. Boone was a Carolinian, but Kentucky was a distinctively Virginia colony. In 1776 the Virginia legislature erected the County of Kentucky, and the next year a Virginia judge dispensed justice at Harrodsburg. Soon the colony was represented in the legislature of the parent state. While thus extending her jurisdiction over the region southwest of the Ohio, the Old Dominion did not forget the language of [her charter] of 1609, 'up into the land throughout from sea to sea, west and northwest.' George Rogers Clark, a Virginian who had made Kentucky his home, was endowed with something of the general's and statesman's grasp. While floating down the Ohio in 1776, being then 24 years of age, he conceived the conquest of the country beyond the river. . . . Clark says he had since the beginning of the war taken pains to make himself acquainted with the true situation of the Northwestern posts; and in 1777 he sent two young hunters to spy out the country more thoroughly, and especially to ascertain the sentiments of the 'habitants.' On the return of these hunters with an encouraging report, he went to Williamsburg, then the capital of Virginia, where he enlisted Governor Patrick Henry and other leading minds in a secret expedition to the Illinois. Acting under a vaguely worded law, authorizing him to aid 'any expedition against their Western enemies,' Governor Henry gave Clark some vague public instructions, directing him to enlist, in any county of the commonwealth, seven companies of men who should act under his command as a militia, and also private instructions that were much more full and definite. . . . Both the public and private instructions are dated January 2, 1778. The governor also gave the young captain a small supply of money. Clark immediately re-crossed the mountains and began to recruit his command. . . . Overcoming as best he could the difficulties that environed him, he collected his feeble command at the Falls of the Ohio. On June 26, 1778, he began the descent of the river. Leaving the Ohio at Fort Massac, forty miles above its mouth, he began the march to Kaskaskia. This fell into his hands, July 5th, and Cahokia soon after, both without the loss of a single life. Clark found few Englishmen in these villages, and the French, who were weary of British rule, he had little difficulty in attaching to the American interest. Vincennes, soon after, surrendered to a mere proclamation, when there was not an American soldier within one hundred miles of the place. . . . Clark prevailed upon 100 men to re-enlist for eight months; he then filled up his companies with recruits from the villages, and sent an urgent call to Virginia for re-enforcements. The salutary influence of the invasion upon the Indians was felt at once; it 'began to spread among the nations even to the border of

the lakes;' and in five weeks Clark settled a peace with ten or twelve different tribes. . . . And now Clark began really to feel the difficulties of his situation. Destitute of money, poorly supplied, commanding a small and widely scattered force, he had to meet and circumvent an active enemy who was determined to regain what he had lost. Governor Hamilton [the British governor at Detroit] projected a grand campaign against the French towns that had been captured and the small force that held them. The feeble issue was the capture, in December, 1778, of Vincennes, which was occupied by but two Americans. Clark, who was in the Illinois at the time of this disaster, at once put his little force in motion for the Wabash, knowing, he says, that if he did not take Hamilton, Hamilton would take him; and, February 25, 1779, at the end of a march of 250 miles, that ranks in peril and hardship with Arnold's winter march to Canada, he again captured the town, the fort, the governor, and his whole command. Hamilton was sent to Virginia a prisoner of war, where he was found guilty of treating American prisoners with cruelty, and of offering the Indians premiums for scalps, but none for prisoners." Clark was ambitious to extend his march to Detroit, but could not compass the necessary means. "'Detroit lost for a few hundred men,' was his pathetic lament as he surrendered an enterprise that lay near his heart. Had he been able to achieve it, he would have won and held the whole Northwest. As it was he won and held the Illinois and the Wabash in the name of Virginia and of the United States. The bearing of this conquest on the question of western boundaries will be considered in another place, but here it is pertinent to remark that the American Commissioners, in 1782, at Paris, could plead 'uti possidetis' in reference to much of the country beyond the Ohio, for the flag of the Republic, raised over it by George Rogers Clark, had never been lowered. It would not be easy to find in our history a case of an officer accomplishing results that were so great and far-reaching with so small a force. Clark's later life is little to his credit, but it should not be forgotten that he rendered the American cause and civilization a very great service. All this time the British were not idle. War-party after war-party was sent against the American border. In 1780 a grand expedition was organized at Detroit and sent to Kentucky under the command of Captain Bird. But it accomplished nothing commensurate with its magnitude and cost. . . . The Northwest had been won by a Virginia army, commanded by a Virginia officer, put in the field at Virginia's expense. Governor Henry had promptly announced the conquest to the Virginia delegates in Congress. . . . But before Patrick Henry wrote this letter, Virginia had welded the last link in her chain of title to the country beyond the Ohio. In October, 1778, her Legislature declared: 'All the citizens of the commonwealth of Virginia, who are actually settlers there, or who shall hereafter be settled, on the west side of the Ohio, shall be included in the district of Kentucky which shall be called Illinois County.' Nor was this all. Soon after, Governor Henry appointed a lieutenant-commandant for the new county, with full instructions for carrying on the government. The French settlements remained under Virginia jurisdiction until March, 1784."—B. A. Hinsdale, *The Old Northwest, ch.* 9.

Also in: *Clark's Campaign in the Illinois (Ohio Valley Hist. Series,* 3).—J. H. Perkins, *Annals of the West, ch.* 7.—A. Davidson and B. Stuvé, *Hist. of Illinois, ch.* 16–18.—T. Roosevelt, *The Winning of the West, v.* 2, *ch.* 2–3.

A. D. 1778-1779.—The French Alliance.—Peril of France.—Doubtful feeling in America.—Spanish mediation with England.—"From the third volume of Doniol's comprehensive work on the 'Participation de la France a l'etablissement des États Unis,' published in 1888, we are able to learn for the first time the extreme peril of France in 1778–'79. When Vergennes advised the recognition of the independence of the United States, it was on the same grounds that Canning advised the recognition of the independence of the Spanish South American States many years afterwards. The fair distribution of power in the civilized world, which was threatened in the latter period by the Holy Alliance, was threatened in the former period by the assumption of maritime supremacy by Britain. In each the object was to call up a new sovereignty in America, so as to check an undue concentration of sovereignty in Europe. Undoubtedly Vergennes was aided, as Canning was aided, by the enthusiasm felt by men of liberal views for a revolution that was expected to extend the domain of liberalism; but with Vergennes, as with Canning, the object was the establishing of a power abroad which could resist a dangerous aggression at home. When in February, 1778, France acknowledged the independence of the United States, Vergennes had good reason to hold either that Britain would not resent the insult by war, or that she would find that in such a war the odds were against her. A British army had just capitulated at Saratoga. America, so it was reported to Vergennes and so he believed, was unanimous in determining to defend her liberties to the last. In Holland there was a strong party which was expected to force the States-General into a recognition of their sister republic. Spain had already secretly advanced a million of francs to the American commissioners. From Frederick the Great, delighted to see his British relatives, who had not always supported him in his troubles, annoyed by a revolt in their own domain, came words very encouraging to the American envoys. Catharine II listened with apparent satisfaction to a scheme which would relieve her infant shipping from British oppression. It looked as if, should Britain declare war against France, she would have against her the armies and navies of all continental Europe, aided by the people of her American Colonies in a compact mass. But in a few months there came a great change. The British army under Howe was so largely reenforced as for the immediate present to give it a great superiority over any army Congress could bring against it in open field. . . . It is true that the news in April of the French treaty revived the energies of the revolutionists; but this treaty had its drawbacks, as the old dislike of France, in part inherited from England, in part the product of the Seven-years war, intensified the yearning for the mother country which in many hearts still remained. French officers complained that on their first arrival in New England they were received with sullen aversion

by the people, though welcomed by the revolutionary leaders. The French army and navy, for the first year in which they were engaged in America, did no good to the American cause; and so great was the popular irritation at their inactivity, so strong, it was said, continued to be the old race attachment to England, that intelligent French observers in America advised Vergennes that he must move warily, for at any moment America might make a separate peace with Britain and then join the British forces against France. No doubt these reports, so far as they pronounced this to be the drift of a large minority in Congress, were unfounded in fact. They were nevertheless communicated under high sanction to Vergennes, and produced in his mind the liveliest anxiety. . . . English influence had for a time regained its ascendency in Holland. Prussia and Russia, having tasted the delights of neutral commerce, let it be plainly understood that they would not abandon a neutrality so profitable for the risks of belligerency. And Spain had taken alarm and was backing out not merely from the family compact, but from her recent promise to aid the insurgents. Aiding the insurgents, her minister declared, would be cutting her own throat, and no aid to the insurgents should be given except on a very heavy equivalent. If France was to meet the shock of the British navy alone she might be swept from the seas, and, aside from this danger, her finances were in such a ruinous condition that her bankruptcy was imminent. One of two courses must be adopted, not only to save France but to save the independence of the United States and the consequent equipoise of power for which France has gone to war. There must be either a general peace, which would include the independence of the United States, or there must be war, with Spain joining the allies. . . . It was in this condition of affairs that the position of Spain in 1778–'79 became of commanding importance. She offered herself as mediator between the allies and their common enemy, and through her the terms of pacification were discussed. In the negotiations, protracted and on both sides largely insincere, between Spain and Britain relative to the proposed pacification, the winter of 1778–'79 was consumed."—F. Wharton, *Introd. to The Revolutionary Diplomatic Correspondence of the U. S., ch.* 5, *sect.* 86 (*v.* 1).

A. D. 1778-1779.—The War carried into the South. — Savannah taken and Georgia subdued. — Towards the end of November, 1778, a "body of troops, under Lieutenant-colonel Campbell, sailed [from New York] for Georgia in the squadron of Commodore Hyde Parker; the British cabinet having determined to carry the war into the Southern States. At the same time General Prevost, who commanded in Florida, was ordered by Sir Henry Clinton to march to the banks of the Savannah River, and attack Georgia in flank, while the expedition under Campbell should attack it in front on the seaboard. . . . The squadron of Commodore Hyde Parker anchored in the Savannah River towards the end of December. An American force of about 600 regulars, and a few militia under General Robert Howe, were encamped near the town, being the remnant of an army with which that officer had invaded Florida, in the preceding summer, but had been obliged to evacuate it by a mortal malady which desolated his camp. Lieutenant-colonel Campbell landed his troops on the 29th of December, about three miles below the town. The whole country bordering the river is a deep morass, cut up by creeks, and only to be traversed by causeways. Over one of these, 600 yards in length, with a ditch on each side, Colonel Campbell advanced, putting to flight a small party stationed to guard it. General Howe had posted his little army on the main road, with the river on his left and a morass in front. A negro gave Campbell information of a path leading through the morass, by which troops might get unobserved to the rear of the Americans. Sir James Baird was detached with the light infantry by this path, while Colonel Campbell advanced in front. The Americans, thus suddenly attacked in front and rear, were completely routed; upwards of 100 were either killed on the spot, or perished in the morass; 38 officers and 415 privates were taken prisoners, the rest retreated up the Savannah River and crossed into South Carolina. Savannah, the capital of Georgia, was taken possession of by the victors, with cannon, military stores and provisions; their loss was only seven killed and nineteen wounded. Colonel Campbell conducted himself with great moderation; protecting the persons and property of the inhabitants, and proclaiming security and favor to all that should return to their allegiance. Numbers in consequence flocked to the British standard: the lower part of Georgia was considered as subdued, and posts were established by the British to maintain possession. While Colonel Campbell had thus invaded Georgia in front, General Prevost" entered the State from Florida, "took Sunbury, the only remaining fort of importance, and marched to Savannah, where he assumed the general command, detaching Colonel Campbell against Augusta. By the middle of January (1779) all Georgia was reduced to submission. A more experienced American general than Howe had by this time arrived to take command of the Southern Department, Major-general Lincoln, who had gained such reputation in the campaign against Burgoyne, and whose appointment to this station had been solicited by the delegates from South Carolina and Georgia. He had received his orders from Washington in the beginning of October."—W. Irving, *Life of Washington, v.* 3, *ch.* 37.

A. D. 1778-1779. — Washington guarding the Hudson.—The storming of Stony Point.—Marauding warfare of the British.—"After Clinton slipped away from Monmouth and sought refuge in New York, Washington took post at convenient points and watched the movements of the enemy. In this way the summer passed. As always, Washington's first object was to guard the Hudson, and while he held this vital point firmly, he waited, ready to strike elsewhere if necessary. It looked for a time as if the British intended to descend on Boston, seize the town, and destroy the French fleet, which had gone there to refit. Such was the opinion of Gates, then commanding in that department, and as Washington inclined to the same belief, the fear of this event gave him many anxious moments. He even moved his troops so as to be in readiness to march eastward at short notice; but he gradually became convinced that the

enemy had no such plan. . . . The main army, therefore, remained quiet, and when the autumn had passed went into winter-quarters in well-posted detachments about New York. In December Clinton made an ineffectual raid [in New Jersey], and then all was peaceful again, and Washington was able to go to Philadelphia and struggle with Congress, leaving his army more comfortable and secure than they had been in any previous winter. . . . He now hoped and believed that the moment would come when, by uniting his army with the French, he should be able to strike the decisive blow. Until that time came, however, he knew that he could do nothing on a great scale, and he felt that meantime the British, abandoning practically the eastern and middle States, would make one last desperate struggle for victory, and would make it in the south. Long before any one else, he appreciated this fact, and saw a peril looming large in that region. . . . All this, however, did not change his own plans one jot. He believed that the south must work out its own salvation, as New York and New England had done with Burgoyne, and he felt sure that in the end it would be successful. But he would not go south, nor take his army there. . . . The British might overrun the north or invade the south, but he would stay where he was, with his grip upon New York and the Hudson River. The tide of invasion might ebb and flow in this region or that, but the British were doomed if they could not divide the eastern colonies from the others. When the appointed hour came, he was ready to abandon everything and strike the final and fatal blow; but until then he waited and stood fast with his army, holding the great river in his grasp. He felt much more anxiety about the south than he had felt about the north, and expected Congress to consult him as to a commander, having made up his mind that Greene was the man to send. But Congress still believed in Gates, who had been making trouble for Washington all winter; and so Gates was sent, and Congress in due time got their lesson, and found once more that Washington understood men better than they did. In the north the winter was comparatively uneventful. The spring passed, and in June Clinton came out and took possession of Stony Point and Verplanck's Point, and began to fortify them. It looked a little as if Clinton might intend to get control of the Hudson by slow approaches, fortifying, and then advancing until he reached West Point. With this in mind, Washington at once determined to check the British by striking sharply at one of their new posts. Having made up his mind, he sent for Wayne and asked him if he would storm Stony Point. Tradition says that Wayne replied, 'I will storm hell, if you will plan it.' A true tradition, probably, in keeping with Wayne's character, and pleasant to us to-day as showing with a vivid gleam of rough human speech the utter confidence of the army in their leader, that confidence which only a great soldier can inspire. So Washington planned, and Wayne stormed [July 15, 1779], and Stony Point fell. It was a gallant and brilliant feat of arms, one of the most brilliant of the war. Over 500 prisoners were taken, the guns were carried off, and the works destroyed, leaving the British to begin afresh with a good deal of increased caution and respect. Not long after, Harry Lee stormed Paulus Hook with equal success, and the British were checked and arrested, if they intended any extensive movement. On the frontier, Sullivan, after some delays, did his work effectively. . . . In these various ways Clinton's circle of activity was steadily narrowed, but it may be doubted whether he had any coherent plan. The principal occupation of the British was to send out marauding expeditions and cut off outlying parties. Tryon burned and pillaged in Connecticut [at New Haven, Fairfield and Norwalk], Matthews in Virginia [at Norfolk, Portsmouth and elsewhere], and others on a smaller scale elsewhere in New Jersey and New York. . . . It was enough for Washington to hold fast to the great objects he had in view, to check Clinton and circumscribe his movements. Steadfastly he did this through the summer and winter of 1779."—H. C. Lodge, *George Washington, v.* 1, *ch.* 8.

A. D. 1779 (August—September).—General Sullivan's expedition against the Senecas.—For the purpose of putting an end to the destructive and bloody incursions of Tories and Indians from western New York, directed against the border settlements of that state and Pennsylvania—as at Cherry Valley and Wyoming—General Washington, in the early part of the year 1779, determined upon a measure for carrying the war into the home of the invaders. "The command was entrusted to Gen. Sullivan. The army organized for the expedition was in three divisions. That part of it under the immediate command of Gen. Sullivan, coming from Pennsylvania, ascended the Susquehannah to Tioga Point. Another division under the command of Gen. James Clinton, constructing batteaux at Schenectady, ascended the Mohawk and rendezvoused at Canajoharrie, opened a road to the head of Otsego Lake, and from thence proceeded in a formidable fleet of over 200 batteaux, to Tioga Point, forming a junction with the force under Gen. Sullivan, on the 22d of August. Previous to the arrival of Gen. Clinton, Sullivan had sent forward a detachment which fell in with a scouting party of Indians, and a skirmish ensued. The combined forces amounted to 5,000 men. The expedition had been so long preparing, and upon the march, that the enemy were well apprized of all that was going on. Their plan of defence contemplated a decisive engagement upon the Chemung river. For this purpose the Rangers and regular British troops, under the command of Col. John Butler, Cols. Guy and Sir John Johnson, Major Walter N. Butler and Capt. M'Donald, and the Indians under Brant, had concentrated their forces upon a bend of the river, near the present village of Elmira [then called Newtown], where they had thrown up a long breast work of logs. The united forces of the British allies, as computed by Gen. Sullivan, was about 1,500. Having ascertained their position, Gen. Sullivan marched in full force and attacked them in the forenoon of the 29th of August. . . . The battle had been

waged about two hours, when the British and Indians perceiving their forces inadequate, and that a maneuver to surround them was likely to be successful, broke and fled in great disorder. 'This,' says John Salmon, of Livingston county, who belonged to the expedition and gave an account of it to the author of the Life of Mary Jemison, 'was the only regular stand made by the Indians. In their retreat they were pursued by our men to the Narrows, where they were attacked and killed in great numbers, so that the sides of the rocks next the River looked as if blood had been poured on them by pailfuls.' The details of all that transpired in this campaign are before the public in so many forms, that their repetition here is unnecessary. The route of the army was via 'French Catherine's Town,' head of Seneca Lake, down the east shore of the Lake to the Indian village of Kanadesaga (Old Castle), and from thence to Canandaigua, Honeoye, head of Conesus Lake, to Groveland. The villages destroyed (with the apple trees and growing crops of the Indians,) were at Catherinestown, Kendai, or 'Apple Town' on the east side of the Lake, eleven miles from its foot, Kanadesaga, Honeoye, Conesus, Canascraga, Little Beard's Town, Big Tree, Canawagus, and on the return of the army, Scawyace, a village between the Cayuga and Seneca Lakes, and several other Cayuga villages. . . . The march of Sullivan, the devastations committed by his army, would at this distant period seem like Vandalism, in the absence of the consideration that he was acting under strict orders; and that those orders were approved, if not dictated, by Washington. The campaign was a matter of necessity; to be effectual, it was not only necessary that its acts should be retaliatory and retributive, but that the haunts, the retreats, of a foe so ruthless, must be broken up. The object was to destroy all the means of subsistence of the Senecas, desolate their homes, prevent their return to them, and if possible, induce their permanent retreat beyond the Niagara River. The imprudence, the want of sagacity, which Col. Stone has imputed to Gen. Sullivan in alarming every village he approached by the sound of his cannon, the author conceives a misapprehension of his motives. Stealthy, quiet approaches, would have found as victims, in every village, the old men, the women and children — the warriors away, banded with their British allies. Humanity dictated the forewarning, that those he did not come to war against could have time to flee. . . . The march of Gen. Sullivan, after leaving the Chemung, was bloodless, except in a small degree — just as it should have been, if he could not make victims of those he was sent to punish. The third expedition of this campaign, which has generally been lost sight of by historians, was that of Gen. Broadhead. He left Fort Pitt in August with 600 men, and destroyed several Mingo and Muncey tribes living on the Allegany, French Creek, and other tributaries of the Ohio. The heavy artillery that Gen. Sullivan brought as far as Newton, would indicate that Niagara was originally the destination. There the General and his officers, seeing how long it had taken to reach that point, in all probability determined that too much of the season had been wasted, to allow of executing their tasks in the Indian country, making their roads and moving the army and all its appointments to Niagara before the setting in of winter. Besides, before the army had reached the valley of the Chemung, the fact was ascertained that there would be a failure in a contemplated junction with the army under Gen. Broadhead. After the expedition of Gen. Sullivan, the Indians never had any considerable permanent re-occupancy of their villages east of the Genesee river. They settled down after a brief flight, in their villages on the west side of the river in the neighborhood of Geneseo, Mt. Morris and Avon, and at Gardeau, Canadea, Tonawanda, Tuscarora, Buffalo Creek, Cattaraugus and Allegany."— O. Turner, *Hist. of the Pioneer Settlement of Phelps and Gorham's Purchase, pt.* 1, *ch.* 4.—"In his general orders of the 17th of October, General Washington announced to the army the result of the expedition, as follows: 'The Commander-in-chief has now the pleasure of congratulating the army on the complete and full success of Maj. Gen. Sullivan, and the troops under his command, against the Seneca and other tribes of the Six Nations, as a just and necessary punishment for their wanton depredations, their unparalleled and innumerable cruelties, their deafness to all remonstrances and entreaty, and their perseverance in the most horrid acts of barbarity. Forty of their towns have been reduced to ashes, some of them large and commodious; that of the Genesee alone containing one hundred and twenty-eight houses. Their crops of corn have been entirely destroyed, which, by estimation, it is said, would have provided 160,000 bushels, besides large quantities of vegetables of various kinds. Their whole country has been overrun and laid waste, and they themselves compelled to place their security in a precipitate flight to the British fortress at Niagara. And the whole of this has been done with the loss of less than forty men on our part, including the killed, wounded, captured, and those who died natural deaths. The troops employed in this expedition, both officers and men, throughout the whole of it, and in the action they had with the enemy, manifested a patience, perseverance and valor that do them the highest honor. In the course of it, when there still remained a large extent of the enemy's country to be prostrated, it became necessary to lessen the issues of provisions to half the usual allowance. In this the troops acquiesced with a most general and cheerful concurrence, being fully determined to surmount every obstacle, and to prosecute the enterprise to a complete and successful issue. Maj. Gen. Sullivan, for his great perseverance and activity, for his order of march and attack, and the whole of his dispositions; the Brigadiers and officers of all ranks, and the whole of the soldiers engaged in the expedition, merit and have the Commander-in-chief's warmest acknowledgements for their important services upon this occasion.' On the 9th of November, 1779, General Sullivan wrote to the President of Congress: 'It is with the deepest regret I find myself compelled to request from Congress liberty to retire from the army. My health is so much impaired by a violent bilious disorder, which seized me in the commencement and continued during the whole of the western expedition, that I have not the smallest hope of a perfect recovery.'. . . General Sullivan, in transmitting to Congress an official account of his operations, reported that . . . 'Every creek and

river has been traced, and the whole country explored in search of Indian settlements, and I am well persuaded that, except one town situated near the Alleghany, about fifty-eight miles from Chinesee, there is not a single town left in the country of the Five Nations. . . . I flatter myself that the orders with which I was entrusted are fully executed, as we have not left a single settlement or field of corn in the country of the Five Nations, or is there even the appearance of an Indian on this side of Niagara. Messengers and small parties have been constantly passing, and some imprudent soldiers who straggled from the army mistook the route and went back almost to Chinesee without discovering even the track of an Indian.' Sullivan was mistaken in regard to the destruction of all the Indian towns as there were several small villages undiscovered by his troops. The principal villages, however, and probably nine-tenths of the growing crops, upon which the Indians had depended for sustenance during the following winter, were effectually destroyed. . . . While Sullivan fully accomplished the task given him to perform, the results expected were not fully realized. The power of the savages had been weakened, but they were not entirely subdued until years afterward, when 'Mad Anthony Wayne' defeated the confederated bands of the Indians of the west, in 1794, a measure which thoroughly humbled the Indians of Western New York, and gave to the settlers peace and security. Sullivan's expedition was fruitful of great results in other ways, however, than the temporary subjugation of the Indians. The fertile and beautiful country now forming the western part of the State of New York, was then an unknown wilderness, and its value and attractiveness were first made known to the white people through this expedition. . . . Soon after the close of the war the tide of emigration commenced to flow westward. From the New England States, Pennsylvania and New Jersey, came hardy pioneers, led on by the glowing accounts they had heard of the new country, and the vicinity of the inland lakes, the borders of the flowing streams, the forest-covered hills became the dwelling places of a rapidly growing band of settlers. The road which Sullivan had opened from the Susquehanna valley was followed by many of the settlers, even to the banks of the Genesee. Thus many of those who had shared the perils and privations of Sullivan's expedition against the Indian tribes of Western New York, afterward became settlers of the land they had aided to conquer."— A. A. D. 1779 (September).—Paul Jones' great sea-fight.—The Bon Homme Richard and the Serapis.—"Near the end of July [1779], Paul Jones, a Scot by birth, in the service of the United States, sailed from l' Orient as commander of a squadron, consisting of the Poor Richard ['Bon Homme Richard,' Jones named her, in compliment to Franklin and to the language of the country from which Franklin's influence procured the ship] of 40 guns, many of them unserviceable; the Alliance of 36 guns, both American ships-of-war; the Pallas, a French frigate of 32; and the Vengeance, a French brig of 12 guns. They ranged the western coast of Ireland, turned Scotland, and, cruising off Flamborough Head, descried the British merchant fleet from the Baltic, under the convoy of the Serapis of 44 guns and the Countess of Scarborough of 20 guns. An hour after sunset, on the 23d of September, the Serapis, having a great superiority in strength, engaged the Poor Richard. Paul Jones, after suffering exceedingly in a contest of an hour and a half within musket-shot, bore down upon his adversary, whose anchor he hooked to his own quarter. The muzzles of their guns touched each other's sides. Jones could use only three nine-pounders beside muskets from the round-tops, but combustible matters were thrown into every part of the Serapis, which was on fire no less than ten or twelve times. There were moments when both ships were on fire. After a two-hours' conflict in the first watch of the night, the Serapis struck its flag. Jones raised his pendant on the captured frigate, and the next day had but time to transfer to it his wounded men and his crew before the Poor Richard went down. The French frigate engaged and captured the Countess of Scarborough. The Alliance, which from a distance had raked the Serapis during the action, not without injuring the Poor Richard, had not a man injured. On the fourth of October the squadron entered the Texel with its prizes. The British ambassador, of himself and again under instructions, reclaimed the captured British ships and their crews, 'who had been taken by the pirate Paul Jones of Scotland, a rebel and a traitor.' 'They,' he insisted, 'are to be treated as pirates whose letters of marque have not emanated from a sovereign power.' The grand pensionary would not apply the name of pirate to officers bearing the commissions of congress. In spite of the stadholder, the squadron enjoyed the protection of a neutral port."—G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *v.* 5, *p.* 350.

A. D. 1779 (September—October).—Unsuccessful attack on Savannah by the Americans and French.—"The state of affairs in the South had called so imperatively for the attention of Congress that a portion of Washington's army had been detached to join General Lincoln. Washington solicited more powerful aid from D'Estaing, who then commanded in the West Indies an army sufficiently powerful to crush entirely the English in Georgia. The French admiral received this application just after having fought a hard battle against Commodore Byron without any decisive result, yet such as obliged the latter to go into port to refit. The former, being thus for a time master of the sea, determined at once to comply with the request, took on board 6,000 land-troops, and steered direct for Savannah, where, arriving quite unexpectedly, he captured by surprise a fifty-gun ship and three frigates. Prevost, too, was very unprepared, having his force broken up into detachments distributed along the frontier; but

these being instantly ordered in, obeyed with such promptitude that, before the French had landed and formed a junction with Lincoln, nearly all had arrived. On the 16th of September, D'Estaing appeared before the place and summoned it to surrender. Prevost, under pretext of negotiation, obtained a suspension for twenty-four hours, during which Colonel Maitland entered with the last and largest detachment, eluding the Americans by a route supposed impassable; and the full determination to resist was then announced. The opinion of all military men now is that D'Estaing was guilty of the most outrageous folly in not marching at once to the attack of the city, without summoning the weakened garrison to surrender at all. The surprise would have then been complete, and the victory sure. . . . A regular siege was now commenced. Heavy ordnance and stores were brought up from the fleet, and the besieging army broke ground. By the 1st of October they had pushed their sap within 300 yards of the abattis, on the left of the British lines. Several batteries were opened on the besieged, which played almost incessantly upon their works, but made no impression on them. The situation of D'Estaing was becoming critical. More time had already been consumed on the coast of Georgia than he had supposed would be necessary for the destruction of the British force in that State. He became uneasy for the possessions of France in the West Indies, and apprehensive for the safety of the ships under his command. The naval officers remonstrated strenuously against longer exposing his fleet on an insecure coast, at a tempestuous season of the year, and urged the danger of being overtaken by a British squadron when broken and scattered by a storm." D'Estaing accordingly decided that he must either raise the siege or attempt the enemy's works by storm. "The latter part of the alternative was adopted. . . . On the morning of the 9th of October, before day, . . . about 3,500 French and 1,000 Americans, of whom between 600 and 700 were regulars and the residue militia of Charleston, advanced in three columns, led by D'Estaing and Lincoln, aided by the principal officers of both nations, and made a furious assault on the British lines. Their reception was warmer than had been expected. . . . Both the French and Americans planted their standards on the walls, and were killed in great numbers while endeavoring to force their way into the works. For about fifty minutes the contest was extremely obstinate." Then the assailants gave way and a retreat was ordered. "In this unsuccessful attempt the French lost in killed and wounded about 700 men. Among the latter were the Count D'Estaing himself, Major General De Fontanges, and several other officers of distinction. The continental troops lost 234 men, and the Charleston militia, who, though associated with them in danger, were more fortunate, had one captain killed and six privates wounded. Count Pulaski was among the slain. The loss of the garrison was astonishingly small. In killed and wounded it amounted only to 55. So great was the advantage of the cover afforded by their works. . . . Count D'Estaing, having committed a blunder at the beginning, had committed a worse blunder at the end, by insisting on the assault, as unnecessary as it was rash. . . He [now] insisted on raising the siege, and both the French and American armies moved from their ground on the evening of the 18th of October. D'Estaing sailed for the West Indies; and Lincoln recrossed the Savannah at Zubly's Ferry and again encamped in South Carolina."—C. B. Hartley, *Life of General Marion* (*Heroes and Patriots of the South*), *ch.* 11.

A. D. 1780 (January—April).—The gloomy winter at Morristown.—Depreciation to worthlessness of the Continental Currency.—Consequent sufferings of the army and the country.—"The year 1780 opened upon a famishing camp. 'For a fortnight past,' writes Washington, on the 8th of January, 'the troops, both officers and men, have been almost perishing with want. Yet,' adds he, feelingly, 'they have borne their sufferings with a patience that merits the approbation, and ought to excite the sympathies, of their countrymen.' The severest trials of the Revolution, in fact, were not in the field, where there were shouts to excite and laurels to be won; but in the squalid wretchedness of ill-provided camps, where there was nothing to cheer and everything to be endured. To suffer was the lot of the revolutionary soldier. A rigorous winter had much to do with the actual distresses of the army, but the root of the evil lay in the derangement of the currency. Congress had commenced the war without adequate funds, and without the power of imposing direct taxes. To meet pressing emergencies, it had emitted paper money, which, for a time, passed currently at par; but sank in value as further emissions succeeded, and that already in circulation remained unredeemed. The several States added to the evil by emitting paper in their separate capacities: thus the country gradually became flooded with a 'continental currency,' as it was called; irredeemable, and of no intrinsic value. The consequence was a general derangement of trade and finance. The continental currency declined to such a degree that forty dollars in paper were equivalent to only one in specie. Congress attempted to put a stop to this depreciation by making paper money a legal tender, at its nominal value, in the discharge of debts, however contracted. This opened the door to knavery, and added a new feature to the evil. The commissaries now found it difficult to purchase supplies for the immediate wants of the army, and impossible to provide any stores in advance. They were left destitute of funds, and the public credit was prostrated by the accumulating debts suffered to remain uncancelled. The changes which had taken place in the commissary department added to this confusion. The commissary-general, instead of receiving, as heretofore, a commission on expenditures, was to have a fixed salary in paper currency, and his deputies were to be compensated in like manner, without the usual allowance of rations and forage. No competent agents could be procured on such terms. . . . In the present emergency Washington was reluctantly compelled, by the distresses of the army, to call upon the counties of the State for supplies of grain and cattle, proportioned to their respective abilities. . . . Wherever a compliance with this call was refused, the articles required were to be impressed: it was a painful

alternative, yet nothing else could save the army from dissolution or starving. . . . As the winter advanced, the cold increased in severity. It was the most intense ever remembered in the country. The great bay of New York was frozen over. . . . The insular security of the place was at an end. . . . Washington was aware of the opportunity which offered itself for a signal 'coup de main,' but was not in a condition to profit by it." —W. Irving, *Life of Washington, v.* 4, *ch.* 1 *and* 4.—"Paper for $9,000,000 was issued before any depreciation began. The issues of the separate colonies must have affected it, but the popular enthusiasm went for something. Pelatiah Webster, almost alone as it seems, insisted on taxation, but a member of Congress indignantly asked if he was to help tax the people when they could go to the printing-office and get a cartload of money. In 1776, when the depreciation began, Congress took harsh measures to try to sustain the bills. Committees of safety also took measures to punish those who 'forestalled' or 'engrossed,' these being the terms for speculators who bought up for a rise. . . . The enemy, perceiving the terrible harm the Americans were doing themselves, thought it well to help on the movement. They counterfeited the bills and passed them through the lines. At the end of 1779 Congress was at its wit's end for money. Its issues had put specie entirely out of reach, and the cause was in danger of being drowned under the paper sea. . . . The French alliance helped more by giving means of procuring loans in Europe than by military assistance. Congress promised to limit its issues to $200,000,000, and tried a new form of note; also loan offices and lotteries. Over 350,000,000 were issued in all, but it is doubtful if more than 200,000,000 were out at any one time. In the spring of 1780 the bills were worth two cents on the dollar, and then ceased to circulate. Specie now came into circulation, being brought by the French, and also that expended by the English passing the lines. The paper was now worth more for an advertisement or a joke than for any prospect of any kind of redemption. A barber's shop in Philadelphia was papered with it, and a dog, coated with tar, and with the bills stuck all over him, was paraded in the streets."—W. G. Sumner, *Hist. of Am. Currency, pp.* 44–47.

A. D. 1780 (February—August).—The siege and capture of Charleston by the British.—Defeat of Gates at Camden.—South Carolina subdued.—"After the failure of the attack on Savannah was learned by Sir Henry Clinton, he sent a large additional force to the South. Reinforcements were also sent on to Lincoln, while the main body of the American army went into winter quarters near Morristown, New Jersey. Sir Henry Clinton, as soon as his forces, which had been dispersed by a storm, had been collected at Savannah, proceeded to invest Charleston," landing his troops on St. John's Island in February. The blockading of the port and operations for the investment of the city were conducted cautiously and with success. On the 12th of May, the American commander, General Lincoln, "finding himself incapable of defending Charleston, decided on capitulating; and he acceded to the terms which the besiegers had first offered. The fortifications, shipping, artillery, and public stores were all surrendered. The garrison, and all who had borne arms, were prisoners of war. The militia were allowed to return home on parole. In the siege the British lost 76 killed, and 189 wounded. The Americans about an equal number. The prisoners, exclusive of sailors, amounted to 5,618, counting all the adult males of the town. To bring the country entirely under subjection, Clinton sent forth three detachments. The first and largest, in the northern part of the State, was under Lord Cornwallis. He detached Colonel Tarleton with his legion of cavalry and mounted infantry, to disperse Colonel Buford, then encamped near the North Carolina line. [Buford] was overtaken at the Waxhaws, and, on his refusal to surrender, Tarleton made a furious charge on Buford's men, when some, in dismay, threw down their arms and asked for quarter, and some fired on the enemy. After this partial resistance, no quarter was given. Colonel Buford, with a few of the horse, and about 100 infantry, escaped; 113 were killed on the spot; 150 so badly wounded as to be incapable of being moved; and 53 were brought away as prisoners. The American officers deny (what the British assert), that any who had laid down their arms had again taken them up. All further resistance to the enemy in South Carolina and Georgia seems then to have ceased. The two other detachments of the British army every where received the submission of the inhabitants, who either gave their parole not again to bear arms against the king, or took the oath of allegiance. In a proclamation for settling the government, Sir Henry Clinton required all to return to their allegiance on pain of being treated as rebels and enemies. He then returned to New York, leaving Lord Cornwallis in command, with 4,000 troops. . . . Lord Cornwallis, considering South Carolina as entirely reannexed to Great Britain, would admit of no neutrality among the inhabitants; but insisted on their taking the oath of allegiance, which, however, was generally taken with reluctance by the people of the lower country. . . . A considerable force, under Baron de Kalb, had been ordered for the Southern army by Congress; but, for want of money, and a sufficent Commissary department, they were so delayed in their march, that it was late in July before they reached Cape Fear River. Here they were joined by General Gates, who had been appointed to the command of the Southern army. The men of this detachment, ill-fed, suffered greatly from dysentery. In South Carolina, Gates was joined by Porterfield's Virginia regiment, Rutherford's corps of North Carolina militia, and Armaud's legion. . . . Gates having under him about 4,000 men, of whom the regulars were less than 1,000, took post at Clermont. As the force of the Americans was daily increasing, Cornwallis, having under him about 2,000 men, of whom 1,900 were regulars, decided on attacking the American army. It so happened, that the period chosen by Cornwallis to surprise Gates, was the very moment in which Gates proposed to surprise his adversary; and thus the advanced corps of both armies unexpectedly met at two o'clock in the morning [Aug. 6, near Camden]. After some

skirmishing, in which the British seemed to have had a decided advantage, both parties suspended their operations till the morning. On the first onset of the British, the Virginia militia under General Stevens fled with precipitation, and were followed by the infantry of Armstrong; and, except Colonel Dixon's regiment, the whole South Carolina division followed the example. Very few of the militia of either State discharged a single musket. Gates was borne away by the torrent, and, with General Caswell, retreated to Clermont, in the hope of collecting a sufficient number of the fugitives to cover the retreat of the regulars; but the hope was vain. He was fain to proceed to Hillsborough, to concert the future plan of operations. Thus left with an inadequate force on the field, De Kalb made a stout resistance; but in an impetuous charge he fell, after having received twelve wounds. His troops were then unable to rally, and their discomfiture was complete. Their loss, in killed, wounded and prisoners, could not have been less than 1,000 men. The British lost 325 men. Just before the action, Sumter had captured a convoy, and made 200 prisoners; but was subsequently surprised by Tarleton, who recaptured the stores, killed 150, and took 300 prisoners. Sumter escaped with difficulty. There was no longer any armed American force in South Carolina, and Cornwallis resorted to energetic means of preventing disaffection. All those who were found in arms after they had submitted to British protection were considered as having forfeited their lives, and several of them were hung on the spot. But these severities, instead of their intended effect, produced a strong reaction; and Sumter was able to collect a new force, with which he greatly annoyed the north-western parts of the State."—G. Tucker, *Hist. of the U. S., ch.* 3 (*v.* 1).

A. D. 1780 (July).—Fresh help from France.—The arrival of Rochambeau and his army, with a fleet.—"La Fayette's second visit to his native country [1779], was most opportune. He arrived in Paris at the moment when the war for the independence of America was in high popularity throughout France. He was put in arrest a week for his disobedience to the order not to leave France, but this was a mere formality. Vergennes received him in private. His example had roused the spirit of the French nobles. The stage resounded with his applauses. Crowds followed his steps. Marie Antoinette, with her quick, enthusiastic spirit, joyed at his distinction. The council of state, the Parliament, the towns, the corporations mingled in the noble excitement. The Royal Treasury was assured support by patriotic offers of contributions, and then was formed the auxiliary army that was to bear succor to America. This public enthusiasm triumphed over the hesitating reluctance of Maurepas, and the economical prudence of Necker. The army, placed under the command of the veteran Rochambeau, commended for his 'steadiness, wisdom, ability and prudence,' a pupil of the Marshal de Belle Isle, distinguished in frequent service, was to be composed of 6,000 troops. Among these shone forth the most brilliant of the nobility."—J. C. Hamilton, *Hist. of the U. S., as traced in the Writings of Alex. Hamilton, ch.* 20 (*v.* 2).—"La Fayette . . . made the ministers understand that if he was not placed in command of the expedition, which would surprise the Americans, at least it was imperative to place over it a French general who would consent to serve under the American commander-in-chief. But he knew well that his old companions in arms in France were jealous of his rapid military fortune and brilliant renown. He knew still better that the officers who were his seniors in rank would be unwilling to serve under him. His first proposition, therefore, was only made to satisfy public feeling in America, which left the management of this affair almost entirely in his hands. In view of the serious difficulties that necessarily would result from the adoption of such a decision — difficulties that might have most disastrous consequences for the cause to which he had devoted himself — he promised to make the Americans understand that he had preferred remaining at the head of one of their divisions and that he had refused the command of the French forces. But he insisted upon this point, that, in order to avoid wounding the self-respect of the Americans, it was indispensable to choose a general to command the expedition, whose promotion had been recent and whose talents were certainly equal to his mission, but who, considering this mission as a distinction, would consent to acknowledge General Washington's supremacy. The choice that was made, under these conditions, of the Count de Rochambeau was perfectly satisfactory to him, and, without waiting for the departure of the expedition, he embarked at Rochefort, on February the 18th, 1780, on board the frigate Hermione, which the king had given him as being a swift sailer. . . . He was anxious to inform Washington of the good news himself, and immediately upon his landing at Boston, on April the 28th, he hastened to Morristown to rejoin his well-beloved and revered friend, as he called him in his letters. . . . General Heath, who commanded the militia in the State of Rhode Island, announced on the 11th of July, the arrival of the French squadron to General Washington, who was then with his staff at Bergen. La Fayette set out almost immediately, provided with instructions from the commander-in-chief, dated the 15th, to repair to the French general and admiral to confer with them. For some time Washington had been considering a plan of offensive operation for the capture of the city and the garrison of New York. This plan, which conformed with the wishes of the French government, was only to be carried out upon certain conditions. First, it was necessary that the French troops should unite with the American forces, and, secondly, that the French should have a naval superiority over the forces of Admirals Graves and Arbuthnot, who had effected their junction at New York the day after the arrival of the French at Newport. This last condition was far from being fulfilled. . . . It had been foreseen that the English, who had concentrated their land and naval forces at New York, would not give the French time to establish themselves on Rhode Island; and Washington informed Rochambeau that Sir Henry Clinton was embarking his troops and would come shortly to attack the forces of the expedition with the squadrons assembled under the com-

mand of Admiral Arbuthnot, which were anchored at Sandy Hook, beyond New York, at the mouth of the Hudson River. The American general watched these movements, and, while he gave frequent information to the French of the projected attack upon them, he tried to prevent it. . . . At the same time, Washington crossed the Hudson above West Point with the greater part of his troops, and proceeded to King's Bridge, at the northern end of the island, where he made some hostile demonstrations. This manœuvre detained General Clinton, who had already embarked eight thousand men upon the ships of Arbuthnot. He landed his troops and gave up his project. Nevertheless, the English admiral set sail and appeared before Rhode Island with eleven ships of the line and a few frigates, twelve days after the French had landed. . . . On August the 9th, when La Fayette had returned to the headquarters of Washington, which were at Dobb's Ferry, ten miles above King's Bridge, on the right bank of the North River, he wrote to Rochambeau and de Ternay an urgent dispatch, in which he finished, in the name of the American general, by proposing to the French generals to come at once to attempt an attack on New York. . . . On the other hand, the same courier brought a letter from Washington which made no mention of this project, but which only replied by a kind of refusal to the request of Rochambeau for a conference, 'wherein in an hour of conversation they could agree upon more things than in volumes of correspondence.' Washington said with truth that he did not dare to leave his army in front of New York, for it might be attacked at any moment, and that by his presence he prevented the departure of the large body of the English forces that might have been sent against Rhode Island. Indeed, it is certain that if some differences had not arisen between General Clinton and Admiral Arbuthnot, the French might have found themselves in a dangerous position at the beginning. From the earliest letters exchanged upon this occasion some discord resulted between La Fayette, Rochambeau and Washington, but, owing to the good sense of Rochambeau, matters were soon smoothed over. He wrote in English to the American general to ask him thereafter to address himself directly to him, and to explain the reasons that induced him to postpone assuming the offensive. At the same time he urgently requested a conference. From that moment the relations between the two leaders were excellent. The mere presence of the French squadron and army, though they were still paralyzed and really blockaded by Admiral Arbuthnot, had effected a useful diversion, since the English had not been able to profit by all the advantages resulting from the capture of Charleston, and, instead of carrying on operations in the Carolinas with superior forces, they had had to bring the greater part of them back to New York."—T. Balch, *The French in America in the War of Independence, ch.* 10–11.

A. D. 1780 (August—September). — The Treason of Benedict Arnold.—"Washington contemplated the aspect of affairs with the greatest alarm. Doubtful if the army could be kept together for another campaign, he was exceedingly anxious to strike some decisive blow. He proposed to Rochambeau, commanding the French troops at Newport, an attack upon New York; but that was not thought feasible without a superior naval force. Letters were sent to the French admiral in the West Indies entreating assistance; and Washington presently proceeded to Hartford, there to meet Rochambeau, to devise some definite plan of operations. During Washington's absence at Hartford, a plot came to light for betraying the important fortress of West Point and the other posts of the Highlands into the hands of the enemy, the traitor being no other than Arnold, the most brilliant officer and one of the most honored in the American army. The qualities of a brilliant soldier are unfortunately often quite distinct from those of a virtuous man and a good citizen. . . . Placed in command at Philadelphia, . . . he [Arnold] lived in a style of extravagance far beyond his means, and he endeavored to sustain it by entering into privateering and mercantile speculations, most of which proved unsuccessful. He was even accused of perverting his military authority to purposes of private gain. The complaints on this point, made to Congress by the authorities of Pennsylvania, had been at first unheeded; but, being presently brought forward in a solemn manner, and with some appearance of offended dignity on the part of the Pennsylvania council, an interview took place between a committee of that body and a committee of Congress, which had resulted in Arnold's trial by a court martial. Though acquitted of the more serious charges, on two points he had been found guilty, and had been sentenced to be reprimanded by the commander in-chief. Arnold claimed against the United States a large balance, growing out of the unsettled accounts of his Canada expedition. This claim was greatly cut down by the treasury officers and when Arnold appealed to Congress, a committee reported that more had been allowed than was actually due. Mortified and soured, and complaining of public ingratitude, Arnold attempted, but without success, to get a loan from the French minister. Some months before, he had opened a correspondence with Sir Henry Clinton under a feigned name, carried on through Major Andre, adjutant general of the British army. Having at length made himself known to his correspondents, to give importance to his treachery, he solicited and obtained from Washington, who had every confidence in him, the command in the Highlands, with the very view of betraying that important position into the hands of the enemy. To arrange the terms of the bargain, an interview was necessary with some confidential British agent; and Andre, though not without reluctance, finally volunteered for that purpose. Several previous attempts having failed, the British sloop-of-war Vulture, with Andre on board, ascended the Hudson as far as the mouth of Croton River, some miles below King's Ferry. Information being sent to Arnold under a flag, the evening after Washington left West Point for Hartford he dispatched a boat to the Vulture, which took Andre on shore, for an interview on the west side of the river, just below the American lines. Morning appeared before the arrangements for the betrayal of the fortress could be definitely completed, and Andre was reluctantly persuaded to come within the American lines, and to remain till the next night at the house of one Smith, a dupe or tool of Arnold's, the same who

had been employed to bring Andre from the ship. For some reason not very clearly explained, Smith declined to convey Andre back to the Vulture. . . . Driven thus to the necessity of returning by land, Andre laid aside his uniform, assumed a citizen's dress, and, with a pass from Arnold in the name of John Anderson, a name which Andre had often used in their previous correspondence, he set off toward sunset on horseback, with Smith for a guide. They crossed King's Ferry, passed all the American guards in safety, and spent the night near Crom Pond, with an acquaintance of Smith's. The next morning, having passed Pine's Bridge, across Croton River, Smith left Andre to pursue his way alone. The road led through a district extending some thirty miles above the island of New York, not included in the lines of either army, and thence known as the 'Neutral Ground,' a populous and fertile region, but very much infested by bands of plunderers called 'Cow Boys' and 'Skinners.' The 'Cow Boys' lived within the British lines, and stole or bought cattle for the supply of the British army. The rendezvous of the 'Skinners' was within the American lines. They professed to be great patriots, making it their ostensible business to plunder those who refused to take the oath of allegiance to the State of New York." On the morning of Andre's journey, the road to Tarrytown, on which he rode, was being guarded by a small party of men, who watched for cattle thieves, and for suspicious travelers generally. Three of these intercepted the unfortunate young officer and discovered his character. Arnold received intelligence of what had happened in time to make his escape to the Vulture. André was examined before a board of which Lafayette, Steuben and Greene were members, and on his own statements was executed as a spy. The sympathy with him was very great, among Americans as well as among his own countrymen; but lenity in the case appeared too dangerous to Washington and his military advisers. —R. Hildreth, *Hist. of the U. S., ch.* 41 (*v.* 3).

A. D. 1780 (August—December).—Partisan warfare in South Carolina.—Sumter and Marion.—A name "which recalls thrilling tales of desperate enterprise, surprises at midnight, sudden attacks in the gray twilight of morning, lurking-places in the depths of forests, restless activity, and untiring perseverance, is the name of Thomas Sumter. He comes before us tall, vigorous, dauntless, with a bold bearing, and imperious brow, stern to look upon, fierce in his self-will, arrogant in his decisions, tenacious in his prejudices, resolute and vigorous in the execution of his own plans, remiss and almost lukewarm in carrying out the plans of others. Born in South Carolina just as that colony had passed from the control of the Proprietaries to the control of the King, he lived to see her take the first decided step towards passing out of the Union. Little has been preserved of his early life, although his subsequent career in the Senate of the United States proves that he was not deficient in education then, wherever or whenever acquired. In the Revolution he took an early part, and soon made himself conspicuous as a bold and enterprising officer. But it was not till after the siege of Charleston that his talents were brought fully into play. Then at the head of a body of volunteers he moved rapidly from point to point, keeping alive the hopes of the Whigs and the fears of the Tories in the regions watered by the Broad River, the Ennoree, and the Tiger. . . . History, like tradition, has her favorite characters, on which she dwells with peculiar fondness, delighting herself in preserving the memory of every exploit, and giving the brightest tints to every circumstance connected with their career. . . . Of these children of a happy star, no one holds in our Revolutionary history the same place as Francis Marion. His story, irregularly told by a friend and companion, took an early hold upon the heart of the people; and the romantic traits of his career, warming the imagination of a great poet, have been recorded in beautiful verse. Impartial judgment and sober research have left his own laurels unimpaired, although they have dissipated the halo which tradition and fancy had shed around his men. His life forms one of those pictures upon which the mind loves to dwell, from the singular combination of rare qualities which it displays. His ancestors were Huguenot exiles, who took refuge in South Carolina, from the dragonnades of Louis XIV. His father was a planter near Georgetown, who, portioning out his estate to his children as they came of age, had nothing left for Francis, the youngest, and his next nearest brother, while they were yet children. At sixteen Francis found himself compelled to choose a pursuit for his support. With only a common English education, and no money to carry him through the preparatory courses, he could neither be a physician nor a lawyer. He resolved to be a sailor, and started upon a voyage to the West Indies. But his ship was burnt in a gale, and after tossing about eight days in an open boat, without water and with nothing but the raw flesh and skin of a single dog to eat, and seeing several of his companions die of hunger, he, with the starving survivors, were rescued, barely alive. He renounced the sea, returned to Georgetown, and engaged in farming. The Cherokee war of 1759 found him hard at his work. He was now twenty-six, small in frame, low in stature, but vigorous, active, and healthy. By nature he was taciturn and reticent, with nothing in the expression of his face to attract or interest a casual observer, but still inspiring confidence and commanding respect in those who were brought into intimate relations with him. When, therefore, a company of volunteers was raised to serve against the Indians, he was chosen lieutenant. In a second expedition, which soon after became necessary, he was made captain. Next came the War of Independence; and joining the first South Carolina levies, he was presently made a major; and with this rank took part in the gallant defense of Fort Moultrie in 1776. His next promotion was to the command of a regiment as lieutenant-colonel. During the siege of Charleston his leg was accidentally broken, a lucky accident, which

left him free when the city fell, to engage in an adventurous system of warfare which was the only possible system in that low state of our fortunes. In the course of this he was promoted by Governor Rutledge to a brigadiership. When he first appeared in Gates's camp, he had but twenty men with him, or rather twenty between men and boys. Some of them were negroes. With these he rescued 150 of the prisoners of Camden, coming upon the British escort by surprise and overpowering it. Early in September a body of 200 Tories attempted to surprise him. He had 53 men with him when he heard of their intention, and instantly setting forward, surprised an advance party of 45, killing or wounding all but 15, and then attacked the main body of 200, and put them to flight. Before the end of the month he surprised another body of 60 men; and in October one of 200. His force was constantly fluctuating between 20 men and 70. Up to the 18th of October he had never had over 70. They went and came as they chose, their number ever ebbing and flowing like the tide. Sometimes the very men who had fought with him were ranged in arms against him; a few only serving from honest zeal and true love of country. . . . As his slender form concealed a lion heart, so under his cold, impassive face, there was a perpetual glow of tender sympathies. . . . Without claiming for Marion those powers of combination which belong to the highest order of military genius, he must be allowed to have excelled in all the qualities which form the consummate partisan,—vigilance, promptitude, activity, energy, dauntless courage, and unshaken self-control. . . . Two principles controlled all his actions, and shaped all his ends; the love of country, pure, earnest, and profound; the love of right, sincere, undeviating, and incorruptible."—G. W. Greene, *Life of Nathanael Greene, bk.* 4, *ch.* 7 (*v.* 3).—"The other partisans . . . had been compelled to take refuge in the mountains. Marion found his security in the swamps. This able partisan maintained his ground below and along the Santee river, and managed, among the defiles and swamps of that region, to elude all the activity of his enemies. His force had been collected chiefly among his own neighbors, were practised in the swamps, and familiar with the country. Like Sumter, utterly unfurnished with the means of war at first, he procured them by similar means. He took possession of the saws from the mills, and converted them into sabres. So much was he distressed for ammunition that he has engaged in battle when he had not three rounds of powder to each man of his party. . . . Various were the means employed to draw off or drive away his followers. The houses on the banks of the Pedee, Lynch's Creek, and Black river, from whence they were chiefly taken, were destroyed by fire, the plantations devastated, and the negroes carried away. But the effect of this wantonness was far other than had been intended. Revenge and despair confirmed the patriotism of these ruined men, and strengthened their resolution. . . . For months, their only shelter was the green wood and the swamp — their only cover the broad forest and the arch of heaven. . . . With a policy that nothing could distract — a caution that no artifice could mislead — Marion led his followers from thicket to thicket in safety, and was never more perfectly secure than when he was in the neighborhood of his foe. He hung upon his flanks along the march — he skirted his camp in the darkness of the night — he lay in wait for his foraging parties — he shot down his sentries, and, flying or advancing, he never failed to harass the invader, and extort from him a bloody toll at every passage through swamp, thicket, or river, which his smaller parties made. In this sort of warfare — which is peculiarly adapted to the peculiarities of the country in Carolina, and consequently to the genius of her people — he contrived almost wholly to break up the British communications by one of the most eligible routes between the seaboard and the interior."—W. G. Simms, *Hist. of S. Carolina, bk.* 5, *ch.* 6.

A. D. 1780-1781.—Vermont as an independent State negotiating with the British. See Vermont: A. D. 1781.

A. D. 1780-1781.—Greene's campaign in the south.—King's Mountain.—The Cowpens.—Guilford Court House —Hobkirk's Hill.—Eutaw Springs.—The British shut up in Charleston.—Cornwallis withdrawn to Virginia.—"After his victory at Camden, Lord Cornwallis found it necessary to give his army some rest from the intense August heat. In September he advanced into North Carolina, boasting that he would soon conquer all the states south of the Susquehanna river. . . . In traversing Mecklenburg county Cornwallis soon found himself in a very hostile and dangerous region, where there were no Tories to befriend him. One of his best partisan commanders, Major Ferguson, penetrated too far into the mountains. The backwoodsmen of Tennessee and Kentucky, the Carolinas, and western Virginia were aroused; and under their superb partisan leaders—Shelby, Sevier, Cleaveland, McDowell, Campbell, and Williams—gave chase to Ferguson, who took refuge upon what he deemed an impregnable position on the top of King's Mountain. On the 7th of October the backwoodsmen stormed the mountain, Ferguson was shot through the heart, 400 of his men were killed and wounded, and all the rest, 700 in number, surrendered at discretion. The Americans lost 28 killed and 60 wounded. . . . In the series of events which led to the surrender of Cornwallis, the battle of King's Mountain played a part similar to that played by the battle of Bennington in the series of events which led to the surrender of Burgoyne. It was the enemy's first serious disaster, and its immediate result was to check his progress until the Americans could muster strength enough to overthrow him. The events, however, were much more complicated in Cornwallis's case, and took much longer to unfold themselves. . . . As soon as he heard the news of the disaster he fell back to Winnsborough, in South Carolina, and called for reinforcements. While they were arriving, the American army, recruited and reorganized since its crushing defeat at Camden, advanced into Mecklenburg county. Gates was superseded by Greene, who arrived upon the scene on the 2d of December. Under Greene were three Virginians of remarkable ability,—Daniel Morgan; William Washington, who was a distant cousin of the commander-in-chief; and Henry

Lee, familiarly known as 'Light-horse Harry,' father of the great general, Robert Edward Lee. The little army numbered only 2,000 men, but a considerable part of them were disciplined veterans, fully a match for the British infantry." To increase this small force, Steuben [Baron Steuben, the military organizer and disciplinarian of the Revolutionary armies,—see above: A. D. 1777 (JANUARY—DECEMBER)] was sent down to Virginia, for the purpose of recruiting and organizing troops. Thereupon detachments from the British army at New York were dispatched by sea to Virginia, and Arnold, the traitor, was given command of them. "The presence of these subsidiary forces in Virginia was soon to influence in a decisive way the course of events. Greene, on reaching South Carolina, acted with boldness and originality. He divided his little army into two bodies, one of which coöperated with Marion's partisans in the northeastern part of the state, and threatened Cornwallis's communications with the coast. The other body he sent under Morgan to the southwestward, to threaten the inland posts and their garrisons. Thus worried on both flanks, Cornwallis presently divided his own force, sending Tarleton with 1,100 men to dispose of Morgan. Tarleton came up with Morgan on the 17th of January, 1781, at a grazing-ground known as the Cowpens, not far from King's Mountain. The battle which ensued was well fought, and on Morgan's part it was a wonderful piece of tactics. With only 900 men in open field he surrounded and nearly annihilated a superior force. The British lost 230 in killed and wounded, 600 prisoners, and all their guns. Tarleton escaped with 270 men. The Americans lost 12 killed and 61 wounded. The two battles, King's Mountain and the Cowpens, deprived Cornwallis of nearly all his light-armed troops, and he was just entering upon a game where swiftness was especially required. It was his object to intercept Morgan and defeat him before he could effect a junction with the other part of the American army. It was Greene's object to march the two parts of his army in converging directions northwards across North Carolina and unite them in spite of Cornwallis. By moving in this direction Greene was always getting nearer to his reinforcements from Virginia, while Cornwallis was always getting further from his supports in South Carolina. . . . The two wings of the American army came together and were joined by the reinforcements; so that at Guilford Court House, on the 15th of March, Cornwallis found himself obliged to fight against heavy odds, 200 miles from the coast and almost as far from the nearest point in South Carolina at which he could get support. The battle of Guilford was admirably managed by both commanders and stubbornly fought by the troops. At nightfall the British held the field, with the loss of nearly one third of their number, and the Americans were repulsed. But Cornwallis could not stay in such a place, and could not afford to risk another battle. There was nothing for him to do but retreat to Wilmington, the nearest point on the coast. There he stopped and pondered. His own force was sadly depleted, but he knew that Arnold in Virginia was being heavily reinforced from New York. The only safe course seemed to march northward and join the operations in Virginia; then afterwards to return southward. This course Cornwallis pursued, arriving at Petersburg and taking command of the troops there on the 20th of May. Meanwhile Greene, after pursuing Cornwallis for about 50 miles from Guilford, faced about and marched with all speed upon Camden, 160 miles distant. . . . Lord Rawdon held Camden. Greene stopped at Hobkirk's Hill, two miles to the north, and sent Marion and Lee to take Fort Watson, and thus cut the enemy's communications with the coast. On April 23 Fort Watson surrendered; on the 25th Rawdon defeated Greene at Hobkirk's Hill, but as his communications were cut the victory did him no good. He was obliged to retreat toward the coast, and Greene took Camden on the 10th of May. Having thus obtained the commanding point, Greene went on until he had reduced every one of the inland posts. At last, on the 8th of September, he fought an obstinate battle at Eutaw Springs, in which both sides claimed the victory. . . . Here, however, as always after one of Greene's battles, it was the enemy who retreated and he who pursued. His strategy never failed. After Eutaw Springs the British remained shut up in Charleston under cover of their ships, and the American government was reëstablished over South Carolina. Among all the campaigns in history that have been conducted with small armies, there have been few, if any, more brilliant than Greene's." —J. Fiske, *The War of Independence, ch.* 7.

A. D. 1781 (January).—The Mutiny of the Pennsylvania Line.—"As the year 1781 opened and the prospect of a new year of struggle became certain, and the invasion of the Southern States began to indicate the prospect of a southern campaign, which was at all times unpopular with northern troops, a disaffection was developed which at last broke forth in open mutiny, and a peremptory demand for discharge. This irritation was aggravated by hunger, cold, and poverty. Marshall says: 'The winter brought not much relaxation from toil, and none from suffering. The soldiers were perpetually on the point of starvation, were often entirely without food, were exposed without proper clothing to the rigors of winter; and had now served almost twelve months without pay.'. . . On the 1st of January the Pennsylvania line revolted; Captain Billings was killed in an attempt to suppress the mutiny; General Wayne was powerless to restore order, and 1,300 men, with six guns, started to Princeton, with the declared purpose to march to Philadelphia, and obtain redress. They demanded clothing, the residue of their bounty, and full arrears of pay. A committee from Congress and the State authorities of Pennsylvania at once entered into negotiations with the troops for terms of compromise. The American Commander-in-chief was then at New Windsor. A messenger from General Wayne informed him on the 3d of January of the revolt, and the terms demanded. It appears from Washington's letters that it was his impulse, at the first intimation of the trouble, to go in person and attempt its control. His second impression was to reserve his

influence and authority until all other means were exhausted. The complaint of the mutineers was but a statement of the condition of all the army, so far as the soldiers had served three years; and the suffering and failure to receive pay were absolutely universal. Leaving the preliminary discussion with the civil authorities who were responsible for much of the trouble, the Commander-in-chief appealed to the Governors of the northern States for a force of militia to meet any attacks from New York, and declined to interfere until he found that the passion had passed and he could find troops who would at all hazards execute his will. It was one of the most difficult passages in the war, and was so handled that the Commander-in-chief retained his prestige and regained control of the army. . . . General Clinton received information of the revolt as early as Washington, on the morning of the 23d, and sent messengers to the American army with propositions, looking to their return to British allegiance. He entirely misconceived the nature of the disaffection, and his agents were retained in custody. It is sufficient to say that a portion of the troops were discharged without critical examination of their enlistments, on their own oath; that many promptly reënlisted, that as soon as Washington found that he had troops who did not share in the open mutiny, he used force and suppressed the disaffection, and that the soldiers themselves hung several agents who brought propositions from General Clinton which invited them to abandon their flag and join his command. The mutiny of the American army at the opening of the campaign of 1781, was a natural outbreak which human nature could not resist, and whatever of discredit may attach to the revolt, it will never be unassociated with the fact that, while the emergency was one that overwhelmed every military obligation by its pressure, it did not affect the fealty of the soldiers to the cause for which they took up arms. . . . La Fayette thus wrote to his wife, 'Human patience has its limits. No European army would suffer the tenth part of what the Americans suffer. It takes citizens to support hunger, nakedness, toil, and the total want of pay, which constitute the condition of our soldiers, the hardiest and most patient that are to be found in the world.'"—H. B. Carrington, *Battles of the Am. Revolution, ch.* 67.

A. D. 1781 (January—May).—Benedict Arnold and the British in Virginia.—Opening of Lafayette's campaign in that state.—"In January, 1781, the news reached headquarters in the Highlands of New York that General [Benedict] Arnold had landed in Virginia with a considerable force, was laying waste the country, and had already destroyed the valuable stores collected at Richmond; opposed to him were only the small commands of Steuben and Muhlenberg. The situation was very alarming, and threatened to place all the Southern States in the hands of the British. If Arnold succeeded in destroying the few American troops in Virginia, he could then march to the assistance of Cornwallis, who, with a superior force, was pressing General Greene very hard in the Carolinas. To defeat or capture Arnold before he could further prosecute his designs was, therefore, of the utmost importance. For this purpose it was necessary to send a detachment from the main army against Arnold by land, and a naval force to Chesapeake Bay to prevent his escape by sea. Washington at once communicated the state of affairs to Rochambeau, who, with the French fleet, had long been blockaded at Newport. Taking advantage of the serious injuries lately suffered by the blockading English fleet in consequence of a storm, Admiral Destouches despatched M. de Tilly to the Chesapeake with a ship-of-the-line and two frigates. To coöperate with these French vessels, Washington detached 1,200 light infantry from the main army, and placed them under the command of Lafayette. That officer was particularly chosen for this important trust, because the confidence reposed in him by both the American and French troops made him, in Washington's opinion, the fittest person to conduct a combined expedition. Thus opened the only campaign in America which afforded Lafayette an opportunity to show what abilities he possessed as an independent commander, and on this campaign his military reputation must chiefly rest. Lafayette moved rapidly southward," to Annapolis; but, the coöperating movement of the French fleet having, meantime, been frustrated by an attack from the English squadron, his instructions required him to abandon the expedition and return. He had already set his troops in motion northward when different instructions reached him. Two more British regiments had been sent to Virginia, under General Philips, who now took command of all the forces there, and this had increased the anxiety of Washington. "The situation of the Southern States had become extremely perilous. General Greene had all he could do to fight Lord Cornwallis's superior force in North Carolina. Unless a vigorous opposition could be made to Philips, he would have no difficulty in dispersing the militia of Virginia, and in effecting a junction with Cornwallis. With their forces so combined, the British would be masters in the South. Washington at once determined to place the defence of Virginia in Lafayette's hands. . . . Lafayette marched with such rapidity . . . that he reached Richmond, where there were valuable stores to be protected, a day in advance of General Philips. From his post on the heights of the town he saw the British set fire to the tobacco warehouses at Manchester, just across the river, but there were neither men nor boats enough to make an attack possible. Philips, on his part, was too much impressed with the show of strength made by the Americans to prosecute his plans on Richmond, and retreating down the James river, burning and laying waste as he went, he camped at Hog Island. Lafayette followed, harassing the enemy's rear, as far as the Chickahominy. Here the situation underwent a considerable change. Lord Cornwallis, after his long and unsuccessful campaign against Greene in North Carolina, made up his mind that his exhausting labors there would prove unprofitable until Virginia should be subjugated. His men were worn out with incessant marching and fighting, while no substantial advantage had been gained. Hearing that General Greene had marched to attack Lord Rawdon at Camden in South Carolina, he determined to join Philips. That officer, accordingly, received orders while at Hog Island to take possession of

Petersburg and there await Cornwallis's arrival. . . . On the 13th of May, General Philips died at Petersburg of a fever. . . . Cornwallis arrived at Petersburg on the 20th of May. His forces now amounted to over 5,000 men, which number was soon increased to 8,000."—B. Tuckerman, *Life of Lafayette, ch.* 6.

Also in: J. E. Cooke, *Virginia, pt.* 3, *ch.* 17.

A. D. 1781 (May—October).—Cornwallis in Virginia and the trap into which he fell.—Siege of Yorktown by the French and Americans.—Surrender of the British army.—"On the 24th of May, Cornwallis, having rested his troops, marched from Petersburg, and endeavored to engage the American forces. But Lafayette, having removed the military stores from Richmond, retreated across the Chickahominy to Fredericksburg, where he expected to meet General Wayne and a battalion of Pennsylvania troops, without whose assistance he could not venture any fighting. . . . Cornwallis . . . moved between Lafayette and the town of Albemarle, where had been placed a great part of the military stores from Richmond, which now seemed doomed to destruction. But on the 10th of June Lafayette had received his expected reënforcement of Wayne's Pennsylvanians, and thus strengthened felt able to assume the offensive. Rapidly crossing the Rapidan he approached close to the British army which blocked the road to Albemarle. Nothing could have better suited Cornwallis, who prepared for a conflict in which he felt sure of a decisive victory. Lafayette, however, had not lost sight of the vital feature of his campaign,—to protect the property of the State without losing his army. Through his scouts he discovered an old unused road to Albemarle, unknown to the enemy. While Cornwallis was preparing for battle, he had the road cleared, and under cover of the night marched his men through it and took up a strong position before the town. There he was joined by militia from the neighboring mountains, and he showed so strong a front that the British commander did not venture an attack. . . . The British commander, so far foiled in his objects, had to march back to Richmond and thence to Williamsburg, near the coast, thus practically abandoning control over any part of Virginia except where naval forces gave possession. Lafayette effected a junction with Baron Steuben on the 18th of June, and thus increased his force to about four thousand men. The Americans had now become the pursuers instead of the pursued, and followed the British, harassing their rear and flanks."—B. Tuckerman, *Life of General Lafayette, v.* 1, *ch.* 6.—"There now came a pause in the Virginia Campaign, at least in daily operations and excitements. The State north of the James was relieved. Cornwallis crossed to the south side, at Cobham, on the 7th [July]; and Lafayette, retiring up the river, encamped, about the 20th, on the now historic Malvern Hill, then described as one of the healthiest and best watered spots in the State. . . . The entire British army was soon after concentrated at Portsmouth, and preparations made to transport a considerable portion of it to New York. Lafayette, meanwhile, at Malvern Hill, could only await developments. He thought of sending re-enforcements to Greene, and asked Washington if, in case Cornwallis left Virginia, he might not return to the Northern army. . . . But while the marquis and Washington and Greene were speculating on the future movements of Cornwallis and were persuaded, from embarkations at Portsmouth, that he was to be deprived of a large part of his force by Clinton, unexpected intelligence came to hand. Instead of any part going to New York, the British force suddenly made its appearance, during the first days in August, at Yorktown, on the Virginia peninsula, which it had abandoned but three weeks before. Here again was a new situation. Cornwallis, at last, at Yorktown — the spot he was not to leave except as a prisoner of war. Why he went there is a simple explanation. Clinton decided, upon certain dissenting opinions expressed by Cornwallis respecting the situation in Virginia, not to withdraw the force in the Chesapeake which he had called for, and which was about to sail for New York, but permitted Cornwallis to retain the whole — all with which he had been pursuing Lafayette and the large garrison at Portsmouth, a total of about seven thousand, rank and file. His new instructions, conveyed at the same time, were to the effect that his Lordship should abandon Portsmouth, which both generals agreed was too unhealthy for the troops, and fortify Old Point Comfort, where Fort Monroe now stands, as a naval station for the protection of the British shipping. In addition, if it appeared necessary, for the better security of the Point, to occupy Yorktown also, that was to be done. Obeying these instructions, Cornwallis ordered a survey of Old Point Comfort; but, upon the report of his engineers, was obliged to represent to Clinton that it was wholly unfit and inadequate for a naval station, as it afforded little protection for ships, and could not command the channel, on account of its great width. Then, following what he believed to be the spirit of his orders, Cornwallis, before hearing from Clinton, moved up to Yorktown, and began to fortify it in connection with Gloucester, on the opposite shore, as the best available naval station. Clinton made no subsequent objections, and there Cornwallis remained until his surrender. His occupation of the place was simply an incident of the campaign — a move taken for convenience and in the interests of the navy and the health of his command."— H. P. Johnston, *The Yorktown Campaign, ch.* 3.— "The march of Lord Cornwallis into Virginia was the first emphatic fact which enabled General Washington to plan an efficient offensive. The repeated detachment of troops from New York so sensibly lessened the capacity of its garrison for extensive field service at the north, that the American Commander-in-chief determined to attack that post, and as a secondary purpose, thereby to divert General Clinton from giving further aid to troops in the Southern States. As a matter of fact, the prudent conduct of the Virginia campaign eventually rallied to the support of General La Fayette an army, including militia, nearly as large as that of Washington, and the nominal strength of the allied army near Yorktown, early in September, was nearly or quite as great as that of Lord Cornwallis. There were other elements which, as in previous campaigns, hampered operations at the north. The Indians were still troublesome in Western New York, and the Canadian frontier continued to demand attention. The American navy had practically disappeared. The scarcity of money and a

powerless recruiting service, increased the difficulties of carrying on the war in a manner that would use to the best advantage the troops of France. . . . The position of the American Commander-in-chief at this time was one of peculiar personal mortification. Appeals to State authorities failed to fill up his army. Three thousand Hessian reinforcements had landed at New York, and the government as well as himself would be compromised before the whole world by failure to meet the just demands which the French auxiliaries had a right to press upon his attention. Relief came most opportunely. The frigate Concorde arrived at Newport, and a reiteration of the purpose of Count de Grasse to leave St. Domingo on the 3d of August, for the Chesapeake direct, was announced by a special messenger. The possibilities of the future at once quickened him to immediate action. With a reticence so close that the army could not fathom his plans, he re-organized his forces for a false demonstration against New York and a real movement upon Yorktown. . . . Letters to the Governors of northern States called for aid as if to capture New York. Letters to La Fayette and the Count de Grasse embodied such intimations of his plans as would induce proper caution to prevent the escape of Lord Cornwallis, and secure transportation at Head of Elk. Other letters to authorities in New Jersey and Philadelphia, expressly defining a plan of operations against New York via Staten Island, with the assurance of ample naval support, were exposed to interception and fell into the hands of General Clinton. As late as the 19th, the roads leading to King's Bridge were cleared of obstructions, and the army was put in readiness to advance against New York Island. On the same day the New Jersey regiment and that of Colonel Hazen crossed the Hudson at Dobb's Ferry, to threaten Staten Island, and ostensibly to cover some bake-houses which were being erected for the purpose of giving color to the show of operations against New York. The plan of a large encampment had been prepared, which embraced Springfield and the Chatham Pass to Morristown, and this was allowed to find its way to Clinton's headquarters. General Heath was assigned to command of the Hudson-river posts, with two regiments from New Hampshire, ten from Massachusetts, five from Connecticut, the Third artillery, Sheldon's dragoons, the invalid corps, all local companies, and the militia. The following forces were selected to accompany the Commander-in-chief, viz., the light infantry under Colonel Scammel, four light companies from New York and Connecticut, the Rhode Island regiment, under the new army establishment, two New York regiments, that of New Jersey and Hazen's regiment, (the last two already across the Hudson) and Lamb's artillery, in all about 2,000 men. The American troops crossed on the 21st, at King's Ferry, and encamped near Haverstraw. The French army followed, and the army was united on the 25th. . . . General Washington and suite reached Philadelphia about noon, August 30th. The army had already realized the fact that they were destined southward. Some dissatisfaction was manifested; but Count de Rochambeau advanced $20,000 in gold upon the pledge of Robert Morris that he would refund the sum by the 1st of October, and the effect upon the troops, who had long been without any pay, was inspiring."—H. B. Carrington, *Battles of the Am. Rev., ch.* 74.

—"Leaving Philadelphia, with the Army, on the 5th of September, Washington meets an express near Chester, announcing the arrival, in Chesapeake Bay, of the Count de Grasse, with a fleet of twenty-eight ships of the line, and with 3,500 additional French troops, under the command of the Marquis de St. Simon, who had already been landed at Jamestown, with orders to join the Marquis de La Fayette! 'The joy' says the Count William de Deux-Ponts, in his precious journal, 'the joy which this welcome news produces among all the troops, and which penetrates General Washington and the Count de Rochambeau, is more easy to feel than to express.' But, in a foot-note to that passage, he does express and describe it, in terms which cannot be spared and could not be surpassed, and which add a new and charming illustration of the emotional side of Washington's nature. 'I have been equally surprised and touched,' says the gallant Deux-Ponts, 'at the true and pure joy of General Washington. Of a natural coldness and of a serious and noble approach, which in him is only true dignity, and which adorn so well the chief of a whole nation, his features, his physiognomy, his deportment, all were changed in an instant. He put aside his character as arbiter of North America, and contented himself for a moment with that of a citizen, happy at the good fortune of his country. A child, whose every wish had been gratified, would not have experienced a sensation more lively, and I believe I am doing honor to the feelings of this rare man in endeavoring to express all their ardor.' Thanks to God, thanks to France, from all our hearts at this hour, for 'this true and pure joy' which lightened the heart, and at once dispelled the anxieties of our incomparable leader. It may be true that Washington seldom smiled after he had accepted the command of our Revolutionary Army, but it is clear that on the 5th of September he not only smiled but played the boy. . . . 'All now went merry,' with him, 'as a marriage bell.' Under the immediate influence of this joy, which he had returned for a few hours to Philadelphia to communicate in person to Congress, . . . and while the Allied Armies are hurrying southward, he makes a hasty trip with Colonel Humphreys to his beloved Mount Vernon and his more beloved wife — his first visit home since he left it for Cambridge in 1775. Rochambeau, with his suite, joins him there on the 10th, and Chastellux and his aids on the 11th; and there with Mrs. Washington, he dispenses for two days, 'a princely hospitality' to his foreign guests. But the 13th finds them all on their way to rejoin the Army at Williamsburg, where they arrive on the 15th, 'to the great joy of the troops and the people,' and where they dine with the Marquis de St. Simon. On the 18th Washington and Rochambeau, with Knox and Chastellux and Du Portail, and with two of Washington's aids, Colonel Cobb of Massachusetts, and Colonel Jonathan Trumbull, jr., of Connecticut, embark on the 'Princess Charlotte' for a visit to the French fleet. . . . A few days more are spent at Williamsburg on their return, where they find General Lincoln already arrived with a part of the troops from the North, having hurried them as Washington besought him, 'on the wings of speed,' and where the word is soon

given, 'On, on, to York and Gloucester!' Washington takes his share of the exposure of this march, and the night of the 28th of September finds him, with all his military family, sleeping in an open field within two miles of Yorktown, without any other covering, as the journal of one of his aids states, 'than the canopy of the heavens, and the small spreading branches of a tree,' which the writer predicts 'will probably be rendered venerable from this circumstance for a length of time to come.' . . . Everything now hurries, almost with the rush of a Niagara cataract, to the grand fall of Arbitrary Power in America. Lord Cornwallis had taken post here at Yorktown as early as the 4th of August, after being foiled so often by 'that boy' as he called La Fayette, whose Virginia campaign of four months was the most effective preparation for all that was to follow, and who, with singular foresight, perceived at once that his lordship was now fairly entrapped, and wrote to Washington, as early as the 21st of August, that 'the British army must be forced to surrender.' Day by day, night by night, that prediction presses forward to its fulfillment. The 1st of October finds our engineers reconnoitering the position and works of the enemy. The 2d witnesses the gallantry of the Duke de Lauzun and his legion in driving back Tarleton, whose raids had so long been the terror of Virginia and the Carolinas. On the 6th, the Allied Armies broke ground for their first parallel, and proceeded to mount their batteries on the 7th and 8th. On the 9th, two batteries were opened — Washington himself applying the torch to the first gun; and on the 10th three or four more were in play — 'silencing the enemy's works, and making,' says the little diary of Colonel Cobb, 'most noble music.' On the 11th, the indefatigable Baron Steuben was breaking the ground for our second parallel, within less than four hundred yards of the enemy, which was finished the next morning, and more batteries mounted on the 13th and 14th. But the great achievement of the siege still awaits its accomplishment. Two formidable British advanced redoubts are blocking the way to any further approach, and they must be stormed. The allied troops divide the danger and the glory between them, and emulate each other in the assault. One of these redoubts is assigned to the French grenadiers and chasseurs, under the general command of the Baron de Viomesnil. The other is assigned to the American light infantry, under the general command of La Fayette. But the detail of special leaders to conduct the two assaults remains to be arranged. Viomesnil readily designates the brave Count William to lead the French storming party, who, though he came off from his victory wounded, counts it 'the happiest day of his life.' A question arises as to the American party, which is soon solved by the impetuous but just demand of our young Alexander Hamilton to lead it. And lead it he did, with an intrepidity, a heroism, and a dash unsurpassed in the whole history of the war. . . . Both redoubts were soon captured; and these brilliant actions virtually sealed the fate of Cornwallis. 'A small and precipitate sortie,' as Washington calls it, was made by the British on the following evening, resulting in nothing; and the next day a vain attempt to evacuate their works, and to escape by crossing over to Gloucester, was defeated by a violent and, for us . . . most providential storm of rain and wind. . . . A suspension of hostilities, to arrange terms of capitulation, was proposed by Cornwallis on the 17th; the 18th was occupied at Moore's House in settling those terms; and on the 19th the articles were signed by which the garrison of York and Gloucester, together with all the officers and seamen of the British ships in the Chesapeake, 'surrender themselves Prisoners of War to the Combined Forces of America and France.'"— Robert C. Winthrop, *Address at the Centennial Celebration of the Surrender of Lord Cornwallis at Yorktown, Oct.* 19, 1881.

A. D. 1781-1782.—Practical suspension of hostilities. — Difficulty of maintaining the army.—Financial distress of the country.—"Immediately after the surrender of Yorktown Washington returned with his army to the vicinity of New York [see Newburgh], but he felt himself far too weak to attempt its capture, and hostilities were restricted to a few indecisive skirmishes or predatory enterprises. It is curious to notice how far from sanguine Washington appeared even after the event which in the eyes of most men, outside America, had determined the contest without appeal. It was still impossible, he maintained, to do anything decisive unless the sea were commanded by a naval force hostile to England, and France alone could provide this force. The difficulties of maintaining the army were unabated. 'All my accounts,' he wrote in April 1782, 'respecting the recruiting service are unfavourable; indeed, not a single recruit has arrived to my knowledge from any State except Rhode Island, in consequence of the requisitions of Congress in December last.' He strongly urged the impossibility of recruiting the army by voluntary enlistment, and recommended that, in addition to the compulsory enrolment of Americans, German prisoners should be taken into the army. Silas Deane, in private letters, expressed at this time his belief that it would be utterly impossible to maintain the American army for another year; and even after the surrender of Cornwallis, no less a person than Sir Henry Clinton assured the Government that, with a reinforcement of only 10,000 men he would be responsible for the conquest of America. . . . Credit was gone, and the troops had long been unpaid. 'The long sufferance of the army,' wrote Washington in October 1782, 'is almost exhausted. It is high time for a peace.' Nothing, indeed, except the great influence, the admirable moderation and good sense, and the perfect integrity of Washington could have restrained the army from open revolt. . . . Holland, immediately after the surrender of Yorktown, had recognised the independence of America, which had as yet only been recognised by France. John Adams was received as representative at the Hague, and after several abortive efforts he succeeded in raising a Dutch loan. France, as her ablest ministers well knew, was drifting rapidly towards bankruptcy, yet two

American loans, amounting together to £600,000, were extorted in the last year of the war. Up to the very eve of the formal signature of peace, and long after the virtual termination of the war, the Americans found it necessary to besiege the French Court for money. As late as December 5, 1782, Franklin wrote from Paris to Livingston complaining of the humiliating duty which was imposed on him. . . . The reply of Livingston was dated January 6, 1783, and it paints vividly the extreme distress in America. 'I see the force,' he writes, 'of your objections to soliciting the additional twelve millions, and I feel very sensibly the weight of our obligations to France, but every sentiment of this kind must give way to our necessities. It is not for the interest of our allies to lose the benefit of all they have done by refusing to make a small addition to it. . . . The army demand with importunity their arrears of pay. The treasury is empty, and no adequate means of filling it presents itself. The people pant for peace; should contributions be exacted, as they have hitherto been, at the point of the sword, the consequences may be more dreadful than is at present apprehended. I do not pretend to justify the negligence of the States in not providing greater supplies. Some of them might do more than they have done; none of them all that is required. It is my duty to confide to you, that if the war is continued in this country, it must be in a great measure at the expense of France. If peace is made, a loan will be absolutely necessary to enable us to discharge the army, that will not easily separate without pay.' It was evident that the time for peace had come. The predatory expeditions which still continued in America could only exasperate still further both nations, and there were some signs — especially in the conflicts between loyalists and revolutionists — that they were having this effect. England had declared herself ready to concede the independence America demanded. Georgia and South Carolina, where the English had found so many faithful friends, were abandoned in the latter half of 1782, and the whole force of the Crown was now concentrated at New York and in Canada. France and Spain for a time wished to protract negotiations in hopes that Rodney might be crushed, that Jamaica and afterwards Gibraltar might be captured; but all these hopes had successively vanished. . . . If the war continued much longer America would almost certainly drop away, and France, and perhaps Spain, become bankrupt."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century, ch.* 15 (*v.* 4).

A. D. 1781-1786.—The cession of Western Territory by the States to the Federal Union. —The Western Reserve of Connecticut.—Although the Articles of Confederation were adopted by Congress in 1777 and ratified immediately by most of the States, it was not until 1781 that they became operative by the assent of all. "New Jersey, Delaware and Maryland held out against ratifying them for from two to four years. The secret of their resistance was in the claims to the western territory. . . . The three recalcitrant States had always had fixed western boundaries, and had no legal claim to a share in the western territory. . . . New Jersey and Delaware gave up the struggle in 1778 and 1779; but Maryland would not and did not yield, until her claims were satisfied. Dr. H. B. Adams has shown that the whole question of real nationality for the United States was bound up in this western territory; that even a 'league government' could not continue long to govern a great and growing territory like this without developing into a real national government, even without a change of strict law; and that the Maryland leaders were working under a complete consciousness of these facts."—A. Johnston, *The United States: Its Hist. and Const., sect.* 89-90. —The western claims of Virginia were the most sweeping and were founded upon the oldest historical document. "The charter granted by James I. to South Virginia, in 1609 [see VIRGINIA: A. D. 1609-1616] . . . embraced the entire north-west of North America, and, within certain limits, all the islands along the coast of the South Sea or Pacific Ocean. . . . The following is the grant: 'All those lands, countries and territories situate, lying and being in that part of America called Virginia, from the point of land called Cape or Point Comfort, all along the sea-coast to the northward 200 miles; and from the said Point or Cape Comfort, all along the sea-coast to the southward 200 miles; and all that space and circuit of land lying from the sea-coast of the precinct aforesaid, up into the land throughout, from sea to sea, west and north-west; and also all the islands lying within 100 miles along the coast of both seas of the precinct aforesaid.' The extraordinary ambiguity of this grant of 1609, which was always appealed to as a legal title by Virginia, was first shown by Thomas Paine. . . . The chief ambiguity . . . lay in the interpretation of the words 'up into the land throughout, from sea to sea, west and north-west.' From which point was the north-west line to be drawn, from the point on the sea-coast 200 miles above, or from the point 200 miles below Cape Comfort? . . . The more favorable interpretation for Virginia and, perhaps, in view of the expression 'from sea to sea,' more natural interpretation, was to draw the north-western line from the point on the sea-coast 200 miles above Point Comfort, and the western line from the southern limit below Point Comfort. This gave Virginia the greater part, at least, of the entire north-west, for the lines diverged continually. . . . At the outbreak of the Revolution, Virginia had annexed the 'County of Kentucky' to the Old Dominion, and, in 1778, after the capture of the military posts in the north-west by Colonel George Rogers Clarke, . . . that enterprising State proceeded to annex the lands beyond the Ohio, under the name of the County of Illinois [see, above: A. D. 1778-1779, CLARKE'S CONQUEST]. The military claims of Virginia were certainly very strong, but it was felt by the smaller States that an equitable consideration for the services of other colonies in defending the back country from the French, ought to induce Virginia to dispose of a portion of her western territory for the common good. It is easy now to conceive how royal grants to Massachusetts and Connecticut of lands stretching from ocean to ocean, must have conflicted with the charter claims and military title of Virginia to the great north-west. . . . The claims of Massachusetts were based upon the charter granted by William and Mary, in 1691, and those of Connecticut upon the charter granted by Charles II., in 1662. . . . The former's claim embraced the lands which now lie in southern

Michigan and Wisconsin, or, in other words, the region comprehended by the extension westward of her present southern boundary and of her ancient northern limit, which was 'the latitude of a league north of the inflow of Lake Winnipiseogee in New Hampshire. The western claims of Connecticut [the zone lying between her northern and southern boundaries — 41° and 42° 2′ north latitude — extended westward] covered portions of Ohio, Indiana, Illinois, and Michigan. . . . The extension of charter boundaries over the far west by Massachusetts and Connecticut led to no trespass on the intervening charter claims of New York. Connecticut fell into a serious controversy, however, with Pennsylvania, in regard to the possession of certain lands in the northern part of the latter State, but the dispute, when brought before a court appointed by Congress, was finally decided in favor of Pennsylvania. But in the western country, Massachusetts and Connecticut were determined to assert their chartered rights against Virginia and the treaty claims of New York; for, by virtue of various treaties with the Six Nations and allies, the latter State was asserting jurisdiction over the entire region between Lake Erie and the Cumberland mountains, or, in other words, Ohio and a portion of Kentucky. These claims were strengthened by the following facts: First, that the chartered rights of New York were merged in the Crown by the accession to the throne, in 1685, of the Duke of York as James II.; again, that the Six Nations and tributaries had put themselves under the protection of England, and that they had always been treated by the Crown as appendant to the government of New York; moreover, in the third place, the citizens of that State had borne the burden of protecting these Indians for over a hundred years. New York was the great rival of Virginia in the strength and magnitude of her western claims." In 1780, Maryland still insisting upon the surrender of these western land claims to the federal government, and refusing to ratify the Articles of Confederation until such cession was made, the claimant States began to yield to her firmness. On the 1st of March, 1781, the offer of New York to cede her claims, providing Congress would confirm her western boundary, was made in Congress. "On that very day, Maryland ratified the Articles and the first legal union of the United States was complete. The coincidence in dates is too striking to admit of any other explanation than that Maryland and New York were acting with a mutual understanding. . . . The offer of Virginia, reserving to herself jurisdiction over the County of Kentucky; the offer of Connecticut, withholding jurisdiction over all her back lands; and the offer of New York, untrammeled by burdensome conditions and conferring upon Congress complete jurisdiction over her entire western territory,— these three offers were now prominently before the country. . . . On the 29th of October, 1782, Mr. Daniel Carroll, of Maryland, moved that Congress accept the right, title, jurisdiction, and claim of New York, as ceded by the agents of that state on the first of March, 1781. . . . On the 13th day of September, 1783, it was voted by Congress to accept the cession offered by Virginia, of the territory north-west of the Ohio, provided that state would waive the obnoxious conditions concerning the guaranty of Virginia's boundary, and the annulling of all other titles to the north-west territory. Virginia modified her conditions as requested, and on the 20th of October, 1783, empowered her delegates in Congress to make the cession, which was done by Thomas Jefferson, and others, March 1, 1784."—H. B. Adams, *Maryland's Influence upon Land Cessions to the U. S.* (*Johns Hopkins Univ. Studies, 3d ser. No.* 1), *pp.* 9–11, 19–22, 36–39.—The Massachusetts deed of cession was executed April 19, 1785. It conveyed the right and title of the state to all lands "west of a meridian line drawn through the western bent or inclination of Lake Ontario, provided such line should fall 20 miles or more west of the western limit of the Niagara River" —that being the western boundary of New York, fixed four years before. In May, 1786, Connecticut authorized a cession which was not complete. Instead of beginning at the western boundary line of Pennsylvania, her conveyance was of lands beyond a line 120 miles west of the Pennsylvania line — thus retaining her claim to the large tract in Ohio known subsequently as the Western Reserve, or Connecticut Reserve. "The acceptance of this cession was strongly opposed in Congress. . . . After a severe struggle it was accepted, May 26, 1786, Maryland alone voting in the negative."—B. A. Hinsdale, *The Old Northwest, ch.* 13.—South Carolina executed the cession of her western claims in 1787; North Carolina in 1790, and Georgia in 1802.—A. Johnston, *Connecticut, ch.* 15.

A. D. 1782 (February—May).—Peace Resolutions in the British House of Commons.—Retirement of Lord North.—Pacific overtures through General Carleton.—"Fortunately for the United States, the temper of the British nation on the question of continuing the American war was not in unison with that of its sovereign. That war into which the nation had entered with at least as much eagerness as the minister had now become almost universally unpopular. Motions against the measures of administration respecting America were repeated by the opposition, and on every new experiment the strength of the minority increased. At length, on the 27th of February [1782], general Conway moved in the house of commons, 'that it is the opinion of this house that a further prosecution of offensive war against America, would, under present circumstances, be the means of weakening the efforts of this country against her European enemies, and tend to increase the mutual enmity so fatal to the interests both of Great Britain and America.' The whole force of administration was exerted to get rid of this question, but was exerted in vain; and the resolution was carried. An address to the king in the words of the motion was immediately voted, and was presented by the whole house. The answer of the crown being deemed inexplicit, it was on the 4th of March resolved by the commons, 'that the house will consider as enemies to his majesty and the country, all those who should advise or attempt a further prosecution of offensive war on the continent of North America.' These votes were soon followed by a change of administration [Lord North resigning and being succeeded by Lord Rockingham, with Fox, Shelburne, Burke and Sheridan for colleagues], and by instructions to

the commanding officers of his Brittanic majesty's forces in America which conformed to them. . . . Early in May, sir Guy Carleton, who had succeeded sir Henry Clinton in the command of all the British forces in the United States, arrived at New York. Having been also appointed in conjunction with admiral Digby a commissioner to negotiate a peace, he lost no time in conveying to general Washington copies of the votes of the British parliament, and of a bill which had been introduced on the part of administration, authorizing his majesty to conclude a peace or truce with those who were still denominated the revolted colonies of North America. These papers he said would manifest the dispositions prevailing with the government and people of England towards those of America, and if the like pacific temper should prevail in this country, both inclination and duty would lead him to meet it with the most zealous concurrence. He had addressed to congress, he said, a letter containing the same communications, and he solicited from the American general a passport for the person who should convey it. At this time, the bill enabling the British monarch to conclude a peace or truce with America had not passed into a law; nor was any assurance given that the present commissioners possessed the power to offer other terms, than those which had formerly been rejected. General Carleton therefore could not hope that negotiations would commence on such a basis; nor be disappointed that the passports he requested were refused by congress, to whom the application was, of course, referred. . . . The several states passed resolutions expressing their objections to separate negotiations, and declaring those to be enemies to America who should attempt to treat without the authority of congress. But the public votes which have been stated, and probably the private instructions given to the British general, restrained him from offensive war, and the state of the American army disabled general Washington from making any attempt on the posts held by the enemy. The campaign of 1782 consequently passed away without furnishing any military operations of moment between the armies under the immediate direction of the respective commanders in chief." — J. Marshall, *Life of Washington, v.* 4, *ch.* 11.

A. D. 1782 (April).—Recognition by the Dutch Republic.—"Henry Laurens, the American plenipotentiary to the Netherlands, having been taken captive and carried to England, John Adams was appointed in his place. The new envoy had waited more than eight months for an audience of reception. Encouraged by the success at Yorktown, on the 9th of January 1782 Adams presented himself to the president of the states-general, renewed his formal request for an opportunity of presenting his credentials, and 'demanded a categorical answer which he might transmit to his sovereign.' He next went in person to the deputies of the several cities of Holland, and, following the order of their rank in the confederation, repeated his demand to each one of them. The attention of Europe was drawn to the sturdy diplomatist, who dared, alone and unsupported, to initiate so novel and bold a procedure. Not one of the representatives of foreign powers at the Hague believed that it could succeed;" but, beginning with Friesland, in February, the seven states, one by one, declared in favor of receiving the American envoy. "On the day which chanced to be the seventh anniversary of 'the battle of Lexington' their high mightinesses, the states-general, reporting the unanimous decision of the seven provinces, resolved that John Adams should be received as the minister of the United States of America. The Dutch republic was the second power in the world to recognise their independence."— G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *v.* 5, *p.* 527.

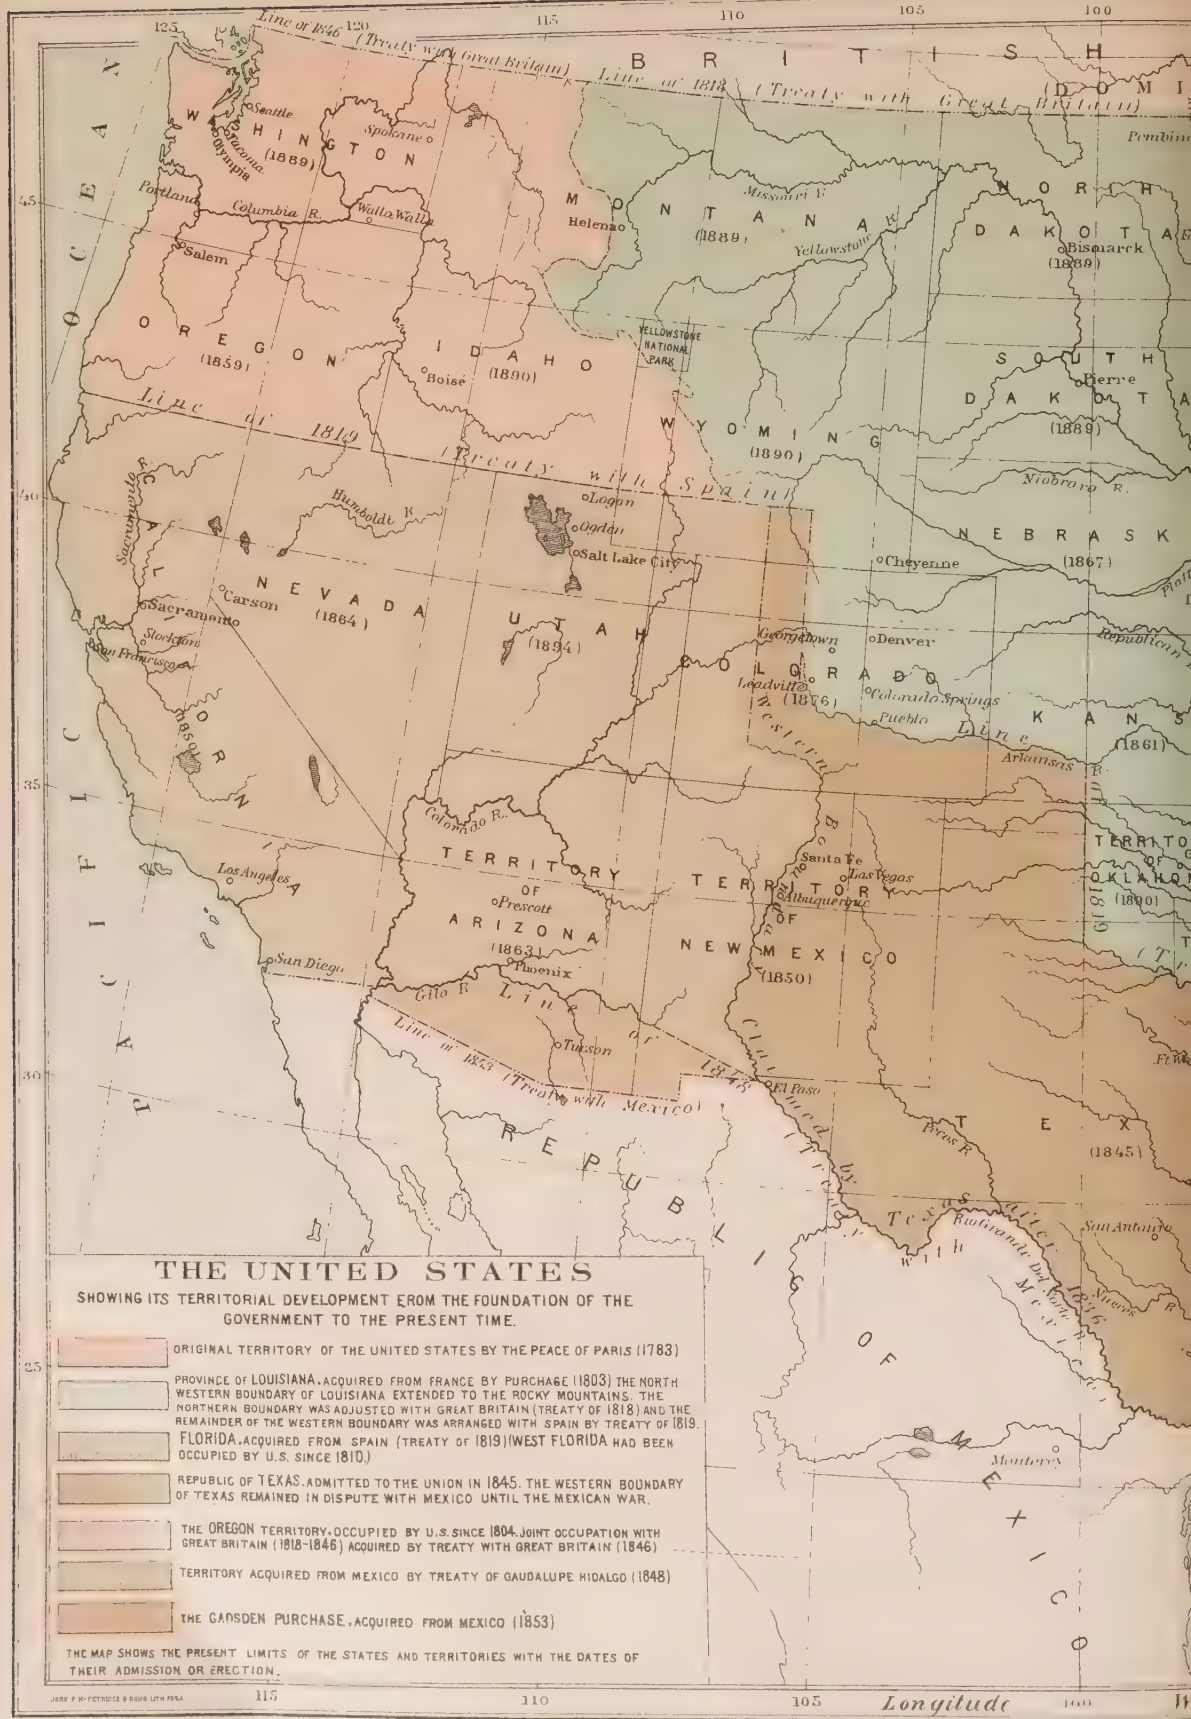
A. D. 1782 (September).—The opening of negotiations for Peace.—The Rockingham ministry, which succeeded Lord North's in the British government, in March, 1782 (see England: A. D. 1782–1783), "though soon dissolved by the death of the Marquis of Rockingham, were early distracted by a want of unanimity, and early lost the confidence of the people. The negotiation with America during May and June made no progress. Mr. Oswald was the agent of Lord Shelburne, known to be opposed to the acknowledgment, and Mr. Grenville, of Mr. Fox. This ministry had been forced upon the king by a vote of the House of Commons. The hopes of regaining America were again excited by the decisive victory of Lord Rodney in the West Indies [see England. A. D. 1780–1782], and the unexpected successes of Sir Eyre Coote against Hyder Ali in the East; and, if credit may be given to the reports of the day, the government looked forward with some confidence to the making a separate peace with Congress by means of Sir Guy Carleton, who had been appointed to the command of the forces in North America. . . . Mr. Adams, writing from the Hague, June 13, '82, observes, 'I cannot see a probability that the English will ever make peace, until their finances are ruined, and such distress brought upon them, as will work up their parties into a civil war.' It was not till September of the same year, under Lord Shelburne's administration, formed upon the dissolution of the Rockingham, that the British government took a decisive and sincere step to make peace, and authorized their commissioner, Mr. Oswald, at Paris, to acknowledge the independence of the colonies. . . . This is the first instruction given by the British Ministry in which it was proposed to recognize the celebrated act of July 4th, 1776. A great and immediate progress was now made in the preliminaries. . . . The commission, under which the preliminaries of the treaty were actually concluded, was issued by Congress in June '81. It empowered 'John Adams, Benjamin Franklin, John Jay, Henry Laurens, and Thomas Jefferson, or the majority of them, or such of them as may assemble, or in case of the death, absence, indisposition, or other impediment of the others, to any one of them, full power and authority, general and special commission, . . . to sign, and thereupon make a treaty or treaties, and to transact every thing that may be necessary for completing, securing and strengthening the great work of pacification, in as ample form, and with the same effect, as if we were personally present and acted therein.' All the commissioners, except Mr. Jefferson, were present

during the discussions, being in Europe at the time the meeting was appointed. Mr. Jefferson was in America, and did not leave it, as a report reached the government that the preliminaries were already signed. Mr. Oswald's commission in proper form was not issued till the 21st of September."—*The Diplomacy of the U. S., ch.* 8.—"At the moment . . . that negotiations were set on foot, there seemed but little hope of finding the Court of France peaceably inclined. Fox alone among the Ministers, though strongly opposed to a French alliance, inclined to a contrary opinion, and imagined that the independence of America once recognized, no further demands would be made upon England. It was therefore his wish to recognize that independence immediately, and by a rapid negotiation to insure the conclusion of what he believed would prove a favourable peace. Shelburne on the contrary believed that further concessions would be asked by France, and that the best chance England possessed of obtaining honourable terms, was to reserve the recognition of independence as part of the valuable consideration to be offered to the Colonies for favourable terms, and to use the points where the interests of France, Spain, and the Colonies were inconsistent, to foment difficulties between them, and be the means of negotiating, if necessary, a separate peace with each of the belligerents, as opportunity might offer. The circumstances of the time favoured the design. Vergennes had not gone to war for the sake of American independence, but in order to humiliate England. He not only did not intend to continue the war a day longer than was necessary to establish a rival power on the other side of the Atlantic, but was desirous of framing the peace on conditions such as would leave England, Spain, and the United States to balance one another, and so make France paramount. He therefore intended to resist the claim which the Colonies had invariably advanced of pushing their frontiers as far west as the Mississippi, and proposed following the example of the Proclamation of 1763, to leave the country between Florida and the Cumberland to the Indians, who were to be placed under the protection of Spain and the United States, and the country north of the Ohio to England, as arranged by the Quebec Act of 1774. Nor was he prepared to support the claim of the New Englandmen to fish on the banks off Newfoundland, over a considerable portion of which he desired to establish an exclusive right for his own countrymen, in keeping with the French interpretation of the Treaties of Utrecht and Paris. Of a still more pronounced character were the views of Spain. Her troops had recently conquered West Florida and threatened East Florida as well. She had determined to obtain formal possession of these territories, and to claim that they ran into the interior till they reached the great lakes. The United States, according to both the French and Spanish idea, were therefore to be restricted to a strip of land on the coast of the Atlantic Ocean, bounded by almost the same line which France had contended for against England after the Treaty of Utrecht. In 1779, when the alliance of France was not a year old, and the great triumph over Burgoyne was fresh, Congress notwithstanding the pressure of M. Gerard, the French envoy, had adopted the following conditions as the ultimatum of peace: (1.) The acknowledgment of the independence of the United States by Great Britain, previous to any treaty or negotiation for peace. (2.) The Mississippi as their western boundary. (3.) The navigation of that river to the southern boundary of the States with a port below it. They also passed a resolution to the effect that any interference after the conclusion of peace by any power with the fishery off Newfoundland hitherto exercised by the inhabitants of the Colonies, should be regarded as a casus belli. 'The advice of the allies, their knowledge of American interests, and their own discretion,' were in other matters to guide the American Commissioners sent to the European Courts. As however the war progressed, and French assistance, especially in money, became of greater and greater importance to the Congress, the tone of their instructions became sensibly modified, under the pressure, first of M. Gérard and then of Count Luzerne, his successor. On the 25th January 1780, M. Gérard having obtained the appointment of a Committee of Congress, informed them that the territories of the United States extended no further west than the limits to which settlements were permitted by the English proclamation of 1763; that the United States had no right to the navigation of the Mississippi, having no territories adjoining any part of the river; that Spain would probably conquer both Floridas, and intended holding them; and that the territory on the east side of the Mississippi belonged to Great Britain, and would probably be conquered by Spain. He at the same time urged upon Congress the immediate conclusion of an alliance with that power, to which Jay had been sent as Commissioner in 1779. On the 15th February, Congress having considered this communication, resolved to instruct Jay to abandon the claim to the navigation of the Mississippi. This practically implied the abandonment of the claim to that river as the western boundary. Shortly after, and again on the demand of Luzerne, the instructions to Adams, who had been appointed Commissioner for negotiating a peace, and was then in Europe, were altered. Independence was to be the sole ultimatum, and Adams was to undertake to submit to the guidance of the French Minister in every respect. 'You are to make the most candid and confidential communications,' so his amended instructions ran, 'upon all subjects to the Ministers of our generous ally the King of France; to undertake nothing in the negotiations for peace or truce without their knowledge or concurrence, and to make them sensible how much we rely upon his Majesty's influence for effectual support in every thing that may be necessary to the present security or future prosperity of the United States of America.' As a climax Count Luzerne suggested and Congress agreed to make Jay, Franklin, Jefferson, and Laurens, joint Commissioners with Mr. Adams. Of the body thus appointed Jefferson refused to serve, while Laurens, as already seen, was captured on his way to England. Of the remaining Commissioners, John Adams was doubly odious to the diplomatists of France and Spain, because of his fearless independence of character, and because of the tenacity with which as a New Englander he clung to the American rights in the Newfoundland fisheries; Jay had been an enthusiastic advocate for the Spanish alliance, but the cavalier treatment he



had received at Madrid, and the abandonment of the Mississippi boundary by Congress, had forced upon him the conviction that his own country was being used as a tool by the European powers, for their own ulterior objects. The French he hated. He said 'they were not a moral people, and did not know what it was.' Not so Franklin, influenced partly by his long residence in the French capital, and by the idea that the Colonies were more likely to obtain their objects, by a firm reliance upon France than by confidence in the generosity of England. He also pointed to the terms of the treaty he had negotiated with the former power, which forbade either party to conclude a separate peace without the leave previously obtained of the other, as imposing a moral and legal obligation on his countrymen to follow the policy which he believed their interests as a power required them to adopt. Meanwhile the King of France congratulated Congress on having entrusted to his care the interests of the United States, and warned them that if France was to be asked to continue hostilities for purely American objects it was impossible to say what the result might be, for the system of France depended not merely on America, but on the other powers at war."—Lord E. Fitzmaurice, *Life of William, Earl of Shelburne, v.* 3, *ch.* 4.—"Benjamin Franklin, now venerable with years, had been doing at the court of Versailles a work hardly less important than that of Washington on the battle-fields of America. By the simple grace and dignity of his manners, by his large good sense and freedom of thought, by his fame as a scientific discoverer, above all by his consummate tact in the management of men, the whilom printer, king's postmaster-general for America, discoverer, London colonial agent, delegate in the Continental Congress, and signer of the Declaration of Independence, had completely captivated elegant, free-thinking France. Learned and common folk, the sober and the frivolous alike swore by Franklin. Snuff-boxes, furniture, dishes, even stoves were gotten up 'à la Franklin.' The old man's portrait was in every house. That the French Government, in spite of a monarch who was half afraid of the rising nation beyond sea, had given America her hearty support, was in no small measure due to the influence of Franklin. And his skill in diplomacy was of the greatest value in the negotiations now pending."—E. B. Andrews, *Hist. of the U. S., v.* 1, *pp.* 208–209.

A. D. 1782 (September—November).—The Peace parleyings at Paris.—Distrust of French aims by Jay and Adams.—A secret and separate negotiation with England.—"The task of making a treaty of peace was simplified both by [the change of ministry which placed Lord Shelburne at the head of affairs in England] . . . and by the total defeat of the Spaniards and French at Gibraltar in September [see England: A. D. 1780–1782]. Six months before, England had seemed worsted in every quarter. Now England, though defeated in America was victorious as regarded France and Spain. The avowed object for which France had entered into alliance with the Americans, was to secure the independence of the United States, and this point was now substantially gained. The chief object for which Spain had entered into alliance with France was to drive the English from Gibraltar, and this point was now decidedly lost. France had bound herself not to desist from the war until Spain should recover Gibraltar; but now there was little hope of accomplishing this, except by some fortunate bargain in the treaty, and Vergennes tried to persuade England to cede the great stronghold in exchange for West Florida, which Spain had lately conquered, or for Oran or Guadaloupe. Failing in this, he adopted a plan for satisfying Spain at the expense of the United States; and he did this the more willingly as he had no love for the Americans, and did not wish to see them become too powerful. France had strictly kept her pledges; she had given us valuable and timely aid in gaining our independence; and the sympathies of the French people were entirely with the American cause. But the object of the French government had been simply to humiliate England, and this end was sufficiently accomplished by depriving her of her thirteen colonies. The immense territory extending from the Alleghany Mountains to the Mississippi River, and from the border of West Florida to the Great Lakes, had passed from the hands of France into those of England at the peace of 1763; and by the Quebec Act of 1774 England had declared the southern boundary of Canada to be the Ohio River. . . . Vergennes maintained that the Americans ought to recognize the Quebec Act, and give up to England all the territory north of the Ohio River. The region south of this limit should, he thought, be made an Indian territory, and placed under the protection of Spain and the United States. . . . Upon another important point the views of the French government were directly opposed to American interests. The right to catch fish on the banks of Newfoundland had been shared by treaty between France and England; and the New England fishermen, as subjects of the king of Great Britain, had participated in this privilege. The matter was of very great importance, not only to New England, but to the United States in general. . . . The British government was not inclined to grant the privilege, and on this point Vergennes took sides with England, in order to establish a claim upon her for concessions advantageous to France in some other quarter. . . . Jay [who had lately arrived in Paris to take part in the negotiations] soon began to suspect the designs of the French minister. He found that he was sending M. de Rayneval as a secret emissary to Lord Shelburne under an assumed name; he ascertained that the right of the United States to the Mississippi valley was to be denied; and he got hold of a dispatch from Marbois, the French secretary of legation at Philadelphia, to Vergennes, opposing the American claim to the Newfoundland fisheries. As soon as Jay learned these facts, he sent his friend Dr. Benjamin Vaughan to Lord Shelburne to put him on his guard, and while reminding him that it was greatly for the interest of England to dissolve the alliance between America and France, he declared himself ready to begin the negotiations without waiting for the recognition of independence, provided that Oswald's commission should speak of the thirteen United States of America, instead of calling them colonies and naming

them separately. This decisive step was taken by Jay on his own responsibility, and without the knowledge of Franklin, who had been averse to anything like a separate negotiation with England. It served to set the ball rolling at once. . . . Lord Shelburne at once perceived the antagonism that had arisen between the allies, and promptly took advantage of it. A new commission was made out for Oswald, in which the British government first described our country as the United States; and early in October negotiations were begun and proceeded rapidly. On the part of England the affair was conducted by Oswald, assisted by Strachey and Fitzherbert, who had succeeded Grenville. In the course of the month John Adams arrived in Paris, and a few weeks later Henry Laurens. . . . The arrival of Adams fully decided the matter as to a separate negotiation with England. He agreed with Jay that Vergennes should be kept as far as possible in the dark until everything was cut and dried, and Franklin was reluctantly obliged to yield. The treaty of alliance between France and the United States had expressly stipulated that neither power should ever make peace without the consent of the other. . . . In justice to Vergennes, it should be borne in mind that he had kept strict faith with us in regard to every point that had been expressly stipulated. . . . At the same time, in regard to matters not expressly stipulated, Vergennes was clearly playing a sharp game against us; and it is undeniable that, without departing technically from the obligations of the alliance, Jay and Adams — two men as honourable as ever lived — played a very sharp defensive game against him. . . . The treaty with England was not concluded until the consent of France had been obtained, and thus the express stipulation was respected; but a thorough and detailed agreement was reached as to what the purport of the treaty should be, while our not too friendly ally was kept in the dark."—J. Fiske, *The Critical Period of Am. Hist., ch.* 1.—"If his [Vergennes'] policy had been carried out, it seems clear that he would have established a claim for concessions from England by supporting her against America on the questions of Canada and the Canadian border and the Newfoundland fishery. . . . The success of such a policy would have been extremely displeasing to the Congress, and Jay and Adams defeated it. . . . The act was done, and if it can be justified by success, that justification, at least, is not wanting."—W. E. H. Lecky, *Hist. of Eng. in the* 18*th Century, ch.* 15 (*v.* 4).—"The instructions of congress, given to the American commissioners under the instigation of the French court, were absolute and imperative, 'to undertake nothing without the knowledge and concurrence of that court, and ultimately to govern themselves by their advice and opinion.' These orders, transmitted at the time of the enlargement of the commission, had just been reinforced by assurances given to quiet the uneasiness created in France by the British overtures through Governor Carleton. Thus far, although the commissioners had felt them to be derogatory to the honor of their country, as well as to their own character as its representatives, there had been no necessity for action either under or against them. But now that matters were coming to the point of a serious negotiation, and the secondary questions of interest to America were to be determined, especially those to which France had shown herself indifferent, not to say adverse, it seemed as if no chance remained of escaping a decision. Mr. Jay, jealous of the mission of De Rayneval, of which not a hint had been dropped by the French court, suspicious of its good faith from the disclosures of the remarkable dispatch of Marbois, and fearful of any advice like that of which he had received a foretaste through M. de Rayneval, at the same time provoked that the confidence expected should be all on one side, the Count communicating nothing of the separate French negotiation, came to the conclusion that the interests of America were safest when retained in American hands. He therefore declared himself in favor of going on to treat with Great Britain, without consulting the French court. Dr. Franklin, on the other hand, expressing his confidence in that court, secured by his sense of the steady reception of benefits by his country, signified his willingness to abide by the instructions he had received. Yet it is a singular fact, but lately disclosed, that, notwithstanding this general feeling, which was doubtless sincerely entertained, Dr. Franklin had been the first person to violate those instructions, at the very inception of the negotiations, by proposing to Lord Shelburne the cession of Canada, and covering his proposal with an earnest injunction to keep it secret from France, because of his belief that she was adverse to the measure. . . . It may fairly be inferred that, whatever Franklin might have been disposed to believe of the French court, his instincts were too strong to enable him to trust them implicitly with the care of interests purely American. And, in this, there can be no reasonable cause for doubt that he was right. The more full the disclosures have been of the French policy from their confidential papers, the more do they show Count de Vergennes assailing England in America, with quite as fixed a purpose as ever Chatham had to conquer America in Germany. Mr. Adams had no doubt of it. He had never seen any signs of a disposition to aid the United States from affection or sympathy. On the contrary, he had perceived their cause everywhere made subordinate to the general considerations of continental politics. Perhaps his impressions at some moments carried him even further, and led him to suspect in the Count a positive desire to check and depress America. In this he fell into the natural mistake of exaggerating the importance of his own country. In the great game of nations which was now playing at Paris under the practised eye of France's chief (for Count de Maurepas was no longer living), the United States probably held a relative position, in his mind, not higher than that of a pawn, or possibly a knight, on a chess-table. Whilst his attention was absorbed in arranging the combinations of several powers, it necessarily followed that he had not the time to devote that attention to any one, which its special representative might imagine to be its due. But even this hypothesis was to Mr. Adams justification quite sufficient for declining to submit the interests of his country implicitly to the Count's control. If not so material in the Count's eyes, the greater the necessity of keeping them in his own care. He therefore seized the first opportunity to announce to his colleagues his preference for the views of Mr. Jay. After some little reflection, Dr. Frank-

lin signified his acquiescence in this decision. His objections to it had doubtless been increased by the peculiar relations he had previously sustained to the French court, and by a very proper desire to be released from the responsibility of what might from him be regarded as a discourteous act. No such delicacy was called for on the part of the other commissioners. Neither does it appear that Count de Vergennes manifested a sign of discontent with them at the time. He saw that little confidence was placed in him, but he does not seem to have made the slightest effort to change the decision or even to get an explanation of it. The truth is, that the course thus taken had its conveniences for him, provided only that the good faith of the American negotiators, not to make a separate peace, could be depended upon. Neither did he ever affect to complain of it, excepting at one particular moment when he thought he had cause to fear that the support he relied on might fail."—J. Q. and C. F. Adams, *The Life of John Adams, v.* 2, *ch.* 7.—"The radical difference between Franklin and his colleagues was in the question of trust. Franklin saw no reason to distrust the fidelity of France at any time to her engagements to the United States during the revolutionary war. His colleagues did not share this confidence, and yet, while impressed by this distrust of their ally, they made no appeal for explanation. The weight of opinion, as will hereafter be more fully seen, is now that Franklin was right, and they in this respect wrong. But whatever may have been the correctness of their view, it was proper that, before making it the basis of their throwing off the burden of treaty obligation and their own instructions, they should have first notified France of their complaint. Obligations cannot be repudiated by one party on the ground of the failure of the other party to perform some condition imposed on him, without giving him notice of the charge against him, so that he could have the opportunity of explanation. It may be added, on the merits, that the extenuation set up by Jay and Adams, that France was herself untrue to her obligations, however honestly they believed it, can not now be sustained. Livingston, who knew more of the attitude of France than any public man on the American side except Franklin, swept it aside as groundless. Edward Everett, one of the most accomplished historical writers and diplomatists the country has ever produced, speaks, as we shall see, to the same effect, and other historical critics of authority, to be also hereafter cited, give us the same conclusion. Yet there are other reasons which may excuse their course, and that of Franklin, who concurred with them rather than defeat a peace. In the first place, such was their isolation, that their means of communication with Congress was stopped; and they might well have argued that if Congress knew that the English envoys refused to treat with them except in secret conference their instructions would have been modified. In the second place we may accept Adams' statement that Vergennes was from time to time informally advised of the nature of the pending propositions. In the third place, the articles agreed on in 1782 were not to be a definite treaty except with the assent of France. . . . It now appears that the famous Marbois letter, handed to Jay by one of the British loyalists, and relied on by him as showing France's duplicity, was disavowed by Marbois; and there are, aside from this, very strong reasons to distrust its genuineness. In the second place, we have in the correspondence of George III a new light thrown on the action taken by Jay in consequence of this letter. . . . Benjamin Vaughan, while a gentleman of great amiability and personal worth, was, when Jay sent him without Franklin's knowledge on a confidential mission to the British ministry, in the employ of that ministry as secret agent at Paris. It is due to Jay to say that he was ignorant of this fact, though he would have been notified of it had he consulted Franklin. One of the most singular incidents of this transaction is that George III, seeking double treachery in thus sending back to him his own agent in the guise of an agent from the American legation, regarded it as a peculiarly subtle machination of Franklin, which it was his duty to baffle by utterly discrediting Benjamin Vaughan. It should be added that Franklin's affection for Benjamin Vaughan was in no wise diminished by Vaughan's assumption, with an honesty which no one who knew him would question, of this peculiar kind of mediatorship. And in Jay Franklin's confidence was unabated. He more than once said that no one could be found more suited than Jay to represent the United States abroad. And when, in view of death, he prepared to settle his estate, he selected Jay as his executor."—F. Wharton, *The Revolutionary Diplomatic Correspondence of the U. S., ch.* 9, *sect.* 111, *and ch.* 13, *sect.* 158 (*v.* 1).—Writing to M. de la Luzerne, the French Minister in the United States, under date of December 19, 1782, Count de Vergennes expressed himself on the conduct of the American Commissioners as follows: "You will surely be gratified, as well as myself, with the very extensive advantages, which our allies, the Americans, are to receive from the peace; but you certainly will not be less surprised than I have been, at the conduct of the Commissioners. According to the instructions of Congress, they ought to have done nothing without our participation. I have informed you, that the King did not seek to influence the negotiation any further than his offices might be necessary to his friends. The American Commissioners will not say that I have interfered, and much less that I have wearied them with my curiosity. They have cautiously kept themselves at a distance from me. Mr. Adams, one of them, coming from Holland, where he had been received and served by our ambassador, had been in Paris nearly three weeks, without imagining that he owed me any mark of attention, and probably I should not have seen him till this time, if I had not caused him to be reminded of it. Whenever I have had occasion to see any one of them, and inquire of them briefly respecting the progress of the negotiation, they have constantly clothed their speech in generalities, giving me to understand that it did not go forward, and that they had no confidence in the sincerity of the British ministry. Judge of my surprise, when, on the 30th of November, Dr. Franklin informed me that the articles were signed. The reservation retained on our account does not save the infraction of the promise, which we have mutually made, not to sign except conjointly. I owe Dr. Franklin the justice to state, however, that on

THE UNITED STATES

SHOWING ITS TERRITORIAL DEVELOPMENT FROM THE FOUNDATION OF THE GOVERNMENT TO THE PRESENT TIME.

- ORIGINAL TERRITORY OF THE UNITED STATES BY THE PEACE OF PARIS (1783)
- PROVINCE OF LOUISIANA, ACQUIRED FROM FRANCE BY PURCHASE (1803) THE NORTH WESTERN BOUNDARY OF LOUISIANA EXTENDED TO THE ROCKY MOUNTAINS. THE NORTHERN BOUNDARY WAS ADJUSTED WITH GREAT BRITAIN (TREATY OF 1818) AND THE REMAINDER OF THE WESTERN BOUNDARY WAS ARRANGED WITH SPAIN BY TREATY OF 1819.
- FLORIDA, ACQUIRED FROM SPAIN (TREATY OF 1819) (WEST FLORIDA HAD BEEN OCCUPIED BY U.S. SINCE 1810.)
- REPUBLIC OF TEXAS, ADMITTED TO THE UNION IN 1845. THE WESTERN BOUNDARY OF TEXAS REMAINED IN DISPUTE WITH MEXICO UNTIL THE MEXICAN WAR.
- THE OREGON TERRITORY, OCCUPIED BY U.S. SINCE 1804. JOINT OCCUPATION WITH GREAT BRITAIN (1818-1846) ACQUIRED BY TREATY WITH GREAT BRITAIN (1846)
- TERRITORY ACQUIRED FROM MEXICO BY TREATY OF GAUDALUPE HIDALGO (1848)
- THE GADSDEN PURCHASE, ACQUIRED FROM MEXICO (1853)

THE MAP SHOWS THE PRESENT LIMITS OF THE STATES AND TERRITORIES WITH THE DATES OF THEIR ADMISSION OR ERECTION.

the next day he sent me a copy of the articles. He will hardly complain that I received them without demonstrations of sensibility. It was not till some days after, that, when this minister had come to see me, I allowed myself to make him perceive that his proceeding in this abrupt signature of the articles had little in it, which could be agreeable to the King. He appeared sensible of it, and excused, in the best manner he could, himself and his colleagues. Our conversation was amicable."—J. Bigelow, *Life of Benjamin Franklin, v. 3, p. 207, note.*

A. D. 1782-1783.—Grievances of the Army. —The Newburgh Addresses.—"Nothing had been done by Congress for the claims of the army, and it seemed highly probable that it would be disbanded without even a settlement of the accounts of the officers, and if so, that they would never receive their dues. Alarmed and irritated by the neglect of Congress; destitute of money and credit and of the means of living from day to day; oppressed with debts; saddened by the distresses of their families at home, and by the prospect of misery before them,—they presented a memorial to Congress in December [1782], in which they urged the immediate adjustment of their dues, and offered to commute the half-pay for life, granted by the resolve of October, 1780, for full pay for a certain number of years, or for such a sum in gross as should be agreed on by their committee sent to Philadelphia to attend the progress of the memorial through the house. It is manifest from statements in this document, as well as from other evidence, that the officers were nearly driven to desperation, and that their offer of commutation was wrung from them by a state of public opinion little creditable to the country. . . . The committee of the officers were in attendance upon Congress during the whole winter, and early in March, 1783, they wrote to their constituents that nothing had been done. At this moment, the predicament in which Washington stood, in the double relation of citizen and soldier, was critical and delicate in the extreme. In the course of a few days, all his firmness and patriotism, all his sympathies as an officer, on the one side, and his fidelity to the government, on the other, were severely tried. On the 10th of March, an anonymous address was circulated among the officers at Newburgh, calling a meeting of the general and field officers, and of one officer from each company, and one from the medical staff, to consider the late letter from their representatives at Philadelphia, and to determine what measures should be adopted to obtain that redress of grievances which they seemed to have solicited in vain. It was written with great ability and skill [by John Armstrong, afterwards General]. . . . Washington met the crisis with firmness, but also with conciliation. He issued orders forbidding an assemblage at the call of an anonymous paper, and directing the officers to assemble on Saturday, the 15th, to hear the report of their committee, and to deliberate what further measures ought to be adopted as most rational and best calculated to obtain the just and important object in view. The senior officer in rank present [General Gates] was directed to preside, and to report the result to the Commander-in-chief. On the next day after these orders were issued, a second anonymous address appeared from the same writer. In this paper he affected to consider the orders of General Washington, assuming the direction of the meeting, as a sanction of the whole proceeding which he had proposed. Washington saw, at once, that he must be present at the meeting himself, or that his name would be used to justify measures which he intended to discountenance and prevent. He therefore attended the meeting, and under his influence, seconded by that of Putnam, Knox, Brooks, and Howard, the result was the adoption of certain resolutions, in which the officers, after reasserting their grievances, and rebuking all attempts to seduce them from their civil allegiance, referred the whole subject of their claims again to the consideration of Congress. Even at this distant day, the peril of that crisis can scarcely be contemplated without a shudder. Had the Commander-in-chief been other than Washington, had the leading officers by whom he was surrounded been less than the noblest of patriots, the land would have been deluged with the blood of a civil war."—G. T. Curtis, *Hist. of the Const. of the U. S., bk. 2, ch. 1 (v. 1).*

A. D. 1783 (September). — The definitive Treaty of Peace between Great Britain and the United States. — The four difficult questions on which the British and American negotiators at Paris arrived, after much discussion and wise compromise, at a settlement of differences originally wide, were (1) Boundaries; (2) Fishing rights; (3) Payment of debts from American to British merchants that were outstanding when the war began; (4) Amnesty to American loyalists, or Tories, and restoration of their confiscated property. Within two months after the separate negotiations with England opened an agreement had been reached, and preliminary or provisional articles were signed on the 30th of November, 1782. The treaty was not to take effect, otherwise than by the cessation of hostilities, until terms of peace should be agreed upon between England and France. This occurred in the following January, and on the 3d of September, 1783, the definitive Treaty of Peace between Great Britain and the United States was signed [at Paris]. Its essential provisions were the following: "Art. I. His Britannic Majesty acknowledges the said United States, viz. New Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, to be free, sovereign and independent States; that he treats with them as such, and for himself, his heirs and successors, relinquishes all claims to the Government, pro-

priety and territorial rights of the same, and every part thereof. Art. II. And that all disputes which might arise in future, on the subject of the boundaries of the United States may be prevented, it is hereby agreed and declared, that the following are, and shall be their boundaries, viz: From the north-west angle of Nova Scotia, viz. that angle which is formed by a line drawn due north from the source of Saint Croix River to the Highlands; along the said Highlands which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the northwesternmost head of Connecticut River; thence down along the middle of that river, to the 45th degree of north latitude; from thence, by a line due west on the said latitude, until it strikes the river Iroquois or Cataraquy; thence along the middle of said river into Lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and Lake Erie; thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of said water communication into the Lake Huron; thence through the middle of said lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward of the Isles Royal and Philipeaux, to the Long Lake; thence through the middle of said Long Lake, and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most northwestern point thereof, and from thence on a due west course to the river Mississippi; thence by a line to be drawn along the middle of the said river Mississippi until it shall intersect the northernmost part of the 31st degree of north latitude. South, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of 31 degrees north of the Equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof to its junction with the Flint River; thence strait to the head of St. Mary's River; and thence down along the middle of St. Mary's River to the Atlantic Ocean. East, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy to its source, and from its source directly north to the aforesaid Highlands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence; comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean; excepting such islands as now are, or heretofore have been, within the limits of the said province of Nova Scotia. Art. III. It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Grand Bank, and on all the other banks of Newfoundland; also in the Gulph of Saint Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretofore to fish. And also that the inhabitants of the United States shall have liberty to take fish of every kind on such part of the coast of Newfoundland as British fishermen shall use (but not to dry or cure the same on that island) and also on the coasts, bays, and creeks of all other of His Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks of Nova Scotia, Magdalen Islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same or either of them shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessors of the ground. Art. IV. It is agreed that creditors on either side shall meet with no lawful impediment to the recovery of the full value in sterling money, of all bona fide debts heretofore contracted. Art. V. It is agreed that the Congress shall earnestly recommend it to the legislatures of the respective States, to provide for the restitution of all estates, rights, and properties which have been confiscated, belonging to real British subjects, and also of the estates, rights, and properties of persons resident in districts in the possession of His Majesty's arms, and who have not borne arms against the said United States. . . . Art. VI. That there shall be no future confiscations made, nor any prosecutions commenc'd, against any person or persons for, or by reason of the part which he or they may have taken in the present war. . . . Art. VII. There shall be a firm and perpetual peace between His Britannic Majesty and the said States, and between the subjects of the one and the citizens of the other, wherefore all hostilities, both by sea and land, shall from henceforth cease: All prisoners on both sides shall be set at liberty, and His Britannic Majesty shall, with all convenient speed, and without causing any destruction, or carrying away any negroes or other property of the American inhabitants, withdraw all his armies, garrisons, and fleets from the said United States. . . . Art. VIII. The navigation of the river Mississippi, from its source to the ocean, shall forever remain free and open to the subjects of Great Britain, and the citizens of the United States."—*Doc's Illustrative of Am. Hist., ed. by H. W. Preston, p.* 232.

A. D. 1783 (November—December). — The British evacuation of New York.—Dissolution of the Continental Army and Washington's farewell to it.—"The definitive treaty had been signed at Paris on the 3d of September, 1783, and was soon to be ratified by the United States in Congress assembled. The last remnant of the British army in the east had sailed down the Narrows on the 25th of November, a day which, under the appellation of Evacuation Day, was long held in grateful remembrance by the inhabitants of New York, and was, till a few years since, annually celebrated with fireworks and with military display. Of the continental army scarce a remnant was then [at the beginning of 1784] in the service of the States, and these few were under the command of General Knox. His great work of deliverance over, Washington had resigned his commission, had gone back to his estate on the banks of the

Potomac, and was deeply engaged with plans for the improvement of his plantations. The retirement to private life of the American Fabius, as the newspapers delighted to call him, had been attended by many pleasing ceremonies, and had been made the occasion for new manifestations of affectionate regard by the people. The same day that witnessed the departure of Sir Guy Carleton from New York also witnessed the entry into that city of the army of the States. Nine days later Washington bid adieu to his officers. About noon on Thursday, the 4th of December, the chiefs of the army assembled in the great room of Fraunces's Tavern, then the resort of merchants and men of fashion, and there Washington joined them. Rarely as he gave way to his emotions, he could not on that day get the mastery of them. . . . He filled a glass from a decanter that stood on the table, raised it with a trembling hand, and said: 'With a heart full of love and gratitude I now take leave of you, and most devoutly wish your latter days may be as prosperous and happy as your former ones have been glorious and honorable.' Then he drank to them, and, after a pause, said: 'I cannot come to each of you to take my leave, but shall be obliged if you will each come and shake me by the hand.' General Knox came forward first, and Washington embraced him. The other officers approached one by one, and silently took their leave. A line of infantry had been drawn up extending from the tavern to Whitehall ferry, where a barge was in waiting to carry the commander across the Hudson to Paulus Hook. Washington, with his officers following, walked down the line of soldiers to the water. The streets, the balconies, the windows, were crowded with gazers. All the churches in the city sent forth a joyous din. Arrived at the ferry, he entered the barge in silence, stood up, took off his hat and waved farewell. Then, as the boat moved slowly out into the stream amid the shouts of the citizens, his companions in arms stood bareheaded on the shore till the form of their illustrious commander was lost to view."—J. B. McMaster, *Hist. of the People of the U. S., ch.* 2 (*v.* 1).

Also in: W. Irving, *Life of Washington, v.* 4, *ch.* 33.—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 2, *ch.* 6–7.

A. D. 1783-1787.—After the war.—Resistance to the stipulations of the Treaty of Peace.—National feebleness and humiliation.—Failure of the Articles of Confederation.—Movements toward a firmer Constitution.— "The revolution was at last accomplished. The evils it had removed, being no longer felt, were speedily forgotten. The evils it had brought pressed heavily upon them. They could devise no remedy. They saw no way of escape. They soon began to grumble, became sullen, hard to please, dissatisfied with themselves and with everything done for them. The States, differing in habits, in customs, in occupations, had been during a few years united by a common danger. But the danger was gone; old animosities and jealousies broke forth again with all their strength, and the union seemed likely to be dissolved. In this state of public discontent the House met at Philadelphia early in January, 1784. Some days were spent in examining credentials of new members, and in waiting for the delinquents to come in. It was not till the 14th of the month that the definitive treaty was taken under consideration and duly ratified. Nothing remained, therefore, but to carry out the stipulations with as much haste as possible. But there were some articles which the people had long before made up their minds never should be carried out. While the treaty was yet in course of preparation the royal commissioners had stoutly insisted on the introduction of articles providing for the return of the refugees and the payment of debts due to British subjects at the opening of the war. The commissioners on behalf of the United States, who well knew the tempers of their countrymen, had at first firmly stood out against any such articles. But some concessions were afterward made by each party, and certain stipulations touching the debts and the refugees inserted. Adams, who wrote in the name of his fellow-commissioners, . . . hoped that the middle line adopted would be approved. The middle line to which Adams referred was that Congress should recommend the States to make no more seizures of the goods and property of men lately in arms against the Confederation, and to put no bar in the way of the recovery of such as had already been confiscated. It was distinctly understood by each side that these were recommendations, and nothing more than recommendations. Yet no sooner were they made known than a shout of indignation and abuse went up from all parts of the country. The community in a moment was divided between three parties. The smallest of the three was made up of the Tories, who still hoped for place and power, and still nursed the delusion that the past would be forgotten. Yet they daily contributed to keep the remembrance of it alive by a strong and avowed attachment to Great Britain. Opposed to these was the large and influential body of violent Whigs, who insisted vehemently that every loyalist should instantly be driven from the States. A less numerous and less violent body of Whigs constituted the third party." The fury of the violent Whigs proved generally irresistible and great numbers of the obnoxious Tories fled (see Tories of the American Revolution) before it. Some "sought a refuge in Florida, then a possession of Spain, and founded settlements which their descendants have since raised to prosperous and beautiful villages, renowned for groves of orange-trees and fields of cane. Others embarked on the British ships of war, and were carried to Canada or the island of Bermuda; a few turned pirates, obtained a sloop, and scoured the waters of Chesapeake bay. Many went to England, beset the ministry with petitions for relief, wearied the public with pathetic stories of the harsh ingratitude with which their sufferings had been requited, and were accused, with much show of reason, by the Americans of urging the severe restrictions which England began to lay on American commerce. Many more . . . set out for Nova Scotia. . . . The open contempt with which, in all parts of the country. the people treated the recommendation of Congress concerning the refugees and the payment of the debts, was no more than any man of ordinary sagacity could have foretold. Indeed, the state into which Congress had fallen was most wretched. . . . Each of the thirteen States the Union bound together retained all the rights of sovereignty, and asserted them punctiliously against

the central government. Each reserved to itself the right to put up mints, to strike money, to levy taxes, to raise armies, to say what articles should come into its ports free and what should be made to pay duty. Toward the Continental Government they acted precisely as if they were dealing with a foreign power. In truth, one of the truest patriots of New England had not been ashamed to stand up in his place in the Massachusetts House of Deputies and speak of the Congress of the States as a foreign government. Every act of that body was scrutinized with the utmost care. The transfer of the most trivial authority beyond the borders of the State was made with protestations, with trembling, and with fear. Under such circumstances, each delegate felt himself to have much the character, and to be clothed with very much of the power, of ambassadors. He was not responsible to men, he was responsible to a State. . . . From beginning to end the system of representation was bad. By the Articles of Confederation each of the thirteen little republics was annually to send to Congress not more than seven and not less than two delegates. No thought was taken of population. . . . But this absolute equality of the States was more apparent than real. Congress possessed no revenue. The burden of supporting the delegates was cast on those who sent them, and, as the charge was not light, a motive was at once created for preferring a representation of two to a representation of seven, or, indeed, for sending none at all. While the war was still raging and the enemy marching and counter-marching within the border of every State, a sense of fear kept up the number of delegates to at least two. Indeed, some of the wealthier and more populous States often had as many as four congressmen on the floor of the House. But the war was now over. The stimulus derived from the presence of a hostile army was withdrawn, and the representation and attendance fell off fast. Delaware and Georgia ceased to be represented. From the ratification of the treaty to the organization of the Government under the Constitution six years elapsed, and during those six years Congress, though entitled to 91 members, was rarely attended by 25. The House was repeatedly forced to adjourn day after day for want of a quorum. On more than one occasion these adjournments covered a period of thirteen consecutive days. . . . No occasion, however impressive or important, could call out a large attendance. Seven States, represented by twenty delegates, witnessed the resignation of Washington. Twenty-three members, sitting for eleven States, voted for the ratification of the treaty. . . . It is not surprising, therefore, that Congress speedily degenerated into a debating club, and a debating club of no very high order. Neglected by its own members, insulted and threatened by its mutinous troops, reviled by the press, and forced to wander from city to city in search of an abiding place, its acts possessed no national importance whatever. It voted monuments that never were put up, rewarded meritorious services with sums of money that never were paid, formed wise schemes for the relief of the finances that never were carried out, and planned on paper a great city that never was built. In truth, to the scoffers and malcontents of that day, nothing was more diverting than the uncertain wanderings of Congress. . . . In the coffee-houses and taverns no toasts were drunk with such uproarious applause as 'A hoop to the barrel' and 'Cement to the Union'; toasts which not long before had sprung up in the army and come rapidly into vogue. . . . The men who, in after years, came to eminence as the framers of the Constitution, who became renowned leaders of the Federalists, presidents, cabinet ministers, and constitutional statesmen, were then in private life, abroad, or in the State Assemblies. Washington was busy with his negroes and tobacco; Adams was minister to Holland; Jefferson still sat in Congress, but was soon to be sent as minister to France; Madison sat in the Virginia House of Deputies; Hamilton was wrangling with Livingston and Burr at the bar of New York; Jay was minister to Spain."—J. B. McMaster, *Hist. of the People of the U. S., v.* 1, *ch.* 2.—Hamilton's description, in one of the papers of the Federalist, of the state of the country in 1787, is very graphic: "We may indeed, with propriety," he wrote, "be said to have reached almost the last stage of National humiliation. There is scarcely anything that can wound the pride, or degrade the character of an independent nation, which we do not experience. Are there engagements, to the performance of which we are held by every tie respectable among men? These are the subjects of constant and unblushing violation. Do we owe debts to foreigners, and to our own citizens, contracted in a time of imminent peril, for the preservation of our political existence? These remain without any proper or satisfactory provision for their discharge. Have we valuable territories and important posts in the possession of a foreign power, which, by express stipulations, ought long since to have been surrendered? These are still retained, to the prejudice of our interests not less than of our rights. Are we in a condition to resent or to repel the aggression? We have neither troops, nor treasury, nor Government. Are we even in a condition to remonstrate with dignity? The just imputations on our own faith, in respect to the same treaty, ought first to be removed. Are we entitled by nature and compact to a free participation in the navigation of the Mississippi? Spain excludes us from it. Is public credit an indispensable resource in time of public danger? We seem to have abandoned its cause as desperate and irretrievable. Is commerce of importance to National wealth? Ours is at the lowest point of declension. Is respectability in the eyes of foreign powers a safeguard against foreign encroachments? The imbecility of our Government even forbids them to treat with us. Our ambassadors abroad are the mere pageants of mimic sovereignty. Is a violent and unnatural decrease in the value of land a symptom of National distress? The price of improved land in most parts of the country is much lower than can be accounted for by the quantity of waste land at market, and can only be fully explained by that want of private and public confidence, which are so alarmingly prevalent among all ranks, and which have a direct tendency to depreciate property of every kind. Is private credit the friend and patron of industry? That most useful kind which relates to borrowing and lending is reduced within the narrowest limits, and this still more from an

opinion of insecurity than from the scarcity of money. To shorten an enumeration of particulars which can afford neither pleasure nor instruction, it may in general be demanded what indication is there of National disorder, poverty, and insignificance, that could befall a community so peculiarly blessed with natural advantages as we are, which does not form a part of the dark catalogue of our public misfortunes? . . . The great and radical vice in the construction of the existing Confederation is in the principle of legislation for States or Governments, in their corporate or collective capacities, and as contradistinguished from the individuals of which they consist. Though this principle does not run through all the powers delegated to the Union, yet it pervades and governs those on which the efficacy of the rest depends. Except as to the rule of apportionment, the United States have an indefinite discretion to make requisitions for men and money, but they have no authority to raise either, by regulations extending to the individual citizens of America. The consequence of this is, that, though in theory their resolutions concerning those objects are laws, constitutionally binding on the members of the Union, yet in practice they are mere recommendations, which the States observe or disregard at their option. . . . There is nothing absurd or impracticable in the idea of a league or alliance between independent nations, for certain defined purposes precisely stated in a treaty; regulating all the details of time, place, circumstance, and quantity; leaving nothing to future discretion; and depending for its execution on the good faith of the parties. . . . If the particular States in this country are disposed to stand in a similar relation to each other, and to drop the project of a general discretionary superintendence, the scheme would indeed be pernicious, and would entail upon us all the mischiefs which have been enumerated under the first head; but it would have the merit of being, at least, consistent and practicable. Abandoning all views towards a Confederate Government, this would bring us to a simple alliance offensive and defensive; and would place us in a situation to be alternately friends and enemies of each other, as our mutual jealousies and rivalships, nourished by the intrigues of foreign nations, should prescribe to us. But if we are unwilling to be placed in this perilous situation; if we still will adhere to the design of a National Government, or, which is the same thing, of a superintending power, under the direction of a common Council, we must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a league and a Goverment; we must extend the authority of the Union to the persons of the citizens, — the only proper objects of Government." — Alexander Hamilton, *The Federalist, no.* 15.—"Many of the States refused or neglected to pay even their allotted shares of interest upon the public debt, and there was no power in Congress to compel payment. Eighteen months were required to collect only one-fifth of the taxes assigned to the States in 1783. The national credit became worthless. Foreign nations refused to make commercial treaties with the United States, preferring a condition of affairs in which they could lay any desired burden upon American commerce without fear of retaliation by an impotent Congress. The national standing army had dwindled to a corps of 80 men. In 1785 Algiers declared war against the United States. Congress recommended the building of five 40-gun ships of war. But Congress had only power to recommend. The ships were not built, and the Algerines were permitted to prey on American commerce with impunity. England still refused to carry out the Treaty of 1783, or to send a Minister to the United States. The Federal Government, in short, was despised abroad and disobeyed at home. The apparent remedy was the possession by Congress of the power of levying and collecting internal taxes and duties on imports, but, after long urging, it was found impossible to gain the necessary consent of all the States to the article of taxation by Congress. In 1786, therefore, this was abandoned, and, as a last resort, the States were asked to pass an Amendment intrusting to Congress the collection of a revenue from imports. This Amendment was agreed to by all the States but one. New York alone rejected it, after long debate, and her veto seemed to destroy the last hope of a continuance of national union in America. Perhaps the dismay caused by the action of New York was the most powerful argument in the minds of many for an immediate and complete revision of the government. The first step to Revision was not so designed. In 1785 the Legislatures of Maryland and Virginia, in pursuance of their right to regulate commerce, had appointed Commissioners to decide on some method of doing away with interruptions to the navigation of Chesapeake Bay. The Commissioners reported their inability to agree, except in condemning the Articles of Confederation. The Legislature of Virginia followed the report by a resolution, inviting the other States to meet at Annapolis, consider the defects of the government, and suggest some remedy. In September, 1786, delegates from five of the Middle States assembled, but confined themselves to discussion, since a majority of the States were not represented. The general conclusion was that the government, as it then stood, was inadequate for the protection, prosperity or comfort, of the people, and that some immediate and thorough reform was needed. After drawing up a report for their States and for Congress, recommending another Convention to be held at Philadelphia, in May, 1787, they adjourned. Congress, by resolution, approved their report and the proposed Convention. The Convention met, as proposed, May 14th, 1787."—A. Johnston, *Hist. of Am. Politics, 2d ed., ch.* 1.—"Four years only elapsed, between the return of peace and the downfall of a government which had been framed with the hope and promise of perpetual duration. . . . But this brief interval was full of suffering and peril. There are scarcely any evils or dangers, of a political nature, and springing from political and social causes, to which a free people can be exposed, which the people of the United States did not experience during that period."—G. T. Curtis, *Hist. of the Const., bk.* 3, *ch.* 1.—"It is not too much to say that the period of five years following the peace of 1783 was the most critical moment in all the history of the American people." —J. Fiske, *Critical Period of Am. Hist., p.* 55.

A. D. 1783-1789.—Depressed state of Trade and Industry.—Commercial consequences of the want of nationality.—"The effect of the Revolutionary War on the merchant marine of the colonies, which thereby secured their independence as the United States, was not so disastrous as might have been expected. Many ships were lost or captured, and the gains of maritime commerce were reduced; but to offset these losses an active fleet of privateers found profitable employment in the seizure of English merchantmen, and thus kept alive the maritime spirit of the country, and supplied a revenue to the shipowners whose legitimate pursuits were suspended by the war. In 1783, therefore, the American merchant marine was in a fairly healthy condition. During the next six years the disadvantages of the new situation made themselves felt. Before the Revolution the colonies had had open trade with their fellow-subjects in the British West India Islands. The commerce thus carried on was a very profitable business. The island colonies were supplied with lumber, corn, fish, live stock, and surplus farm produce, which the continent furnished in abundance, together with rough manufactured articles such as pipe staves, and in return the ships of New York and New England brought back great quantities of coffee, sugar, cotton, rum, and indigo. . . . As a result of independence, the West India business was entirely cut off. The merchantmen of the United States then came in on the footing of foreign vessels, and all such vessels, under the terms of the Navigation Act, were rigorously excluded from trade with the British colonies. It was evident, however, that the sudden cessation of this trade, whatever loss it might inflict on the newly created state, would be tenfold more harmful to the islands, which had so long depended upon their neighbors of the mainland for the necessaries of life. Pitt, then Chancellor of the Exchequer, appreciated this difficulty, and in 1783 brought a bill into Parliament granting open trade as to articles that were the produce of either country. The measure failed, owing to Pitt's resignation, and the next ministry, in consequence of the violent opposition of British shipowners, passed a merely temporary act, vesting in the crown the power of regulating trade with America. This power was occasionally exercised by suspending certain provisions of the navigation laws, under annual proclamations, but it did not serve to avert the disaster that Pitt had foreseen. Terrible sufferings visited the population of the West India colonies, and between 1780 and 1787 as many as 15,000 slaves perished from starvation, having been unable to obtain the necessary supply of food when their own crops had been destroyed by hurricanes. Apart from the unfavorable condition of the West India trade, another and more important cause had operated to check the prosperous development of American commerce. The only bond of political union at this time was that formed by the Articles of Confederation, constituting a mere league of independent States, any one of which could pass laws calculated to injure the commerce of the others."—J. R. Soley, *Maritime Industries of Am.* (*The United States of Am., ed. by N. S. Shaler, v.* 1, *ch.* 10).—"The general commerce of the granulated mass of communities called the United States, from 1783 to 1789, was probably the poorest commerce known in the whole history of the country. England sent America £3,700,000 worth of merchandise in 1784, and took in return only £750,000. The drain of specie to meet this difference was very severe, and merchants could not meet the engagements so rashly made. They had imported luxuries for customers who were poor, and non-payment through all the avenues of trade was the consequence. One circumstance and detail of the internal management of this commerce added to the distress and to the necessary difficulties of the time. Immediately after the peace, British merchants, factors, and clerks came across the seas in streams, to take advantage of the new opportunities for trade. It seemed to the citizens to be a worse invasion of their economic rights than the coming of the troops had been to the political rights of the old colonists. The whole country was agitated, but action was initiated in Boston in 1785. The merchants met and discussed all these difficulties. They pledged themselves to buy no more goods of British merchants or factors in Boston. In about three weeks the mechanics and artisans met in the old Green Dragon Tavern and committed themselves to the same policy. But the merchants went beyond mere non-intercourse with traders at home. The root of the difficulty was in the ill-regulation or want of regulation of our commerce with all foreign countries. The confederation was giving and not getting. Where it should have gotten, foreigners were getting, because the parts of the country had not agreed to unite in acquiring for the common benefit, lest some part should be injured in the process. Congress made treaties for the Confederation. But if unable to treat with any power which excluded American shipping from its ports, or laid duties on American produce, Congress did not control our ports in an equivalent manner. Each individual state was to decide whether the unfriendly power should trade at its own ports. This in effect nullified any retaliatory action. England, being the best market, virtually controlled any change in commerce, as it was then conducted. Her ports were closed to American products unless they were brought in British vessels. France admitted our vessels to her ports, but her merchants cried out against the competition. It was feared that the ministers would be obliged to yield to their clamor and close the ports. Probably the poor economic condition of the country affected the foreign trade even more than the bad adjustment of foreign relations. All causes combined to form two parties, one advocating imposts upon foreign trade or a Navigation Act, the other opposing this scheme, and insisting upon absolute freedom of commerce. It was in this direction that the Boston people moved, after they had instituted non-intercourse in their own market with British traders. They petitioned Congress to remedy these embarrassments of trade, and sent a memorial to their own legislature. This document urged that body to insist on action by Congress. They formed a Committee of Correspondence to enforce these plans upon the whole country."—W. B. Weeden, *Economic and Social Hist. of New Eng.*, 1620-1789, *ch.* 22 (*v.* 2).

A. D. 1784.—The financial administration of Robert Morris.—Cost of the war.—From May, 1781, until April, 1785, the burden of the financial management of the revolutionary struggle rested upon Robert Morris, of Philadelphia, who held the office which Congress had created and entitled "the Superintendent of Finances." Morris's detractors argued that he deserved no great credit for his management of the finances as compared with his predecessors, because in his time everything turned in his favour. It is true that if things had remained as before, he could not have restored the finances; for the miracle of carrying on a war without means has never yet been performed by anybody. The events which gave him an opportunity to restore the finances, by intelligent and energetic action, were as follows. The first was the collapse of the paper currency and its absolute removal from circulation, in May, 1781, just before he took office. As soon as it was out of the way, specie came in. He was able to throw aside all the trammels in which the treasury operations had been entangled by the paper system. It is true that he did not succeed in his attempt to relieve himself entirely from these anticipations, which, inasmuch as they were anticipations, would have used up the revenues of his time; but it was a great gain for him to be able to conduct his current operations at least in terms of specie. The second thing in his favour was the great help granted by France in 1781, and especially the importation of a part of this in specie. This enabled him to found the bank, from which he borrowed six times what he put into it. The chief use of the bank to him, however, was to discount the notes which he took for bills of exchange. Then also it was possible for him to reduce the expenses in a way which his predecessors had not had the courage or the opportunity to accomplish, because in their time the abuses of the old method had not gone far enough to force acquiescence in the reforms. In Morris's time, and chiefly, as it appears, by his exertions and merit, the expenditures were greatly reduced for an army of a given size. When the war came to an end, it was possible for him to reduce the entire establishment to a very low scale. Next we notice that the efforts to introduce taxation bore fruit which, although it was trivial in one point of view, was large enough to be very important to him in his desperate circumstances. Finally, when his need was the greatest, and these advantages and opportunities proved inadequate, the rise of American credit made the loan in Holland possible [$3,600,000, obtained in four different loans]. . . . By the Report of 1790 the total amount of expenditures and advances at the treasury of the United States, during the war, in specie value, was estimated as follows: 1775 and 1776, $20,064,666. — 1777, $24,986,646. — 1778, $24,289,438. — 1779, $10,794,620. — 1780, $3,000,000.—1781, $1,942,465.—1782, $3,632,745. —1783, $3,226,583.—1784, $548,525 to November 1.—Total $92,485,693. This table shows how the country lapsed into dependence on France after the alliance was formed. The round number opposite 1780 is very eloquent. It means anarchy and guesswork. . . . According to the best records we possess, the cost of the war to the United States, reduced to specie value year by year at the official scale of depreciation, which, being always below the truth, makes these figures too high, was, as above stated, $92,485,693, at the treasury. There were also certificates of indebtedness out for $16,708,009. There had been expended in Europe, which never went through the treasury, $5,000,000. The States were estimated to have expended $21,000,000. Total, $135,000,000. Jefferson calculated it at $140,000,000, by adding the debts incurred and the continental currency. The debt contracted by England during the war was £115,000,000, for which £91,000,000 were realized. The Comptroller of the Treasury of France said that it cost 60,000,000 livres a year to support the army in America. Vergennes told Lafayette, in November, 1782, that France had expended 250,000,000 livres in the war. There is an often-repeated statement that the war cost France 1,200,000,000 livres, or 1,280,000,000, or 1,500,000,000. Arthur Young put it at £50,000,000, sterling. Probably if 60,000,000 a year for five years, or $60,000,000, was taken as the amount directly expended for and in America by France, it would be as fair a computation as could be made of her contribution to American independence. She had large expenditures elsewhere in the prosecution of her war against Great Britain, and her incidental losses of ships, etc., were great. When England abandoned the effort to subdue the colonies, she was in a far better position for continuing it than either of her adversaries. George III. was by no means stupid in his comments and suggestions about the war. No Englishman of the period said things which now seem wiser in the retrospect. As early as September, 1780, he said: 'America is distressed to the greatest degree. The finances of France, as well as Spain, are in no good situation. This war, like the last, will prove one of credit.' This opinion was fully justified in 1782. French finances were then hastening toward bankruptcy, so that France could not continue the war expenses or the loans and subsidies to America. English credit was high. October 2, 1782, Vergennes wrote to Montmorin, that the English fleet was stronger than at the beginning of the war, while the fleets of France and Spain were weaker; that French finances were greatly weakened, while English credit was high; that England had recovered influence in Russia, and through Russia on Prussia and Austria. He wanted peace and reconciliation with England in order to act with her in eastern Europe. If England had chosen to persevere in the war, the matter of credit would have been the most important element in her chances of success, aside from the natural difficulties of the enterprise."—W. G. Sumner, *The Financier and the Finances of the Am. Revolution, ch.* 23 (*v.* 2).

A. D. 1784-1788.—Disputes with England over the execution of the Treaty of Peace.—Difficulties with Spain.—The question of the Navigation of the Mississippi.—Eastern jealousy and Western excitement.—"Serious disputes soon arose, concerning the execution of the

treaty of peace; and each nation complained of infractions by the other. On the part of the United States, it was alleged that negroes had been carried away, contrary to the treaty; and as early as May, 1783, congress instructed their ministers for negociating peace to remonstrate to the British court against this conduct of their commander in America, and to take measures to obtain reparation. The United States, also, complained that the western posts had not been surrendered, agreeably to treaty stipulations. Great Britain, on her part, alleged that legal impediments had been interposed to prevent the collection of British debts in America; and that the 5th and 6th articles, relating to the property of the loyalists, had not been complied with. In June, 1784, the legislature of Virginia not only declared that there had been an infraction on the part of Great Britain of the 7th article, in detaining the slaves and other property of the citizens of the United States, but instructed their delegates in congress to request that a remonstrance be presented to the British court against such infraction and to require reparation. They also directed them to inform congress that the state of Virginia conceived a just regard to the national honor and interest obliged her assembly to withhold their co-operation in the complete fulfilment of the treaty until the success of such remonstrance was known, or they should have further directions from congress. They at the same time declared, that as soon as reparation for such infraction should be made, or congress should judge it indispensably necessary, such acts as inhibited the recovery of British debts should be repealed, and payment made, in such time and manner as should consist with the exhausted situation of the state. In consequence of these difficulties and disputes, congress, early in the year 1785, determined to send a minister plenipotentiary to Great Britain; and on the 24th of February John Adams was appointed to represent the United States at the court of London. He was instructed 'in a respectful but firm manner to insist that the United States be put, without further delay, into possession of all the posts and territories within their limits which are now held by British garrisons.'. . . Mr. Jefferson was soon after appointed to represent the United States at the court of Versailles, in the room of Dr. Franklin, who had leave to return home, after an absence of nine years. Mr. Livingston having resigned the office of secretary of foreign affairs, Mr. Jay, in March, 1784, and before his return from Europe, was appointed in his place. Mr. Adams repaired to the British court, and was received as the first minister from the United States since their independence was acknowledged. . . . In December, 1785, Mr. Adams presented a memorial to the British secretary of state, in which, after stating the detention of the western posts contrary to the stipulations in the treaty of peace, he in the name and in behalf of the United States required 'that all his majesty's armies and garrisons be forthwith withdrawn from the said United States, from all and every of the posts and fortresses before enumerated, and from every port, place and harbor, within the territory of the said United States, according to the true intention of the treaties.' To this memorial the British secretary, lord Carmarthen, returned an answer, on the 28th of February, 1786, in which he acknowledges the detention of the posts, but alleges a breach of the 4th article of the treaty of peace on the part of the United States, by interposing impediments to the recovery of British debts in America. . . . This answer was accompanied with a statement of the various instances in which the 4th article had been violated by acts of the states. The complaints of Great Britain also extended to breaches of the 5th and 6th articles of the treaty, relating to the recovery of certain property and to confiscations. The answer of the British secretary was submitted to congress; and in order to remove the difficulties complained of, that body, in March, 1787, unanimously declared that all the acts, or parts of acts, existing in any of the states, repugnant to the treaty of peace, ought to be repealed; and they recommended to the states to make such repeal by a general law. . . . A circular letter to the states accompanied these declarations, in which congress say, 'we have deliberately and dispassionately examined and considered the several facts and matters urged by Great Britain, as infractions of the treaty of peace, on the part of America, and we regret that, in some of the states, too little attention has been paid to the public faith pledged by that treaty.' In consequence of this letter, the states of New Hampshire, Massachusetts, Rhode Island, Connecticut, Delaware, Maryland, Virginia, and North Carolina, passed acts complying with the recommendations contained in it. The operation of the act of Virginia, however, which repealed all acts preventing the recovery of debts due to British subjects, was suspended until the governor of that state should issue a proclamation, giving notice that Great Britain had delivered up the western posts, and was also taking measures for the further fulfilment of the treaty of peace by delivering up the negroes belonging to the citizens of that state, carried away contrary to the 7th article of the treaty, or by making compensation for the same. . . . The British court was not yet disposed to enter into any commercial treaty with the United States. The ministers were, no doubt, satisfied that the advantages they enjoyed under their own regulations were greater than could be obtained by any treaty they could make with America. And this was, probably, one of the principal reasons of their refusal to enter into any such treaty. As the British court declined sending a minister to the United States, Mr. Adams, in October, 1787, at his request, had leave to return home. . . . The United States had also at this period to encounter difficulties with Spain as well as Great Britain. The two Floridas having been ceded to his catholic majesty, serious disputes soon arose, not only on the old subject of the navigation of the Mississippi, but with respect to the boundaries of Louisiana and the ceded territory. The Spanish court still persisted in its determination to exclude the Americans from the navigation of the Mississippi. . . . In December, 1784, congress declared it necessary to send a minister to Spain, for the purpose of adjusting the interfering claims of the two nations respecting the navigation of the Mississippi, and other matters highly interesting to the peace and good understanding which ought to subsist between them. This was prevented by the appointment of Don Diego Gardoqui, a minister from Spain, who arrived in the United States and was acknowledged by congress in the summer of 1785. Soon after his

arrival, Mr. Jay, then secretary of foreign affairs, was appointed to treat with the Spanish minister on the part of the United States. . . . As Mr. Jay, by his instructions, was not to conclude a treaty until the same was communicated to congress and approved by them, and was also specially directed to obtain a stipulation acknowledging the right of the United States to their territorial claims and the free navigation of the Mississippi, as established in their treaty with Great Britain, he, on the 3d of August, 1786, submitted to congress the . . . plan of a commercial treaty, and stated the difficulties in obtaining the stipulation required. . . . 'Circumstanced as we are [said Mr. Jay] I think it would be expedient to agree that the treaty should be limited to twenty five or thirty years, and that one of the articles should stipulate that the United States would forbear to use the navigation of that river below their territories to the ocean. Thus the duration of the treaty and of the forbearance in question should be limited to the same period.' . . . Among other reasons, Mr. Jay stated that the navigation of the Mississippi was not at that time very important, and would not probably become so in less than twenty five or thirty years, and that a forbearance to use it, while it was not wanted, was no great sacrifice — that Spain then excluded the people of the United States from that navigation, and that it could only be acquired by war, for which the United States were not then prepared; and that in case of war France would no doubt join Spain. Congress were much divided on this interesting subject. The seven states at the north, including Pennsylvania, were disposed, in case a treaty could not otherwise be made, to forbear the use of the navigation of the Mississippi below the southern boundary of the United States, for a limited time, and a resolution was submitted to congress repealing Mr. Jay's instructions of the 25th of August, 1785, and which was carried, seven states against five. . . . This, however, was to be on the express condition that a stipulation of forbearance should not be construed to extinguish the right of the United States, independent of such stipulation, to use and navigate said river from its source to the ocean; and that such stipulation was not to be made unless it should be agreed in the same treaty that the navigation and use of the said river above such intersection to its source should be common to both nations — and Mr. Jay was to make no treaty unless the territorial limits of the United States were acknowledged and secured according to the terms agreed between the United States and Great Britain. . . . As by the confederation the assent of nine states was necessary in making a treaty the same number was considered requisite in giving specific instructions in relation to it; . . . and it was questioned whether the previous instructions given to Mr. Jay could be rescinded without the assent of nine states. These proceedings in congress, though with closed doors, soon became partly known, and excited great alarm in Virginia and in the western settlements. . . . While these negociations were pending, the fertile country at the west was settling with a rapidity beyond the most sanguine calculations; and it is not surprising that the news of an actual or intended abandonment of the navigation of the Mississippi, the only outlet for their productions, should have excited great alarm among its inhabitants. They were much exasperated by the seizure and confiscation of American property by the Spaniards, on its way down the river, which took place about the same time. The proposition made in congress was magnified into an actual treaty, and called from the western people most bitter complaints and reproaches. . . . To quiet the apprehensions of the western inhabitants, the delegates from North Carolina, in September, 1788, submitted to congress a resolution declaring that 'whereas many citizens of the United States, who possess lands on the western waters, have expressed much uneasiness from a report that congress are disposed to treat with Spain for the surrender of their claim to the navigation of the river Mississippi; in order therefore to quiet the minds of our fellow citizens by removing such ill founded apprehensions, resolved, that the United States have a clear, absolute, and unalienable claim to the free navigation of the river Mississippi, which claim is not only supported by the express stipulations of treaties, but by the great law of nature.' The secretary of foreign affairs, to whom this resolution was referred, reported, that as the rumor mentioned in the resolution was not warranted by the negociations between the United States and Spain, the members be permitted to contradict it, in the most explicit terms. Mr. Jay also stated, there could be no objection to declaring the right of the United States to the navigation of the river clear and absolute — that this had always been his opinion; and that the only question had been whether a modification of that right for equivalent advantages was advisable; and though he formerly thought such a modification might be proper, yet that circumstances and discontents had since interposed to render it questionable. He also advised that further negociations with Spain be transferred to the new general government. On this report, congress, on the 16th of September, 1788, in order to remove the apprehensions of the western settlers, declared that the members be permitted to contradict the report referred to by the delegates from North Carolina; and at the same time resolved 'that the free navigation of the river Mississippi is a clear and essential right of the United States, and that the same ought to be considered and supported as such.' All further negociations with Spain were also referred to the new federal government."— T. Pitkin, *Political and Civil Hist. of the U. S., ch.* 17 (*v.* 2).—"It was important for the frontiersmen to take the Lake Posts from the British; but it was even more important to wrest from the Spaniards the free navigation of the Mississippi. While the Lake Posts were held by the garrisons of a foreign power, the work of settling the northwestern territory was bound to go forward slowly and painfully; but while the navigation of the Mississippi was barred, even the settlements already founded could not attain to their proper prosperity and importance. . . . The Westerners were right in regarding as indispensable the free navigation of the Mississippi. They were right also in their determination ultimately to acquire the control of the whole river, from the source to the mouth. However, the Westerners wished more than the privilege of sending down stream the products of their woods and pastures and tilled farms. They had already begun to cast longing eyes on the fair Spanish

possessions. . . . Every bold, lawless, ambitious leader among the frontier folk dreamed of wresting from the Spaniard some portion of his rich and ill-guarded domain. It was not alone the attitude of the frontiersmen towards Spain that was novel, and based upon a situation for which there was little precedent. Their relations with one another, with their brethren of the seaboard, and with the Federal Government, likewise had to be adjusted without much chance of profiting by antecedent experience. Many phases of these relations between the people who stayed at home and those who wandered off to make homes, between the frontiersmen as they formed young States, and the Central Government representing the old States, were entirely new, and were ill-understood by both parties. . . . The attitude towards the Westerners of certain portions of the population in the older States, and especially in the northeastern States, was one of unreasoning jealousy and suspicion; and though this mental attitude rarely crystallized into hostile deeds, its very existence, and the knowledge that it did exist, embittered the men of the West. . . . In the northeastern States, and in New England especially, this feeling showed itself for two generations after the close of the Revolutionary War. On the whole the New Englanders have exerted a more profound and wholesome influence upon the development of our common country than has ever been exerted by any other equally numerous body of our people. They have led the nation in the path of civil liberty and sound governmental administration. But too often they have viewed the nation's growth and greatness from a narrow and provincial standpoint, and have grudgingly acquiesced in, rather than led the march towards, continental supremacy. In shaping the nation's policy for the future their sense of historic perspective seemed imperfect. . . . The extreme representatives of this northeastern sectionalism not only objected to the growth of the West at the time now under consideration, but even avowed a desire to work it harm, by shutting the Mississippi, so as to benefit the commerce of the Atlantic States. . . . These intolerant extremists not only opposed the admission of the young western States into the Union, but at a later date actually announced that the annexation by the United States of vast territories beyond the Mississippi offered just cause for the secession of the northeastern States. Even those who did not take such an advanced ground felt an unreasonable dread lest the West might grow to overtop the East in power. . . . A curious feature of the way many honest men looked at the West was their inability to see how essentially transient were some of the characteristics to which they objected. Thus they were alarmed at the turbulence and the lawless shortcomings of various kinds which grew out of the conditions of frontier settlement and sparse population. They looked with anxious foreboding to the time when the turbulent and lawless people would be very numerous, and would form a dense and powerful population; failing to see that in exact proportion as the population became dense, the conditions which caused the qualities to which they objected would disappear. Even the men who had too much good sense to share these fears, even men as broadly patriotic as Jay, could not realize the extreme rapidity of western growth. Kentucky and Tennessee grew much faster than any of the old frontier colonies had ever grown; and from sheer lack of experience, eastern statesmen could not realize that this rapidity of growth made the navigation of the Mississippi a matter of immediate and not of future interest to the West. . . . While many of the people on the eastern seaboard thus took an indefensible position in reference to the trans-Alleghany settlements, in the period immediately succeeding the Revolution, there were large bodies of the population of these same settlements, including very many of their popular leaders, whose own attitude towards the Union was, if anything, more blameworthy. They were clamorous about their rights, and were not unready to use veiled threats of disunion when they deemed these rights infringed; but they showed little appreciation of their own duties to the Union. . . . They demanded that the United States wrest from the British the Lake Posts, and from the Spaniards the navigation of the Mississippi. Yet they seemed incapable of understanding that if they separated from the Union they would thereby forfeit all chance of achieving the very purposes they had in view, because they would then certainly be at the mercy of Britain, and probably, at least for some time, at the mercy of Spain also. They opposed giving the United States the necessary civil and military power, although it was only by the possession and exercise of such power that it would be possible to secure for the westerners what they wished. In all human probability, the whole country round the Great Lakes would still be British territory, and the mouth of the Mississippi still in the hands of some European power, had the folly of the separatists won the day and had the West been broken up into independent states. . . . This final triumph of the Union party in these first-formed frontier States was fraught with immeasurable good."—T. Roosevelt, *The Winning of the West, v.* 3, *ch.* 3.—See FLORIDA: A. A. D. 1787.—The framing of the Federal Constitution.—The Union constructed of compromises.—The convention of delegates appointed to revise the Articles of Confederation, but which took upon itself the task of framing anew a Federal Constitution for the States, assembled at Philadelphia on the 25th of May, 1787, eleven days later than the day appointed for its meeting. "The powers conferred by the several states were not uniform. Virginia, Pennsylvania, and New Jersey appointed their delegates 'for the purpose of revising the Federal Constitution;' North Carolina, New Hampshire, Delaware, and Georgia 'to decide upon the most effectual means to remove the defects of the Federal Union;' New York, Massachusetts, and Connecticut 'for the sole and

express purpose of revising the Articles of Confederation;' South Carolina and Maryland 'to render the Federal Constitution entirely adequate to the actual situation.' Rhode Island held aloof. She was governed by a class of men who wanted to pay their debts in paper money, and she did not wish to surrender her power to collect duties upon the goods that came into her port. The trade of Newport at that day surpassed that of New York. Connecticut came in reluctantly, and New Hampshire late in July, 1787. . . . Washington was made president of the convention. . . . Many names great in the revolutionary struggle were absent from the roll of delegates. John and Samuel Adams, and John Hancock, were not there. Patrick Henry of Virginia refused to attend. Thomas Jefferson and John Jay were absent from the country. George Washington and Benjamin Franklin, however, were there. . . . Among the younger men was James Madison of Virginia. . . . Alexander Hamilton came from New York. . . . Charles C. Pinckney was a delegate from South Carolina. . . . James Wilson of Pennsylvania was a Scotchman. He surpassed all others in his exact knowledge of the civil and common law, and the law of nations. . . . Oliver Ellsworth and Roger Sherman came from Connecticut. . . . Many of the 55 delegates shared Hamilton's contempt for a democracy, but the strength they would repose in a government they preferred to retain in the states. . . . The first business of the convention was the adoption of rules. Each state was to have one vote. Such was the rule in the Confederate Congress. Seven states made a quorum. The convention was to sit with closed doors, and everything was to be kept secret: nothing was to be given to the public except the completed work. This injunction of secrecy was never removed. Fortunately James Madison kept a pretty full account of the debates and proceedings, all in his own hand."— J. S. Landon, *Const. Hist. and Gov't of the U. S., lect.* 3.—"Madison tells us in his report of these debates that previous to the opening of the Convention it had been a subject of discussion among the members present, as to how the States should vote in the Convention. Several of the members from Pennsylvania had urged that the large States unite in refusing to the small States an equal vote, but Virginia, believing this to be injudicious if not unjust, 'discountenanced and stifled the project.' On the 29th tne real business of the Convention was opened by Edmund Randolph, who as Governor of Virginia was put forward as spokesman by his colleagues. He began by saying that as the Convention had originated from Virginia, and the delegation from this State supposed that some proposition was expected from them, the task had been imposed on him. After enumerating the defects of the Confederation, he detailed the remedy proposed. This latter was set forth in fifteen resolutions and was called afterwards the Virginia plan of government. Charles Pinckney from South Carolina had also a draft of a federal government, which was read and like the former referred to a committee of the whole House. . . . The Committee of the Whole . . . debated from day to day the resolutions contained in the Virginia plan, and on the 13th of June they reported nineteen resolutions based upon those of Virginia, forming a system of government in outline. On the following day Mr. Paterson, of New Jersey, asked for time to prepare another plan founded on the Articles of Confederation. This was submitted to the Convention on the 15th. The Virginia and the New Jersey plan were contrasted briefly by one of the members: Virginia plan proposes two branches in the legislature, Jersey, a single legislative body; Virginia, the legislative powers derived from the people, Jersey, from the States; Virginia, a single executive, Jersey, more than one; Virginia, a majority of the legislature can act, Jersey, a small majority can control; Virginia, the legislature can legislate on all national concerns, Jersey, only on limited objects; Virginia, legislature to negative all State laws, Jersey, giving power to the executive to compel obedience by force; Virginia, to remove the executive by impeachment, Jersey, on application of a majority of the States; Virginia, for the establishment of inferior judiciary tribunals, Jersey, no provision. Neither of these plans commended themselves to men like Hamilton, who wanted a strong government, and were afraid of democracy or giving power to the people. He thought the Virginia plan 'but pork still with a little change of the sauce.' The Articles of Confederation amended, as in the New Jersey plan, set forth a government approved of by the opposite wing of the Convention, consisting of men like Lansing, who professed an ultra devotion to the rights and autonomy of the States. . . . The Convention did not go again into committee of the whole, but continued to debate the nineteen resolutions from the 19th of June until the 23d of July. Some of these were referred to grand committees, consisting of one member from each State, or they were referred to select committees consisting of five members."— K. M. Rowland, *Life of Geo. Mason, v.* 2, *ch.* 4.—"The plan presented by Mr. Patterson, called the New-Jersey plan, was concerted and arranged between the deputations of that State, of Delaware, of New York, and of Connecticut, with the individual cooperation of Mr. Luther Martin, one of the delegates of Maryland. The extreme jealousy . . . manifested by the representatives of the two first-named States with regard to the equal suffrage of the States in the common councils of the Confederacy, was the principal source of their aversion to the plan reported by the committee of the whole. The delegates of Connecticut, and Messrs. Lansing and Yates,— forming a majority of the delegation of New York,— united with the deputations of New Jersey and Delaware, not so much from an exclusive attachment to the principle of the sovereignty and equality of the States, as from the policy of preserving the existing framework of the confederation, and of simply vesting in Congress, as then organized, a few additional powers. It was under the influence of these mixed political views that the New-Jersey plan was conceived and prepared. It proposed to vest in the existing Congress,— a single body in which all the States had an equal suffrage,— in addition to the powers already given to it by the articles of confederation, that of raising revenue by imposts and stamp and postage duties, and also that of passing acts for the regulation of commerce with foreign nations and between the States; leaving the enforcement of all such acts,

in the first instance, to the State courts, with an ultimate appeal to the tribunals of the United States. Whenever requisitions on the States for contributions should be made, and any State should fail to comply with such requisitions within a specified time, Congress was to be authorized to direct their collection in the non-complying States, and to pass the requisite acts for that purpose. None of the foregoing powers, however, were to be exercised by Congress without the concurrence of a certain number of the States, exceeding a bare majority of the whole. The plan also proposed the organization of a Federal executive and a Federal judiciary. . . . It was, finally, provided that if any State, or any body of men in any State, shall oppose or prevent the carrying into execution any act of Congress passed in virtue of the powers granted to that body, or any treaty made and ratified under the authority of the United States, the Federal executive shall be authorized to call forth the power of the confederated States, or so much thereof as may be necessary, to enforce and compel an obedience to the acts, or an observance of the treaties, whose execution shall have been so opposed or prevented. Such were the salient features of the plan now brought forward as a substitute for the Virginia propositions, as reported by the committee of the whole. . . . In the progress of the discussion upon the two plans, Colonel Hamilton, of New York, made an elaborate speech, declaring himself to be opposed to both, and suggesting a third and more absolute plan, which he thought was alone adequate to the exigencies of the country. He frankly avowed his distrust of both republican and federal government, under any modification. He entered into a minute analysis of the various sources and elements of political power, in order to show that all these would be on the side of the State governments, so long as a separate political organization of the States was maintained, and would render them an over-match for any general government that could be established, unless a 'complete sovereignty' was vested in the latter. He thought it essential, therefore, to the ends of a good and efficient government of the whole country, that the State governments, with their vast and extensive apparatus, should be extinguished; though 'he did not mean,' he said, 'to shock public opinion by proposing such a measure.' He also expressed his despair of the practicability of establishing a republican government over so extensive a country as the United States. He was sensible, at the same time, that it would be unwise to propose one of any other form. Yet 'he had no scruple,' he said, 'in declaring that, in his private opinion, the British government was the best in the world, and that he doubted much whether any thing short of it would do in America.' He descanted upon the securities against injustice, violence, and innovation, afforded, in the English system, by the permanent constitution of the House of Lords, and by the elevated and independent position of the monarch. He thence deduced the necessity of as permanent a tenure as public opinion in this country would bear, of the leading branches of the new government. 'Let one branch of the legislature,' he said, 'hold their places for life, or at least during good behavior. Let the executive also be for life.' In concluding, he expressed his conviction that 'a great progress was going on in the public mind; that the people will, in time, be unshackled from their prejudices; and, whenever that happens, they will themselves not be satisfied at stopping where the plan brought forward by Mr. Randolph [the Virginia plan] would place them, but would be ready to go as far, at least, as he proposed.' He then read a plan of government he had prepared, which, he said, he did not submit as a proposition to the convention, but as giving a correct sketch of his ideas, and to suggest the amendment which he should probably offer to the Virginia plan in the future stages of its consideration. . . . The convention now had presented for their consideration three distinct schemes of government: one purely Federal, founded upon the idea of preserving undiminished the sovereignty and equality of the States, and of constituting a special political agency in Congress for certain purposes, but still under the dependence and control of the States; another of a consolidated character, bottomed on the principle of a virtual annihilation of the State sovereignties and the creation of a central government, with a supreme and indefinite control over both individuals and communities; the third a mixed and balanced system, resting upon an agreed partition of the powers of sovereignty between the States and the Union,— one portion to be vested in the Union for certain objects of common and national concern, the residue retained by the States for the regulation of the general mass of their interior and domestic interests. . . . On the 19th of June . . . Mr. King, of Massachusetts, moved that 'the committee do now rise, and report that they do not agree to the propositions offered by the Honorable Mr. Patterson; and that they report to the House the resolutions offered by the Honorable Mr. Randolph, heretofore reported from a committee of the whole.' The motion was carried by the votes of Massachusetts, Connecticut, Pennsylvania, Virginia, North Carolina, South Carolina, and Georgia, in the affirmative,— New York, New Jersey, and Delaware voting in the negative; and Maryland, divided."— W. C. Rives, *Life and Times of James Madison, ch.* 29. —"It appeared," wrote Madison, in a letter to Jefferson, October 24th "to be the sincere and unanimous wish of the Convention to cherish and preserve the Union of the States. No proposition was made, no suggestion was thrown out, in favor of a partition of the Empire into two or more Confederacies. It was generally agreed that the objects of the Union could not be secured by any system founded on the principle of a confederation of Sovereign States. A voluntary observance of the federal law by all the members could never be hoped for. A compulsive one could evidently never be reduced to practice, and if it could, involved equal calamities to the innocent and the guilty, the necessity of a military force, both obnoxious and dangerous, and, in general, a scene resembling much more a civil war than the administration of a regular Government. Hence was embraced the alternative of a Government which, instead of operating on the States, should operate without their intervention on the individuals composing them; and hence the change in the principle and proportion of representation. This ground-work being laid, the great objects which presented themselves were: 1. To unite a proper energy

in the Executive, and a proper stability in the Legislative departments, with the essential characters of Republican Government. 2. To draw a line of demarkation which would give to the General Government every power requisite for general purposes, and leave to the States every power which might be most beneficially administered by them. 3. To provide for the different interests of different parts of the Union. 4. To adjust the clashing pretensions of the large and small States. Each of these objects was pregnant with difficulties. The whole of them together formed a task more difficult than can well be conceived by those who were not concerned in the execution of it. Adding to these considerations the natural diversity of human opinions on all new and complicated subjects, it is impossible to consider the degree of concord which ultimately prevailed as less than a miracle. The first of these objects, as respects the Executive, was peculiarly embarrassing. On the question whether it should consist of a single person or a plurality of co-ordinate members, on the mode of appointment, on the duration in office, on the degree of power, on the re-eligibility, tedious and reiterated discussions took place. The plurality of co-ordinate members had finally but few advocates. Governor Randolph was at the head of them. The modes of appointment proposed were various: as by the people at large, by electors chosen by the people, by the Executives of the States, by the Congress; some preferring a joint ballot of the two Houses; some, a separate concurrent ballot, allowing to each a negative on the other house; some, a nomination of several candidates by one House, out of whom a choice should be made by the other. Several other modifications were started. The expedient at length adopted seemed to give pretty general satisfaction to the members. As to the duration in office, a few would have preferred a tenure during good behaviour; a considerable number would have done so in case an easy and effectual removal by impeachment could be settled. It was much agitated whether a long term, seven years for example, with a subsequent and perpetual ineligibility, or a short term, with a capacity to be re-elected, should be fixed. In favor of the first opinion were urged the danger of a gradual degeneracy of re-elections from time to time, into first a life and then a hereditary tenure, and the favorable effect of an incapacity to be reappointed on the independent exercise of the Executive authority. On the other side it was contended that the prospect of necessary degradation would discourage the most dignified characters from aspiring to the office; would take away the principal motive to the faithful discharge of its duties — the hope of being rewarded with a reappointment; would stimulate ambition to violent efforts for holding over the constitutional term; and instead of producing an independent administration and a firmer defence of the constitutional rights of the department, would render the officer more indifferent to the importance of a place which he would soon be obliged to quit forever, and more ready to yield to the encroachments of the Legislature, of which he might again be a member. The questions concerning the degree of power turned chiefly on the appointment to offices, and the controul on the Legislature. An absolute appointment to all offices, to some offices, to no offices, formed the scale of opinions on the first point. On the second, some contended for an absolute negative, as the only possible mean of reducing to practice the theory of a free Government, which forbids a mixture of the Legislative and Executive powers. Others would be content with a revisionary power, to be overruled by three-fourths of both Houses. It was warmly urged that the judiciary department should be associated in the revision. The idea of some was, that a separate revision should be given to the two departments; that if either objected, two-thirds, if both, three-fourths, should be necessary to overrule. In forming the Senate, the great anchor of the government, the questions, as they come within the first object, turned mostly on the mode of appointment, and the duration of it. The different modes proposed were: 1. By the House of Representatives. 2. By the Executive. 3. By electors chosen by the people for the purpose. 4. By the State Legislatures. On the point of duration, the propositions descended from good behaviour to four years, through the intermediate terms of nine, seven, six, and five years. The election of the other branch was first determined to be triennial, and afterwards reduced to biennial. The second object, the due partition of power between the General and local Governments, was perhaps, of all, the most nice and difficult. A few contended for an entire abolition of the States; some, for indefinite power of Legislation in the Congress, with a negative on the laws of the States; some, for such a power without a negative; some, for a limited power of legislation, with such a negative; the majority, finally, for a limited power without the negative. The question with regard to the negative underwent repeated discussions, and was finally rejected by a bare majority. . . . I return to the third object above mentioned, the adjustments of the different interests of different parts of the continent. Some contended for an unlimited power over trade, including exports as well as imports, and over slaves as well as other imports; some, for such a power, provided the concurrence of two-thirds of both Houses were required; some, for such a qualification of the power, with an exemption of exports and slaves; others, for an exemption of exports only. The result is seen in the Constitution. South Carolina and Georgia were inflexible on the point of the slaves. The remaining object created more embarrassment, and a greater alarm for the issue of the Convention, than all the rest put together. The little States insisted on retaining their equality in both branches, unless a compleat abolition of the State Governments should take place; and made an equality in the Senate a sine qua non. The large States, on the other hand, urged that as the new Government was to be drawn principally from the people immediately, and was to operate directly on them, not on the States; and, consequently, as the States would lose that importance which is now proportioned to the importance of their voluntary compliance with the requisitions of Congress, it was necessary that the representation in both Houses should be in proportion to their size. It ended in the compromise which you will see, but very much to the dissatisfaction of several members from the large States."—J. Madison, *Letters and other Writings, v.* 1, *pp.* 344–354.—"Those who pro-

posed only to amend the old Articles of Confederation and opposed a new Constitution, objected that a government formed under such a Constitution would be not a federal, but a national, government. Luther Martin said, when he returned to Maryland, that the delegates 'appeared totally to have forgot the business for which we were sent. . . . We had not been sent to form a government over the inhabitants of America considered as individuals. . . . That the system of government we were intrusted to prepare was a government over these thirteen States; but that in our proceedings we adopted principles which would be right and proper only on the supposition that there were no state governments at all, but that all the inhabitants of this extensive continent were in their individual capacity, without government, and in a state of nature.' He added that, 'in the whole system there was but one federal feature, the appointment of the senators by the States in their sovereign capacity, that is by their legislatures, and the equality of suffrage in that branch; but it was said that this feature was only federal in appearance.' The Senate, the second house as it was called in the convention, was in part created, it is needless to say, to meet, or rather in obedience to, reasoning like this. . . . The Luther Martin protestants were too radical to remain in the convention to the end, when they saw that such a confederacy as they wanted was impossible. But there were not many who went the length they did in believing that a strong central government was necessarily the destruction of the state governments. Still fewer were those who would have brought this about if they could. . . . The real difficulty, as Madison said in the debate on that question, and as he repeated again and again after that question was settled, was not between the larger and smaller States, but between the North and South; between those States that held slaves and those that had none. Slavery in the Constitution, which has given so much trouble to the Abolitionists of this century, and, indeed, to everybody else, gave quite as much in the last century to those who put it there. Many of the wisest and best men of the time, Southerners as well as Northerners, and among them Madison, were opposed to slavery. . . . Everywhere north of South Carolina, slavery was looked upon as a misfortune which it was exceedingly desirable to be free from at the earliest possible moment; everywhere north of Mason and Dixon's Line, measures had already been taken, or were certain soon to be taken, to put an end to it; and by the Ordinance for the government of all the territory north of the Ohio River, it was absolutely prohibited by Congress, in the same year in which the Constitutional Congress met. But it was, nevertheless, a thing to the continued existence of which the anti-slavery people of that time could consent without any violation of conscience. Bad as it was, unwise, wasteful, cruel, a mockery of every pretense of respect for the rights of man, they did not believe it to be absolutely wicked. . . . The question with the North was, how far could it yield; with the South, how far could it encroach. It turned mainly on representation. . . . There were some who maintained at first that the slave population should not be represented at all. Hamilton proposed in the first days of the convention 'that the rights of suffrage in the national legislature ought to be proportioned to the number of free inhabitants.'"—S. H. Gay, *James Madison, ch.* 7–8.—"When the great document was at last drafted by Gouverneur Morris, and was all ready for the signatures [September 17, 1787], the aged Franklin produced a paper, which was read for him, as his voice was weak. Some parts of this Constitution, he said, he did not approve, but he was astonished to find it so nearly perfect. Whatever opinion he had of its errors he would sacrifice to the public good, and he hoped that every member of the convention who still had objections would on this occasion doubt a little of his own infallibility, and for the sake of unanimity put his name to this instrument. Hamilton added his plea. A few members, he said, by refusing to sign, might do infinite mischief. . . . From these appeals, as well as from Washington's solemn warning at the outset, we see how distinctly it was realized that the country was on the verge of civil war. Most of the members felt so, but to some the new government seemed far too strong, and there were three who dreaded despotism even more than anarchy. Mason, Randolph, and Gerry refused to sign. . . . In the signatures the twelve states which had taken part in the work were all represented, Hamilton signing alone for New York."—J. Fiske, *The Critical Period of Am. Hist., p.* 303.—A "popular delusion with regard to the Constitution is that it was created out of nothing; or, as Mr. Gladstone puts it, that 'It is the greatest work ever struck off at any one time by the mind and purpose of man.' The radical view on the other side is expressed by Sir Henry Maine, who informs us that the 'Constitution of the United States is a modified version of the British Constitution . . . which was in existence between 1760 and 1787.' The real source of the Constitution is the experience of Americans. They had established and developed admirable little commonwealths in the colonies; since the beginning of the Revolution they had had experience of State governments organized on a different basis from the colonial; and, finally, they had carried on two successive national governments, with which they had been profoundly discontented. The general outline of the new Constitution seems to be English; it was really colonial. The President's powers of military command, of appointment, and of veto were similar to those of the colonial governor. National courts were created on the model of colonial courts. A legislature of two houses was accepted because such legislatures had been common in colonial times. In the English Parliamentary system as it existed before 1760 the Americans had had no share; the later English system of Parliamentary responsibility was not yet developed, and had never been established in colonial governments; and they expressly excluded it from their new Constitution. They were little more affected by the experience of other European nations. . . . The chief source of the details of the Constitution was the State constitutions and laws then in force. Thus the clause conferring a suspensive veto on the President is an almost literal transcript from the Massachusetts constitution. In fact, the principal experiment in the Constitution was the establishment of an electoral college; and of all parts of the system this has worked least as the framers expected. The Constitution represents,

therefore, the accumulated experience of the time. . . . The real boldness of the Constitution is the novelty of the federal system which it set up."—A. B. Hart, *Formation of the Union* (*Epochs of Am. Hist.*), *sect.* 62.—"That a constitution should be framed in detail by a body of uninstructed delegates, expressly chosen for that purpose, was familiar in the States of the Union; but was perhaps unexampled elsewhere in the world, and was certainly unexampled in the history of federations. That the instrument of federal government should provide for proportional representation in one house, and for a federal court, was a step in federal organization which marks a new federal principle. For many purposes the Union then created was stronger than the Prussian monarchy at that moment. In many respects the States were left stronger than the little nominally independent German principalities. The great merit of the members of the convention is their understanding of the temper of their own countrymen. They selected out of English, or colonial, or State usages such practices and forms as experience had shown to be acceptable to the people. . . . The Convention had further the wisdom to express their work in general though carefully stated principles. All previous federal governments had been fettered either by an imperfect and inadequate statement, as in the constitution of the United Netherlands, or by an unwritten constitution with an accumulation of special precedents, as in the Holy Roman Empire. The phrases of the Constitution of 1787 were broad enough to cover cases unforeseen. A third distinction of the federal Convention is the skill with which it framed acceptable compromises upon the three most difficult questions before it. The two Houses of Congress satisfied both large and small States; the three-fifths representation of slaves postponed an inevitable conflict; the allowance of the slave trade for a term of years made it possible for Congress to perfect commercial legislation. The Convention had profited by the experience of the Confederation: on every page of the Constitution may be found clauses which would not have stood there had it been framed in 1781. An adequate revenue was provided; foreign and interstate commerce was put under the control of Congress; the charge of foreign affairs was given entirely to the central authority; the powers of government were distributed among three departments."—A. B. Hart, *Introduction to the Study of Federal Government, ch.* 4.

A. D. 1787-1789.—The struggle for the Federal Constitution in the States.—Its ratification.—The end of the Confederation.—"The fate of the proposed Constitution remained doubtful for many months after the adjournment of the convention. Hamilton said it would be arrogance to conjecture the result. . . . Delaware was the first state to accept it [Dec. 7, 1787]. Gratified by the concession of equality in the federal Senate, the ratification was prompt, enthusiastic, and unanimous. Pennsylvania was the second [Dec. 12]. The opposition was sharp, but Franklin was president of the state, and Wilson a delegate to the state convention. Their influence was great. . . . The ratification was effected by a vote of 46 to 23. Then New Jersey [Dec. 18] and Georgia [Jan. 2, 1788] followed unanimously. Next came Connecticut [Jan. 9] by a vote of 128 to 40. The result in these five states was the more easily obtained because the friends of the Constitution were prompt to act. With delay in the other states came a bitterness of contention which made the result doubtful. The first close struggle was in Massachusetts. The public creditor favored the proposed Constitution. He saw in it some hope of his long deferred pay. But the debtor class opposed it; for it would put an end to cheap paper money, with which they hoped to pay their debts, when it became still cheaper. . . . Hancock and Adams scarcely favored the Constitution. They feared it infringed upon the rights of the people, and especially upon the rights of the states. . . . Hancock finally came forward as a mediator. He proposed that the Constitution be ratified, with an accompanying recommendation that it be amended in the particulars in which it was thought to be defective. His proposition was adopted, and the Constitution was ratified [Feb. 6] by a vote of 187 [186] to 168. Maryland next ratified the Constitution with much unanimity [April 28], notwithstanding the strenuous opposition of Luther Martin. . . . South Carolina followed next [May 23], and ratified the Constitution by a majority of 76, but recommended amendments substantially like those of Massachusetts. South Carolina was the eighth state; and, if one more could be obtained, the Constitution would take effect between the nine ratifying states. There remained the five states of Virginia, New York, New Hampshire, North Carolina, and Rhode Island. The state convention of Virginia was called for the 2d of June 1788, of New York for the 17th, and of New Hampshire for the 18th of the same month. The result was expected to be adverse in every one of these states. In Virginia the opposition was led by Patrick Henry. . . . Henry was ably seconded by Richard Henry Lee, William Grayson, and George Mason. . . . James Monroe followed their lead. James Madison and Governor Randolph were the leading champions of the new Constitution. . . . John Marshall, afterwards chief justice, came to their assistance. . . . The debate lasted a month. It may be read with instruction, as it is reported in the volumes of Elliot. The ratification prevailed [June 25] by a majority of 10 [11] in a vote of 186 [167]. . . . The influence of Washington procured the result. . . . Meanwhile, the state of New Hampshire had ratified the Constitution [June 21], but the fact was not known in Virginia. The opposition to the Constitution was great and bitter in the State of New York. Fortunately the convention was held so late that New Hampshire, the ninth state, had ratified while the New York convention was engaged in its heated discussions. Two thirds of the delegates were elected to oppose it. . . . The friends of the Constitution felt, long before the convention assembled, that

public discussion might be useful in overcoming the hostile attitude of the state. Accordingly, a series of essays in exposition of the Constitution was written by Hamilton, Madison, and Jay, over the common signature of 'Publius.' These essays were published in a newspaper, between October, 1787, and June, 1788. . . . They were subsequently collected and published in a volume styled 'The Federalist.' From that day to this, 'The Federalist' has held unequalled rank as an authority upon the construction of the Constitution." On the 24th of June a fleet courier, employed by Hamilton, brought from Concord to Poughkeepsie, where the New York convention sat, news of the ratification of the Constitution by New Hampshire, the ninth state. "Now, indeed, the situation was changed. There was no longer a confederacy; the Union was already formed. . . . The state must either join the new system or stay out of it. New York was not favorably situated for a separate nation. New England on the east, and New Jersey and Pennsylvania on the south, belonged to the new Union. Canada was on the north. . . . Delay, with its altered circumstances, finally brought to Hamilton and his party the victory that had been denied to argument and eloquence. But the Anti-Federalists were reluctant to yield, and the debate was prolonged," until the 26th of July, when the ratification was carried by 30 votes against 27. "North Carolina remained out of the Union until November, 1789, and Rhode Island until June, 1790. . . . The ratification by nine states having been certified to the Congress of the Confederacy, that body adopted a resolution fixing the first Wednesday of March, 1789, as the day when the new government should go into operation. As the day fell on the 4th of March, that day became fixed for the beginning and the end of congressional and presidential terms."—J. S. Landon, *Const. Hist. and Gov't of the U. S., lect.* 4.

Elliot, *ed., Debates in the State Conventions on the Adoption of the Fed. Const.—The Federalist.*—A. Hamilton, *Works, v.* 2.—W. C. Rives, *Life and Times of Madison, ch.* 34–36 (*v.* 2).—K. M. Rowland, *Life of Geo. Mason, v.* 2, *ch.* 6–8.

A. D. 1789.—The First Presidential Election.—Washington called to the head of the new Government.—"The adoption of the Federal constitution was another epoch in the life of Washington. Before the official forms of an election could be carried into operation a unanimous sentiment throughout the Union pronounced him the nation's choice to fill the presidential chair. He looked forward to the possibility of his election with characteristic modesty and unfeigned reluctance; as his letters to his confidential friends bear witness. . . . The election took place at the appointed time [the first Wednesday in January, 1789], and it was soon ascertained that Washington was chosen President for the term of four years from the 4th of March. By this time the arguments and entreaties of his friends, and his own convictions of public expediency, had determined him to accept. . . . From a delay in forming a quorum of Congress the votes of the electoral college were not counted until early in April, when they were found to be unanimous in favor of Washington. 'The delay,' said he in a letter to General Knox, 'may be compared to a reprieve; for in confidence I tell you (with the world it would obtain little credit), that my movements to the chair of government will be accompanied by feelings not unlike those of a culprit, who is going to the place of his execution; so unwilling am I, in the evening of a life nearly consumed in public cares, to quit a peaceful abode for an ocean of difficulties, without that competency of political skill, abilities and inclination, which are necessary to manage the helm.' . . . At length on the 14th of April he received a letter from the president of Congress, duly notifying him of his election; and he prepared to set out immediately for New York, the seat of government."—W. Irving, *Life of Washington, v.* 4, *ch.* 37.—The secondary electoral votes, by which the Vice President was, at that time, chosen, were scattered among eleven candidates. John Adams received the greater number (34) though not quite a majority of the 69, and was elected.

A. D. 1789-1792.—Organization of the Federal government and first administration of Washington.—The dividing of Parties.—Federalists and Democratic Republicans.—"March 4th, 1789, had been appointed for the formal inauguration of the new Government, but the members elect had not yet unlearned the Confederacy's slovenly habits. It was not until April 6th that a sufficient number of members of Congress arrived in New York to form a quorum and count the electoral votes. At that time, and until 1805, no electoral votes were cast distinctively for President and Vice-President. Each elector voted by ballot for two persons. If a majority of all the votes were cast for any person, he who received the greatest number of votes became President, and he who received the next greatest number became Vice-President. When the votes were counted in 1789 they were found to be, for George Washington, of Virginia, 69 (each of the electors having given him one vote), for John Adams, of Massachusetts, 34, and 35 for various other candidates. Washington received notice of his election, and, after a triumphal progress northward from his home at Mount Vernon, was sworn into office April 30th [at Federal Hall, corner Wall and Nassau Streets, New York]. The Vice-President had taken his place as presiding officer of the Senate a few days before. Frederick A. Muhlenberg, of Pennsylvania, was chosen Speaker of the House, but the vote had no party divisions, for Parties were still in a state of utter confusion. Between the extreme Anti-federalists, who considered the Constitution a long step toward a despotism, and the extreme Federalists, who desired a monarchy modeled on that of England, there were all varieties of political opinion. . . . The extreme importance of Washington lay in his ability, through the universal confidence in his integrity and good judgment, to hold together this alliance of moderate men for a time, and to prevent party contests upon the interpretation of federal powers until the Constitution should show its

merit and be assured of existence. The President selected his Cabinet with a careful regard to the opposite opinions of his supporters. The Treasury Department was given to Alexander Hamilton, of New York, a Federalist. . . . The War Department was given to General Henry Knox, of Massachusetts, also a Federalist. The State Department was given to Thomas Jefferson, of Virginia, an Anti-federalist. . . . Edmund Randolph, of Virginia, also an Anti-federalist, was appointed Attorney-General, and John Jay, of New York, a Federalist, Chief Justice of the Supreme Court. Twelve Amendments were adopted by this Session of Congress, in order to meet the conscientious objections of many moderate Anti-federalists, and to take the place of a 'Bill of Rights.' Ten of these, having received the assent of the necessary number of States, became a part of the Constitution, and now stand the first ten of the Amendments. They were intended to guarantee freedom of religion, speech, person, and property. . . . January 9th [1790] Hamilton offered his famous Report on the Settlement of the Public Debt. It consisted of three recommendations, first, that the foreign debt of the Confederacy should be assumed and paid in full; second, that the domestic debt of the Confederacy, which had fallen far below par and had become a synonym for worthlessness, should also be paid at its par value; and third, that the debts incurred by the States during the Revolution, and still unpaid, should be assumed and paid in full by the Federal Government. Hamilton's First recommendation was adopted unanimously. The Second was opposed, even by Madison and many moderate Anti-federalists, on the ground that the domestic debt was held by speculators, who had bought it at a heavy discount, and would thus gain usurious interest on their investment. Hamilton's supporters argued that, if only for that reason, they should be paid in full, that holders of United States securities might learn not to sell them at a discount, and that the national credit might thus be strengthened for all time to come. After long debate the second recommendation was also adopted. Hamilton's Third recommendation involved a question of the powers of the Federal Government. It therefore for the first time united all the Anti-federalists in opposition to it. They feared that the rope of sand of the Confederacy was being carried to the opposite extreme; that the 'money power' would, by this measure, be permanently attached to the Federal Government; and that the States would be made of no importance. But even this recommendation was adopted, though only by a vote of 31 to 26 in the House. A few days later, however, the Anti-federalists received a reinforcement of seven newly arrived North Carolina members. The third resolution was at once reconsidered, and voted down by a majority of two. Hamilton secured the final adoption of the third resolution by a bargain which excited the deep indignation of the Anti-federalists. A National Capital was to be selected. The Federalists agreed to vote that it should be fixed upon the Potomac River [see WASHINGTON (CITY): A. D. 1791], after remaining ten years in Philadelphia, and two Anti-federalist members from the Potomac agreed in return to vote for the third resolution, which was then finally adopted. Hamilton's entire report was thus successful. Its immediate effects were to appreciate the credit of the United States, and to enrich the holders of the Continental debt. Its further effect was to make Hamilton so much disliked by Anti-federalists that, despite his acknowledged talents, his party never ventured to nominate him for any elective office. . . . Party Organization may be considered as fairly begun about the close [of the first Session of the Second Congress, in 1792]. . . . The various Anti-federalist factions, by union in resisting the Federalists, had learned to forget minor differences and had been welded into one party which only lacked a name. That of Anti-federalist was no longer applicable, for its opposition to the Federal Union had entirely ceased. A name was supplied by Jefferson, the recognized leader of the party, after the French Revolution had fairly begun its course. That political convulsion had, for some time after 1789, the sympathy of both Federalists and Anti-federalists, for it seemed the direct outgrowth of the American Revolution. But, as its leveling objects became more apparent, the Federalists grew cooler and the Anti-federalists warmer towards it. The latter took great pains, even by dress and manners, to show the keenness of their sympathy for the Republicans of France, and about this time adopted the name Democratic-Republican, which seemed sufficiently comprehensive for a full indication of their principles. This has always been the official party title. It is now abbreviated to Democratic, though the name Democrat was at first used by Federalists as one of contempt, and the party called itself Republican, a title which it could hardly claim with propriety, for its tendency has always been toward a democracy, as that of its opponents has been toward a strong republic. The name Republican, therefore, belongs most properly to its present possessors (1879). But it must be remembered that the party which will be called Republican until about 1828 was the party which is now called Democratic."—A. Johnston, *Hist. of Am. Politics, ch.* 2.— Jefferson's bitterness of hostility to the Federalists was due to the belief that they aimed at the overthrow of the Republic. His conviction as to these really treasonable purposes in the leaders of the party was often expressed, but never more distinctly than in a letter written in 1813 to an English traveller, Mr. Melish. At the same time, he set forth the principles and aims of his own party: "Among that section of our citizens called federalists," he wrote, "there are three shades of opinion. Distinguishing between the leaders and people who compose it, the leaders consider the English constitution as a model of perfection, some, with a correction of its vices, others, with all its corruptions and abuses. This last was Alexander Hamilton's opinion, which others, as well as myself, have often heard him declare, and that a correction of what are called its vices would render the English an impracticable government. This government they wished to have established here, and only accepted and held fast, at first, to the present constitution, as a stepping-stone to the final establishment of their favorite model. This party has therefore always clung to England as their prototype and great auxiliary in promoting and effecting this change. A weighty minority, however, of these leaders, considering the voluntary conversion of our government into a monarchy as too distant, if not desperate, wish

to break off from our Union its eastern fragment, as being, in truth, the hot-bed of American monarchism, with a view to a commencement of their favorite government, from whence the other States may gangrene by degrees, and the whole be thus brought finally to the desired point. For Massachusetts, the prime mover in this enterprise, is the last State in the Union to mean a final separation, as being of all the most dependent on the others. Not raising bread for the sustenance of her own inhabitants, not having a stick of timber for the construction of vessels, her principal occupation, nor an article to export in them, where would she be, excluded from the ports of the other States, and thrown into dependence on England, her direct, and natural, but now insidious rival? At the head of this minority is what is called the Essex Junto of Massachusetts. But the majority of these leaders do not aim at separation. In this, they adhere to the known principle of General Hamilton, never, under any views, to break the Union. Anglomany, monarchy, and separation, then, are the principles of the Essex federalists. Anglomany and monarchy, those of the Hamiltonians, and Anglomany alone, that of the portion among the people who call themselves federalists. These last are as good republicans as the brethren whom they oppose, and differ from them only in their devotion to England and hatred of France which they have imbibed from their leaders. The moment that these leaders should avowedly propose a separation of the Union, or the establishment of regal government, their popular adherents would quit them to a man, and join the republican standard; and the partisans of this change, even in Massachusetts, would thus find themselves an army of officers without a soldier. The party called republican is steadily for the support of the present constitution. They obtained at its commencement all the amendments to it they desired. These reconciled them to it perfectly, and if they have any ulterior view, it is only, perhaps, to popularize it further, by shortening the Senatorial term, and devising a process for the responsibility of judges, more practicable than that of impeachment. They esteem the people of England and France equally, and equally detest the governing powers of both. This I verily believe, after an intimacy of forty years with the public councils and characters, is a true statement of the grounds on which they are at present divided, and that it is not merely an ambition for power. An honest man can feel no pleasure in the exercise of power over his fellow citizens. And considering as the only offices of power those conferred by the people directly, that is to say, the executive and legislative functions of the General and State governments, the common refusal of these, and multiplied resignations, are proofs sufficient that power is not alluring to pure minds, and is not, with them, the primary principle of contest. This is my belief of it; it is that on which I have acted; and had it been a mere contest who should be permitted to administer the government according to its genuine republican principles, there has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books. You expected to discover the difference of our party principles in General Washington's valedictory, and my inaugural address. Not at all. General Washington did not harbor one principle of federalism. He was neither an Angloman, a monarchist, nor a separatist. He sincerely wished the people to have as much self-government as they were competent to exercise themselves. The only point on which he and I ever differed in opinion, was, that I had more confidence than he had in the natural integrity and discretion of the people, and in the safety and extent to which they might trust themselves with a control over their government. He has asseverated to me a thousand times his determination that the existing government should have a fair trial, and that in support of it he would spend the last drop of his blood. He did this the more repeatedly, because he knew General Hamilton's political bias, and my apprehensions from it."—T. Jefferson, *Letter to Mr. Melish, Jan.* 13, 1813 (*Writings, ed. by Washington, v.* 6).

—The view taken at the present day of the Federalism and the Federalists of the first three decades of the Union, among those who see more danger in the centrifugal than in the centripetal forces in government, are effectively stated in the following: "The popular notion in regard to Federalism is that to which the name naturally gives rise. By Federalists are commonly understood those men who advocated a union of the States and an efficient Federal government. This conception is true, but is at the same time so limited that it may fairly be called superficial. The name arose from its first object which the friends of the Constitution strove to achieve; but this object, the more perfect union, and even the Constitution itself, were but means to ends of vastly more importance. The ends which the Federalists sought formed the great principles on which the party was founded, and it can be justly said that no nobler or better ends were ever striven for by any political party or by any statesmen. The first and paramount object of the Federalists was to build up a nation and to create a national sentiment. For this they sought a more perfect union. Their next object was to give the nation they had called into existence not only a government, but a strong government. To do this, they had not only to devise a model, to draw a constitution, to organize a legislature, executive, and judiciary, but they had to equip the government thus formed with all those adjuncts without which no government can long exist under the conditions of modern civilization. The Federalists had to provide for the debt, devise a financial and foreign policy, organize an army, fortify the ports, found a navy, impose and collect taxes, and put in operation an extensive revenue system. We of the English race—whose creed is that governments and great political systems grow and develop slowly, are the results of climate, soil, race, tradition, and the exigencies of time and place, who wholly disavow the theory that perfect governments spring in a night from the heated brains of Frenchmen or Spaniards—can best appreciate the task with which our ancestors grappled. . . . Upon a people lately convulsed by civil war, upon a people who had lost their old political habits and traditions without finding new ones in their stead, it was necessary to impose a government, and to create a national sentiment. This the Federalists did, and they need no other eulogy. With no undue national pride, we can justly say that the adoption and support of the

Constitution offer an example of the political genius of the Anglo-Saxon race to which history cannot furnish a parallel. The political party to whose exertions these great results were due was the Federal party. They were the party of order, of good government, and of conservatism. Against them was ranged a majority of their fellow-citizens. But this majority was wild, anarchical, disunited. The only common ground on which they could meet was that of simple opposition. The only name they had was anti-Federalists. They had neither leaders, discipline, objects, nor even a party cry. Before the definite aims and concentrated ability of the Federalists, they fled in helpless disorder, like an unarmed mob before advancing soldiers. But, though dispersed, the anti-Federalists were still in a numerical majority. They needed a leader, organization, and opportunity, and they soon found all three. Thomas Jefferson arrived in New York, not only to enter into Washington's cabinet, and lend the aid of his great talents to the success of the new scheme, but soon also to put himself at the head of the large though demoralized opposition to the administration he had sworn to support. Filled with the wild democratic theories which his susceptible nature had readily imbibed in France, Jefferson soon infused them into the minds of most of his followers. Instead of a vague dislike to any and all government, he substituted a sharp and factious opposition to each and every measure proposed by the friends of the Constitution."—H. C. Lodge, *Life and Letters of George Cabot, ch.* 11.

A. D. 1792.—Second Presidential Election.—George Washington re-elected with unanimity, receiving 132 votes of the Electoral College, John Adams, Vice President, receiving 77 votes, with 50 cast for George Clinton, 4 for Jefferson and 1 for Burr.

A. D. 1793.—The First Fugitive Slave Law.—For some time after the adoption of the Federal Constitution, its provision relating to the rendition of persons "held to service or labor in one State, under the laws thereof, escaping into another" remained without legislation to execute it; "and it is a striking fact that the call for legislation came not from the South, but from a free State; and that it was provoked, not by fugitive slaves, but by kidnappers. . . . A free negro named John was seized at Washington, Pennsylvania, in 1791, and taken to Virginia. The Governor of Pennsylvania, at the instigation of the Society for the Abolition of Slavery, asked the return of the three kidnappers; but the Governor of Virginia replied that, since there was no national law touching such a case, he could not carry out the request. On the matter being brought to the notice of Congress by the Governor of Pennsylvania," a bill was passed which "became law by the signature of the President, February 12, 1793. . . . The act provided at the same time for the recovery of fugitives from justice and from labor; but the alleged criminal was to have a protection through the requirement of a requisition, a protection denied to the man on trial for his liberty only. The act was applicable to fugitive apprentices as well as to slaves, a provision of some importance at the time. In the Northwest Territory there were so-called negro apprentices, who were virtually slaves, and to whom the law applied, since it was in terms extended to all the Territories. Proceedings began with the forcible seizure of the alleged fugitive. The act, it will be observed, does not admit a trial by jury. It

allowed the owner of the slave, his agent or attorney, to seize the fugitive and take him before any judge of a United States Circuit or District Court, or any local magistrate. The only requirement for the conviction of the slave was the testimony of his master, or the affidavit of some magistrate in the State from which he came, certifying that such a person had escaped. Hindering arrest or harboring a slave was punishable by a fine of five hundred dollars. The law thus established a system allowing the greatest harshness to the slave and every favor to the master. Even at that time, when persons might still be born slaves in New York and New Jersey, and gradual emancipation had not yet taken full effect in Rhode Island and Connecticut, it was repellant to the popular sense of justice; there were two cases of resistance to the principle of the act before the close of 1793. Until 1850 no further law upon this subject was passed, but as the provisions of 1793 were found ineffectual, many attempts at amendment were made."—M. G. McDougall, *Fugitive Slaves, 1619–1865* (*Fay House Monographs, no.* 3), *pp.* 17–19.—"The fugitive-slave clause in the Constitution is of course obligatory, but there is a wide distinction between the fugitive-slave clause and the fugitive-slave law. The Constitution gives no power to Congress to legislate on the subject, but imposes on the States the obligation of rendition. Chief-Justice Hornblower, of New York, and Chancellor Walworth, of New York, long since pronounced the fugitive law of '93 unconstitutional on this very ground."—William Jay, *Letter to Josiah Quincy* (*quoted in B. Tuckerman's "William Jay and the Constitutional Movement for the Abolition of Slavery"*).

A. D. 1793.—Popular sympathy with the French Revolution.—Washington's Proclamation of Neutrality.—Insolent conduct of the French minister, Genet.—"The French Revolution, as was natural from the all-important services rendered by France to the United States in their own revolutionary struggle, enlisted the warm sympathy of the American people. . . . As the United States were first introduced to the family of nations by the alliance with France of 1778, the very important question arose, on the breaking out of the war between France and England, how far they were bound to take part in the contest. The second article of the treaty of alliance seemed to limit its operation to the then existing war between the United States and Great Britain; but by the eleventh article the two contracting powers agreed to 'guarantee mutually from the present time and forever, against all other powers,' the territories of which the allies might be in possession respectively at the moment the war between France and Great Britain should break out, which was anticipated as the necessary consequence of the alliance. Not only were the general sympathies of America strongly with France, but the course pursued by Great Britain toward the United States, since the peace of 1783, was productive of extreme irritation, especially her refusal to give up the western posts, which . . . had the effect of involving the northwestern frontier in a prolonged and disastrous Indian war. These causes, together with the recent recollections of the revolutionary struggle, disposed the popular mind to make common cause with France, in what was regarded as the war of a people struggling for freedom against the combined despots of Europe. Washington, however, from the first, determined to maintain the neutrality of the country;" and, with the unanimous advice of his cabinet, he issued (April 22, 1793) a proclamation of neutrality. "This proclamation, though draughted by Mr. Jefferson and unanimously adopted by the Cabinet, was violently assailed by the organs of the party which followed his lead. . . . The growing excitement of the popular mind was fanned to a flame by the arrival at Charleston, South Carolina [April 9], of 'Citizen' Genet, who was sent as the minister of the French Republic to the United States. Without repairing to the seat of government, or being accredited in any way, in his official capacity, he began to fit out privateers in Charleston, to cruise against the commerce of England. Although the utmost gentleness and patience were observed by the executive of the United States in checking this violation of their neutrality, Genet assumed from the first a tone of defiance, and threatened before long to appeal from the government to the people. These insolent demonstrations were of course lost upon Washington's firmness and moral courage. They distressed, but did not in the slightest degree intimidate him; and their effect on the popular mind was to some extent neutralized by the facts, that the chief measures to maintain the neutrality of the country had been unanimously advised by the Cabinet, and that the duty of rebuking his intemperate course had devolved upon the secretary of state [Jefferson], the recognized head of the party to which Genet looked for sympathy."—E. Everett, *Life of Washington, ch.* 8.—A demand for "Genet's recall was determined on during the first days of August. There was some discussion over the manner of requesting the recall, but the terms were made gentle by Jefferson, to the disgust of the Secretary of the Treasury and the Secretary of War [Hamilton and Knox], who desired direct methods and stronger language. As finally toned up and agreed upon by the President and cabinet, the document was sufficiently vigorous to annoy Genet, and led to bitter reproaches addressed to his friend in the State Department. . . . The letter asking Genet's recall, as desired by Washington, went in due time, and in the following February came a successor. Genet, however, did not go back to his native land, for he preferred to remain here and save his head, valueless as that article would seem to have been. He spent the rest of his days in America, married, harmless, and quite obscure. His noise and fireworks were soon over, and one wonders now how he could ever have made as much flare and explosion as he did."—H. C. Lodge, *George Washington, v.* 2, *pp.* 155–156.

A. D. 1793.—Whitney's Cotton-gin and the series of inventions which it made complete.—Their political effect.—The strengthening of the Slave Power, and the strengthening of Unionism.—"Some English artisans, who, about the middle of the last century, were obtaining a scanty living by spinning, weaving and other such occupations, turned their inventive talent to the improvement of their art. Paul and

Wyatt introduced the operation of spinning by rollers; Highs, or Hargreaves, invented the jenny, by which a great many threads could be spun as easily as one. Paul devised the rotating carding-engine; Crompton the mule; Arkwright the water-frame, which produced any number of threads of any degree of fineness and hardness. These ingenious machines constituted a very great improvement on the spindle and distaff of ancient times, and on the spinning-wheel, originally brought from Asia, or perhaps reinvented in Europe. At length one spinner was able to accomplish as much work as one hundred could have formerly done. While the art of producing threads was undergoing this singular improvement, Cartwright, a clergyman, invented, in 1785, the power-loom, intended to supersede the operation of weaving by hand, and to make the production of textile fabrics altogether the result of machinery. After some modifications, that loom successfully accomplished the object for which it was devised. As these inventions succeeded, they necessarily led to a demand for motive power. In the first little cotton factory, the germ of that embodiment of modern industry, the cotton-mill, a water-wheel was employed to give movement to the machinery. The establishment was, therefore, necessarily placed near a stream, where a sufficient fall could be obtained. The invention of the steam-engine by Watt, which was the consequence of the new and correct views of the nature of vapors that had been established by Dr. Black, supplied, in due time, the required motive power, and by degrees the water-wheel went almost out of use. Textile manufacture needed now but one thing more to become of signal importance — it needed a more abundant supply of raw material. . . . Cotton, the fibre chiefly concerned in these improvements, was obtained in limited quantities from various countries; but, at the time of the adoption of the Constitution, not a single pound was exported from the United States. What was grown here was for domestic consumption. Every good housewife had her spinning-wheel, every plantation its hand-loom. The difficulty of supplying cotton fibre in quantity sufficient to meet the demands of the new machinery was due to the imperfect means in use for separating the cotton from its seeds — a tedious operation, for the picking was done by hand. Eli Whitney, a native of Massachusetts, by his invention of the cotton-gin in 1793, removed that difficulty. The fibre could be separated from the seeds with rapidity and at a trifling cost. There was nothing now to prevent an extraordinary development in the English manufactures. A very few years showed what the result would be. In 1790 no cotton was exported from the United States. Whitney's gin was introduced in 1793. The next year about 1½ million of pounds were exported; in 1795, about 5½ millions; in 1860, the quantity had reached 2,000 millions of pounds. The political effect of this mechanical invention, which thus proved to be the completion of all the previous English inventions, being absolutely necessary to give them efficacy, was at once seen in its accomplishing a great increase and a redistribution of population in England. . . . In the United States the effects were still more important. Cotton could be grown through all the Southern Atlantic and the Gulf States. It was more profitable than any other crop — but it was raised by slaves. Whatever might have been the general expectation respecting the impending extinction of slavery, it was evident that at the commencement of this century the conditions had altogether changed. A powerful interest had come into unforeseen existence both in Europe and America which depended on perpetuating that mode of labor. Moreover, before long it was apparent that, partly because of the adaptation of their climate to the growth of the plant, partly because of the excellence of the product, and partly owing to the increasing facilities for interior transportation, the cotton-growing states of America would have a monopoly in the supply of this staple. But, though mechanical invention had reinvigorated the slave power by bestowing on it the cotton-gin, it had likewise strengthened unionism by another inestimable gift — the steam-boat. At the very time that the African slave-trade was prohibited, Fulton was making his successful experiment of the navigation of the Hudson River by steam. This improvement in inland navigation rendered available, in a manner never before contemplated, the river and lake system of the continent; it gave an instantaneous value to the policy of Jefferson, by bringing into effectual use the Mississippi and its tributaries; it crowded with population the shores of the lakes; it threw the whole continent open to commerce, it strengthened the central power at Washington by diminishing space, and while it extended geographically the domain of the republic, it condensed it politically. It bound all parts of the Union more firmly together. . . . In the Constitution it had been agreed that three fifths of the slaves should be accounted as federal numbers in the apportionment of federal representation. A political advantage was thus given to slave labor. This closed the eyes of the South to all other means of solving its industrial difficulties. . . . To the cotton-planter two courses were open. He might increase his manual force, or he might resort to machinery. . . . It required no deep political penetration for him to perceive that the introduction of machinery must in the end result in the emancipation of the slave. Machinery and slavery are incompatible — the slave is displaced by the machine. In the Southern States political reasons thus discouraged the introduction of machinery. Under the Constitution an increased negro force had a political value, machinery had none. The cotton interest was therefore persuaded by those who were in a position to guide its movements, that its prosperity could be secured only through increased manual labor."— Dr. J. W. Draper, *History of the American Civil War, sect.* 3, *ch.* 16 (*v.* 1).—See, also, below: A. D. 1818–1821.

A. D. 1794-1795. — Threatening relations with Great Britain.—The Jay Treaty.—"The daily increasing 'love-frenzy for France,' and the intemperate language of the Democratic press, naturally emphasized in England that reaction against America which set in with the treaty of peace. On the other hand, the retention of the frontier posts in violation of that treaty was a thorn in the side of the young Republic. In the course of the war England had adopted, by successive Orders in Council, a policy ruinous to the

commerce of neutral nations, especially of the United States. In the admiralty courts of the various British West India islands hundreds of ships from New England were seized and condemned, for carrying French produce or bearing cargoes of provisions chartered to French ports. The New England fishermen and shipowners were vociferous for war, and the Democratic clubs denounced every British insult and celebrated every French victory. On March 26, 1794, an embargo against British ships was proclaimed for thirty days, and then extended for thirty days longer. The day after the embargo was laid, Dayton, of New Jersey, moved in Congress to sequester all moneys due to British creditors, and apply it towards indemnifying shipowners for losses incurred through the Orders in Council; and on April 21st the Republicans moved a resolution to suspend all commercial intercourse with Great Britain till the western posts should be given up, and indemnity be paid for injuries to American commerce in violation of the rights of neutrals. The passage of such an act meant war; and for war the United States was never more unprepared. . . . Peace could be secured only by immediate negotiation and at least a temporary settlement of the causes of neutral irritation, and for such a task the ministers at London and Washington were incompetent or unsuited. . . . In this crisis Washington decided to send to England a special envoy. Hamilton was his first choice, but Hamilton had excited bitter enmities." On Hamilton's recommendation, John Jay, the Chief Justice, was chosen for the difficult mission, and he sailed for England in May, 1794, landing at Falmouth on the 8th of June. Within the succeeding five months he accomplished the negotiation of a treaty, which was signed on the 19th of November. "The main points that Jay had been instructed to gain were compensation for negroes [carried away by the British armies on the evacuation of the country in 1783], surrender of the posts, and compensation for spoliations; in addition, a commercial treaty was desired. When Secretary for Foreign Affairs, Jay had argued that the negroes, some 3,000 in number, who, at the time of the evacuation, were within the British lines, relying on proclamations that offered freedom, and who followed the troops to England, came within that clause of the treaty of peace which provided that the army should be withdrawn without 'carrying away any negroes or other property.' Lord Grenville, however, insisted upon refusing any compensation. Once within the British lines, he said, slaves were free for good and all. . . . From any point of view the matter was too insignificant to wreck the treaty upon it, and Jay waived the claim. As to the western posts [Oswego, Niagara, Detroit, Mackinaw, etc.], it was agreed that they should be surrendered by June 12, 1796. But compensation for the detention was denied on the ground that it was due to the breach of the treaty by the United States in permitting the States to prevent the recovery of British debts." For the determination and payment of such debts, it was now provided that a board of five commissioners should sit at Philadelphia; while another similar board at London should award compensation for irregular and illegal captures or condemnations made during the war between Great Britain and France. "Under this clause American merchants received $10,345,000. . . . The disputed questions of boundaries, arising from the construction of the treaty of peace, were referred to joint commissioners: properly enough, as the confusion was due to ignorance of the geography of the Northwest. British and American citizens holding lands at the time respectively in the United States and in any of the possessions of Great Britain were secured in their rights; a clause much objected to in America, but which was obviously just. A still more important provision followed, a novelty in international diplomacy, and a distinct advance in civilization: that war between the two countries should never be made the pretext for confiscation of debts or annulment of contracts between individuals. In the War of 1812 the United States happened for the moment to be the creditor nation, and the millions which this provision saved to her citizens it would be difficult to estimate. . . . It was the commercial articles which excited the most intense hostility in America. . . . To unprejudiced eyes, after the lapse of a hundred years, considering the mutual exasperation of the two peoples, the pride of England in her successes in the war with France, the weakness and division of the United States, the treaty seems a very fair one. Certainly one far less favorable to America would have been infinitely preferable to a war, and would probably in the course of time have been accepted as being so. The commercial advantages were not very considerable, but they at least served as 'an entering wedge,' to quote Jay's expression, and they were 'pro tanto' a clear gain to America. . . . The treaty was not published till July 2d. . . . Even before its contents were known, letters, signed 'Franklin,' appeared abusing the treaty; and in Philadelphia an effigy of Jay was placed in the pillory, and finally taken down, guillotined, the clothes fired, and the body blown up. It was clear, then, that it was not this particular treaty, but any treaty at all with Great Britain, that excited the wrath of the Republicans. On July 4th toasts insulting Jay or making odious puns on his name, were the fashion. . . . On June 24th the treaty was ratified by the Senate, with the exception of the article about the West India trade. On August 15th it was signed, with the same exception by Washington."—G. Pellew, *John Jay, ch.* 11.—"The reception given to the treaty cannot be fully explained by the existing relations between the United States and England. It was only in consequence of its Francomania that the opposition assumed the character of blind rage."—H. von Holst, *Const. and Political Hist. of the U. S., v.* 1, *p.* 124.

A. D. 1796.—Washington's Farewell Address.—"The period for the presidential election was drawing near, and great anxiety began to be felt that Washington would consent to stand for a third term. No one, it was agreed, had greater claim to the enjoyment of retirement, in consideration of public services rendered; but it was thought the affairs of the country would be in a very precarious condition should he retire

before the wars of Europe were brought to a close. Washington, however, had made up his mind irrevocably on the subject, and resolved to announce, in a farewell address, his intention of retiring. Such an instrument, it will be recollected, had been prepared for him from his own notes, by Mr. Madison, when he had thought of retiring at the end of his first term. As he was no longer in confidential intimacy with Mr. Madison, he turned to Mr. Hamilton as his adviser and coadjutor, and appears to have consulted him on the subject early in the present year [1796], for, in a letter dated New York, May 10th, Hamilton writes: 'When last in Philadelphia, you mentioned to me your wish that I should "re-dress" a certain paper which you had prepared. As it is important that a thing of this kind should be done with great care and much at leisure, touched and retouched, I submit a wish that, as soon as you have given it the body you mean it to have, it may be sent to me.' The paper was accordingly sent, on the 15th of May, in its rough state, altered in one part since Hamilton had seen it. 'If you should think it best to throw the whole into a different form,' writes Washington, 'let me request, notwithstanding, that my draft may be returned to me (along with yours) with such amendments and corrections as to render it as perfect as the formation is susceptible of; curtailed if too verbose, and relieved of all tautology not necessary to enforce the ideas in the original or quoted part. My wish is, that the whole may appear in a plain style; and be handed to the public in an honest, unaffected, simple garb.' We forbear to go into the vexed question concerning this address; how much of it is founded on Washington's original 'notes and heads of topics'; how much was elaborated by Madison, and how much is due to Hamilton's recasting and revision. The whole came under the supervision of Washington; and the instrument, as submitted to the press, was in his handwriting, with many ultimate corrections and alterations. Washington had no pride of authorship; his object always was to effect the purpose in hand, and for that he occasionally invoked assistance, to ensure a plain and clear exposition of his thoughts and intentions. The address certainly breathes his spirit throughout, is in perfect accordance with all his words and actions, and 'in an honest, unaffected, simple garb,' embodies the system of policy on which he had acted throughout his administration. It was published in September [17], in a Philadelphia paper called the Daily Advertiser. The publication of the Address produced a great sensation. Several of the State legislatures ordered it to be put on their journals."—W. Irving, *Life of Washington, v. 5, ch. 30.*

The following is the text of the Address.

"To the people of the United States. Friends and Fellow-Citizens: The period for a new election of a citizen, to administer the executive government of the United States, being not far distant, and the time actually arrived, when your thoughts must be employed in designating the person, who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprize you of the resolution I have formed, to decline being considered among the number of those, out of whom a choice is to be made. I beg you, at the same time, to do me the justice to be assured, that this resolution has not been taken without a strict regard to all the considerations appertaining to the relation, which binds a dutiful citizen to his country; and that, in withdrawing the tender of service, which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both. The acceptance of, and continuance hitherto in, the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped, that it would have been much earlier in my power, consistently with motives, which I was not at liberty to disregard, to return to that retirement, from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea. I rejoice, that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty, or propriety; and am persuaded, whatever partiality may be retained for my services, that, in the present circumstances of our country, you will not disapprove my determination to retire. The impressions, with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say, that I have, with good intentions, contributed towards the organization and administration of the government the best exertions of which a very fallible judgment was capable. Not unconscious, in the outset, of the inferiority of my qualifications, experience in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and every day the increasing weight of years admonishes me more and more, that the shade of retirement is as necessary to me as it will be welcome. Satisfied, that, if any circumstances have given peculiar value to my services, they were temporary, I have the consolation to believe, that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it. In looking forward to the moment, which is intended to terminate the career of my public life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude, which I owe to my beloved country for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me; and for the opportunities I have thence enjoyed of manifesting my inviolable attachment, by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, let it always be remembered to your praise, and as an instructive example in our annals, that under circumstances in which the passions, agitated in every direction, were liable to mislead, amidst appearances sometimes dubious, vicissitudes of fortune often discouraging, in situations in which not unfrequently want of

success has countenanced the spirit of criticism, the constancy of your support was the essential prop of the efforts, and a guarantee of the plans by which they were effected. Profoundly penetrated with this idea, I shall carry it with me to my grave, as a strong incitement to unceasing vows that Heaven may continue to you the choicest tokens of its beneficence; that your union and brotherly affection may be perpetual; that the free constitution, which is the work of your hands, may be sacredly maintained; that its administration in every department may be stamped with wisdom and virtue; that, in fine, the happiness of the people of these States, under the auspices of liberty, may be made complete, by so careful a preservation and so prudent a use of this blessing, as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation, which is yet a stranger to it. Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments, which are the result of much reflection, of no inconsiderable observation, and which appear to me all-important to the permanency of your felicity as a People. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion. Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment. The unity of Government, which constitutes you one people, is also now dear to you. It is justly so: for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home, your peace abroad; of your safety; of your prosperity; of that very Liberty, which you so highly prize. But as it is easy to foresee, that, from different causes and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed, it is of infinite moment, that you should properly estimate the immense value of your national Union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the Palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest even a suspicion, that it can in any event be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts. For this you have every inducement of sympathy and interest. Citizens, by birth or choice, of a common country, that country has a right to concentrate your affections. The name of American, which belongs to you, in your national capacity, must always exalt the just pride of Patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have in a common cause fought and triumphed together; the Independence and Liberty you possess are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes. But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those, which apply more immediately to your interest. Here every portion of our country finds the most commanding motives for carefully guarding and preserving the Union of the whole. The North, in an unrestrained intercourse with the South, protected by the equal laws of a common government, finds, in the productions of the latter, great additional resources of maritime and commercial enterprise and precious materials of manufacturing industry. The South, in the same intercourse, benefiting by the agency of the North, sees its agriculture grow and its commerce expand. Turning partly into its own channels the seamen of the North, it finds its particular navigation invigorated; and, while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The East, in a like intercourse with the West, already finds, and in the progressive improvement of interior communications by land and water, will more and more find, a valuable vent for the commodities which it brings from abroad, or manufactures at home. The West derives from the East supplies requisite to its growth and comfort, and, what is perhaps of still greater consequence, it must of necessity owe the secure enjoyment of indispensable outlets for its own productions to the weight, influence, and the future maritime strength of the Atlantic side of the Union, directed by an indissoluble community of interest as one nation. Any other tenure by which the West can hold this essential advantage, whether derived from its own separate strength, or from an apostate and unnatural connexion with any foreign power, must be intrinsically precarious. While, then, every part of our country thus feels an immediate and particular interest in Union, all the parts combined cannot fail to find in the united mass of means and efforts greater strength, greater resource, proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from Union an exemption from those broils and wars between themselves, which so frequently afflict neighbouring countries not tied together by the same governments, which their own rivalships alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues would stimulate and embitter. Hence, likewise, they will avoid the necessity of those overgrown military establishments, which, under any form of government, are inauspicious to liberty, and which are to be regarded as particularly hostile to Republican Liberty. In this sense it is, that your Union ought to be considered as a main prop of your liberty, and that

the love of the one ought to endear to you the preservation of the other. These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the Union as a primary object of Patriotic desire. Is there a doubt, whether a common government can embrace so large a sphere? Let experience solve it. To listen to mere speculation in such a case were criminal. We are authorized to hope, that a proper organization of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. It is well worth a fair and full experiment. With such powerful and obvious motives to Union, affecting all parts of our country, while experience shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those, who in any quarter may endeavour to weaken its bands. In contemplating the causes, which may disturb our Union, it occurs as matter of serious concern, that any ground should have been furnished for characterizing parties by Geographical discriminations, Northern and Southern, Atlantic and Western; whence designing men may endeavour to excite a belief, that there is a real difference of local interests and views. One of the expedients of party to acquire influence, within particular districts, is to misrepresent the opinions and aims of other districts. You cannot shield yourselves too much against the jealousies and heart-burnings, which spring from these misrepresentations; they tend to render alien to each other those, who ought to be bound together by fraternal affection. The inhabitants of our western country have lately had a useful lesson on this head; they have seen, in the negotiation by the Executive, and in the unanimous ratification by the Senate, of the treaty with Spain, and in the universal satisfaction at that event, throughout the United States, a decisive proof how unfounded were the suspicions propagated among them of a policy in the General Government and in the Atlantic States unfriendly to their interests in regard to the Mississippi; they have been witnesses to the formation of two treaties, that with Great Britain, and that with Spain, which secure to them every thing they could desire, in respect to our foreign relations, towards confirming their prosperity. Will it not be their wisdom to rely for the preservation of these advantages on the Union by which they were procured? Will they not henceforth be deaf to those advisers, if such there are, who would sever them from their brethren, and connect them with aliens? To the efficacy and permanency of your Union, a Government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute; they must inevitably experience the infractions and interruptions, which all alliances in all times have experienced. Sensible of this momentous truth, you have improved upon your first essay, by the adoption of a Constitution of Government better calculated than your former for an intimate Union, and for the efficacious management of your common concerns. This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers, uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true Liberty. The basis of our political systems is the right of the people to make and to alter their Constitutions of Government. But the Constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish Government presupposes the duty of every individual to obey the established Government. All obstructions to the execution of the Laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force; to put, in the place of the delegated will of the nation, the will of a party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill-concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common counsels, and modified by mutual interests. However combinations or associations of the above descriptions may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious, and unprincipled men will be enabled to subvert the power of the people, and to usurp for themselves the reins of government; destroying afterwards the very engines, which have lifted them to unjust dominion. Towards the preservation of your government, and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretexts. One method of assault may be to effect, in the forms of the constitution, alterations, which will impair the energy of the system, and thus to undermine what cannot be directly overthrown. In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of governments, as of other human institutions; that experience is the surest standard, by which to test the real tendency of the existing constitution of a country; that facility in changes, upon the credit of mere hypothesis and opinion, exposes to perpetual change, from the endless variety of hypothesis and opinion; and remember, especially, that, for the efficient management of your common interests, in a country so extensive as ours, a government of as much vigor as is consistent with the perfect security of liberty is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian. It is, indeed, little else than a name, where the government is too feeble to withstand the enterprise of faction, to confine each member of the society within the limits prescribed by the laws, and to maintain all in the secure and tran-

quil enjoyment of the rights of person and property. I have already intimated to you the danger of parties in the state, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party, generally. This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but, in those of the popular form, it is seen in its greatest rankness, and is truly their worst enemy. The alternate domination of one faction over another, sharpened by the spirit of revenge, natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries, which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation, on the ruins of Public Liberty. Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight,) the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it. It serves always to distract the Public Councils, and enfeeble the Public Administration. It agitates the Community with ill-founded jealousies and false alarms; kindles the animosity of one part against another, foments occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the government itself through the channels of party passions. Thus the policy and the will of one country are subjected to the policy and will of another. There is an opinion, that parties in free countries are useful checks upon the administration of the Government, and serve to keep alive the spirit of Liberty. This within certain limits is probably true; and in Governments of a Monarchical cast, Patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in Governments purely elective, it is a spirit not to be encouraged. From their natural tendency, it is certain there will always be enough of that spirit for every salutary purpose. And, there being constant danger of excess, the effort ought to be, by force of public opinion, to mitigate and assuage it. A fire not to be quenched, it demands a uniform vigilance to prevent its bursting into a flame, lest, instead of warming, it should consume. It is important, likewise, that the habits of thinking in a free country should inspire caution, in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. A just estimate of that love of power, and proneness to abuse it, which predominates in the human heart, is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the Guardian of the Public Weal against invasions by the others, has been evinced by experiments ancient and modern; some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way, which the constitution designates. But let there be no change by usurpation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit, which the use can at any time yield. Of all the dispositions and habits, which lead to political prosperity, Religion and Morality are indispensable supports. In vain would that man claim the tribute of Patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of Men and Citizens. The mere Politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connexions with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths, which are the instruments of investigation in Courts of Justice? And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect, that national morality can prevail in exclusion of religious principle. It is substantially true, that virtue or morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who, that is a sincere friend to it, can look with indifference upon attempts to shake the foundation of the fabric? Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened. As a very important source of strength and security, cherish public credit. One method of preserving it is, to use it as sparingly as possible; avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts, which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burthen, which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinion should coöperate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind, that towards the payment of debts there must be Revenue; that to have Revenue there must be taxes; that

no taxes can be devised, which are not more or less inconvenient and unpleasant, that the intrinsic embarrassment, inseparable from the selection of the proper objects (which is always a choice of difficulties), ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue, which the public exigencies may at any time dictate. Observe good faith and justice towards all Nations; cultivate peace and harmony with all. Religion and Morality enjoin this conduct; and can it be, that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great Nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt, that, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages, which might be lost by a steady adherence to it? Can it be, that Providence has not connected the permanent felicity of a Nation with its Virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices? In the execution of such a plan, nothing is more essential, than that permanent, inveterate antipathies against particular Nations, and passionate attachments for others, should be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated. The Nation, which indulges towards another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate, envenomed, and bloody contests. The Nation, prompted by ill-will and resentment, sometimes impels to war the Government, contrary to the best calculations of policy. The Government sometimes participates in the national propensity, and adopts through passion what reason would reject; at other times, it makes the animosity of the nation subservient to projects of hostility instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty, of Nations has been the victim. So likewise, a passionate attachment of one Nation for another produces a variety of evils. Sympathy for the favorite Nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite Nation of privileges denied to others, which is apt doubly to injure the Nation making the concessions; by unnecessarily parting with what ought to have been retained; and by exciting jealousy, ill-will, and a disposition to retaliate, in the parties from whom equal privileges are withheld. And it gives to ambitious, corrupted, or deluded citizens, (who devote themselves to the favorite nation,) facility to betray or sacrifice the interests of their own country, without odium, sometimes even with popularity; gilding, with the appearances of a virtuous sense of obligation, a commendable deference for public opinion, or a laudable zeal for public good, the base of foolish compliances of ambition, corruption, or infatuation. As avenues to foreign influence in innumerable ways, such attachments are particularly alarming to the truly enlightened and independent Patriot. How many opportunities do they afford to tamper with domestic factions, to practise the arts of seduction, to mislead public opinion, to influence or awe the Public Councils! Such an attachment of a small or weak, towards a great and powerful nation, dooms the former to be the satellite of the latter. Against the insidious wiles of foreign influence (I conjure you to believe me, fellow-citizens,) the jealousy of a free people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of Republican Government. But that jealousy, to be useful, must be impartial; else it becomes the instrument of the very influence to be avoided, instead of a defence against it. Excessive partiality for one foreign nation, and excessive dislike of another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests. The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop. Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities. Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off, when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality, we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel. Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? It is our true policy to steer clear of permanent alliances with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is always the best policy. I repeat it, therefore,

as those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary and would be unwise to extend them. Taking care always to keep ourselves, by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies. Harmony, liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences; consulting the natural course of things, diffusing and diversifying by gentle means the streams of commerce, but forcing nothing, establishing, with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that, by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion, which experience must cure, which a just pride ought to discard. In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course, which has hitherto marked the destiny of nations. But, if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the rage of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare, by which they have been dictated. How far, in the discharge of my official duties, I have been guided by the principles which have been delineated, the public records and other evidences of my conduct must witness to you and to the world. To myself, the assurance of my own conscience is, that I have at least believed myself to be guided by them. In relating to the still subsisting war in Europe, my Proclamation of the 22d of April, 1793, is the index to my plan. Sanctioned by your approving voice, and by that of your Representatives in both Houses of Congress, the spirit of that measure has continually governed me, uninfluenced by any attempts to deter or divert me from it. After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest to take, a neutral position. Having taken it, I determined, as far as should depend upon me, to maintain it, with moderation, perseverance, and firmness. The considerations, which respect the right to hold this conduct, it is not necessary on this occasion to detail. I will only observe, that, according to my understanding of the matter, that right, so far from being denied by any of the belligerent Powers, has been virtually admitted by all. The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity towards other nations. The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me, a predominant motive has been to endeavour to gain time to our country to settle and mature its yet recent institutions and to progress without interruption to that degree of strength and consistency, which is necessary to give it, humanly speaking, the command of its own fortunes. Though in reviewing the incidents of my administration, I am unconscious of intentional error, I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope, that my Country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest. Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man, who views in it the native soil of himself and his progenitors for several generations; I anticipate with pleasing expectation that retreat, in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow-citizens, the benign influence of good laws under a free government, the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors, and dangers. GEORGE WASHINGTON."

A. D. 1796.—Third Presidential Election.—Washington succeeded by John Adams.—After the appearance of Washington's Farewell Address, the result of the Presidential election became exceedingly doubtful. "There was no second man in whom the whole of the nation could be won over. The Federalists . . . could not bring forward a single candidate who could calculate on the unanimous and cheerful support of the entire party. There still prevailed at the time a feeling among the people that the vice-president had a sort of claim to the succession to the presidency. But even apart from this, Adams would have been one of the most prominent candidates of the Federalists. The great majority of them soon gave him a decided preference over all other possible candidates. On the other hand, some of the most distinguished and influential of the Federalists feared serious consequences to the party and the country from the vanity and violence as well as from the egotism and irresolution with which he was charged. But to put him aside entirely was not possible, nor was it their wish. They thought, however to secure a greater number of electoral votes for Th. Pinckney, the Federal candidate for the vice-presidency, which, as the constitution then stood, would have made him presi-

dent and Adams vice-president. Although this plan was anxiously concealed from the people, it caused the campaign to be conducted by the party with less energy than if the leaders had been entirely unanimous. France was naturally desirous of Jefferson's success. . . . Wolcott asserted that Adet had publicly declared that France's future policy towards the United States would depend on the result of the election. Some did not hesitate to say that, on this account, Jefferson should have the preference, but on the more thoughtful Federalists it exerted the very opposite influence. There is no reason for the assumption that the issue of the election would have been different, had Adet behaved more discreetly. But his indiscretion certainly contributed to make the small majority expected for Adams completely certain, while Hamilton's flank movement in favor of Pinckney helped Jefferson to the vice-presidency. . . . The result of the election, however, left the country in a very serious condition. Washington's withdrawal removed the last restraint from party passion."—H. von Holst, *The Constitutional and Political History of the United States, v.* 1, *ch.* 3. —Adams received 71 votes in the Electoral College and Jefferson 68. As the constitution then provided, the majority of votes elected the President and the next greatest number of votes elected the Vice President.

A. D. 1797-1799.—Troubles with the French Republic.—The X, Y, Z correspondence.—On the brink of war.—"Mr. Adams took his cabinet from his predecessor; it was not a strong one, and it was devoted to Hamilton, between whom and the new President there was soon a divergence, Hamilton being fond of power, and Adams having a laudable purpose to command his own ship. The figure of speech is appropriate, for he plunged into a sea of troubles, mainly created by the unreasonable demands of the French government. The French 'Directory,' enraged especially by Jay's treaty with England, got rid of one American minister by remonstrance, and drove out another [Pinckney] with contempt. When Mr. Adams sent three special envoys [Gerry, Marshall, and Pinckney], they were expected to undertake the most delicate negotiations with certain semi-official persons designated in their correspondence only by the letters X, Y, Z. The plan of this covert intercourse came through the private secretary of M. de Talleyrand, then French Minister for Foreign Affairs; and the impudence of these three letters of the alphabet went so far as to propose a bribe of 1,200,000 francs (some $220,000) to be paid over to this minister. 'You must pay money, a great deal of money,' remarked Monsieur Y ('Il faut de l'argent, beaucoup de l' argent'). The secret of these names was kept, but the diplomatic correspondence was made public, and created much wrath in Europe as well as in America. Moreover, American vessels were constantly attacked by France, and yet Congress refused to arm its own ships. At last the insults passed beyond bearing, and it was at this time that 'Millions for defence, not one cent for tribute,' first became a proverbial phrase, having been originally used by Charles C. Pinckney. . . . Then, with tardy decision, the Republicans yielded to the necessity of action, and the Federal party took the lead. War was not formally proclaimed, but treaties with France were declared to be no longer binding. An army was ordered to be created, with Washington as Lieutenant-general and Hamilton as second in command; and the President was authorized to appoint a Secretary of the Navy and to build twelve new ships-of-war. Before these were ready, naval hostilities had actually begun; and Commodore Truxtun, in the U. S. frigate Constellation, captured a French frigate in West Indian waters (Feb. 9, 1799), and afterwards silenced another, which however escaped. Great was the excitement over these early naval successes of the young nation. Merchant-ships were authorized to arm themselves, and some 300 acted upon this authority. . . . The result of it all was that France yielded. Talleyrand, the very minister who had dictated the insults, now disavowed them, and pledged his government to receive any minister the United States might send. The President, in the most eminently courageous act of his life, took the responsibility of again sending ambassadors; and did this without even consulting his cabinet, which would, as he well knew, oppose it. They were at once received, and all danger of war with France was at an end. This bold stroke separated the President permanently from at least half of his own party, since the Federalists did not wish for peace with France. His course would have given him a corresponding increase of favor from the other side, but for the great mistake the Federalists had made in passing certain laws, called the 'Alien' law and the 'Sedition' law."—T. W. Higginson, *Larger Hist. of the U. S., ch.* 14.

A. D. 1797-1800.—Early attitude of the Slavocracy in Congress.—Treatment of Free Blacks.—"Many people will not allow the least blame to be cast on this period [the later years of the 18th century], because it does not harmonize with their admiration of the 'fathers,' and because they have adopted, without any proof, the common view that the deeper shadows of slavery and slavocracy first appeared comparatively late. . . . In reading through the debates [in Congress], single striking instances of injustice do not make the deepest impression. It is the omnipresent unwillingness to practice justice towards colored persons,—yes, even to recognize them as actual beings. When the defense of their rights is demanded, then congress has always a deaf ear. . . . Swanwick of Pennsylvania laid before the house of representatives, Jan. 30, 1797, a petition from four North Carolina negroes who had been freed by their masters. Since a state law condemned them to be sold again, they had fled to Philadelphia. There they had been seized under the fugitive slave law . . . and now prayed congress for its intervention. Blount of North Carolina declared that only when it was 'proved' that these men were free, could congress consider the petition. Sitgreaves of Pennsylvania asked, in reply to this, what sort of proof was offered that the four negroes were not free. This question received no answer. Smith of South Carolina and Christie of Maryland simply expressed their amazement that any member whatever could have presented a petition of 'such an unheard-of nature.' Swanwick and some other representatives affirmed

that the petition must be submitted to a committee for investigation and consideration, because the petitioners complained of violation of their rights under a law of the Union. No reply could be made to this and no reply was attempted. This decisive point was simply set aside, and it was voted by fifty ayes to thirty-three noes not to receive the petition. . . . In order to reach this result, Smith had produced the customary impression by the declaration that the refusal of the demand made by the representatives from the southern states would drive a 'wedge' into the Union. When, three years later, the same question was brought before congress again by a petition of the free negroes of Philadelphia, Rutledge of South Carolina declared in even plainer terms that the south would be forced to the sad necessity of going its own way. . . . The whites who troubled themselves about slaves or free colored persons had no better reception. . . . In all the cases mentioned, the tactics of the representatives of the slaveholding interest were the same. . . . If congress was urged to act in any way which did not please them, then slavery was always a 'purely municipal affair.'"—H. von Holst, *Const. and Political Hist. of the U. S., v.* 1, *ch.* 8.

A. D. 1798.—Twelfth Amendment to the Constitution.—The Twelfth Amendment to the Constitution was proclaimed January 8, 1798. See CONSTITUTION OF THE UNITED STATES.

A. D. 1798.—The Alien and Sedition Laws and the Virginia and Kentucky Resolutions.—"The outrages which we suffered from the injustice of England and France gave additional bitterness to the strife between parties at home. The anti-federal press was immoderate in its assaults upon the administration. It so happened that several of the anti-federal papers were conducted by foreigners. Indeed, there were many foreigners in the country whose sympathies were with the French, and their hostility to the administration was open and passionate. The federal leaders determined to crush out by the strong arm of the law these publishers of slanders and fomenters of discontent. Hence the famous 'alien and sedition laws' were passed. The remedy devised was far worse than the disease. It hastened the federal party to its tomb, and was the occasion of the formulation of that unfortunate creed of constitutional construction and of state sovereignty known as the 'Virginia and Kentucky Resolutions' of 1798-99."—J. S. Landon, *Const. Hist. and Govt. of the U. S., lect.* 6.—The series of strong measures carried by the Federalists comprised the Naturalization Act of June 18, the Alien Act of June 25, the second Alien Act, of July 6, and the Sedition Act of July 14, 1798.

The text of the Naturalization Act is as follows:

June 18, 1798. Acts of the Fifth Congress, Statute II., Chap. liv.: "An Act supplementary to, and to amend the act, intituled 'An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject.'

Section 1. Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled, That no alien shall be admitted to become a citizen of the United States, or of any state, unless in the manner prescribed by the act, intituled 'An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject,' he shall have declared his intention to become a citizen of the United States, five years, at least, before his admission, and shall, at the time of his application to be admitted, declare and prove, to the satisfaction of the court having jurisdiction in the case, that he has resided within the United States fourteen years, at least, and within the state or territory where, or for which such court is at the time held, five years, at least, besides conforming to the other declarations, renunciations and proofs, by the said act required, anything therein to the contrary hereof notwithstanding: Provided, that any alien, who was residing within the limits, and under the jurisdiction of the United States, before the twenty-ninth day of January, one thousand seven hundred and ninety-five, may, within one year after the passing of this act—and any alien who shall have made the declaration of his intention to become a citizen of the United States, in conformity to the provisions of the act, intituled 'An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject,' may, within four years after having made the declaration aforesaid, be admitted to become a citizen, in the manner prescribed by the said act, upon his making proof that he has resided five years, at least, within the limits, and under the jurisdiction of the United States: And provided also, that no alien, who shall be a native, citizen, denizen or subject of any nation or state with whom the United States shall be at war, at the time of his application, shall be then admitted to become a citizen of the United States."—*Statutes at Large of the United States, ed.* 1850, *v.* 1, *pp.* 566-567.

The following is the text of the two Alien Acts:

June 25, 1798. Statute II., Chap. lviii.—"An Act Concerning Aliens.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be lawful for the President of the United States at any time during the continuance of this act, to order all such aliens as he shall judge dangerous to the peace and safety of the United States, or shall have reasonable grounds to suspect are concerned in any treasonable or secret machinations against the government thereof, to depart out of the territory of the United States, within such time as shall be expressed in such order, which order shall be served on such alien by delivering him a copy thereof, or leaving the same at his usual abode, and returned to the office of the Secretary of State, by the marshal or other person to whom the same shall be directed. And in case any alien, so ordered to depart, shall be found at large within the United States after the time limited in such order for his departure, and not having obtained a license from the President to reside therein, or having obtained such license shall not have conformed thereto, every such alien shall, on conviction thereof, be imprisoned for a term not exceeding three years, and shall never after be admitted to become a citizen of the United States. Provided always and be it further enacted, that if any alien so ordered to depart shall prove to the satisfaction of the President, by evidence to be taken before such person or persons as the President shall

direct, who are for that purpose hereby authorized to administer oaths, that no injury or danger to the United States will arise from suffering such alien to reside therein, the President may grant a license to such alien to remain within the United States for such time as he shall judge proper, and at such place as he may designate. And the President may also require of such alien to enter into a bond to the United States, in such penal sum as he may direct, with one or more sufficient sureties to the satisfaction of the person authorized by the President to take the same, conditioned for the good behavior of such alien during his residence in the United States, and not violating his license, which license the President may revoke whenever he shall think proper.

Sec. 2. And be it further enacted, That it shall be lawful for the President of the United States, whenever he may deem it necessary for the public safety, to order to be removed out of the territory thereof, any alien who may or shall be in prison in pursuance of this act; and to cause to be arrested and sent out of the United States such of those aliens as shall have been ordered to depart therefrom and shall not have obtained a license as aforesaid, in all cases where, in the opinion of the President, the public safety requires a speedy removal. And if any alien so removed or sent out of the United States by the President shall voluntarily return thereto, unless by permission of the President of the United States, such alien on conviction thereof, shall be imprisoned so long as, in the opinion of the President, the public safety may require.

Sec. 3. And be it further enacted, That every master or commander of any ship or vessel which shall come into any port of the United States after the first day of July next, shall immediately on his arrival make report in writing to the collector, or other chief officer of the customs of such port, of all aliens, if any, on board his vessel, specifying their names, age, the place of nativity, the country from which they shall have come, the nation to which they belong and owe allegiance, their occupation and a description of their persons, as far as he shall be informed thereof, and on failure, every such master and commander shall forfeit and pay three hundred dollars, for the payment whereof on default of such master or commander, such vessel shall also be holden, and may by such collector or other officer of the customs be detained. And it shall be the duty of such collector, or other officer of the customs, forthwith to transmit to the officer of the department of state true copies of all such returns.

Sec. 4. And be it further enacted, That the circuit and district courts of the United States, shall respectively have cognizance of all crimes and offences against this act. And all marshals and other officers of the United States are required to execute all precepts and orders of the President of the United States issued in pursuance or by virtue of this act.

Sec. 5. And be it further enacted, That it shall be lawful for any alien who may be ordered to be removed from the United States, by virtue of this act, to take with him such part of his goods, chattels, or other property, as he may find convenient; and all property left in the United States by any alien, who may be removed, as aforesaid, shall be, and remain subject to his order and disposal, in the same manner as if this act had not been passed.

Sec. 6. And be it further enacted, That this act shall continue and be in force for and during the term of two years from the passing thereof.

Approved, June 25, 1798."— *Statutes at Large of the United States,* ed. 1850, Vol. I., pp. 570–572.

July 6, 1798. Statute II., Chap. lxvi.—"An Act respecting Alien Enemies.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever there shall be a declared war between the United States and any foreign nation or government, or any invasion or predatory incursion shall be perpetrated, attempted, or threatened against the territory of the United States, by any foreign nation or government, and the President of the United States shall make public proclamation of the event, all natives, citizens, denizens, or subjects of the hostile nation or government, being males of the age of fourteen years and upwards, who shall be within the United States, and not actually naturalized, shall be liable to be apprehended, restrained, secured and removed, as alien enemies. And the President of the United States shall be, and he is hereby authorized, in any event, as aforesaid, by his proclamation thereof or other public act, to direct the conduct to be observed, on the part of the United States, towards the aliens who shall become liable as aforesaid; the manner and degree of the restraint to which they shall be subject, and in what cases, and upon what security their residence shall be permitted, and to provide for the removal of those, who, not being permitted to reside within the United States, shall refuse or neglect to depart therefrom; and to establish any other regulations which shall be found necessary in the premises and for the public safety: Provided, that aliens resident within the United States, who shall become liable as enemies, in the manner aforesaid, and who shall not be chargeable with actual hostility, or other crime against the public safety, shall be allowed for the recovery, disposal, and removal of their goods and effects, and for their departure, the full time which is, or shall be stipulated by any treaty, where any shall have been between the United States and the hostile nation or government, of which they shall be natives, citizens, denizens, or subjects: and when no such treaty shall have existed, the President of the United States may ascertain and declare such reasonable time as may be consistent with the public safety, and according to the dictates of humanity and national hospitality.

Sec. 2. And be it further enacted, That after any proclamation shall be made as aforesaid, it shall be the duty of the several courts of the United States, and of each state, having criminal jurisdiction, and of the several judges and justices of the courts of the United States, and they shall be, and are hereby respectively, authorized upon complaint, against any alien or alien enemies, as aforesaid, who shall be resident and at large within such jurisdiction or district, to the danger of the public peace or safety, and contrary to the tenor or intent of such proclamation, or other regulations which

the President of the United States shall and may establish in the premises, to cause such alien or aliens to be duly apprehended and convened before such court, judge or justice; and after a full examination and hearing on such complaint, and sufficient cause therefor appearing, shall and may order such alien or aliens to be removed out of the territory of the United States, or to give such sureties for their good behaviour, or to be otherwise restrained, conformably to the proclamation or regulations which shall or may be established as aforesaid, and may imprison, or otherwise secure such alien or aliens, until the order which shall and may be made, as aforesaid, shall be performed.

Sec. 3. And be it further enacted, That it shall be the duty of the marshal of the district in which any alien enemy shall be apprehended, who by the President of the United States, or by the order of any court, judge or justice, as aforesaid, shall be required to depart, and to be removed, as aforesaid, to provide therefor, and to execute such order, by himself or his deputy, or other discreet person or persons to be employed by him, by causing a removal of such alien out of the territory of the United States; and for such removal the marshal shall have the warrant of the President of the United States, or of the court, judge or justice ordering the same, as the case may be.

Approved, July 6, 1798."—*Statutes at Large of the United States*, ed. of 1850, Vol. I., p. 577.

The text of the Sedition Act is as follows:

JULY 14, 1798. Chap. lxxiv.—"An Act in addition to the act, entitled 'An Act for the punishment of certain crimes against the United States.'

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That if any persons shall unlawfully combine or conspire together, with intent to oppose any measure or measures of the government of the United States, which are or shall be directed by proper authority, or to impede the operation of any law of the United States, or to intimidate or prevent any person holding a place or office in or under the government of the United States, from undertaking, performing or executing, his trust or duty; and if any person or persons, with intent as aforesaid, shall counsel, advise or attempt to procure any insurrection, riot, unlawful assembly, or combination, whether such conspiracy, threatening, counsel, advice, or attempt shall have the proposed effect or not, he or they shall be deemed guilty of a high misdemeanor, and on conviction before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding five thousand dollars and by imprisonment during a term not less than six months nor exceeding five years; and further at the discretion of the court may be holden to find sureties for his good behavior in such sum, and for such time, as the said court may direct.

Sec. 2. And be it further enacted, That if any person shall write, print, utter, or publish, or shall cause or procure to be written, printed, uttered or published or shall knowingly and willingly assist or aid in writing, printing, uttering or publishing any false, scandalous and malicious writing or writings against the government of the United States, or either house of the Congress of the United States, or the President of the United States, with intent to defame the said government, or either house of the said Congress, or the said President, or to bring them or either of them, into contempt or disrepute; or to excite against them, or either, or any of them, the hatred of the good people of the United States, or to stir up sedition within the United States, or to excite any unlawful combinations therein, for opposing or resisting any law of the United States, or any act of the President of the United States, and one in pursuance of any such law, or of the powers in him vested by the constitution of the United States, or to resist, oppose or defeat any such law or act, or to aid, encourage or abet any hostile designs of any foreign nation against the United States, their people or government, then such person, being thereof convicted before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding two thousand dollars, and by imprisonment not exceeding two years.

Sec. 3. And be it further enacted and declared, That if any person shall be prosecuted under this act, for the writing or publishing any libel aforesaid, it shall be lawful for the defendant, upon the trial of the cause, to give in evidence in his defence, the truth of the matter contained in the publication charged as a libel. And the jury who shall try the cause, shall have a right to determine the law and the fact, under the direction of the court, as in other cases.

Sec. 4. And be it further enacted, That this act shall continue and be in force until the third day of March, one thousand eight hundred and one, and no longer: Provided that the expiration of the act shall not prevent or defeat a prosecution and punishment of any offence against the law, during the time it shall be in force. Approved July 14, 1798."

"There has been a general effort on the part of biographers to clear their respective heroes from all responsibility for these ill-fated measures. The truth is, that they had the full support of the congressmen and senators who passed them, of the President who signed them, and of all the leaders in the States, who almost all believed in them; and they also met with very general acceptance by the party in the North. Hamilton went as far in the direction of sustaining the principle of these laws as any one. He had too acute a mind to believe with many of the staunch Federalist divines of New England, that Jefferson and Madison were Marats and Robespierres, and that their followers were Jacobins who, when they came to power, were ready for the overthrow of religion and society, and were prepared to set up a guillotine and pour out blood in the waste places of the federal city. But he did believe, and so wrote to Washington, after the appearance of the X. Y. Z. letters that there was a party in the country ready to 'new model' the constitution on French principles, to form an offensive and defensive alliance with France, and make the United States a French province. He felt, in short, that there was a party in America ready for confiscation and social confusion. A year later, in 1799, he wrote to Dayton, the speaker of the national House of Representatives, a long letter in which

he set forth very clearly the policy which he felt ought to be pursued. He wished to give strength to the government, and increase centralization by every means, by an extension of the national judiciary, a liberal system of internal improvements, an increased and abundant revenue, an enlargement of the army and navy, permanence in the laws for the volunteer army, extension of the powers of the general government, subdivision of the States as soon as practicable, and finally a strong sedition law, and the power to banish aliens. This was what was termed at that day a 'strong and spirited' policy; it would now be called repressive, but by whatever name it is designated, it was the policy of Hamilton, and is characteristic of both his talents and temperament. Except as to the subdivision of States, it was carried out pretty thoroughly in all its main features by the Federalists. The alien and sedition laws, although resisted in Congress, did not much affect public opinion at the elections which immediately ensued, and the Federalists came into the next Congress with a large majority."—H. C. Lodge, *Alexander Hamilton, ch.* 9.—"The different portions of the country were affected according to the dominant political opinion. Where the Federalists were strong political feeling bore them headlong into prosecutions under the new powers. In the Republican States a sense of injury and danger went hand in hand, and the question of the hour was how to repel the threatening destruction. Mr. Jefferson did not fail to see that the great opportunity for his party had come. His keen political sagacity detected in an instant the fatal mistake the administration had made, and he began at once to look about him for the best means to turn his opponents' mistake to his own advantage. Naturally he felt some delicacy in appearing too forward in assailing a government of which he himself was the second in office. Nevertheless he lent himself willingly to the task of organizing, in a quiet way, a systematic assault upon these laws of Congress, and at once opened a correspondence calculated to elicit the best judgment of his coadjutors and gradually drew out a programme of action. Virginia was by no means unanimous in reprobating these laws. She had a large and influential body of Federalists. . . . But the influence of Jefferson was paramount and the result of Jeffersonian principles soon appeared on every hand. Meetings were held in many of the counties upon their county court days at which were adopted addresses or series of resolutions condemning or praying for the repeal of these laws. . . . New York, New Jersey, and Pennsylvania sent petitions of appeal to Congress. . . . But it was in Kentucky that the greatest resistance was evoked. The feeling in that State was, indeed, little short of frenzy, and a singular unanimity was displayed even in the most extreme acts and sentiments. This grew out of no passing passion. It was based upon the most vigorous elements in her character as a people. Kentucky was at this time somewhat apart from the rest of the Union. . . . Her complaints, just and unjust, had been many, but hitherto she had not gained the nation's ear. But the time was now ripe for her to assert herself."—E. D. Warfield, *The Kentucky Resolutions of* 1798, *ch.* 1.—The famous Kentucky Resolutions, substantially drafted by Jefferson, as he acknowledged fifteen years afterwards, but introduced in the Legislature of Kentucky by John Breckenridge, on the 8th of November, 1798, were adopted by that body, in the lower branch on the 10th and in the upper on the 13th. Approved by the Governor on the 16th, they were immediately printed and copies officially sent to every other state and to members of Congress. They were as follows:

"I. Resolved, that the several states composing the United States of America, are not united on the principle of unlimited submission to their General Government; but that by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a General Government for special purposes, delegated to that Government certain definite powers, reserving each state to itself, the residuary mass of right to their own self Government; and that whensoever the General Government assumes undelegated powers, its acts are unauthoritative, void, and are of no force: That to this compact each state acceded as a state, and is an integral party, its co-states forming as to itself, the other party: That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself; since that would have made its discretion, and not the constitution, the measure of its powers; but that as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.

II. Resolved, that the Constitution of the United States having delegated to Congress a power to punish treason, counterfeiting the securities and current coin of the United States, piracies and felonies committed on the High Seas, and offences against the laws of nations, and no other crimes whatever, and it being true as a general principle, and one of the amendments to the Constitution having also declared, 'that the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people,' therefore also the same act of Congress passed on the 14th day of July, 1798, and entitled 'An act in addition to the act entitled an act for the punishment of certain crimes against the United States;' as also the act passed by them on the 27th of June, 1798, entitled 'An act to punish frauds committed on the Bank of the United States' (and all other their acts which assume to create, define, or punish crimes other than those enumerated in the constitution) are altogether void and of no force, and that the power to create, define, and punish such other crimes is reserved, and of right appertains solely and exclusively to the respective states, each within its own Territory.

III. Resolved, that it is true as a general principle, and is also expressly declared by one of the amendments to the Constitution that 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively or to the people;' and that no power over the freedom of religion, freedom of speech, or freedom of the press being delegated to the United States by the Constitution, nor prohibited by it to the states, all lawful powers respecting the same did of right remain, and were reserved to the states, or

to the people: That thus was manifested their determination to retain to themselves the right of judging how far the licentiousness of speech and of the press may be abridged without lessening their useful freedom, and how far those abuses which cannot be separated from their use, should be tolerated, rather than the use be destroyed; and thus also they guarded against all abridgment by the United States of the freedom of religious opinions and exercises, and retained to themselves the right of protecting the same, as this state by a Law passed on the general demand of its Citizens, had already protected them from all human restraint or interference; and that in addition to this general principle and express declaration, another and more special provision has been made by one of the amendments to the Constitution which expressly declares that 'Congress shall make no law respecting an Establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech, or of the press,' thereby guarding in the same sentence, and under the same words, the freedom of religion, of speech, and of the press, insomuch, that whatever violates either, throws down the sanctuary which covers the others, and that libels, falsehoods, and defamation, equally with heresy and false religion, are withheld from the cognizance of federal tribunals. That therefore the act of the Congress of the United States passed on the 14th day of July, 1798, entitled 'An act in addition to the act for the punishment of certain crimes against the United States,' which does abridge the freedom of the press, is not law, but is altogether void and of no effect.

IV. Resolved, that alien friends are under the jurisdiction and protection of the laws of the state wherein they are; that no power over them has been delegated to the United States, nor prohibited to the individual states distinct from their power over citizens; and it being true as a general principle, and one of the amendments to the Constitution having also declared, that 'the powers not delegated to the United States by the Constitution nor prohibited by it to the states are reserved to the states respectively or to the people,' the act of the Congress of the United States passed on the 22d day of June, 1798, entitled 'An act concerning aliens,' which assumes power over alien friends not delegated by the Constitution, is not law, but is altogether void and of no force.

V. Resolved, that in addition to the general principle as well as the express declaration, that powers not delegated are reserved, another and more special provision inserted in the Constitution from abundant caution has declared, 'that the migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year 1808.' That this Commonwealth does admit the migration of alien friends described as the subject of the said act concerning aliens; that a provision against prohibiting their migration, is a provision against all acts equivalent thereto, or it would be nugatory; that to remove them when migrated is equivalent to a prohibition of their migration, and is therefore contrary to the said provision of the Constitution, and void.

VI. Resolved, that the imprisonment of a person under the protection of the Laws of this Commonwealth on his failure to obey the simple order of the President to depart out of the United States, as is undertaken by the said act entitled 'An act concerning aliens,' is contrary to the Constitution, one amendment to which has provided, that 'no person shall be deprived of liberty without due process of law,' and that another having provided 'that in all criminal prosecutions the accused shall enjoy the right to a public trial by an impartial jury, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favour, and to have the assistance of counsel for his defence,' the same act undertaking to authorize the President to remove a person out of the United States who is under the protection of the Law, on his own suspicion, without accusation, without jury, without public trial, without confrontation of the witnesses against him, without having witnesses in his favour, without defence, without counsel, is contrary to these provisions also of the Constitution, is therefore not law but utterly void and of no force. That transferring the power of judging any person who is under the protection of the laws, from the Courts to the President of the United States, as is undertaken by the same act concerning Aliens, is against the article of the Constitution which provides, that 'the judicial power of the United States shall be vested in Courts, the Judges of which shall hold their offices during good behaviour,' and that the said act is void for that reason also; and it is further to be noted, that this transfer of Judiciary powers is to that magistrate of the General Government who already possesses all the Executive, and a qualified negative in all the Legislative power.

VII. Resolved, that the construction applied by the General Government (as is evinced by sundry of their proceedings) to those parts of the Constitution of the United States which delegate to Congress a power to lay and collect taxes, duties, imposts, and excises; to pay the debts, and provide for the common defence, and general welfare of the United States, and to make all laws which shall be necessary and proper for carrying into execution the powers vested by the Constitution in the Government of the United States, or any department thereof, goes to the destruction of all the limits prescribed to their power by the Constitution — That words meant by that instrument to be subsidiary only to the execution of the limited powers, ought not to be so construed as themselves to give unlimited powers, nor a part so to be taken, as to destroy the whole residue of the instrument: That the proceedings of the General Government under colour of these articles, will be a fit and necessary subject for revisal and correction at a time of greater tranquility, while those specified in the preceding resolutions call for immediate redress.

VIII. Resolved, that the preceding Resolutions be transmitted to the Senators and Representatives in Congress from this Commonwealth, who are hereby enjoined to present the same to their respective Houses, and to use the best endeavours to procure at the next session of Congress, a repeal of the aforesaid unconstitutional and obnoxious acts.

IX. Resolved lastly, that the Governor of this Commonwealth be, and is hereby authorised

and requested to communicate the preceding Resolutions to the Legislatures of the several States, to assure them that this Commonwealth considers Union for specified National purposes, and particularly for those specified in their late Federal compact, to be friendly to the peace, happiness, and prosperity of all the states: that faithful to that compact, according to the plain intent and meaning in which it was understood and acceded to by the several parties, it is sincerely anxious for its preservation: that it does also believe, that to take from the states all the powers of self government, and transfer them to a general and consolidated Government, without regard to the special delegations and reservations solemnly agreed to in that compact, is not for the peace, happiness, or prosperity of these states: And that therefore, this Commonwealth is determined, as it doubts not its Co-states are, tamely to submit to undelegated and consequently unlimited powers in no man or body of men on earth: that if the acts before specified should stand, these conclusions would flow from them; that the General Government may place any act they think proper on the list of crimes and punish it themselves, whether enumerated or not enumerated by the Constitution as cognizable by them: that they may transfer its cognizance to the President or any other person, who may himself be the accuser, counsel, judge, and jury, whose suspicions may be the evidence, his order the sentence, his officer the executioner, and his breast the sole record of the transaction: that a very numerous and valuable description of the inhabitants of these states, being by this precedent reduced as outlaws to the absolute dominion of one man and the barrier of the Constitution thus swept away from us all, no rampart now remains against the passions and the power of a majority of Congress, to protect from a like exportation or other more grievous punishment the minority of the same body, the Legislatures, Judges, Governors, and Counsellors of the states, nor their other peaceable inhabitants who may venture to reclaim the constitutional rights and liberties of the states and people, or who for other causes, good or bad, may be obnoxious to the views or marked by the suspicions of the President, or be thought dangerous to his or their elections or other interests public or personal: that the friendless alien has indeed been selected as the safest subject of a first experiment: but the citizen will soon follow, or rather has already followed; for already has a Sedition Act marked him as its prey: that these and successive acts of the same character, unless arrested on the threshold, may tend to drive these states into revolution and blood, and will furnish new calumnies against Republican Governments, and new pretexts for those who wish it to be believed that man cannot be governed but by a rod of iron: that it would be a dangerous delusion were a confidence in the men of our choice to silence our fears for the safety of our rights: that confidence is everywhere the parent of despotism: free government is founded in jealousy and not in confidence; it is jealousy and not confidence which prescribes limited Constitutions to bind down those whom we are obliged to trust with power: that our Constitution has accordingly fixed the limits to which and no further our confidence may go; and let the honest advocate of confidence read the Alien and Sedition Acts, and say if the Constitution has not been wise in fixing limits to the Government it created, and whether we should be wise in destroying those limits? Let him say what the Government is if it be not a tyranny, which the men of our choice have conferred on the President, and the President of our choice has assented to and accepted over the friendly strangers, to whom the mild spirit of our Country and its laws had pledged hospitality and protection: that the men of our choice have more respected the bare suspicions of the President than the solid rights of innocence, the claims of justification, the sacred force of truth, and the forms and subsistance of law and justice. In questions of power then let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution. That this Commonwealth does therefore call on its Co-states for an expression of their sentiments on the acts concerning Aliens, and for the punishment of certain crimes hereinbefore specified, plainly declaring whether these acts are or are not authorized by the Federal Compact? And it doubts not that their sense will be so announced as to prove their attachment unaltered to limited Government, whether general or particular, and that the rights and liberties of their Co-states will be exposed to no dangers by remaining embarked on a common bottom with their own: That they will concur with this Commonwealth in considering the said acts so palpably against the Constitution as to amount to an undisguised declaration, that the compact is not meant to be the measure of the powers of the General Government, but that it will proceed in the exercise over these states of all powers whatsoever: That they will view this as seizing the rights of the states and consolidating them in the hands of the General Government with a power assumed to bind the states (not merely in cases made federal) but in all cases whatsoever, by laws made, not with their consent, but by others against their consent: That this would be to surrender the form of Government we have chosen, and to live under one deriving its powers from its own will, and not from our authority; and that the Co-states recurring to their natural right in cases not made federal, will concur in declaring these acts void and of no force, and will each unite with this Commonwealth in requesting their repeal at the next session of Congress."

In the month following this declaration from Kentucky, on the 21st of December, Virginia affirmed substantially the same threatening doctrine, more temperately and cautiously set forth in resolutions drawn by Madison as follows:

"Resolved, that the General Assembly of Virginia doth unequivocally express a firm resolution to maintain and defend the constitution of the United States, and the constitution of this state against every aggression, either foreign or domestic, and that they will support the government of the United States in all measures warranted by the former.

That this Assembly most solemnly declares a warm attachment to the union of the states, to maintain which, it pledges all its powers; and that for this end it is their duty to watch over and oppose every infraction of those principles which constitute the only basis of that union, because a faithful observance of them can alone secure its existence, and the public happiness.

That this Assembly doth explicitly and peremptorily declare that it views the powers of the Federal Government, as resulting from the compact, to which the states are parties; as limited by the plain sense and intention of the instrument constituting that compact; as no farther valid than they are authorized by the grants enumerated in that compact, and that in case of a deliberate, palpable and dangerous exercise of other powers not granted by the said compact, the states who are parties thereto have the right, and are in duty bound to interpose for arresting the progress of the evil, and for maintaining within their respective limits, the authorities, rights and liberties appertaining to them.

That the General Assembly doth also express its deep regret that a spirit has in sundry instances, been manifested by the Federal Government, to enlarge its powers by forced constructions of the constitutional charter which defines them; and that indications have appeared of a design to expound certain general phrases (which having been copied from the very limited grant of powers in the former articles of confederation were the less liable to be misconstrued), so as to destroy the meaning and effect of the particular enumeration, which necessarily explains and limits the general phrases; and so as to consolidate the states by degrees into one sovereignty, the obvious tendency and inevitable consequence of which would be to transform the present republican system of the United States into an absolute, or at best a mixed monarchy.

That the General Assembly doth particularly protest against the palpable and alarming infractions of the Constitution, in the two late cases of the 'Alien and Sedition Acts,' passed at the last session of Congress, the first of which exercises a power nowhere delegated to the Federal Government; and which by uniting legislative and judicial powers to those of executive, subverts the general principles of free government, as well as the particular organization and positive provisions of the federal constitution: and the other of which acts, exercises in like manner a power not delegated by the constitution, but on the contrary expressly and positively forbidden by one of the amendments thereto; a power which more than any other ought to produce universal alarm, because it is levelled against the right of freely examining public characters and measures, and of free communication among the people thereon, which has ever been justly deemed the only effectual guardian of every other right.

That this state having by its convention which ratified the federal constitution, expressly declared, 'that among other essential rights, the liberty of conscience and of the press cannot be cancelled, abridged, restrained or modified by any authority of the United States,' and from its extreme anxiety to guard these rights from every possible attack of sophistry or ambition, having with other states recommended an amendment for that purpose, which amendment was in due time annexed to the constitution, it would mark a reproachful inconsistency and criminal degeneracy, if an indifference were now shown to the most palpable violation of one of the rights thus declared and secured, and to the establishment of a precedent which may be fatal to the other.

That the good people of this commonwealth having ever felt and continuing to feel the most sincere affection to their brethren of the other states, the truest anxiety for establishing and perpetuating the union of all, and the most scrupulous fidelity to that constitution which is the pledge of mutual friendship, and the instrument of mutual happiness: The General Assembly doth solemnly appeal to the like dispositions of the other states, in confidence that they will concur with this commonwealth in declaring, as it does hereby declare, that the acts aforesaid are unconstitutional, and that the necessary and proper measures will be taken by each for cooperating with this state, in maintaining unimpaired the authorities, rights, and liberties, reserved to the states respectively, or to the people.

That the Governor be desired to transmit a copy of the foregoing resolutions to the executive authority of each of the other states, with a request, that the same may be communicated to the legislature thereof.

And that a copy be furnished to each of the Senators and Representatives, representing this state in the Congress of the United States."

In later years, after Calhoun and his school had pushed these doctrines to their logical conclusion, Madison shrank from the result, and endeavored to disown the apparent meaning of what Jefferson had written and he had seemed to endorse in 1798. He denounced Nullification and Secession as "twin heresies," and denied that they were contained or implied in the resolutions of 1798—either those adopted in Kentucky or the responsive ones written by himself for the legislature of Virginia. The Kentucky Resolutions of 1798 were followed in 1799 by another series, in which the right of a sovereign State to nullify obnoxious laws of the Federal Government was no longer asserted by implication, but was put into plain terms—as follows: "That the principle and construction, contended for by sundry of the state legislatures, that the general government is the exclusive judge of the extent of the powers delegated to it, stop not short of despotism,—since the discretion of those who administer the government, and not the Constitution, would be the measure of their powers: That the several states who formed that instrument, being sovereign and independent, have the unquestionable right to judge of the infraction; and, That a nullification, by those sovereignties, of all unauthorized acts done under color of that instrument, is the rightful remedy." It was Mr. Madison's desire to cast on these resolutions of 1799, with which Jefferson had nothing to do, the odium of the nullification doctrine, and to remove the stigma from the resolutions of 1798, in which the word "nullification" makes no appearance; "neither that," pleaded Madison, "nor any equivalent term." But, when Madison made this plea, in 1830, "it was not then generally known, whether Mr. Madison knew it or not, that one of the resolutions and part of another which Jefferson wrote to be offered in the Kentucky legislature in 1798 were omitted by Mr. Nicholas [to whom Mr. Jefferson had entrusted them], and that therein was the assertion . . . 'where powers are assumed which have not been delegated, a nullification of the act is the rightful remedy.' The next year, when additional resolutions were offered by Mr. Breckenridge, this idea in similar, though not in precisely the same language, was

presented [as quoted above]. . . . In 1832, this fact, on the authority of Jefferson's grandson and executor, was made public; and further, that another declaration of Mr. Jefferson's in the resolution not used was an exhortation to the co-States, 'that each will take measures of its own for providing that neither these acts nor any others of the general government, not plainly and intentionally authorized by the Constitution, shall be exercised within their respective territories.'"—S. H. Gay, *James Madison, ch.* 15.—"The publication of the Kentucky resolutions . . . was instantly followed by a new crop of remonstrances and petitions from the people. . . . Such memorials as reached the House were sent to a committee, who, late in February, reported. . . . The report closed with three resolutions, and these were: that it was not in the interest of the public good to repeal either the Alien Law, or the Sedition Law, or any of the laws respecting the army, the navy, or the revenue of the United States. On the twenty-fifth of February, the House being in Committee of the Whole, the three resolutions were taken up one by one" and adopted. "The House then agreed to the action of the committee on each of the three resolutions. The Federal party was now at the height of its prosperity and power. It controlled the Senate. It controlled the House. Outwardly it was great and powerful, but within that dispute had begun which, in a few short months, drove Pickering and M'Henry from the Cabinet, split the party in twain, and gave to the country the strange spectacle of staunch and earnest Federalists wrangling and contending and overwhelming each other with abuse."—J. B. McMaster, *A History of the United States, ch.* 11 (*v.* 2).

A. D. 1799.—The Death of Washington.—A great sorrow fell upon the country, with a shock of surprise, in the last month of the year. Washington was stricken with a suddenly fatal disease, and died after an illness of two days. On the 12th of December he seemed to be in perfect health, but exposed himself to a cold rain that day, in a long ride about his estate. The next day he had a slight sore throat, and in the night he suffered difficulty in breathing, which followed a severe chill. Physicians were called on the morning of the 14th, who bled him copiously, according to the medical practice of that day. His struggle for breath increased steadily, and he knew that it meant death, facing the prospect with great calmness and thoughtfully arranging his affairs. He was conscious to the end, which came about ten o'clock that night. It is now understood that Washington's disease (which the physicians then called quinsy) was what is known as acute oedematous laryngitis, which might have been overcome by an operation of tracheotomy.—H. C. Lodge, *George Washington, v.* 2, *ch.* 6.

A. D. 1800.—The convention with France and the French Spoliation Claims incident to it.—"In the instructions to the American envoys in France they had been directed to secure a claims commission, the abrogation of the former treaties, and the abolition of the guarantee of 1778, as it was called, contained in Article XI. of the Treaty of Alliance of that year, and covering 'the present possessions of the Crown of France in America, as well as those which it may acquire by the future treaty of peace.' Upon none of these points were the envoys able to carry out their instructions. In reference to claims, a distinction, which was finally embodied in the treaty, was drawn by the French government between two classes of claims: first, debts due from the French government to American citizens for supplies furnished, or prizes whose restoration had been decreed by the courts; and secondly, indemnities for prizes alleged to have been wrongfully condemned. The treaty provided that the first class, known as debts, should be paid, but excluded the second, or indemnity class. In reference to the indemnity claims, and to the questions involved in the old treaties, including, of course, the guarantee of 1778, as the envoys were not able to come to an agreement, the treaty declared that the negotiation was postponed. The Senate of the United States expunged this latter article, inserting in its place a clause providing for the duration of the present convention; and this amendment was accepted by the French government, with the proviso that both governments should renounce the pretensions which were the object of the original article. To this the Senate also agreed, and upon this basis the convention was finally ratified. It thus appears that the United States surrendered the claims of its citizens against France for wrongful seizures, in return for the surrender by France of whatever claim it might have had against the United States for the latter's failure to fulfil the obligations assumed in the earlier treaties [especially the guaranty of the possessions of France in America, which was undertaken in the treaty of 1778]. The United States, therefore, having received a consideration for its refusal to prosecute the claims of its citizens, thereby took the place, with respect to the claimants, of the French government, and virtually assumed the obligations of the latter. . . . The claims for indemnity thus devolving upon the United States, known as the French Spoliation Claims, have been from that day to this the subject of frequent report and discussion in Congress, but with no result until the passage of the act of Jan. 20, 1885, referring them to the Court of Claims. At the present time (1888) they are undergoing judicial examination before that tribunal."—J. R. Soley, *The Wars of the U. S.*, 1789–1850 (*Narrative and Critical Hist. of Am., v.* 7, *ch.* 6; *and ed's foot-note*).

Also in: F. Wharton, *Digest of the International Law of the U. S., sect.* 248 (*v.* 2, *pp.* 714–728).—D. Webster, *Works, v.* 4, *pp.* 152–178.—T. H. Benton, *Thirty Years' View, v.* 1, *ch.* 117–120.—W. H. Seward, *Works, v.* 1, *pp.* 132–155.—*Rep't of Sec. of State* (*U. S. Senate, Ex. Doc. no.* 74 *and* 102, 49*th Cong.* 1*st sess.*).—Spoliations committed by the French in the Revolutionary and Napoleonic wars subsequently to the year 1800, were indemnified under the provisions of the treaty for the Louisiana purchase (see Louisiana: A. D. 1798–1803); under the treaty with Spain in 1819, and under a later treaty with France which was negotiated in Andrew Jackson's most imperative manner in 1831. These do not enter into what have become historically specialized as the French Spoliation Claims.

A. D. 1800.—The Second Census.—Total population, 5,305,937, (an increase of slightly more than 35 per cent. since 1790), classed and distributed as follows:

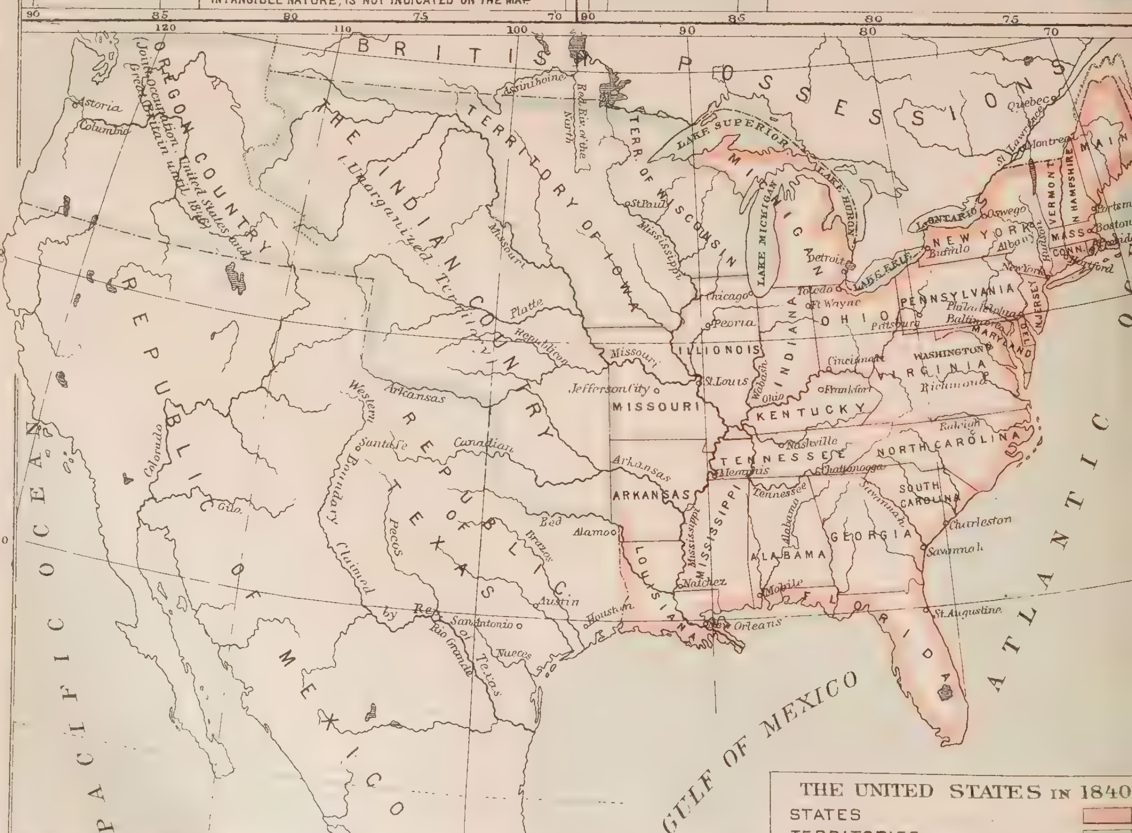
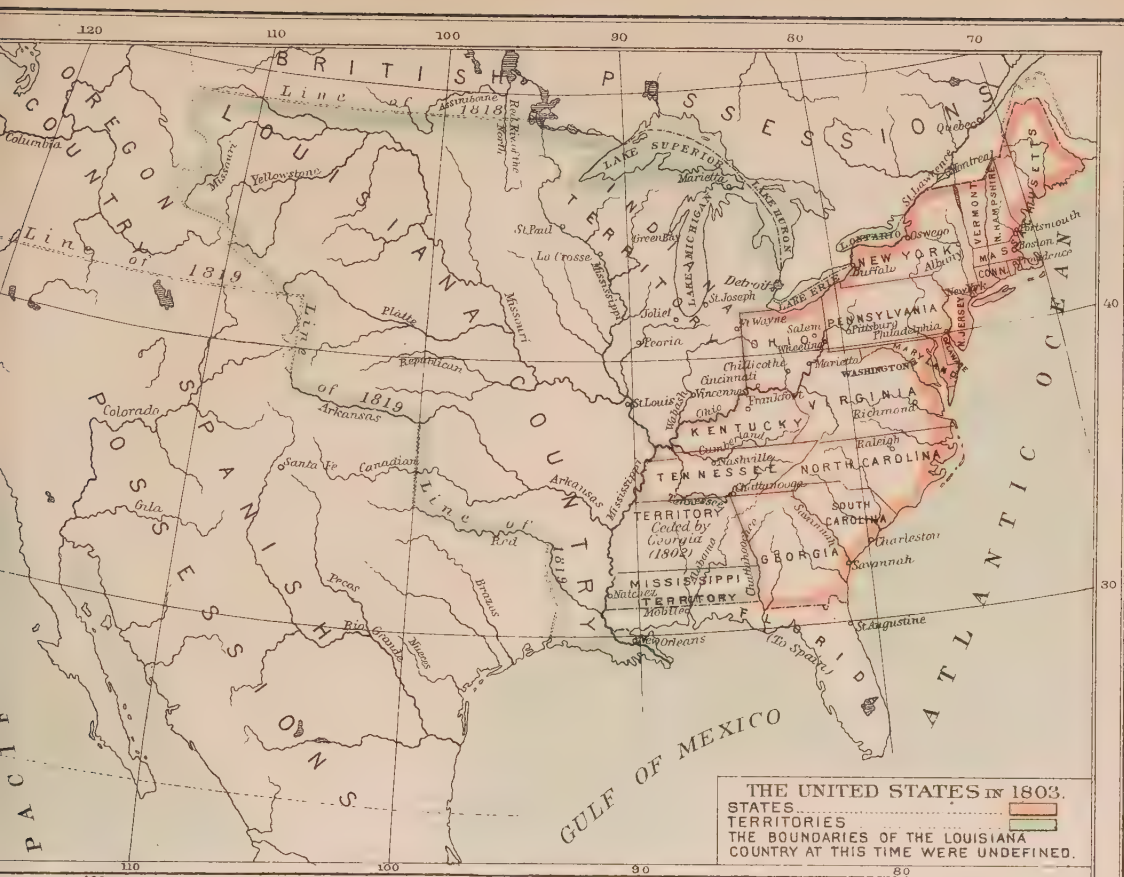
A. D. 1800-1801.—The Fourth Presidential Election.—Presidency of Jefferson.—"Adams, whom Dr. Franklin aptly described as 'always an honest man, often a wise one, but sometimes and in some things absolutely out of his senses,' was approaching the end of his term as President, and public attention was absorbed in the task of choosing a successor. . . . At the time of Adams's election, a sectional feeling, destined in the future to work so much evil, had already been developed; and he in consequence received from States south of the Potomac but two electoral votes. New York had given him her twelve, yet the entire majority over his competitor was but three in all the colleges. The national parties were not unequally matched in the State; and it was evident that, could its vote be diverted to Jefferson in the next contest, his victory would be assured. Hence, strenuous efforts were made to accomplish this end, and for months society was like a seething caldron. The trouble with France had, for the moment, swelled the numbers of the Federalists, and closed up their ranks; but the capricious course of the President, and the violent disruption of the cabinet, rent them asunder, never to be re-united. . . . During the French excitement, it seemed almost certain that, after the local election, they would have a majority in the new Legislature, and thus retain for their candidate the electoral vote of New York. This pleasing prospect was soon obscured. When its people found Mr. Adams sternly enforcing the Sedition Law, and exercising the power it conferred in an unfeeling manner upon one of their most esteemed citizens [Judge Peck], they turned with disgust from a party which they held responsible for its enactment, as well as for this violent procedure. The permanent ascendency which the Republicans seemed to have acquired in the metropolis had been wrested from them, in the spring of 1799, by the unpopularity of a scheme of Burr's, already conspicuous in the State as an unscrupulous political tactician. He had been a member of the assembly the preceding year, and, under the pretence of supplying pure and wholesome water, obtained a charter which enabled the corporators to engage in banking. In consequence of the feeling this aroused, he did not dare present himself again as a candidate, but, with great tact and unwearied efforts, succeeded in healing divisions in his party, and nominating a delegation for the assembly, which embraced the Republicans most eminent for wealth, station, or family influence. Gov. Clinton headed the list. . . . The result followed which Burr had anticipated. The Federal majority of the last year was overcome, and New York City secured by the Republicans, giving them control of the State. Adams subsequently received but four electoral votes south of Maryland, and Jefferson became his successor. Burr, to whose untiring exertions this great victory was due, was thereby inducted into the office of Vice-President. At that time, the Legislature appointed the electors for the State; and the Republicans, then anticipating a defeat, had at a previous session advocated that, for the future, these should be chosen directly by the people in separate districts, hoping thus to secure a sufficient number to elect their Presidential candidate. The Federalists, thinking their supremacy in the assembly assured, refused to support the plan. Now, however, when it became known that their adversaries had gained a majority in the Legislature on which would devolve the duty of choosing the electors, Hamilton addressed a letter to Gov. Jay, suggesting that the present body, whose term would not expire before July, should be again convened, in order to pass a measure which, when before proposed by the Republicans, had been denounced as unconstitutional. Jay had too much regard for principle to entertain the idea. After his death, the letter was found among his papers, endorsed, 'Proposing a measure for party purposes which I think it would not become me to adopt.' It is related that a noted French duellist, when required to forgive his enemies before receiving absolution, exclaimed, 'My enemies? I have none. I have killed them all!' Mr. Jefferson might have responded in the same manner, the morrow after the Presidential election. To the one party, the result seemed like the breaking up of an ice gorge —the harbinger of spring. To the other it appeared as an avalanche of French principles, destructive alike of religion and established government. Both were at fault. President Jefferson was quite as unable to destroy the work of his predecessors as he was to depart from their policy of neutrality. The Sedition and Alien Laws soon expired by limitation; but the great measures of the former administrations were too wise, and had struck their roots too deep into the national sentiment, to be suddenly overturned."—W. Whitelock, *Life and Times of John Jay, ch.* 22.—In the Electoral College, Thomas Jefferson and Aaron Burr, both Democratic Republicans, received an equal number of votes (73), and the election was carried into the House of Representatives, where Jefferson was chosen



President and Burr Vice President. "Adams, stung to the heart by the election of Jefferson, refused to witness the hateful spectacle of his successor's inauguration. He spent his last hours in filling up vacancies to place patronage out of Jefferson's reach; then he departed, the old order in his person giving place with a frown and a shudder to the new. Adams did not hate monarchy, he thought that for England it was good. In the eyes of Jefferson monarchy was the incarnate spirit of evil and to rid mankind of it by example was the mission of the American Republic. Every vestige of the half monarchical state which Washington had retained was now banished from the President's mansion and life. No more coaches-and-six, no more court dress, no more levèes. Although Jefferson did not, as legend says, ride to his inauguration and tie his horse to the fence, he was inaugurated with as little ceremony as possible. He received an ambassador in slippers down at the heel, and in the arrangement of his dinner parties was so defiant of the rules of etiquette as to breed trouble in the diplomatic circle. Yet with all his outward simplicity the Virginian magnate and man of letters, though he might be a Republican, could not in himself be a true embodiment of democracy. He was the friend of the people, but not one of them. . . . The desired day had come when the philosopher was to govern. The words of the address which Jefferson, unlike the demagogic sons of thunder in the present day, read in a very low voice, are the expression by its great master and archetype of the republican idea which has hitherto reigned supreme in the mind of the American people. These words are monumental, 'Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling alliances with none; the support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies, the preservation of the general government in its whole constitutional vigour, as the sheet-anchor of our peace at home and safety abroad; a jealous care of the right of election by the People; a mild and safe correction of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority, the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first movements in war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labour may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid, the diffusion of information, and arraignment of all abuses at the bar of public reason; freedom of religion, freedom of the press, and freedom of person under the protection of the "habeas corpus," and trial by jurors impartially selected; — these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation.' Jefferson's wand was the pen. Yet he is strangely apt to fall into mixed metaphors and even into platitudes. This address has not escaped criticism."— Goldwin Smith, *The United States, ch.* 3.— "Jefferson had reached the presidential chair at a most fortunate moment. . . . The prospect of a speedy peace in Europe promised effectual and permanent relief from those serious embarrassments to which, during war on the ocean, American commerce was ever exposed from the aggressions of one or of all the belligerents. The treasury was fuller, the revenue more abundant than at any previous period. Commerce was flourishing, and the pecuniary prosperity of the country very great. All the responsibility of framing institutions, laying taxes, and providing for debts, had fallen on the ousted administration. Succeeding to the powers and the means of the Federal government without sharing any of the unpopularity at the expense of which they had been attained, and ambitious not so much of a splendid as of a quiet and popular administration, the new president seemed to have before him a very plain and easy path. . . . To the offices of Secretary of State, Secretary of the Treasury, and Attorney General, left vacant by the resignation of the late incumbents, Jefferson nominated James Madison, Henry Dearborn, and Levi Lincoln, the latter an early leader of the opposition in Massachusetts. . . . As the Senate stood at present, still containing, as it did, of the members present a majority of Federalists, Jefferson did not think proper to make any further nominations; but, soon after the adjournment, he appointed as Secretary of the Treasury Albert Gallatin, all along the financial member of the opposition. . . . The Navy Department, after being refused by Chancellor Livingston, was given to Robert Smith, brother of the Baltimore member of Congress. Livingston, however, having reached the age of sixty, and being obliged, under a Constitutional provision, to vacate the chancellorship of New York, consented to accept the embassy to France. . . . Habersham was continued as post-master-general for some six months, . . . but he presently gave way to Gideon Granger, a leader of the Connecticut Republicans."—R. Hildreth, *Hist. of the U. S., 2d series, ch.* 16 (*v.* 2, *or v.* 5 *of whole work*).— "The first act of the new Cabinet was to reach a general understanding in regard to the objects of the Administration. These appear to have been two only in number: reduction of debt and reduction of taxes, and the relation to be preserved between them."—H. Adams, *Life of Albert Gallatin, p.* 276.—"Under President Jefferson, the heads of the great departments of the government were changed, nor was there any just reason to complain of this measure; as they formed a part of his political council; and, as the chief executive officer of government, he had a perfect right to select his confidential friends and advisers. But when afterwards, and within a few months, he removed able and upright men from offices of a subordinate grade, his conduct was considered improper and arbitrary, and as partaking somewhat of the 'right of prerogative,' usually claimed and exercised by royal princes. . . . In his inaugural address, Mr. Jefferson said, 'We have gained little, if we encourage a political intolerance as wicked as impolitic. We are all brethren of the same principles; we are all republicans, and all federalists.' Yet in less than fifty days he removed fourteen federal

officers, without any allegation of unfaithfulness or inefficiency: on the plea, indeed, that his predecessor had removed two public officers on account of their political opinions; and had appointed none to office in the government but such as were of the same sentiments and views as the administration. 'Few died, and none resigned,' he said; and therefore, to equalize public offices between the two great political parties, it was necessary, in his opinion, to remove a part of those then employed, and to appoint others more friendly to the new administration. For a very few of the removals there might have been sufficient or justifiable reasons offered; but in most instances the changes were made merely for political opinions."—A. Bradford, *Hist. of the Federal Gov't*, 1789-1839, *ch.* 6.



A. D. 1801.—Appointment of John Marshall to be Chief Justice of the Supreme Court.—His Constitutional decisions.—On the 31st of January, 1801, near the close of the term of President Adams, the latter appointed John Marshall, who had been Secretary of State in his cabinet since the previous May, to be Chief Justice of the Supreme Court. It was a memorable appointment,—the most memorable, perhaps, that has ever been made by official and not popular selection, in America, since Washington was appointed to the command of the continental army. Its result was to place the new, uninterpreted, plastic Constitution of the Federal Republic under the hands of a master, during thirty-four years of the period in which it hardened into practical, determined law. It decided the character of the Constitution, and by that decision the great instrument was made a bond of nationality, firm, strenuous and enduring. "The abilities of the new Chief Justice were recognized by the profession and the public at the time of his appointment, but the attractive qualities of his heart and his kindly manners soon caused respect and reverence to ripen into affection. Perhaps no American citizen except Washington ever conciliated so large a measure of popularity and public esteem. . . . In surveying the results of the labors of thirty-four years recorded in thirty-two volumes of reports, it is obvious that it was in the decision of cases involving international and constitutional law that the force and clearness of the Chief Justice's intellect shone most conspicuous. Such was the ready assent of his colleagues on the bench to his supremacy in the exposition of constitutional law, that in such causes a dissenting opinion was almost unknown. Having had occasion to discuss and thoroughly study the Constitution, both in the Virginia convention which adopted it and afterward in the legislature, he had preconceived opinions concerning it, as well as perfect familiarity with it. But in the hot contest waging between the friends of a strict and those of a liberal construction of its language, he wished to take no part. He stated that there should be neither a liberal nor a strict construction, but that the simple, natural, and usual meaning of its words and phrases should govern their interpretation. In the case of Gibbons v. Ogden, in which he is called upon to define the true rule of construction of the United States Constitution regarding the rights of the States and the rights and powers of the general government, he studiously avoids each extreme, steering safely in the middle course. He lays down his own rule thus clearly and definitely:—'This instrument contains an enumeration of powers expressly granted by the people to their government. It has been said that these powers ought to be construed strictly; but why ought they to be so construed? Is there one sentence in the Constitution which gives countenance to this rule? In the last of the enumerated powers, that which grants expressly the means for carrying all others into execution, Congress is authorized to make all laws that shall be necessary and proper for the purpose. But this limitation on the means which may be used is not extended to the powers which are conferred, nor is there one sentence in the Constitution which has been pointed out by the gentlemen of the bar, or which we have been able to discern, that prescribes this rule. We do not therefore think ourselves justified in adopting it. If they contend only against that enlarged construction which would extend words beyond their natural and obvious import, we might question the application of the term but should not controvert the principle. If they contend for that narrow construction which, in support of some theory not to be found in the Constitution, would deny to the government those powers which the words of the grant, as usually understood, import, and which are consistent with the general views and objects of the instrument; for that narrow construction which would cripple the government, and render it unequal to the objects for which it is declared to be instituted, and to which the powers given, as fairly understood, render it competent; then we cannot perceive the propriety of this strict construction, nor adopt it as a rule by which the Constitution is to be expounded.'. . . Marshall's dictum that there must be neither a strict nor a liberal construction of the Constitution, but that the natural meaning of the words must govern, was undoubtedly sound and wise. The broad proposition was above criticism; it meant only that the language of the instrument should not be stretched or wrenched in any direction; and however politicians or even statesmen might feel, there was no other possible ground for a judge to take. Jefferson might regard it as a duty to make the Constitution as narrow and restricted as possible; Hamilton might feel that there was an actual obligation upon him to make it as broad and comprehensive as its words would admit. But Jefferson and Hamilton, in a different department of public life from Marshall, had duties and obligations correspondingly different from his. They might properly try to make the Constitution mean what it seemed to them for the public welfare that it should mean. Marshall could not consider any such matter; he had only to find and declare what it did mean, what its words actually and properly declared, not what they might possibly or desirably be supposed or construed to declare. This was the real force and the only real force of his foregoing assertion. As an abstract statement of his function it was impregnable. But, as with most broad principles, the difficulty lay in the application of it to particular cases. The constitutional questions which came before Marshall chiefly took the form of whether or not the Constitution conferred some power or authority upon Congress, or upon the Executive. Then the Federalist lawyers tried to show how much the language could mean, and the anti-Federal-

ist counsel sought to show how little it could mean, and each urged that public policy was upon his side. The decision must be yes or no; the authority did or did not rest in the government. It was easy to talk about the natural and proper meaning of the words; but after all it was the question at issue; did they (not could they) say yes, or did they (not could they) say no, to the special authority sought to be exercised. Now it is one thing to be impartial and another to be colorless in mind. Judge Marshall was impartial and strongly possessed of the judicial instinct or faculty. But he was by no means colorless. He could no more eliminate from his mind an interest in public affairs, and opinions as to the preferable forms of government and methods of administration, than he could cut out and cast away his mind itself. Believing that the Constitution intended to create and did create a national government, and having decided notions as to what such a government must be able to do, he was subject to a powerful though insensible influence to find the existence of the required abilities in the government. . . . The great majority of his decisions were in accordance with Federalist principles of construction and of policy. The Republicans all denounced him as a Federalist, even of an extreme type."—A. B. Magruder, *John Marshall, ch.* 10.

A. D. 1803.—The Louisiana Purchase.—Its constitutional and political aspects.—"The Mississippi question, which had played so important a part in the times of the confederation, had arisen again and demanded a solution, as Spain had, on the 1st of October, 1800, ceded the whole of Louisiana to France. The United States had had experience enough already of how dangerous and how great an obstacle in the way of the commercial development of the country it might become, if the mouth of the Mississippi were in the possession of a foreign power, even if it were no stronger than Spain. Jefferson had not shared in this experience in vain. This was one of the instances in which he gave evidence of a really statesmanlike insight. He wrote on the 18th of April, 1802, to his embassador Livingston in Paris: This cession 'completely reverses all the political relations of the United States, and will form a new epoch in our political course. . . . There is on the globe one single spot, the possessor of which is our natural and habitual enemy.' Livingston was instructed to enter into negotiations immediately for the cession of New Orleans and the Floridas, in case France should consider the possession of Louisiana indispensably necessary. As Bonaparte at this very time entertained the idea of resuming the old French colonial policy, the negotiations remained long without result. The uprising of the negroes in San Domingo and the warlike turn which the affairs of Europe began again to assume, disposed him more favorably towards the American offer. On the 30th of April, 1803, the treaty, ceding the whole of Louisiana to the United States for $15,000,000, was concluded in Paris [see LOUISIANA: A. D. 1798–1803]. Hamilton shared Jefferson's view, that the purchase of Louisiana was a question of the greatest, and even of vital, importance for the Union. His opposition on other occasions to the policy of the administration, and his personal enmity to the president, did not prevent his lending him a helping hand in this matter when an opportunity offered. The great majority of the Federalists opposed this increase of the territory of the Union with as much decision as Hamilton advocated it. They showed in their attitude towards this question a shortsightedness which would have been astonishing even among the doctrinarians of the opposite party."—H. von Holst, *Const. and Pol. Hist. of the U. S., v.* 1, *pp.* 183–185.—"Mr. Jefferson belonged to the school of strict construction, and was in fact its leader and apostle. . . . Under a construction of the Constitution as strict as he had been insisting upon, it was plain that the government would have no power to acquire foreign territory by purchase, and that any attempt in that direction would be usurpation. . . . To give the necessary authority an amendment of the Constitution would be essential, and amendment would be a slow process which might not be accomplished in time to meet the emergency. The case would be complicated by the fact that if the territory was acquired a considerable population would be brought into the Union and thus made citizens by a process of naturalization not contemplated by the Constitution. Mr. Madison, the Secretary of State, agreed with the President in his views. To use Mr. Jefferson's words, 'The Constitution has made no provision for our holding foreign territory; still less for incorporating foreign nations into our Union.' But under circumstances so imperative he thought the political departments of the government should meet the emergency by consummating the purchase, and 'then appeal to the nation for an additional article in the Constitution approving and confirming an act which the nation had not previously authorized.' He did not conceal from himself, however, that in so doing ground would be occupied which it would be difficult to defend, and he proceeds to say: 'The less that is said about any constitutional difficulty the better. Congress should do what is necessary in silence. I find but one opinion as to the necessity of shutting up the Constitution for some time.' Mr. John Quincy Adams held similar views. . . . But it is difficult to conceive of any doctrine more dangerous or more distinctly antagonistic to the fundamental ideas of the American Union than the doctrine that the Constitution may be 'shut up' for a time in order that the government may accomplish something not warranted by it. The political immorality was obvious and glaring; more so in the case of the apostle of strict construction than it could have been if advanced by any other statesman of the day. . . . But Mr. Jefferson's political mistake was scarcely greater than that committed by his opponents: and, indeed, from a party standpoint it was no mistake whatsoever, but a bold measure of wise policy.

. . . The purchase, according to the Federal view of the Constitution, was perfectly legitimate. . . . But the Federalists in general took narrow and partisan views, and in order to embarrass the administration resorted to quibbles which were altogether unworthy the party which had boasted of Washington as its chief and Hamilton as the exponent of its doctrines. . . . The Federal leaders did not stop at cavils; they insisted that the unconstitutional extension of territory was in effect a dissolution of the Union, so that they were at liberty to contemplate and plan for a final disruption."—Judge T. M. Cooley, *The Acquisition of Louisiana* (*Indiana Hist. Soc. Pamphlets, no.* 3).—The result of the debates on the Louisiana treaty, in the Senate and the House, "decided only one point. Every speaker, without distinction of party, agreed that the United States government had the power to acquire new territory either by conquest or by treaty; the only difference of opinion regarded the disposition of this territory after it was acquired. Did Louisiana belong to the central government at Washington, or to the States? . . . Whether the government at Washington could possess Louisiana as a colony or admit it as a State, was a difference of no great matter if the cession were to hold good; the essential point was that for the first time in the national history all parties agreed in admitting that the government could govern. . . . Even in 1804 the political consequences of the act were already too striking to be overlooked. Within three years of his inauguration Jefferson bought a foreign colony without its consent and against its will, annexed it to the United States by an act which he said made blank paper of the Constitution; and then he who had found his predecessors too monarchical, and the Constitution too liberal in powers,—he who had nearly dissolved the bonds of society rather than allow his predecessor to order a dangerous alien out of the country in a time of threatened war,—made himself monarch of the new territory, and wielded over it, against its protests, the powers of its old kings. Such an experience was final; no century of slow and half-understood experience could be needed to prove that the hopes of humanity lay thenceforward, not in attempting to restrain the government from doing whatever the majority should think necessary, but in raising the people themselves till they should think nothing necessary but what was good."—H. Adams, *Hist. of the U. S. of Am. during the first Administration of Jefferson, v.* 2, *ch.* 4–6.

A. D. 1803.—Report on the British impressment of seamen from American ships.—"In consequence of a resolution of the Senate, calling upon the President for information respecting the violation of the national flag, and the impressment of American seamen, he communicated to that body a letter from the Secretary of State, specifying all the cases of impressment which had come to the knowledge of that Department. The Secretary had no information of the violation of the national flag, except in the recent aggression of Morocco. It appeared, by this report, that 43 citizens of the United States had been impressed by the British, of whom 12 had protections. Ten were natives of the British dominions, and 17 of other countries, none of whom were stated to have been naturalized. Thus a practice which, even within the British dominions, violates the dearest rights of personal liberty, and which their courts have never ventured to justify, and which is excused and acquiesced in on the plea of necessity, was unhesitatingly exercised by British navy officers on board of American vessels."—G. Tucker, *Hist. of the U. S., ch.* 12 (*v.* 2).—"When the captain of a British frigate overhauled an American merchant-vessel for enemy's property or contraband of war, he sent an officer on board who mustered the crew, and took out any seamen whom he believed to be British. The measure, as the British navy regarded it, was one of self-protection. If the American government could not or would not discourage desertion, the naval commander would recover his men in the only way he could. Thus a circle of grievances was established on each side. . . . The growth of American shipping stimulated desertions from the British service to the extent of injuring its efficiency; and these desertions in their turn led to a rigorous exercise of the right of impressment. To find some point at which this vicious circle could be broken was a matter of serious consequence to both countries, but most so to the one which avowed that it did not mean to protect its interest by force. Great Britain could have broken the circle by increasing the pay and improving the condition of her seamen; but she was excessively conservative, and the burdens already imposed on her commerce were so great that she could afford to risk nothing. . . . Conscious of her own power, she thought that the United States should be first to give way. Had the American government been willing to perform its neutral obligations strictly, the circle might have been broken without much trouble; but the United States wished to retain their advantage, and preferred to risk whatever England might do rather than discourage desertion, or enact and enforce a strict naturalization law, or punish fraud. The national government was too weak to compel the States to respect neutral obligations, even if it had been disposed to make the attempt. The practice of impressment brought the two governments to a deadlock on an issue of law. No one denied that every government had the right to command the services of its native subjects, and as yet no one ventured to maintain that a merchant-ship on the high seas could lawfully resist the exercise of this right; but the law had done nothing to define the rights of naturalized subjects or citizens. The British government might, no doubt, impress its own subjects; but almost every British sailor in the American service carried papers of American citizenship, and although some of these were fraudulent, many were genuine. The law of England, as declared from time out of mind by every generation of her judges, held that the allegiance of a subject was indefeasible, and therefore that naturalization was worthless. The law of the United States, as declared by Chief-Justice Ellsworth in 1799, was in effect the same."—H. Adams, *History of the U. S. of Am. during the first Administration of Thomas Jefferson, v.* 2, *ch.* 14.—"Great Britain was clearly in the wrong. She ought to have kept her seamen by increasing their pay and putting an end to the grievances which produced the mutiny of the Nore. In heartlessly neglecting to render the service just

to the common sailor, and at the same time making a brutal use of impressment, aristocratic government showed its dark side. It is true that impressment was conscription in a coarse form, and that the extreme notion of indefeasible allegiance still prevailed. But the practice, however lawful, was intolerable, and its offensiveness was sure to be aggravated by the conduct of British commanders full of the naval pride of their nation and perhaps irritated by the loss of their crews; for it is not denied that many British seamen were seduced from the service and that the American marine, both mercantile and national, was largely manned in this way."—Goldwin Smith, *The United States, ch.* 3.—See, also, below: A. D. 1804–1809.

A. D. 1803-1804.—Federalist Secession movement.—"In the winter . . . of 1803–4, immediately after, and as a consequence of, the acquisition of Louisiana, certain leaders of the Federal party conceived the project of the dissolution of the Union, and the establishment of a Northern Confederacy. The justifying causes to those who entertained it were, that the annexation of Louisiana to the Union transcended the constitutional powers of the government of the United States; that it created, in fact, a new confederacy, to which the States, united by the former compact, were not bound to adhere; that it was oppressive to the interests and destructive to the influence of the Northern section of the Confederacy, whose right and duty it therefore was to secede from the new body politic, and to constitute one of their own. It was lamented that one inevitable consequence of the annexation of Louisiana to the Union would be to diminish the relative weight and influence of the Northern section; that it would aggravate the evil of the slave representation; and endanger the Union itself, by the expansion of its bulk, and the enfeebling extension of its line of defence against foreign invasion. A Northern Confederacy was thought to be the only probable counterpoise to the manufacture of new States in the South. This project was quietly and extensively discussed at the time, by the members of Congress from Massachusetts and Connecticut especially. General Hamilton, indeed, was chosen as the person to be placed, at the proper time, at the head of the military movement which, it was foreseen, would be necessary for carrying the plan into execution. He was consulted on the subject; and although it is quite certain that he was opposed to it, he consented to attend a meeting of Federalists in Boston in the autumn of 1804, but his untimely death, in the summer of that year, prevented the meeting. To whatever proportions, however, the project might otherwise have gone, it was checked by the advantage which was evident to all of the securing of so large a domain, by the great desirableness of preventing France from holding the mouth of our great river, and by the settlement of the question of our national boundaries. These considerations gave a quietus for a time to the suggestions of sectional jealousy."—C. F. Robertson, *The Louisiana Purchase in its Influence upon the Am. System* (*Papers of the Am. Hist. Ass'n, v.* 1), *pp.* 262–263.

A. D. 1804.—Fifth Presidential Election.—Thomas Jefferson, Democratic Republican, re-elected by the vote of 162 Electors in the College, against 14 voting for Charles C. Pinckney, Federalist. George Clinton chosen Vice President.

A. D. 1804-1805.—Impeachment and trial of Judge Chase.—In the closing hours of the session of Congress which expired March 4, 1803, proceedings of impeachment were begun for the removal from the bench of Judge Pickering, United States District Judge of New Hampshire, who had become mentally incapable of discharging the duties of his office. "By the federalists, the attack on Judge Pickering was taken as the first of a series of impeachments, intended to revolutionize the political character of the courts, but there is nothing to prove that this was then the intent of the majority. The most obnoxious justice on the supreme bench was Samuel Chase of Maryland, whose violence as a political partisan had certainly exposed him to the danger of impeachment; but two years had now passed without producing any sign of an intention to disturb him, and it might be supposed that the administration thus condoned his offences. Unluckily, Judge Chase had not the good taste or the judgment to be quiet. He irritated his enemies by new indiscretions, and on May 13, 1803, nearly three months after Pickering's impeachment, Mr. Jefferson, in a letter to Joseph H. Nicholson, suggested that it would be well to take him in hand:—'You must have heard of the extraordinary charge of Chase to the grand jury at Baltimore. Ought this seditious and official attack on the principles of our Constitution and on the proceedings of a State to go unpunished? And to whom so pointedly as yourself will the public look for the necessary measures? I ask these questions for your consideration. As for myself, it is better that I should not interfere.' . . . Nicholson seems to have passed on to Randolph the charge he had received from the President. . . . On January 5, 1804, Randolph rose to move for an inquiry into the conduct of Judge Chase. . . . After a long debate, the inquiry was ordered, and Randolph, with his friend Nicholson, was put at the head of the committee. On March 26, 1804, they reported seven articles of impeachment. . . . With this the session ended, and the trial went over to the next year. . . . The impeachment of Justice Chase is a landmark in American history, because it was here that the Jeffersonian republicans fought their last aggressive battle, and, wavering under the shock of defeat, broke into factions which slowly abandoned the field and forgot their discipline. That such a battle must one day be fought for the control of the Judiciary was from the beginning believed by most republicans who understood their own principles. Without controlling the Judiciary, the people could never govern themselves in their own way; and although they might, over and over again, in every form of law and resolution, both state and national, enact and proclaim that theirs was not a despotic but a restricted government, which had no right to exercise powers not delegated to it, and over which they, as States, had absolute control, it was none the less certain that Chief Justice Marshall and his associates would disregard their will, and would impose upon them his own. The people were at the mercy of their creatures. The Constitutions of England, of Massachusetts, of Pennsylvania, authorized the removal of an obnoxious judge on a mere address of the legislature, but the Constitution of

the United States had so fenced and fortified the Supreme Court that the legislature, the Executive, the people themselves, could exercise no control over it. A judge might make any decision, violate any duty, trample on any right, and if he took care to commit no indictable offence he was safe in office for life. On this license the Constitution imposed only one check: it said that all civil officers should be removed from office 'on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.' This right of impeachment was as yet undefined, and if stretched a little beyond strict construction it might easily be converted into something for which it had not been intended. . . . Judge Chase's offences were serious. The immediate cause of impeachment, his address to the grand jury at Baltimore on the 2d May, 1803, proved that he was not a proper person to be trusted with the interpretation of the laws. In this address he said that those laws were rapidly destroying all protection to property and all security to personal liberty. 'The late alteration of the federal Judiciary,' said he, 'by the abolition of the office of the sixteen circuit judges, and the recent change in our state Constitution by the establishing of universal suffrage, and the further alteration that is contemplated in our state Judiciary, if adopted, will, in my judgment, take away all security for property and personal liberty. The independence of the national Judiciary is already shaken to its foundations, and the virtue of the people alone can restore it.' That by this reference to the virtue of the people he meant to draw a contrast with the want of virtue in their government was made clear by a pointed insult to Mr. Jefferson: 'The modern doctrines by our late reformers, that all men in a state of society are entitled to enjoy equal liberty and equal rights, have brought this mighty mischief upon us, and I fear that it will rapidly progress until peace and order, freedom and property, shall be destroyed.'. . . There was gross absurdity in the idea that the people who, by an immense majority, had decided to carry on their government in one way should be forced by one of their own servants to turn about and go in the opposite direction; and the indecorum was greater than the absurdity, for if Judge Chase or any other official held such doctrines, even though he were right, he was bound not to insult officially the people who employed him. On these grounds Mr. Jefferson privately advised the impeachment, and perhaps Randolph might have acted more wisely had he followed Mr. Jefferson's hint to rely on this article alone, which in the end came nearer than any other to securing conviction. . . . The articles of impeachment which Randolph presented to the House on March 26, 1804, and which were, he claimed, drawn up with his own hand, rested wholly on the theory of Chase's criminality; they contained no suggestion that impeachment was a mere inquest of office. But when Congress met again, and, on December 3, the subject came again before the House, it was noticed that two new articles, the fifth and sixth, had been quietly interpolated, which roused suspicion of a change in Randolph's plan. . . . No one could doubt that Randolph and his friends, seeing how little their ultimate object would be advanced by a conviction on the old charges, inserted these new articles in order to correct their mistake and to make a foundation for the freer use of impeachment as a political weapon. The behavior of Giles and his friends in the Senate strengthened this suspicion. He made no concealment of his theories, and labored earnestly to prevent the Senate from calling itself a court, or from exercising any functions that belonged to a court of law."—H. Adams, *John Randolph, ch.* 4–6. The doctrine of impeachment which Giles (Senator from Virginia) and John Randolph maintained, in connection with the trial of Judge Chase, and which seems to have been acquiesced in by the majority of their party, is reported by John Quincy Adams from a conversation to which he was a listener. In Mr. Adams' Memoirs, under date of December 21, 1804, the incident is related as follows: "There was little business to do [in the Senate], and the adjournment took place early. Sitting by the fireside afterwards, I witnessed a conversation between Mr. Giles and Mr. Israel Smith, on the subject of impeachments; during which Mr. John Randolph came in and took part in the discussion. Giles labored with excessive earnestness to convince Smith of certain principles, upon which not only Mr. Chase, but all the other Judges of the Supreme Court, excepting the one last appointed, must be impeached and removed. He treated with the utmost contempt the idea of an 'independent' judiciary—said there was not a word about such an independence in the Constitution, and that their pretensions to it were nothing more nor less than an attempt to establish an aristocratic despotism in themselves. The power of impeachment was given without limitation to the House of Representatives; the power of trying impeachments was given equally without limitation to the Senate; and if the Judges of the Supreme Court should dare, as they had done, to declare an act of Congress unconstitutional, or to send a mandamus to the Secretary of State, as they had done, it was the undoubted right of the House of Representatives to impeach them, and of the Senate to remove them, for giving such opinions, however honest and sincere they may have been in entertaining them. Impeachment was not a criminal prosecution; it was no prosecution at all. The Senate sitting for the trial of impeachments was not a court, and ought to discard and reject all process of analogy to a court of justice. A trial and removal of a judge upon impeachment need not imply any criminality or corruption in him. Congress had no power over the person, but only over the office. And a removal by impeachment was nothing more than a declaration by Congress to this effect: You hold dangerous opinions, and if you are suffered to carry them into effect you will work the destruction of the nation. We want your offices, for the purpose of giving them to men who will fill them better. In answer to all this, Mr. Smith only contended that honest error of opinion could not, as he conceived, be a subject of impeachment. And in pursuit of this principle he proved clearly enough the persecution and tyranny to which those of Giles and Randolph inevitably lead. It would, he said, establish 'a tyranny over opinions,' and he traced all the arguments of Giles to their only possible issue of rank absurdity. In all this conversation I opened my lips but once, in which I told Giles that I could not assent to his definition of the term impeachment."—J. Q. Adams, *Memoirs, ed. by C. F. Adams, v.* 1, *pp.* 322–323.—The trial of

Judge Chase was opened on the 9th of February, 1805, and ended on the 23d. By votes ranging from 15 to 34 (the total number of Senators being 34), he was acquitted on each of the charges — a result attributed considerably to the offensive and incapable manner in which the prosecution had been conducted by John Randolph.— J. Schouler, *Hist. of the U. S., v.* 2, *p.* 77.
